Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Henry Chamberlin from the Wall Street Journal.

A STATESMANLIKE APPRAISAL—ECONOMIC PITFALLS AND POLITICAL ADVANTAGES OF ERP ARE EXPERTLY ANALYZED BY EX-PRESIDENT HOOVER

(By William Henry Chamberlin)

Herbert Hoover has added to his long list of valuable services to his country by his statesmanlike appraisal of ERP, contained in his letter to Senator VANDENBERG. Our only living ex-President yields to very few men in his mastery of the basic facts of the American and world economy. When he pronounces a judgment on a large domestic or international issue it is based not on some emotional catchword, but on solid and precise knowledge. This is why his judgments should always be treated with respect.

Many advocates of ERP are so obsessed with its urgency that they are inclined to be impatient with criticisms of detail. Many opponents are so impressed by dangers and difficulties that they lose sight of the very great political stake America has in turning back the world-wide offensive of Soviet communism.

Mr. Hoover sees the two sides of the Marshall plan, its political desirability and its economic pitfalls, as well as anyone who has commented on the proposal. He speaks of the "vital importance" of the defeat of communism in western Europe, of the front against communism that lies not alone in Europe, but stretches through Latin America and Asia.

HE SEES THE DANGERS, TOO

At the same time he recognizes the force of the arguments about the dangers to the American economy inherent in the Marshall plan. As Mr. Hoover says:

"The volume of exports and finance proposed may accelerate an already dangerous inflation; it further delays our recuperation from the war; it drains our natural resources and continues excessive taxation; all of which might bring depression and thus destroy the strength of the one remaining source of aid to a world in chaos."

Most of his letter to Senator VANDENBERG is devoted to constructive, concrete, practical suggestions for diminishing the burden on the American economy without sacrificing the purpose of helping the noncommunist part of Europe back to its economic feet. One of the most obvious means of achieving this end is to get the unused industrial resources of Germany and Japan back into production as quickly as possible.

It would be both futile and absurd for America to advance large sums of money to Britain and France and smaller sums to China and Korea while permitting continuance of the artificial conditions of industrial desolation in Germany and Japan that have contributed so much to European and Asiatic depression. Mr. Hoover seems to emphasize this point when he suggests that those of the 16 European nations concerned with these problems should agree to "the trizonal economic union of western Germany, a peace with Japan; a cessation of plant destruction and removal; and abolition or increase in 'levees of industry' in these two countries."

TO SHIP $800,000,000 OF CAPITAL GOODS

Mr. Hoover draws attention to the fact that ERP in its present form calls for the shipment of about $800,000,000 worth of capital goods, including steel and machinery, from the United States during the first 15 months of the plan. At the same time we lack sufficient railway equipment; there is a shortage of agricultural machinery, affecting food production; there is a scarcity of building materials and steel is selling at 100-percent premiums in the black market.

What would be more reasonable than a vigorous revival of steel and machine building industries in Germany, with proper safeguards against diversion of production to military ends? Mr. Hoover comes out for this sensible idea, which should also apply, he says, to fertilizer production and oil refining in Germany. It would certainly represent a peak of sheer economic absurdity for America to impose crippling deprivation on its own economy in order to send to Europe machinery and equipment which could be produced in Germany, or anywhere else, for that matter.

It may be objected that Germany could not simultaneously export coal and raise appreciably its level of steel, machinery, and fertilizer output. Mr. Hoover suggests that increased American exports of coal to European countries which cannot satisfy their own needs might be better than American exports of steel, machinery, and fertilizer.

The ex-President correctly brands as an illusion the idea "that scarcity and thus inflation can be more than temporarily retarded by compulsory fixing of wages, prices, and rationing." Some of western Europe's difficulties may be attributed to these practices.

ASKS FOR OTHER CONDITIONS

Mr. Hoover calls for group determination, on a non-partisan basis, of ERP policies, for a clear distinction between gifts and loans, for refusal to enter into a 4-year commitment, for the making of relief supplies to Japan and Germany a first charge on reparations, and for a refusal of American grants or gifts of money to pay for goods from other countries.

Two other witnesses on ERP, Mr. Bernard Baruch and Mr. John Foster Dulles, have called for closer political association among the recipients of American aid and for a reduction in trade barriers as between these European nations. Some assurances along the lines of closer economic relations were given in the original blueprint, drawn up by the representatives of the 16 nations at Paris. There can be no doubt that Europe's division is communism's opportunity, and that a broad west European federation, sponsored by the United States, would be the most effective curb on Communist aggression.

If it proves possible to combine Mr. Hoover's economic statemanship in framing the details of ERP with some bold imaginative stroke in the direction of closer association among all nations, regardless of which side they fought on in the war, which lie outside the Soviet orbit of control, the prospects of fruitful American-European cooperation will look much brighter.

Sermon of Most Rev. Raymond A. Kearney

EXTENSION OF REMARKS
OF
HON. JOHN J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of the sermon delivered by the Most Reverend Raymond A. Kearney, auxiliary bishop of Brooklyn, at the red Mass in the National Shrine of the Immaculate Conception, Catholic University of America, Sunday, January 25, 1948:

Just 2 months ago the bishops of the United States had their annual meeting on the campus of this university. As a result of their prayerful deliberations there came forth a statement that in the judgment of the bishops was the most opportune to offer to our people at this particular time. The theme of this statement was the error of secularism.

When one encounters an extraordinary or unusual word he goes at once to the impartial source of the dictionary. And there we find that secularism is "any view of life, education, etc., or any policy or program referring to such, based on the premise that religion and religious considerations, as of God and a future life, should be ignored or excluded." The atheist and the materialist is of course a secularist; he excludes all consideration of God and the hereafter, for in his creed there is neither. And this we readily understand. But there are some who profess a belief in God, and who sometimes solemnly invoke His name, and who on formal occasions wish to be clearly understood as believers in the deity, and yet are infected with a secularist viewpoint. "They fail," the bishops' statement says, "to bring an awareness of their responsibility to God into their thought and action as individuals and members of society." They have a view of life "that limits itself not to the material in exclusion of the spiritual, but to the human here and now in exclusion of man's relation to God here and hereafter." Secularism is the practical exclusion of God from human thinking and living.

We have in mind here the multitudes who give God lip-service, who proclaim their belief in Him, and who would be shocked if one were to suggest that in fact they really were not believers. We have in mind those to whom God and religion is sort of a luxury, an ornament, a thing apart; comfortable, seemly, decorous, on the Sabbath day; not missed at all throughout the rest of the week. God and religion are to them, something quite appropriate to the church, the sacristy and the cloister; but should have no influence in the affairs of the community of nations, nor in the political or economic world, nor in domestic life, and far less in the individual and personal life that each one of us must lead.

The statement of the hierarchy points out the effects of this secularist attitude on the individual, the family, the Nation and international society. We may note that secularism means the concentration of man on the temporal affairs of this life to the denial or disregard of the hereafter. Its fundamental principle is that all human conduct is to be guided by earthly considerations. "It destroys nourishment, kills roots, rots everything from within." As a result the individual is blinded to his responsibility to God. His thoughts, aspirations, and deeds, are his own, without reference to God. The statement goes on to say, "The greatest moral

catastrophe of our age is the growing number of Christians who lack a sense of sin, because personal responsibility to God is not a moving force in their lives. They live in God's world quite unmindful of Him as their Creator and Redeemer. The vague consciousness of God which they may retain is impotent as a motive in daily conduct. The moral regeneration which is recognized as absolutely necessary for the building of a better world must begin by bringing the individual back to God and to an awareness of his responsibility to God. This secularism, of its very nature, cannot do."

If the individual has lost a sense of responsibility to God, then the family, the Nation, and ultimately the community of nations has necessarily followed in the same path, for ultimately it is the individual who makes up these segments, and the whole, of human society. The family has come into decadence with "a 60-fold increase in the divorce rate during the past century." In the field of education secularism has taken a toll as no where else. The philosophy of naturalism, which excludes God, has been accepted, and has been taught, and is being taught, on the very highest planes and in the highest places, of our entire educational system, so that as a result a totally secularist viewpoint is being brought through our teacher-training institutions to every little red schoolhouse in the country. In fact, we are reliably informed that the concepts of the natural law, and all that follows therefrom, are becoming less and less important in the matter of training our youth in the profession of the law. In the field of economics the disregard of God and God's laws has led to a grave disorder and we live ever fearful that a national catastrophe might be the result of friction and misunderstanding between capital and labor. In the international community disregard of God has in fact led to this unparalleled crises in civilization, wherein in the councils of states His name may not be so much as mentioned. This is the secularism that Pope Pius XI called the "plague of our age."

We have said that we quite understand this attitude on the part of atheists. All who adhere to a philosophy of naturalism, positiveism, materialism, have the same note in common; they do not believe in a personal, intelligent God, and they are, logically, secularists. But it is difficult to understand those who do profess a belief in God, who do invoke His name, and yet would exclude Him, or ignore Him in their daily affairs. Some perhaps are insincere in their expressions of belief, conforming externally to tradition, convention, decorum, or some such thing. But nevertheless there are some who are sincere and who nevertheless see things only from the worldly viewpoint, to the exclusion of God in human affairs. They are "Sunday Christians." They pray, sincerely enough. They go to church if not always, at least always sincerely. They do believe in God, or at least they sincerely believe they do. Still, they regard their God as no reality in their daily affairs, private, domestic, political, or anything else.

For the out-and-out atheists we can do nothing but pray. We can pray that divine light might eventually enter their souls and that seeing they may yet believe. But for the others there is a greater hope. They have not yet outlawed God. I believe their trouble is that they have done only shallow thinking about God, or perhaps they have done too little thinking, or even no thinking about God. I believe that if they would think a great deal about God, and ask "Who is God?" and "What is God?" they would turn to God with delightful amazement and exclaim from the depths of their souls: "Too late have I known Thee."

Therefore today I should like to talk to you about God—just plain God. The God that Socrates and Plato and Aristotle learned to know about the kindly light of revelation by the sheer, fine penetration of human reason. The God that great thinkers over ages and ages recognized as the one Supreme Being. The God that philosophers and theologians, no less than peasants and artisans and workers of every sort from the beginning of time have come to know, to love, and to serve. The God who has never seriously been denied, until this fateful modern age. The God of old. The one true God before whom every other god is a false god and a demigod.

I have in mind the God whom the founders of our Republic knew when with a spirit of deep religion they gave to posterity our sacred Declaration of Independence. "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." Endowed by their Creator. That is the God I know—the Creator. The Creator of the universe—the land, the sky, the sea, and everything contained within it. The Creator who produced everything that is out of abysmal nothingness. Who is therefore greater than the whole of creation, and distinct from it. The first and final cause of everything that is.

The Creator is eternal. A billion years is to Him as a fleeting instant. He always was, and always must be. If there is such a thing as creation, there never could have been a time when there was absolutely nothing, for out of absolutely nothing nothing positive could have followed. So there must have been some Being who never had a beginning, who always was, and who brought into existence whatever has been, or is, or will be, in the universe. So the Creator is the Eternal Being, without beginning. And being without beginning, He is perfect and can never have an end, for a perfect being must be without flaw of any sort, and so He cannot wear out, or age, or annihilate Himself.

The Creator as the perfect Being has all perfections and no imperfections. He is simple, immutable, immense, infinite. He is infinitely all-wise, all-powerful. He is infinitely holy, good, merciful, and just. In fact, He is goodness, mercy, and justice. He is everything that is positive and loveable—infinitely so. He is the one, true Supreme Being.

The Creator is also the Infinite Lawmaker. By a single act of His will He has tossed into space the ball of the universe and set it spinning through time and through the ages according to His divinely conceived plan. In the act of creation He who is the Eternal Law has promulgated the natural law in His creatures by His all-wise and providential determination of the natures and essences of His creatures. He is the Supreme Legislator directing all things with consummate wisdom, each according to its own nature. But this natural law implanted by the Creator in the nature of things demands when we think of mankind specification by positive enactment. Hence, the eternal and natural laws must be supplemented by human law enacted by earthly authority. And all human law must ultimately be in one way or another a derivation from the natural law or a determination of it. Therefore positive law is valid only insofar as it is a development and application of the law of God for the common welfare of mankind. Positive human law is good law only when it is intended, and in fact, does serve to keep man and this universe spinning in accord with the eternal decrees of the Maker of all of us.

Such is the God whom the philosophers over the ages have given us. But the same God of whom St. Paul says, "He is not far from any one of us" (Acts xvii: 22) has also revealed Himself to man, so that we are not left entirely to the resources of natural reason to know Him, but aided by the gift of faith we might come to know Him more perfectly and thus to serve more faithfully. It is the same God who spoke to Moses and said, "I am the God of thy father, the God of Abraham, the God of Isaac and the God of Jacob." The same who said, "I am who am. Thus shalt thou say to the children of Israel: He who is sent me." (Ex. iii: 14). The same God who thundered: "I am the Lord thy God who brought thee out of the land of Egypt, out of the house of bondage. Thou shalt not have strange gods in My sight" (Deut. v: 6–7). It is the same God to whom St. Paul refers as the One "who at sundry times and in divers manners spoke in times past to the fathers by the prophets" (Heb. i: 1), i. e. by Isaias, Jeremias, and all the others, major and minor, calling men to repentance and holding forth always the pledge and promise of a Redeemer. It is the same God whose praises the Psalmist loved to sing in unparalleled, divine song: "Great is the Lord, and greatly to be praised; and of his greatness there is no end" (Ps. 144: 3). And again "I have known that the Lord is great, and our God is above all gods; whatsoever the Lord pleased he hath done, in heaven, in earth, in the sea, and in all the deeps." It is the same God who in the new dispensation so loved the world as to send His only-begotten Son to purchase by His Blood a fallen human race—the God of mercy and of love. He is the God of old—a jealous God, who will have no false gods in His sight. He is a God to be loved and to be feared; to be loved, because He is Love, to be feared, because we have loved Him so little.

These reflections may in a very feeble way convey some slight notion of the God I would know and serve. Anything less is a tin god—a false god. There is only one true God—the God of old—supreme, infinite, eternal God—the way, the truth, the life—thrice holy—infinitely merciful yet infinitely just. He is everything that is good and true and beautiful. He is all. St. Teresa used to say, "Who has God, wants nothing." God is all; the alpha and omega, the beginning and the end; the absolute, the God of old still lives.

There is, however, one thing to be remembered. There is one thing God cannot do. He cannot make Himself anything less than He is. He cannot act contrary to His own infinitely perfect nature. He cannot make Himself less wise, less good, less just, less anything. He cannot abdicate His godliness. He cannot, for instance, ignore something, or not know something, He would be less than perfect, and this He cannot be. Hence, He knows, and by His immutable nature, must know, all things great or trivial. He knows therefore the secret of the atom, the cause of cancer, and He knows too the fall of a sparrow in flight, the tick of a pulse, the innermost passing thought and desire of child or man.

Now, if God cannot ignore anything, however trivial, neither can He be indifferent to anything. It is His world, all things must proceed in an orderly way toward their ultimate destiny. Inanimate nature, plant and animal life, all proceed in accordance with divine plan as expressed in the natural law written into their being. Only man, made a little less than the angels, created in the image and likeness of God, endowed with the light of intelligence and the power of free will can frustrate the divine plan by rebelling against the will of God and by sprinkling as it were a mean handful of grit into the divinely conceived machinery of the universe. But God being all-good—infinite

goodness itself—cannot be indifferent to man's conduct. If man's actions are good and noble, the divine will is being accomplished. Otherwise, man is guilty of the blasphemy of disobeying his Maker. God therefore has a stake in everything we think, desire, or do. He judges the innermost thoughts and desires of each of us, and of each of us in our capacity as private individuals, and of each of us in his social relation to the family, to his neighbor, to his country, and to the community of nations. He cannot be, and will not be, excluded from the affairs of His children. Hence, the secularist viewpoint of ignoring or denying God's part in the affairs of men and nations is essentially wrong if one acknowledges a sincere belief in God the Creator.

God is supremely interested in the temporal welfare of His creatures and it is for this reason that the natural law plainly calls for the existence of the State. The State has the sacred responsibility of promoting the common welfare of men. God is therefore intimately concerned with every bill intended for the common welfare and presented to the Congress, or to any legislative body. He is concerned with the motives that inspire it, the objectives to be attained, the means of attaining them. No court ever hands down a decision that is not already automatically appealed to the Infinite Judge, who from eternity has already confirmed it or set it aside as shocking to infinite justice. There can be no international parley that can hide from His fearful scrutiny decisions that have to bear on the welfare and the pursuit of happiness of all His children the world over, everywhere. We cannot afford to exclude God from anything. He will not allow it.

Many pious people say this prayer: "Go before us, O Lord, we beseech Thee, in all our doings with Thy gracious inspiration and further us with Thy continual help that every prayer and work of ours may begin from Thee and by Thee be happily ended." Yes; every prayer and work of ours should begin with God, for only then can it be happily ended.

We need more God, and no less God in all human affairs. We condemn the merely secular viewpoint as invalid. This is God's world and everything in it must go according to His will. We cannot afford to look at things from the world alone; we must see things through the eye of God and under the thought of eternity. God and religion are not reserved to the church and for Sunday. On the contrary, every single act of ours must be checked against God for accuracy. The master of a ship makes his port when he checks his course by God's fine handwriting in the sky. Man, too, may eventually make his eternal destination by adjusting his course according to the eternal law which is God.

Such is the God that I know—so imperfectly. I commend Him to you; and I commend you to Him. You who have grave responsibilities in public life toward the Nation and your fellowman need this God of old. You need Him, not now and then, but always. You need Him in all things. With Him, like St. Paul, you can do all things; without Him, nothing. He is your wisdom, your strength, your power. He is your all and He demands all. He will have no false gods before Him. To Him do we pray today for light and guidance that those who make our laws and those who interpret them and judge men by them, might with His blessing do all things for the welfare of our Nation and for the good of a stricken world in accord with the will of God.

If by chance you should sometime in the future recall this sacred occasion, I hope you will remember just this: "He who has God, wants nothing."

National Junior Chamber of Commerce Honors the 10 Outstanding Young Men of 1947

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. KEFAUVER. Mr. Speaker, the United States Junior Chamber of Commerce annually selects the 10 foremost young men of the Nation under 35 years of age. The selection for the year 1947 was made by a committee of eminent citizens, headed by Mr. Paul G. Hoffman, president of the Studebaker Corp. The presentation ceremony for the young men selected during 1947 was held at Chattanooga, Tenn., on January 21, 1948. Jaycee President John Ben Shepperd; Clifford D. Cooper, vice president; Raymond E. Roberts, editor of Future, the magazine for young men; Frank Fister, executive vice president; and other national officers of the organization were present. The highlights of the program were the addresses of Shelby R. Brammer, president of the Chattanooga Jaycees; John Ben Shepperd; and Hon. Harold Stassen, of Minnesota. Under leave to extend my remarks, I include the addresses of these three men:

ADDRESS BY SHELBY BRAMMER, PRESIDENT OF THE CHATTANOOGA JUNIOR CHAMBER OF COMMERCE

Chattanooga salutes the more than 2,000 local Junior Chambers of Commerce tonight on the occasion of a nationwide observance of the twenty-seventh anniversary of the founding of the United States Junior Chamber of Commerce in St. Louis, Mo. The climax of this observance is in Chattanooga tonight where we are honoring the Nation's 10 outstanding young men of 1947. The keynote here tonight is service. Outstanding service has been rendered by these men who have been brought from all over the Nation to receive the distinguished service award. New York City and Whittier, Calif., is here. Washington, D. C. and Knoxville; Waukesha, Wis.; Omaha; Berkeley, Calif.; Baltimore, Md.; in fact, all America! Stand by, for the presentation of the distinguished service awards to your illustrious native sons. And now, here is John Ben Shepperd, of Gladewater, Tex., president of the United States Jaycees. His job has taken him to Alaska, through most of the 48 States, to England, France, Belgium, and from here he goes to Washington to testify before the Senate Foreign Relations Committee hearings on the Marshall plan. It is very fitting that this widely traveled leader of young men presents the Nation's 10 outstanding young men.

ADDRESS BY JOHN BEN SHEPPARD, PRESIDENT OF THE UNITED STATES JUNIOR CHAMBER OF COMMERCE

Thank you, Shelby Brammer, and let me express the gratitude of these swell young fellows as well as all the members of the United States Jaycees for the wonderful southern hospitality shown us all here in Chattanooga. In a moment we will meet the 10 young men and hear the Honorable Harold E. Stassen, former Governor of Minnesota, and the principal speaker at the distinguished service award banquet being held here at the Read House.

For a decade the United States Jaycees and our monthly magazine, Future, have sponsored the selection of the Nation's 10 outstanding young men. We hope that by calling attention to their accomplishments that not only all young men but citizens everywhere will strives the harder to follow their example and keep our American system of freedom of opportunity going onward and upward.

From scores of ballots that flooded into our national Jaycee headquarters in Tulsa a panel of nine distinguished American business and professional men picked the 10 men we have tonight. The judges' panel was composed of men over 35 years of age and they made their selections without regard to the affiliations of these men but judged them on the basis of their individual contribution to their business or profession and for their outstanding services in behalf of the general welfare of our whole country.

Now to meet the Nation's 10 outstanding young men of 1947. The first one we want to recognize is Thomas R. Reid, of Baltimore, Md., who, unfortunately, is confined to a hospital. But here representing him is W. Wallace Ashley, president of the Baltimore Junior Association of Commerce, and Ed Ellis, a personal friend and fellow worker of Mr. Reid. Mr. Ellis is president of the North Carolina Jaycees. Tom Reid has distinguished himself as the representative of employers at international labor conferences in Montreal, Canada, and Geneva, Switzerland, in 1946 and 1947. He is one of the few men in the country whose job is to handle human relations and he is in charge of that function for McCormick & Co. of Baltimore. He is the leading exponent of multiple management, a plan in which the young men of a business or industry are given an opportunity to aid management and to prepare for bigger jobs later. He became the paid executive head of the United States Jaycee organization before his thirtieth birthday and he was one of the founders of Future magazine in 1938. I am proud to present this ruby-studded distinguished service award key to you, Ed Ellis, for Thomas R. Reid, and please, Mr. Ashley, convey our sincere hopes that Tom is recovered soon.

Our next young man is from New Orleans and it is with regret that we heard that Chep Morrison, illustrious mayor of that city could not leave his busy desk and is not here with us. He has attracted considerable attention already for his work in spark-plugging many civic construction and improvement projects in his city and he has traveled extensively in Latin America in the interests of improving our trade relations. New Orleans and particularly the Jaycees there are proud of Chep Morrison.

The next young man is also influencing our national thinking on municipal affairs and, like Mr. Morrison, he, too, is a mayor. James Quigg Newton, Jr., was elected mayor of Denver, Colo., last spring and he has since been seeking out experts and specialists—not political friends—to reorganize his city's health and police departments and set up sound personnel policies. He spearheaded an expansion program for the University of Denver, a privately endowed school, and a multimillion dollar improvement program is under way. Last year Denver Jaycees recognized his work as president of the university's board of trustees by naming him the outstanding young man of Denver. Mr. Newton, we join Denver in saluting you. Here is your distinguished service key.

Imagination and youth, combined with infinite courage and hard work, made our next young man truly outstanding. He is LaVon P. Peterson, age 28, of Omaha, Nebr., where

he founded the world's only school for training blind persons to repair radios and electronic equipment. He has been blind since birth but his radio engineering institute has many blind graduates, who, after 1 year's study are in business for themselves. During the war he trained men for our armed services to repair radios in complete darkness. It is indeed a pleasure to bestow this honor upon Mr. Peterson for his service to the handicapped. Here is your key, Mr. Peterson.

From Knoxville, Tenn., comes now Adrian Sanford Fisher, age 33, a man who is general counsel for one of the Government's most vital functions, the Atomic Energy Commission. He has served as an adviser on the group which actually drew the Marshall plan. He wears a Phi Beta Kappa key and is a graduate of the Harvard Law School. He was nominated by the Knoxville Jaycees.

Also, in the field of atomic energy from Berkeley, Calif., we have Dr. Glenn Theodore Seaborg, age, 35, chemist in nuclear reactions at the University of California. He formerly isolated element 94, plutonium, and recently his work has led to discovery of elements 95 and 96, Americum and curium. He isolated and identified U-233 and demonstrated that it undergoes fission with slow neutrons and he understands what radioactive isotopes mean. Chicago Jaycees named him their outstanding young man of the year 2 years ago. San Francisco Jaycees nominated him for this honor and we take great pleasure in presenting you with the DSA key, Dr. Seaborg.

Waukesha and all Wisconsin is aware of the work of Congressman GLENN R. DAVIS, age 33, who was active in framing veterans' legislation and the investigation of Veterans' Administration regional offices. He supports United Nations participation by the United States and has worked for bipartisan, long-range foreign policy. He favors aid to Europe's displaced persons. Glenn fought in the Pacific and we hope this key inspires you, Glenn, to further, greater things in the field of good, progressive government.

Another Congressman who has done an outstanding job is RICHARD M. NIXON, of Whittier, Calif. Aged 34, he was a member of the Herter committee which studied Europe's relief needs on the spot. He has devoted many, many months to making a thorough investigation of the needs for foreign aid. His work for fair labor legislation and on the Un-American Activities Committee of the House has reflected much credit on him. Mr. NIXON you have set an example of hard work in behalf of good government and this service is an inspiration to young men everywhere and we are proud for you to wear the DSA key.

From Memphis, Tenn., we have here with us tonight Dr. Robert A. Hingson, aged 34, the first physician to use hypospray. With Dr. Waldo B. Edwards he developed a successful technique of continuous caudal analgesia which gives complete relief to women during childbirth. He has trained many physicians in this technique, he has written extensively on pain control and is a surgeon in the United States Public Health Service. He is professor of anesthesia in the College of Medicine at the University of Tennessee. It is with pleasure and pride we award you this key for distinguished service in the field of medicine.

Last to be introduced, youngest man of our group of young men and from the Nation's largest city, New York, we call to the microphone Cord Meyer, Jr., aged 27, an ardent advocate of world government. He is president of the United World Federalist. Mr. Meyer has written and lectured extensively on the necessity for a world federation with sufficient power to keep the peace and peace is precious to him as it is to all of us, especially after he fought and was wounded in the Pacific with the marines. He was chosen young man of the year recently by the New York City Young Men's Board of Trade and we would like to hear a brief message from you, Mr. Meyer. In presenting you with this DSA key let me say we are impressed as the judges were by your organization's proposals. We wish you continuing success in your efforts for international law and order.

We are indeed proud to bring to the microphone now one of the truly outstanding young men of the decade. He gained an interest in the affairs of government and citizenship as a charter member of the East St. Paul, Minn., Junior Chamber of Commerce. His broad background and capacity for sound thinking was recognized by the people of Minnesota and they elected him their Governor. Later, President Roosevelt named him one of our delegates to the San Francisco United Nations charter conference. Even before these very important missions the judges of our annual impartial search for the Nation's 10 outstanding young men were impressed by his record, and in 1939 named him for the honor we are here bestowing on these other young men. Here is Harold E. Stassen, who was the principal speaker at our banquet tonight and who will now address you.

ADDRESS BY HAROLD E. STASSEN, OF MINNESOTA

President Shepperd, members and guests of the United States Junior Chamber of Commerce, I join in a salute to the 10 young men who have been selected as the 10 outstanding young men of the year. The record of their achievements, in a brief span of years, in a wide variety of fields of endeavor, is a thrilling testimonial to their individual abilities and equally to the dynamics of our American system.

We are all aware that we meet at a time when the most extensive and crucial world-wide competition of ways of life is under way.

Thus in addition to commending each of these young men for the remarkable achievements I take this opportunity to urge upon each of them, and upon the millions of young men and young women of their generation, an increased participation in the public affairs which have a direct bearing upon this conflict of ways of life around the world. The vigor, the resourcefulness, the enthusiasm of youth is very much needed on the public scene today.

I urge that it be directed in three principal phases.

First, that the ingenuity and expressive nature of youth be directed to the advocacy of the rightness of the fundamental concepts of individual freedom of the American system. America must not take an uncertain or apologetic attitude toward either its political system of representative government or its economic system of capitalism. It is a fact and it needs to be dramatically emphasized throughout the world that our modern people's capitalism in America is as different from the imperialistic monopoly capitalism of a century ago as is the ruthless economy of Russia different from the Utopia painted by Karl Marx.

Our modern people's capitalism has attained by actual statistics a higher production and wider distribution to all the people of the necessities and the luxuries of life than any other system in the history of the world.

Through that high production we are able to extend major assistance to war-torn countries of other parts of the world. This we should do thoroughly, willingly, and on a sound and businesslike basis. But we should not lose sight of the fact that the principles of individual economic freedom are a greater asset to any country than any goods that America can send.

With this affirmative advocacy of modern people's capitalism there must be carried on a constant campaign of interpretation to the people of our own country of the essential requirements of our system, of the importance of large sums of capital held in the hands of citizens rather than controlled by the men in Government, with incentives always present to invest, to buy, to sell, to work, to invent, to earn. The interpretation to the people is a vital safeguard against the recurring effects of the demagog to present unsound and treacherous proposals which would undermine the fundamentals of our individual freedom.

The second phase of the effort of youth is of equal importance. The drive and ingenuity of youth should be focused upon the correction of the weaknesses and shortcomings that do exist in our American system. We must never be smug or complacent about the success of America. Such an attitude leads directly to deterioration. Currently the two major shortcomings of our excellent economic system are in housing and in health. America today, with all of its superb production ability is 2,000,000 houses short of its essential requirements. This housing shortage falls with devastating effect upon the youth of the land, including particularly the veterans of the war, as they are naturally the late comers to the housing market and are caught by the extreme shortage. Major new action is required to break through the housing jam. The youth of the land should think through and come forward with new suggestions and aggressively seek results. It is not desirable that Uncle Sam should become a huge landlord, but it is essential that the power of government be used to break through the retarding effects of outdated building ordinances, of outmoded restrictive union practices, or retarding combinations of contractors and material men, and translate to the house-building field some of the efficiency and economy of our mass production techniques in other branches of industry. This requires that huge projects be initiated by the Government under private contract to open the way and to take the loss necessary to develop the new techniques.

In health we must work out the means by which major burdens of medical and hospital care which fall upon the ordinary family in event of serious illness or major accident are lifted from their backs by an insurance principle. But we should not make the mistake of bringing the whole medical profession and hospital administration under the hand of government.

Likewise, we need the increased use of the modern automobile and airplane in extending mobile health clinic services, fanning out from hospital centers of mercy and from specialized medical groups to the neglected areas of the country. It is a startling fact that nearly 1,200 of the counties of the 3,070 counties of our country are today without hospital care.

The greatest danger to our free economy is boom and bust, and here again young men with a willingness to learn the lessons of the past and to pioneer in new methods of combating hoarding, profiteering, monopoly, and excess speculation can do much to avoid the serious fluctuations of a free economy without making the sad mistake of adopting over-all centralized governmental control.

The third phase of the effort of youth in public affairs which I urge is a realistic counterpart to our meeting of the challenge of totalitarian competition on the economic and ideological front. It is the imperative necessity of remaining strong in a military sense during these critical years. Our generation knows all too well the grim lesson of what it means to be unprepared and weak in the face of an enemy who has turned to force in an attempt at domination.

There are many sincere people who would make major cuts in our budget for defense in order to secure larger tax reductions. But it is of grave importance that we reach agree-

ment in this country on the vital necessity of remaining strong in the years immediately ahead. To do so we must enact some form of required service and training. We dare not drift along, with our active manpower a hundred thousand men short of minimum requirements and our reserves not up to strength. Likewise, we must move ahead in research and keep up front in air power. If we do there is less likelihood of men in other parts of the world making a mad decision to seek domination by force. And if they do make such a tragic move, tragic for themselves and for others, there should be no question of our victory, with a minimum cost of suffering and of men.

These three phases of the affirmative advocacy of the way of freedom, the constant improvement of our weaknesses, and the steady strengthening of our position, are the greatest assurance of an expanding freedom for ourselves and others in the years ahead and of opportunities for millions of the youth of tomorrow, equal or better than the opportunities which the 10 young men we honor tonight have demonstrated exist in America today.

JAYCEES BUILD FOR LEADERSHIP

Mr. Speaker, one of the crying needs of the Nation is more young men who will assume government leadership. Today the United States as the No. 1 Nation has the responsibility of world direction and it needs courageous young men to carry on the job successfully. The junior chamber of commerce is doing the best job of preparing young men for this task. Within 27 years more than a thousand clubs have been formed and membership has grown to 250,000 These young men render great service in sponsoring and energetically putting over projects in their communities. Equally important is the program of the Jaycees in building for leadership. Any young man under 35 years of age who has a desire to serve can join this democratic organization. The members, in my opinion, represent the best hope of responsible leadership in the years to come.

Ed Allen's Fireside Thoughts

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. KNUTSON. Mr. Speaker, pursuant to permission granted me to extend my remarks in the RECORD, I insert below Ed Allen's Fireside Thoughts, for January 17, 1948, which I commend to the membership because the thoughts expressed therein are sound and timely:

ED ALLEN'S FIRESIDE THOUGHTS

I liked this yarn so much that it seemed too good to keep—it happened in a little place called Nut Town, where a man by the name of Uncle Sam ran a grocery store. It seems that at times business was good with him and then again it wasn't so good. The whole ups and downs of business worried this old boy until one day he had a bright idea. The trouble, he decided, was due to the fact that his customers were suffering from a "dollar shortage."

Well, thought he, I'll fix that—so old Uncle Sam went to the bank and borrowed $100 in brand new $1 bills—these he gave to the people who passed his store with only one provision, they were to spend the money in his store. That night he was delighted to find his cash register full of new $1 bills—he had had a wonderful day, he had found an easy way to get rich. Every day after that he distributed $100 to the good people of Nut Town and his business continued to boom. Of course, he began to owe a lot of money for goods he had failed to pay for, but that didn't matter—he just arranged to pay them off with I O U's.

Uncle Sam's plan worked so well that it came to the attention of some of the big bureaucrats in Washington. Wonderful! They decided, and called a meeting of the big brains to decide how they could expand old Uncle Sam's plan to take in the whole world. Imagine the excitement—here was an idea that would give the people of the world all of the things their hearts desired, but best of all—we here in America would get richer and richer and enjoy prosperity forever and ever. All that the big brains needed to put their come-and-get-it plan into action was around 19,000,000,000 fresh, crisp, new dollars to give people suffering from a dollar shortage. All they were to do in return was to promise to spend this money in our American stores. They promised all right—and what's more they even promised to be nice and friendly. Well, Congress, of course, not being very smart, asked a lot of foolish questions but finally gave the bureaucrats the money which was loaded in ships and taken abroad. When the ships got there they turned around and brought the money back to pay for all the things the foreigners wanted. Boy! Was business good. Never had we known such prosperity. Of course, things got pretty scarce—prices and taxes skyrocketed—and there was talk of controls and rationing. But shucks. That wasn't the fault of the plan—but because of greedy businessmen.

So we see from this simple beginning in a little grocery store in Nut Town how we went on the biggest binge the world has ever known. Speaking of a dollar shortage, when the dawn comes, which it surely will, with some semblance of reason returning to our drugged minds and with trembling hands, we start to count up our real assets, it really will be something—believe me.

Stabilizing the Rubber Industry

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks, I submit a statement by Mr. R. P. Dinsmore, vice president of the Goodyear Tire & Rubber Co., on our rubber problem. It follows:

STABILIZING THE RUBBER INDUSTRY

(By R. P. Dinsmore)

The last war proved that we are dependent on adequate rubber supplies in order to carry on our military activities and our vital domestic economy in such a period. We were saved by the rapid promotion of our synthetic rubber industry in World War II, and it is generally agreed that we cannot rely upon crude rubber imports in a future emergency, but should preserve the synthetic manufacturing capacity and skill, together with knowledge of how to use it, against a future emergency. The minimum production and use advocated to accomplish this is 100,000 long tons per annum—many believe a higher figure is desirable.

In an effort to frame legislation to accomplish this purpose Congress has made investigations and conducted hearings, which disclose a disheartening conflict of opinions as to what should be done. On the one hand certain industry leaders advocate turning over the entire business to private enterprise, free from any control or restriction. On the other hand are those who advise continued Government production of synthetic with continuation of the present mandatory use in transportation items. Various intermediate views have likewise been expressed.

We may assume that all of these opinions are honestly held and frankly voiced. The differences no doubt arise from personal judgments as to the weight which should be assigned to the various factors. There seems to be little, if any, conflict in the view that national security must be protected, or that our system of private enterprise should not be hampered by Government operations beyond the bare necessities clearly required by national security. It is the difficulty in reconciling these two objectives which has created sincere differences of opinion.

If synthetic rubber could compete with natural rubber in cost and quality, there would be no problem. Private enterprise would insure an adequate supply at competitive prices. This, however, is not the case and there is no assurance that it would be brought about by any private operation which is now in prospect. There is merely the belief or faith, in some minds, that the application of private-business genius would inevitably produce this result. It has been rather generally agreed that national security requires the maintenance in active use, or standby, of 600,000 long tons of annual general purpose synthetic-rubber capacity. To make this capacity effective, there is needed plant capacity for raw materials, including 425,000 short tons of butadiene, 132,000 short tons of styrene, and at least an assured supply of the corresponding quantities of antioxidant, modifier, soap, salt, etc.

There will be required a stock pile of natural rubber, which may be as much as 800,000 long tons (see RMA statistical committee report of November 1947), and a stock pile of synthetic rubber at least equivalent to 3 months' output of the idle portion of the 600,000 tons capacity. This latter to enable immediate rubber conversion to an emergency-use basis, while the idle plants are being reactivated.

To permit crude rubber stock piling, 275,000 long tons minimum of GR–S must be produced annually until sometime in 1949.

The need for high priority for these national security moves is evidenced by our experience in the past war, the present unsettled state of the world, and the probability of swift, unheralded attack, if we should once more become the objective of an aggressor nation.

While recognizing the necessity for giving primary consideration to national security, it is inevitable that an industry which is the product of our free-enterprise system, would view with deep concern Government control of the production, use or sale of its major raw material, rubber. This is because such control deprives the industry of its normal right to purchase rubber on a free competitive market; because industry cannot freely select the most economical rubbers for use in all its products; because Government thereby has an unusual influence on competitive relationships at home and abroad; because industry fears the exercise of Government control for purposes harmful to the industry, in order to promote relationships with foreign countries,

some of which have manipulated the price of rubber to our detriment; because the industry feels a proprietary interest in synthetic-rubber production which was built up and maintained by its experience, skill, and managerial ability; and, in general, because industry fears the deadening effect of Government monopoly. It may be added that the rubber industry believes that it has in the product of its own enterprise, an economic weapon which should be utilized to combat excessive prices for natural rubber. It believes that sufficient GR–S should be produced for this purpose.

As previously stated, these problems could all be avoided if GR–S should be produced at a price and quality competitive with natural rubber. As it is, any free-enterprise scheme must have so many qualifications and restrictions in order to provide for national security, that it becomes a hodgepodge with little freedom left except in the name. It remains to inquire whether or not the most serious objections to Government operation and control can be overcome and what remaining advantages any scheme of private enterprise might have.

Wide discussion has failed to evolve any more feasible scheme for insuring the use of the minimum amounts of synthetic rubber than by continuing present specifications for small tire transportation items. However, mandatory use should be limited to these items by law, subject to change only by Congress after recommendations by a joint committee of the rubber industry and the supervising Government agency. Flexibility may be permitted the agency as to the amount of GR–S to be used in each of the permitted items. The importation of such tire items should be subject to the prevailing specifications. Export of such items should be permitted free from such specifications. The Government should produce in its synthetic rubber plants sufficient rubber to supply voluntary industry demands, which will always be stimulated by high natural-rubber prices. An adequate stock pile of GR-S should be carried to permit reasonable demands to be promptly filled.

Cost of the synthetic rubber is a matter which directly affects fair dealing with the public. It should be realized that if the public must buy tires containing certain percentages of synthetic rubber regardless of cost, that rubber should be priced as favorably as possible. If it is unfavorably priced, there is a heavy burden placed upon the tire user. For this reason, the write-off of synthetic plants, which were built for emergency defense and are continued for the same reason, should not be saddled upon the rubber-consuming public. It should be carried by all of the taxpayers. Aside from a small charge for plant renewals and improvements, the rubber should be priced at actual cost.

Since natural rubber is the only important competitor of synthetic, its probable market behavior directly affects the acceptance of GR–S and the consumer burden. It seems clear that while natural rubber is in short supply, any moderate increase in demand may cause a substantial price increase. On the other hand, we have recently seen how a sudden falling off in demand creates a substantial decrease in price. At present, 2 to 4 cents price advantage seems necessary to create a voluntary preference for the synthetic. Thus if GR–S were selling at 16 cents per pound, it would be fairly competitive with natural at 18 to 20 cents. These should be realistic levels under present conditions, and fair to all concerned. They would stimulate voluntary use, which would aid in the accumulation of the needed natural rubber stock piles.

If proper pricing policies were to be adopted, it is doubtful whether either industry or the tire-consuming public would suffer by Government operation in comparison with private enterprise. Mr. Hadlock testified before Mr. SHAFER's committee that rubber could be produced for an out-of-pocket cost of about 14½ cents per pound, but that other necessary charges brought the cost up to or above the 18½ cents selling price. If legislation permitted Rubber Reserve to cut these additional charges to around 1 cent per pound, as the industry recommends, the rubber could be sold at 15½ to 16 cents per pound, thus extending the period of time over which GR–S would be competitive. On the other hand, if private industry produced the GR–S profits on the major raw materials and the rubber would have to be added, there seems to be little hope, by use of present plants and under present conditions, of equaling or bettering a Government cost. The probabilities are that the costs in private plants, for some time forward, would be at least 1 cent per pound higher.

Synthetic rubber would be favored by higher natural rubber prices or lower GR–S costs. Although plantation rubber costs have undoubtedly increased and may, for some time, continue to rise, native rubber and small, one-family, plantation rubber appear on the market in increasing quantities as the market price drops. It is evident, therefore, that only a successful restriction plan or a better balance between supply and demand than is probable in the near future, would hold natural rubber prices at 18- to 20-cent levels. On the other hand, a radical reduction in the cost of synthetic rubber production would require both cheaper processes and cheaper raw materials. This is true for the major intermediates, butadiene and styrene, as well as for the rubber itself. It is believed that these savings possibilities are purely theoretical at the present time. If they should become realities, private capital would then become available to develop them, even if completely new plant designs were required.

In any event, within 18 months or so, when natural rubber becomes plentiful, we may see it selling for anywhere from 12 cents down to 6 cents. Under these circumstances there is little likelihood that GR–S, whoever makes it, can compete. In fact, its only use will be for required security purposes, for a limited special need or to meet any rigged prices by crude producers. If this is a correct prediction, the loss of such a business is not much hardship to industry.

The foregoing has been a discussion of the conflicting needs of national security and industrial economy. It seems obvious that the requirements of national security require, for a time, Government controls which are generally obnoxious to private industry. The position taken here has been that we cannot have a mixed economy, and, for that, I believe the present-day world abounds in practical examples more convincing than any I might adduce. An effort has been made to show reasons why the best compromise, under conditions which will prevail in the next year or two, is continuation of Government operation and control. The question naturally arises as to whether there is a conceivable change of conditions when the situation might be reversed. Granted that reversal will not be possible until adequate stock piles have been accumulated, it seems clear that, thereafter, private ownership can safely be substituted whenever the National Security Resources Board (or its then equivalent) decides that the guaranteed maintenance of the present sythetic-rubber industry is no longer essential to national security. This might come about from the development of a fully competitive rubber or for other reasons not now apparent.

It is clearly evident that we are not yet in a normal peacetime condition. There are alarming manifestations of world unrest which directly threaten our future security. No sensible patriotic viewpoint can ignore these facts or subordinate them to our inherent preferences for private enterprise, particularly in this case where private enterprise has so little to offer and so little room in which to turn. It would be wise to continue Government control subject to simple and specific limitations and adequate congressional review, until such time when a reversal to our normal practices can take place without serious threat to our Nation's welfare. Within the present pattern, encouragement of voluntary use of GR–S brings us most nearly to the desired objective.

Meanwhile we may as well recognize the unpalatable fact that by every indication, both from our own work in this country, and from what we know of the German's work, it is unlikely that the GR–S type of rubber will ever be entirely competitive. It is probable that the competitor for natural rubber must come from new, undeveloped fields of polymer chemistry, while GR–S takes its place as just another obsolete weapon of the late war.

Trend to Monopoly Must Be Stopped—National Federation of Small Business Spearheading Drive To Strengthen Antitrust Laws—Speech of Edward Wimmer, Vice President

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. KEFAUVER. Mr. Speaker, small businesses are greatly concerned with march toward monopoly and big concentration in this country. They realize that monopoly means the death of free enterprise and of our opportunity to survive and expand. The National Federation of Small Business, foremost small-business organization in the country, appreciates this situation and is doing something about it.

Under leave to extend my remarks, I include a thoughtful and stirring address made by Edward Wimmer, vice president of the National Federation of Small Business, over a radio network on January 24, 1948. The address is as follows:

Thank you, and greetings, everyone.

This week, ladies and gentlemen, I am going to devote most of my time to a discussion of one of the most controversial and hard-fought legislative proposals ever to come before the lawmakers of this Nation. I am speaking of a measure commonly referred to as the O'Mahoney-Kefauver bill to outlaw mergers and consolidations between competing corporations. You may be of the opinion that such a bill as this would not affect you directly, but believe me, no matter what your position in life, I can assure you that the future of the O'Mahoney-Kefauver bill will have a direct bearing on your future. I say this because, in my humble opinion, if mergers and consolidations of competing corporations are not halted in this country, the American way of life will be halted, and the O'Mahoney-Kefauver proposal is the only legislation now ready for passage designed to meet this emergency.

There are many other problems closer to your own thinking which I would like to discuss at this moment. The present and growing threat of inflation, for example. The tax situation. The growing threat of the consumer-cooperative movement. The threat of

socialized medicine and compulsory military training. The liquidation of savings. The dangerous overloading of the debt structure and many other things, but discussion of these problems will have to come later, not because they are not as important as today's topic, but because it will not do any good to solve any of those problems if we fail to solve the merger problem. If you have been a regular or periodic listener to these federation programs, you have heard me speak on the O'Mahoney-Kefauver proposal. This past year I testified in favor of it, as did our president, Mr. C. Wilson Harder, and our Washington representative, Mr. George Burger. We also polled our membership, and the vote was overwhelmingly in favor of its immediate passage. Last year the bill was reported out of the Judiciary Committee unanimously, and it is now in the Rules Committee. The job is to obtain early consideration of the measure by the House and Senate.

Permit me to give you some background information on the merger question, which I think is of vital interest to every thinking American who loves this country. First of all, I think we can agree on the thesis that widespread, independent ownership of farm, home, and enterprise, is the foundation of a free economy, which in turn is the foundation of free government. If you believe in the concepts of human dignity and freedom as expressed by the founding fathers in the Declaration of Independence, the Constitution, and the Bill of Rights, you must believe with me that such concepts as they expressed are not only basic to free enterprise and free government but are also in keeping with the concepts of Christianity. Therefore, anything which seriously interferes with the expansion of a free economy, must likewise interfere with the expansion of free government and Christianity, since one is inseparable from the other. When we get this truth securely in mind, we find it a lot easier to effectively approach the many social, economic, and political problems we are now called upon to solve. Will you approach the merger problem with me, with this thought in mind?

The O'Mahoney-Kefauver bill, known as H. R. 515, is not ill-conceived legislation, nor is it a radical measure from any standpoint. It merely amends a law which was passed in 1914 by a Congress fearful of the growing concentration of economic power in a few corporations, which was already taking place at that time. The law was called the Clayton Act, and its purpose was to stop mergers and consolidations of competing corporations, on the grounds that such mergers and consolidations were tending toward monopoly and were contrary to the concepts of democracy. This act, the Clayton Act, specifically stated in section 7, that no corporation could acquire the stocks or share capital of a competing corporation, when such acquisition tended to lessen competition. Section 11 of the act provided that the Federal Trade Commission, created that year, should have jurisdiction over the fulfillment of the Clayton Act and be empowered to order a divesture of any stocks or share capital involved in any merger which tended to create monopoly. Such a law would have not only prevented the combining of enterprises in the private-enterprise field but it would have stopped the combining of consumer-cooperative enterprises. It would have been better, however, if this act had never been passed, for it served no real good, and only tended to defeat following attempts to check the march of monopolistic forces. The Federal Trade Commission had no law with teeth in it, and the amount of money which is granted the Commission is not enough to carry on its essential work, even if the law had been enforceable. Why is all this true? Let me explain.

The Clayton Act stipulated that no corporation could acquire the stocks or share capital of any competing corporation, so the monopolizers merely acquired the physical assets, they bought the property itself, and then the stock. When they had done this over a long period of time with little opposition, they became so bold as to begin acquiring the stocks and share capital of competitors. The O'Mahoney-Kefauver bill would be the thumb in the dike now needed to stop this acquisition and keep the whole structure of our economy from cracking wide open, and I will tell you why.

You know as well as I do, that concentration of economic power was the basic cause of the collapse of every ancient and modern democracy in the history of the world, and both Woodrow Wilson and Howard Taft stated within a few months of each other, that concentration of economic power had reached such proportions prior to 1918, in this country, that it jeopardized the future of free enterprise and free government. Reports published in 1919, revealed that 200 nonfinancial corporations owned 33 percent of all the corporate assets in the United States. In 1919, due to the nullified Clayton Act, there was a total of 379 important mergers. Each year the number increased, until in 1929 there was a record high of 1,079 mergers, and the 200 nonfinancial corporations had jumped their ownership of corporate assets from 33 percent in 1919, to 48 percent in 1929, which leaped to 55 percent in the early thirties. If the Clayton Act, and in fact, if all our antitrust laws had not been full of loopholes, thousands upon thousands of corporations which have now lost their identity would still be competing on the open market, and 20 banks would not now be holding nearly a third of all the loans and investments of all the banks.

During the thirties, merger and consolidation and expansion of giant chains and holding companies continued, and in 1939, Franklin D. Roosevelt sent his sensational monopoly message to Congress, urging immediate strengthening of the antitrust laws, with new provisions for immediate halting of all mergers, plus the breaking up of all giant holding companies. The Temporary National Economic Committee, created by the Seventy-fifth Congress, looked into every phase of economic concentration, and as chairman of that committee, Senator JOSEPH O'MAHONEY performed a service of immeasurable value in determining our future handling of this problem. Congressman ESTES KEFAUVER, of Tennessee, in pushing his bill as far as he has, is measuring up to the highest standards of political statesmanship.

The TNEC study showed for one thing, that the average small- and medium-sized plant could operate at a lower cost than many of its largest competitors, and that during period of stress, the small- and medium-sized plant, when independently operated, was more likely to make a fight for a share of the available business. Dr. Frank Fetter in his testimony before the TNEC said that any outright combination of formerly independent plants, however attained, puts an end to competition among constituent members, giving a degree of control over production and price policies not attainable by the trade-association agreement. "Yet," declared Dr. Fetter, "few combinations have been questioned in the courts, and others have been given a clear bill, except when the abuses where so exaggerated as to shock public opinion and the court." End of quotation. Like ourselves, Dr. Fetter is not opposed to big business. What he is opposed to is big business combines, and some of the topmen in the industrial and financial world support this opposition. Owen D. Young said in 1933, that it was impossible for any man to direct the conglomeration of great numbers of operating companies with holding companies superimposed on the operating companies, and holding companies superimposed on the holding companies, investment companies and affiliates, such as the Insull combine. Arthur H. Anderson, head of one of the largest accounting firms in the United States, says that properties have been added to properties so fast as to cause what he terms industrial indigestion. Charles R. Flint, who recorded himself in Who's Who as the father of trusts, testified that the so-called intellectual giants of the industrial world were inclined to centralize too much, and he expressed his belief that it was a far wiser economic policy to sustain the independence and individuality of the separate concerns.

That is all we are trying to do, ladies and gentlemen, in our support of the O'Mahoney-Kefauver bill, for we believe that sustaining the independence of enterprise is to sustain the independence of this Nation. What chance will the youth of tomorrow have to start an independent business if present trends continue unabated, and think of the loss of opportunity to the average workman where his choice of jobs is limited to fewer and fewer, but bigger and bigger corporations, and the greater the combine, the farther away is the worker from all personal contact with the men who have the final word on all decisions. No one needs to be against big business to oppose this trend, any more than one needs to be opposed to labor unions because they are big, but like the combines in the industrial and financial field, labor has been merging and combining, with Government growing bigger and bigger, to keep from being taken over by one or the other. Attempts are being made to take monopoly powers away from labor, but how can this be done when labor can prove it needs monopolistic bargaining powers to deal with monopolistic business. So you see there is much more at stake in the passage of the antimerger legislation we are supporting, than shows on the surface.

Senator O'MAHONEY described H. R. 515 as a "mirror in which will be reflected the development of the future," and I think this is a good way to look at all major legislative proposals. What do they mirror?

During the holidays I made a broadcast on building bridges for America's children, and my point was, that what our organization is trying to do, is no more nor less than to help create an economy in which the boys and girls of tomorrow will have their opportunity to go into business for themselves; engage in the professions and their other chosen vocations as independent, individual human beings, enjoying every liberty set down in our wonderful Constitution and Bill of Rights.

Such is the basis of American family life, and only in a society where all men can exercise a free will and the inherent good which God gave to man, will you find any high degree of material and spiritual progress. The opportunity to open a little store is therefore something far more important to society than the mere granting of a personal business privilege, and this kind of thinking must dominate and determine our future course in all things. The reason why the Federation puts so much stress upon the importance of the independent farm and independent retail store, is because the independent farm is the fountainhead of independent enterprise, and the business of millions of small manufacturers, banks, wholesalers, jobbers, brokers, insurance companies, auto dealers, and so forth, is dependent upon the individually owned store. and think of the number of salesmen alone who would be knocked out of the economic picture if the small retailer were to disappear. This business of keeping the independent in business, whether he be a grocer, candlestick maker, artist, doctor, farmer, miller, or whatever he is, is therefore the task of all patriotic Americans for upon the destiny of the independent, rests the destiny of the Nation.

Thank you for listening, good luck, and good thinking to you all.

Three Largest South Dakota Newspapers Herald Passage of the Mundt Bill (H. R. 3342) To Establish a Permanent United States Information Service Abroad

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. MUNDT. Mr. Speaker, with the passage last week of H. R. 3342—the so-called Mundt bill to create a permanent United States information and educational exchange service in our State Department—this country has at long last equipped itself to tell people throughout the world the truth about the facts and functions of freedom as they are practiced in this Republic.

As indicative of the general approval which this new legislation is receiving throughout the country, Mr. Speaker, I am including at this point in the RECORD recent editorials clipped from the three largest daily newspapers of South Dakota. Newspaper comment, generally, throughout the country is registering the same enthusiastic approval of our Congressional action as that demonstrated in the three following editorials:

[From the Sioux Falls, S. Dak., Daily Argus Leader]

AMERICA MUST TELL ITS STORY IN EUROPE

The Nation is now generally convinced that the American story must be better told in Europe if we are to counteract effectively the propaganda coming out of Moscow.

In consequence, it is now a strong probability that Congress will approve promptly the bill originally presented by Representative KARL MUNDT, of South Dakota, to promote the Voice of America.

This subject last week commanded the attention of the Washington Post, which said in a lead editorial:

"One of the most hopeful auguries of the new session of Congress is the manner in which action has been expedited to put the foreign information program on a sound basis for the future.

"Last week the Senate Republican Policy Committee gave the green light to the Senate version of the Mundt bill as one of three pieces of 'must' legislation for January.

"In addition to providing the basis for expansion of Voice of America broadcasts, libraries and other facets of the information program, the Mundt bill also goes into another significant aspect of our cultural relations—the exchange of students, teachers, and technical materials and the assignment of specialists to other countries on request.

"Passage of the Mundt bill itself, of course, does not assure the funds necessary to do the job. But it is the first step in what many Members of Congress have rightly come to regard as an inescapable choice. The second equally essential step will be to vote the money for any adequate program, both in a deficiency appropriation and in next year's budget."

The expected passage of this bill is a significant step in the development of an American international program.

So far we have been, as Representative MUNDT put it in a speech in Sioux Falls, "feeding the stomachs of Europe while Russia has been feeding the minds of Europe." As a result, we have received little credit and, in truth, much abuse. The Russians have succeeded in implanting in the minds of many Europeans the impression that we are giving only small aid and that what we are giving is material that we do not consider good enough for ourselves. Furthermore, they have promoted the idea that we are doing this solely to promote our capitalistic economy and that we even are somewhat interested in starting another war just to produce prosperity in the United States.

Such arguments are, of course, childishly inaccurate, but they have been, unfortunately, accepted in some quarters of Europe.

It is obviously sound policy for us to spend some money—at the most, however, only a trifle compared to the relief cost—to make sure that Europe understands our motives and our benefactions.

This is the purpose of the Mundt bill, and there's satisfaction in the realization that its merit is being appreciated in Washington.

The second editorial, Mr. Speaker, is taken from the Aberdeen American News published in Aberdeen, S. Dak.:

"VOICE" TRIBUTE TO MUNDT

Unanimous approval by the House Monday sent to President Truman the legislation authorization strengthening of the State Department's "Voice of America" foreign broadcasts for offsetting Russian propaganda.

The enthusiastic endorsement in both Houses, of the legislation is a tribute to the leadership of Representative KARL MUNDT, of South Dakota. One of the first to see the need for this type of information dissemination, he fought for the measure against great odds last year and won national recognition for his efforts.

Congressional delegations to Europe last summer and fall learned that the South Dakota Representative knew what he was talking about.

They saw for themselves that the great aid America was giving Europe in her fight against communism was not as effective as it should be because America was not doing the necessary job of selling herself. And they saw also the effectiveness of Russia's vicious propaganda campaign.

It is time, these Congressmen have decided, that Europe start learning the truth about America.

The action of Congress on this important measure which assures the world America is going to speak up for the freedom and for the kind of democracy it cherishes is encouraging to persons who are beginning to see the threat once more of the isolationist influence.

Finally, Mr. Speaker, I want to call attention to an editorial appearing in the Rapid City Daily Journal, published in Rapid City, S. Dak., out in South Dakota's famous summer playground—the beautiful Black Hills:

WELL DONE, KARL MUNDT

The Mundt bill has passed both Houses of Congress and is awaiting President Truman's signature, marking the end of a strenuous campaign by South Dakota's KARL MUNDT.

MUNDT has worked vigorously and often with the odds stacked against him to push through his Voice of America legislation. He has insisted it is folly to feed the stomachs of the Europeans while the Communists feed their minds.

The unanimous approval both Houses of Congress gave MUNDT's bill is a stirring tribute to the efforts of the active South Dakotan.

The scores of Congressmen who visited Europe last summer and fall were shocked at the way America is being misrepresented abroad. Day and night the Russians are carrying on a vicious anti-American campaign, telling the people of Europe we are dollar diplomats, that we want to enslave the people of Europe, that we are warmongers, that the United States wants the Marshall plan in order to create a permanent market for American goods.

In France last summer when that country was suffering from its worst drought in 100 years, Communists set fires in the scanty wheat fields of Normandy and Britanny. The Communist newspapers of France charged the fires were started by American agents who wanted to make France spend its last few dollars on American wheat.

Some American shipments to France were a mixture of corn and wheat flour. The Communists told the French that Americans in their country only feed corn to hogs and evidently the Americans do not think any better of the French than they do of their swine.

To most of the people of Europe, America is still a utopian country, a land of plenty and the place where a man of humble beginnings may rise to the highest office in the land. They do not want to believe the Russian propaganda and most of the Europeans do not believe it fully. However, it is like water dripping on a stone. If it drips long enough, it is certain to leave an impression.

Against Russia's clever and expansive propaganda system, America has little defense. We have a United States information service, but it is grossly inadequate. We have three men stationed in France, for example, to tell the truth about America to the French; the Russians have hundreds hired to misrepresent America and to promote the communistic philosophy. It is like sending a teenager to do battle with a giant.

KARL MUNDT's legislation will do much to convey the truth about America to the bewildered Europeans. It provides for the exchange of students—Europeans would be sent to American universities and Americans would go to schools in Europe, resulting in a better knowledge of their respective lands.

It provides for well-equipped libraries where the people of Europe can read about this great land of ours and learn that it isn't a nation of scandalous divorces, lynchings, and gang murders as the Russians make it out to be. It provides for chairs of American culture in foreign universities, the sponsoring of American lecturers and technicians.

Most important, it provides for a virile information service of facts and sets up the machinery which will enable America to make out the Russian propaganda for what it is—lies.

After Truman signs the Mundt bill, Congress must still appropriate the necessary funds for its operation.

But the bill has passed, a vital step on the way toward better world understanding. KARL MUNDT, of South Dakota, is to be commended for the great task he successfully performed to help feed the minds as well as the stomachs of the people in the harassed lands across the Atlantic.

Industry Needs Medicine and Vice Versa

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. McCORMACK. Mr. Speaker, under permission granted me, I include in my extension of remarks a well considered and challenging address made by S. Bruce Black, president of the Liberty Mutual Insurance Co., of Boston, Mass., at the annual dinner held in Cleveland,

Ohio, on January 5, 1948, of the Congress on Industrial Health, American Medical Association:

INDUSTRY NEEDS MEDICINE AND VICE VERSA

It is indeed a privilege to have this opportunity to speak at this meeting of so many leaders of American medicine and I am grateful for this occasion to state industry's needs as seen through the eyes of an organization such as my own. I am not a doctor and I do not presume to tell you what you need to do. But my experience with industry and its relations to medicine leads me to make certain observations as to what industry's medical needs are.

That we may better understand what I believe is needed, I would like to go back 40 years, to the days before workmen's compensation laws were enacted. At that time when a man took a job he assumed the risks that went with the job. If he sustained an injury while at work he could not collect moneys from the employer unless he proved that his employer was negligent; he had to prove this in a court of law, and it was accepted that if a fellow worker's negligence caused the injury, that injury was not the responsibility of the employer.

When the philosophy was adopted that such disablement is part of the cost of production and should be incorporated in the price of the product, workmen's compensation laws were passed. Industry became legally liable for the injuries to its workers, became obligated to provide benefits during the time lost from work, medical and surgical care that injuries required, and death benefits to dependents if the injuries were fatal.

It became evident that if industry were to pay such costs it should have some control over those costs. This brought about the development of three specialized skills—safety engineering, industrial hygiene, and industrial medicine, to reduce the number of work injuries and occupational disease disabilities by removing their causes and industrial medicine to minimize the consequences of injury and disease and to restore the disabled to useful employment.

Even though some groups frown at the mention of profits, it is certainly true that the profit motive underlies our American way of life. Needless to say, survival in a free competitive system requires industry to control its production costs. Only in that way can it stay in business. Workmen's compensation is a part of the production cost. The experience of the individual plant largely determines the cost the plant pays for its insurance for workmen's compensation. Two plants making the same product may pay very different costs for compensation insurance. When a plant's compensation losses are low, the compensation insurance costs are low and that part of their production cost is low. When the compensation losses are high, the reverse is true.

The changing social concept that made the injuries arising out of the production of a commodity a part of the production cost produced a need, a demand for an in-plant medical program. Management found a few pioneering physicians who would enter their industries and develop medical programs. There was a time when many physicians looked upon these pioneers, questioned the propriety of their practices, attempted to restrict them to first aid, and felt that the care of the injured belonged exclusively to the private practitioner. Perhaps some physicians still hold this viewpoint.

Nevertheless, industrial medicine has grown, and it has grown because the changing social trend has created a specific demand and need for it. It has grown to its present status, where it should soon be generally recognized as a specialty within the field of medicine. Industrial medicine encompasses all those aspects of medicine that relate to industry. It includes, in addition to prevention, the diagnosis and treatment of industrial injuries and occupational disease, industrial hygiene and toxicology, mental hygiene, industrial sanitation, legal medicine, administration, employee relations, and health education. In those plants large enough to support a full medical program, both the industry and the employees have generally benefited from modern industrial medicine. The practice has developed steadily out of the obvious need and out of its own effectiveness. Smaller industries need a similar type of medical care to achieve the same ends. Ways and means are now developing to furnish that care, but progress is slow and the problems are many. But where can industry find the doctors for such care? Where can it find physicians who are interested in and have training in industrial medicine? I know of only a few medical schools in the country that are making a serious contribution to this field. And those few doctors that may become qualified—how is industry to find them? And, conversely, how is the qualified physician to approach industry?

The vast majority of industrial cases, rightly, are now being treated by the general practitioner. Industry has found too many times that the general practitioner has too little knowledge of or interest in the man's job or his working environment. How can it be said that he is giving his patient the best possible medical care without such knowledge? Industry has found that he limits his treatment generally to curative practices and has given little attention to the preventive medical aspects of a case. This is so because his practice is curative medicine, not preventive.

Industry has found that because of his lack of knowledge of the plant environment and the work, that his sole contact with the industry is likely to be the patient's statement which he takes at face value. This often leads to unnecessary and costly litigation, ill will, loss of time from work, poor employee relations. We do not feel that industry is unreasonable in asking the American Medical Association to join hands with it to improve the practice of medicine as it applies to the industrial problems.

Industry needs practitioners who are interested in the effect of the working environment on the man, who are aware of the basic elements of industrial medicine, who are willing to see the problems of industry, who are willing to pursue the preventive aspects of a case. Industry needs a preventive medical control plan.

Fundamentally, industrial medicine concerns itself with the health of the worker. This means that the physician must be familiar with and concerned with occupational conditions, proper plant hygiene and sanitation and the health of the workers. It would be wrong to state or imply that he gives no treatment beyond simple first aid, whether the condition or injury is connected with his work or not. I know of no industrial physician who thus restricts his medical activities to first aid.

We have now reached the threshold of a change as vitally significant to the practice of medicine and to the running of an industry as were the new workmen's compensation laws. It is becoming more generally accepted that the catastrophe of sickness and surgery should be provided for beforehand. Opinions differ as to how this provision should be accomplished. Should government tax industry and the worker and provide medical care? Should individual initiative determine whether or not a person will so protect himself beforehand? Or should industry provide for medical care and sickness losses?

Let us first understand that the cost of individual sickness insurance must necessarily be high. It must be high because it must be preceded by a determination of insurability. It must be high because those individuals who would be most likely to take advantage of it are those who would most need it. And it is high because of the need for individual premium selling and collecting.

These impediments can be minimized by the method of writing accident and health insurance on a group plan so that a sizeable segment of population will be insured under one premium and hence experience will be average. Thus there is no need for the expense of individual selection and no need for individual premium collecting. The group most suited to such an approach is an industrial or business group.

At the present time industry is alive to the importance of its workers' health. It costs money to hire a worker. It costs money to train him. And the longer a well and competent man works for the company the more important to production are the skills which he acquires. Ill health in a worker means decreased productiveness, inattentiveness, greater liability to accidents, decreased quality of product, increased scrap, costly absenteeism, and a host of other effects which can be summed up as lowered production and increased production costs. There is a direct relation between worker health and worker productiveness. Thus if industry can invest in a program that will improve employee health, that investment will be worth while.

This country is essentially an industrial country. Whether it survives in world competition will probably depend on the skills and the industrial production that this country can achieve. This means that the industrial population cannot be permitted to lose its effectiveness at an arbitrary age of 55 if it is in any way possible to prolong the health of the worker for another decade. Just how far such prolongation of productiveness can be carried is fundamentally a medical and biological question but it certainly can be carried farther and faster with the cooperation of industry than without it. Other things being equal the civilization or national economy which can be served by the greatest number of productive working years from each individual worker is going to survive and triumph in world competition.

Industry is adopting more and more group accident and health plans for their workers. Many industrialists have accepted the responsibility of paying for worker ill-health and medical care. Unions recognize the value of group insurance and it is being included in many contract negotiations.

This movement is a continuance of the social trend represented by the development of the workmen's-compensation system. Industry's adoption of group accident and health plans stems from an awareness of this trend. Preventive medicine as well as medical care are inherent in these plants. Industry needs organized medicine to work with it, in developing the best possible ways to meet these problems, for I believe, industry would prefer to see their solution remain in the hands of private agencies.

Industry itself has not made the best possible use of the abilities of modern medicine, and this has been for two reasons: First, in many cases industry has not been aware of its specific needs or the answers to those needs. And second, organized medicine has not offered a full and realistic answer to those needs. In our work in industry we find this to be so. Where industry thoroughly understands what medicine can do for it and where medicine is willing to adjust its practices so that it contributes to industry's well-being as well as the individual work's well-being, we are noting increasing industrial medical progress.

As I have already stated, workmen's-compensation costs are a part of the production cost. If, as the trend indicates, nonoccupation accident and health is to become a part

of production cost, then industry must be very much interested in a medical program and the use of medical skills. Of course, industry as a whole is very much interested in the individual; at the same time industry has to be interested in the cost and the industrial return on every investment. In working with industry and interesting industry in making greater use of good medical practice, we have concluded that if the medical profession can answer some of the cost-control problems that industry faces, as well as furnishing good medical care for the individual, then the time is ripe for a joint program between medicine and industry.

When industry assumes the cost, the obvious question is, "How can such costs be controlled?" There is little control if present-day medicine offers only a curative approach to illness. There is litle control if medical service is offered only as an absentee-type of supportive treatment. There is little control when physicians certify as disabling, conditions which would not be considered disabling if the requirements of the job were understood or if the worker were placed in work which he could safely perform. There is little control unless the physician is willing to approach each case from a preventive as well as a curative point of view.

And what does industry need to control costs under group health and accident insurance? It needs many of those elements of a medical program that have grown out of the workmen's compensation system, and in addition to that it needs greater knowledge of and emphasis on preventive medicine. By preventive medicine I mean two things: The prevention of illness and the prevention of losses.

Knowledge of the prevention of illness is growing. Perhaps the American Medical Association can focus greater emphasis on this phase of medical knowledge and research as it applies to illness and to aging processes. Perhaps it is appropriate to suggest that the great preventive accomplishments of the past have been achieved in dealing not with individuals but with masses.

Of great immediate importance is a need for prevention of losses through medical care. This includes prompt and effective treatment of minor illnesses to prevent the development of more serious and disabling conditions. This also includes a recognition of the importance of keeping a man at work, a recognition of the economic significance of the day's wage to the worker and the day's productive effort to industry and the Nation's economy. This will mean more active treatment aimed at maintaining the workers' wages and the workers' productiveness. And when, in spite of this, serious illness occurs, it means prompt effective treatment to restore the man to health and to productive effort as soon as possible.

When a change in social trend creates a need, that need will somehow be filled. Adoption of group health and accident plans by industry is a response to a social trend. It is creating a need for industrial medicine and preventive medicine such as I have indicated. It would appear that this can best be supplied by the physician who because of his knowledge of work capacity and environment is best qualified to decide what work the employee is able to accomplish.

Industrial medicine is maturing. Soon definite patterns will have become fixed and applicable to the practice of medicine in industry. The American Medical Association can offer aid and leadership in the development and fixation of these patterns. If they become fixed without such aid, the patterns may not be entirely pleasing to any of us. Right now there is serious need for strong, active, realistic cooperation and direction of these trends. The American Medical Association should, I believe, stress the ascendant element of preventive over purely curative medicine to facilitate and implement the practice of industrial medicine. It should bring this thinking to the general practitioner who is now treating most of industry's illnesses and injuries. There should be close cooperation between the association and the physician serving industry, looking toward higher standards of industrial medical practice, perhaps by establishing a certifying board as has been done in other specialties. In some such way, industry may know who is a qualified industrial physician.

And, finally, some very challenging questions grow out of group accident and health benefit plans. Shall the industrial physician treat all illness and injury that is ambulatory? In nonoccupational conditions, shall we have only advising and educating function? Will group practice offer the answer to group insurance? How is a preventive medical program to be developed that will be effective?

These questions should be answered by organized medicine. As always happens where the need is great enough, questions such as these are somehow answered by somebody. We believe that industry would prefer to have them answered by the American Medical Association than by forces outside of organized medicine. Industry needs organized medicine to implement its health program. American medicine needs industry, because this is an industrial Nation and because industry is becoming the focal point for the medical care of the majority of American workers.

Time for Common Sense

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. DINGELL. Mr. Speaker, on Monday, January 19, in the Washington Post, there appeared a statement signed by the Schenley Distillers Corp., captioned "Time for common sense," an open letter to the Congress of the United States.

I want to address myself to the statement which, throughout its entire length, impresses me with its forceful and sound reason. I believe that this statement should prompt the membership of the House to consider the points raised by the signers of the advertisement. Unrefuted arguments advanced in the statement should compel at least a cautious advance if not an abrupt halt to the policy of grain restriction, not only to the distillers but it seems to me that the same argument might be applied to the impending restriction on the production of beer, the workingman's favorite beverage.

I want to go along with the program of feeding the hungry but I want to be sure that the restrictions are justified and that they will produce an additional volume of food for the unfortunate people of Europe before I would further impose grain restrictions.

I submit the advertisement as part of my remarks for I feel that it is more readily understandable than any interpretation that I can give as relates to its contents.

TIME FOR COMMON SENSE—AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES

In the next few days the Congress will be asked to consider legislation to extend the shut-down of American distillers. Since this involves an industry which pays annually more than two and a half billion dollars in taxes and employs directly and indirectly more than 2,000,000 American workers, we think it might be useful for you and for the public to have some of the facts about the recent voluntary 60-day shut-down.

Schenley entered into the voluntary agreement and has lived up to its obligations 100 percent.

Some American distillers did not shut down.

The Canadian distillers did not shut down.

The British distillers did not shut down.

No other country in the world closed its distilleries.

For the announced purpose of providing food for hungry people in Europe, the shut-down has been an absolute, costly, and utter failure.

The purpose of our Government was to save wheat. We believe that not only was there no saving of wheat, but that wheat was actually lost.

The distilling industry uses practically no wheat. The actual figure is less than one-thousandth of 1 percent of the total wheat crop.

This industry uses principally corn, some rye, and some barley malt. Most of this grain, if not so used, would ordinarily be fed to animals.

Normally we use about 2 percent of the total corn crop.

It was estimated by the President's Food Committee that the 60-day shut-down would save approximately 10,000,000 bushels of grain, but actually little or nothing was saved because in the process of distilling we return to the farmer feeds for poultry, hogs, dairy cattle, and beef cattle which in the opinion of experts have an equal or greater feeding value than the grain we used.

We take out only the starch. We save all the protein and oil and add yeast. The resulting products are rich in protein, vitamins, amino acids and other feed values.

We are convinced that the final result is this: If a farmer has 10 bushels of grain and sells us 2 bushels for distilling, and then feeds the 8 bushels which he kept and the residue which we return to him, he will get as much added weight in feeding his animals as he would have achieved if he had fed them the original 10 bushels.

We think he actually gets more.

Suffice it to say that the benefits of a balanced diet have been proved over and over again for both animals and human beings.

Our own Department of Agriculture, in numerous bulletins, has published many formulas for the use of distillers feeds to balance animal diets.

We admit, frankly, that the exact percentage of feeding value which we return to the economy is debatable.

You may think that instead of being more, it is even as much as 50 percent less. Let's assume that you sincerely believe that the Luckman plan saved 5,000,000 bushels of corn, or less than one-tenth of 1 percent of the total grain available.

But it wasn't corn the Government wanted to ship abroad. It was wheat.

We knew that our feeds would add weight to cattle, but the Government apparently was not interested in getting more meat. Now the Secretary of Agriculture tells the country that we are faced with a terrible meat shortage. It does get a little confusing, doesn't it, gentlemen?

In addition, we think they lost more wheat than they thought they saved.

When the farmer doesn't get our feed, do you honestly believe he is going to let his poultry and hogs and cattle starve?

And maybe this particular farmer hasn't any corn. Maybe he has wheat. So he feeds the wheat to the chickens and hogs and cattle—and it was wheat that we wanted in the first place to ship to Europe.

The government of every country in the world, except our own, has adopted the principle that distilling takes nothing away from the food economy. This is proved by the fact that none of these governments have shut down their distilleries. Surely they are not purposely taking food out of the mouths of starving people.

England is running at capacity; Canada is running at capacity; 11 countries which have submitted their needs under the Marshall plan, have asked for grain for distilling and brewing.

Even assuming that the shutdown saved a few million dollars worth of corn, let's see what it cost:

It completely dislocated an industry which pays to the Federal and State governments more than $2,500,000,000 a year in taxes.

It threw thousands of American workers out of work. We know because we alone kept more than 1,000 on full pay.

It increased the price of the neutral grain spirits now in storage in the United States more than 150 percent.

It opened the door wide for foreign distillers and foreign workers to take over the business of American distillers and the jobs of American workers.

We admit that these are strong statements, but we will prove every one of them right up to the hilt.

There is one other fact that ought to be clarified. The public was told that the stocks of whisky in the United States were adequate—that we have over 550,000,000 gallons of whisky. What we have, actually, is about 65,000,000 gallons of whisky in this country which is 4 years old or older. This is about 1 year's supply. The rest is green whisky not yet fit to drink. (Government figures show what is put away—not what is there after evaporation and outage.)

This is less aged whisky per capita than in any distilling country on the whole face of the globe.

Now you may well ask us why we agreed voluntarily to shut down when we knew all of these facts and had communicated them to the Luckman committee.

We assented because we were conscious of an obligation to the American people, who decided in 1933 that they would prefer to have a sound distilling industry with employment and taxes and Government regulation instead of bootleggers, gunmen, and rot-gut. They put that in our Constitution.

So, when the call came to help hungry people we wanted to contribute our share, heaped up and running over. We knew no grain would be saved, but when we were told that a great sacrifice on our part would be a tremendous psychological contribution for the purpose of securing assent from others to make comparable sacrifices, we agreed.

No other American industry was asked to make any comparable sacrifice.

No other country asked its distillers to make any sacrifice.

We think it is time for a little common sense.

We think this whole question of the shutdown of distillers and the allocation of grain for restriction of production should be investigated by the Congress of the United States. Not in an hour, not in a day, but in a full-dress hearing, with opportunity for all to be heard. Not just distillers, but the communities that are being ruined, the workers who are being thrown out of work, and the farmers who have an interest in the feeding of their stock and the disposition of their products.

We believe that the public interest would be best served by full disclosure of all the facts in the full light of day.

SCHENLEY DISTILLERS CORP.

The Next Great Fight for Equality for Agriculture

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Clarence Poe, from the Progressive Farmer for December 1947:

THE NEXT GREAT FIGHT FOR EQUALITY FOR AGRICULTURE

(By Clarence Poe, president and editor)

First of all we most heartily congratulate the members of the House Committee on Agriculture upon the patriotism and progressiveness which have caused them to go to the farmers themselves and ask, "What do you think Congress should do?" At the House committee meeting we attended, crops farmers, cattle raisers, dairymen, women farmers, tenant farmers, Negro farmers, 4-H clubsters, all spoke up—and spoke with such vigor and ability as to make everybody proud of our southern farm folks. Of course, leaders in agricultural research, education, and organization will be heard in Washington, but it was an inspiration to see this committee traveling north, south, east, and west to get the views of "grass roots farmers."

I

For our own part we should like first of all to ask the able members of this committee to consider the one question which must be back of all its other questions, namely, "Just what great purpose does Congress intend to serve, just what great national interest does it wish to promote, as a result of whatever long-range agricultural policy it adopts?"

All too many present-day speakers, writers, commentators, and statesmen seem to think that the chief purpose of any agricultural policy, whether short-range or long-range, should be merely to produce (and produce cheaply) the food and raiment for an urban civilization, a civilization of our towns and cities. Our own convictions, on the contrary, is that it is the high duty of government to promote and maintain a rich and satisfying rural civilization for our farm people themselves. So Congress must not merely ask, "How can soils be so conserved and handled as to produce food and fiber at the lowest possible cost to city consumers?" On the contrary, Congress and Government must conserve and promote human values as well as economic values. Farm men and women must not only have satisfying incomes, but must have a satisfying way of life. As we have said over and over—

"Farmers work just as hard as any other class. By feeding and clothing humanity, they make just as important a contribution to human welfare as any other class. Hence they are just as much entitled to all the advantages of modern civilization as any other class. But just because the necessities of their occupation compel them to live in widely separated places, they have not heretofore been regarded as entitled to these advantages. From now on farm folks must demand such Federal, State, and local cooperation as will give farmers—on absolutely equal terms with other classes—the privileges and benefits of twentieth century civilization."

II

There are two great fights for "Equality for Agriculture" that farmers must make and about which Congress should help. The first great fight is for the farmer's economic rights. Here the No. 1 need is for "parity prices"—to see to it that the farmer gets prices for his products that will enable him to get a fair exchange of his goods for manufactured goods—and for sound crop insurance and tenant purchase programs, etc. By adequate, organized effort American farmers may win permanent recognition for this form of "Equality for Agriculture," the farmer's economic rights.

What we now equally need to have recognized is the farmer's right to another form of "Equality for Agriculture." By this we mean the duty of society and government to give the farmer reasonably equal access to all the benefits and advantages of twentieth century civilization.

A recent member of the Government of Australia made a trip through the South and while here made one statement that should be thundered from the housetops: "In our country," he said, "we have come to think of it as a duty of government to provide for the education, health, and general welfare of all classes of our people regardless of how widely scattered the duties of their occupation may take them. They are not to blame for that."

That, it seems to us, must now likewise be recognized as the duty of our American Government. Already we have gone far in this direction but not yet half far enough.

III

For a long time it was thought all right for Uncle Sam to deliver the townsman's mail daily to townsfolks, but rank socialism to do so for farmers. Now quick mail service to farmers has helped American business no less than agriculture.

Electricity is one of the godsends of twentieth century civilization—but only recently has Government begun to recognize its duty to give its benefits to farmers on something like the same terms on which city people have so long enjoyed it.

For a long time it was thought all right to have 9 months' school for town and city folks and 3 months for country folks. Now equality of educational opportunity for rich and poor, town and country, is winning increasing acceptance in all States—and must be accepted by Congress also. The illiteracy of one State hurts every other State. Without Federal aid to our poorer rural States equality of educational opportunity is absolutely hopeless for this generation or the next of rural youth. To give help here is the No. 1 duty of Congress to the farmer.

Hardly less important—and perhaps even more sacred and Godlike—is the supreme duty of Government to provide for our farm people equality of opportunity in the matter of hospital and medical care. A great start has been made in this direction. Congress must now go forward until it reaches the complete ideal we set forth in addressing the Senate Committee on the Hill-Burton hospital-aid bill—

"For every person, rich or poor, high or low, urban or rural, white or black, an equal right to adequate hospital and medical care whenever and wherever he makes the same grim battle against ever-menacing death which sooner or later we must all make for ourselves and see our loved ones make."

IV

A richly satisfying rural civilization and not the mere support of a town-and-city civilization—this must be the aim of our new and broadened fight to win for farmers "Equality for agriculture." Just because the farmer's work compels him to live far from

congested centers is no reason for denying him the equal benefits of education, electricity, roads, recreation, libraries, hospital and medical care, and other agencies of twentieth century civilization. To so equalize the costs of these benefits as to insure equal rights for farmers must be one of the major features of any long-range agricultural program for America.

Veterans' Homestead Act

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. KEFAUVER. Mr. Speaker, today I have filed a bill which I think will be of great assistance in handling veterans' housing and homestead problems. The bill is substantially the same as that sponsored by the American Legion and other veteran organizations which was introduced in the House by Hon. EDITH NOURSE ROGERS, chairman of the Veterans' Affairs Committee (H. R. 4488) and by 22 other Congressmen.

There is one important difference, H. R. 4488, commonly known as the Veterans' Homestead Act authorizes the incorporation of nonprofit veteran associations or cooperatives which are empowered to build low-cost housing units for rent or sale to veterans. The bill which I have filed authorizes the existing veteran departments of the various States to carry out this work in lieu of the associations or cooperatives.

The aims of the Veterans' Homestead Act are excellent. I feel that its only weakness is the provision calling for the formation of veteran cooperatives to act as the agency for the issuance of bonds and for supervising the program. There is already established in each State, departments authorized to assist veterans. They have files showing the condition of the veterans in the various States and they are familiar with the local housing needs. These existing departments are better prepared to be the nucleus around which this organization should be developed.

FOLLOWS USUAL FEDERAL-STATE PATTERN

The bill recommended is a somewhat new approach to the problem of veterans' housing. It follows the practice which Congress years ago formulated with respect to Federal aid for highway and road construction and improvement. In the main, the planning and the details, as well as the actual construction of roads and highways, are left to the department of highways of each State. The Federal Government simply furnishes financial aid and exercises an over-all supervisory function which guarantees that the highway departments of the several States shall have expert assistance in the planning of roads and highways and their construction and maintenance and financial aid.

STATE DIRECTION BETTER

This bill provides a similar dual responsibility for veterans' housing. It recognizes that fundamentally the laws which govern the construction and ownership of real property is that of the State wherein the property is situated. Each State may therefore lend its aid to sponsoring such local housing developments which are best adapted and most suitable to the needs and abilities of the veterans of those communities; and each State is able under existing laws or such laws as it may see fit to enact, to curb and abolish antiquated building codes and practices which tend to create monopoly in the building industry and inflated construction costs.

DUPLICATION OF EFFORT WOULD BE REDUCED

This bill needs no Federal bureau to execute it. To execute this law from the standpoint of the Federal Government would require only a small personnel staff in the Veterans' Administration, whose duties it would be (a) to negotiate Federal securities upon a national offering and upon terms more advantageous than would be available to the individual States; and (b) the adoption of simplified regulations which would permit allocation of such Federal funds for community housing developments in the States upon the hypothecation of reasonable security representing indebtedness of the purchasers of such property, and that the particular housing development was suitable for the purposes intended, and constructed under approved building methods and sold at prices fair and consistent with the prices of similar housing accommodations in the community where such housing development is undertaken.

Finally, this bill gives each State both the privilege and responsibility of assisting its own veterans in acquiring homes and home ownership; and it especially gives the various commissions or departments which all the States have created to deal with veterans' affairs and aid veterans, a real opportunity to be of service to the veterans. In most States a substantial sum is being spent in salaries to State officials whose chief duties are filling out forms for veterans for pensions and compensation, all of which is being done by private pension attorneys, the Red Cross, various veterans' organizations, and even the Veterans' Administration itself through its contact agents, and other employees. In some cases, the States have land which is not needed for other purposes and they could well be transferred to the State department of veterans' affairs for building sites. These State commissions and departments of veterans' affairs could give the veteran expert advice on building costs and practices; assist him in providing municipal and private utility services; clearing disputed titles; combining architects and other fees and costs in a manner to reduce the cost to the individual veteran; these departments could, if such is necessary in any community or particular case, form a cooperative or other corporation and obtain the charter therefor at little or no cost to the veterans. They could act for the veterans in processing and closing loan transactions, and remove other obstacles and perform other services to the veterans of their own State, all of which today make the task confronting the veterans who want to buy, build, and finance a home all but impossible when all of the details in connection therewith are undertaken by the veteran individually.

Watch on the Rhine

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregon Daily Journal.

TODAY'S GUEST EDITORIAL

(EDITOR'S NOTE.—This is the third in a series of editorials written by students of Portland high schools. The following editorial was selected as the best by a jury of Lincoln High School students. Other editorials written by high-school students will appear on this page on succeeding Mondays.)

WATCH ON THE RHINE

(By Joann Cohn, student, Lincoln High School)

"The foundation of every state in the education of its youth."—Diogenes.

Can there be any other factor as influential in the development of a country's governmental philosophy as education?

In this period of world history there is a continual underlying conflict of various ideologies, and a country forms its ideologies through the education of its people. In the case of Germany, emphasis has always been put on German education, German culture, and German totalitarianism. When Hitler came into power, he found the German school system perfect for his dream of world governing by Germans. The strict militaristic teachers complied with his instructions to subordinate all general learning to nazism. This Nazi ideology produced youth leaders who thought only subjectively, considering themselves superior in every field of knowledge. This way of thinking has become inherent in the German youth of today.

Obviously young people, thus taught, cannot be a force for peace and world cooperation. What are the Allies doing to change the philosophy of the German youth of today? What must they do?

1. Zones have been set up in the four divisions of Germany to study educational systems, provide textbooks, and appoint teachers of designated areas.

2. The United States Office of Education has sent staff members to the American zone to serve as consultants on educational problems; the three other occupational staffs are serving in the same way.

However, these attempts to reeducate a misled people will be useless if there is no unity in the four systems. For example, according to a recent report in a leading magazine, there are four completely different histories being taught in the zones, each planting the seeds of diverse philosophies of liberation movements, materialistic concepts, socialism, and pure democracy. Can there be any unity of learning, and consequently thinking and acting, among the people if such varied ideas of government and history are being taught?

In the systems' theories there is also disunity. As an illustration, the Russian system is based on an 8-year "rush" to graduation into the trades and industries while the United States theory is emphasis on learning and changing from old ideas.

The four zones have one factor in common, however, the difficulties under which the youth must be taught. These are:

1. Hunger and cold prevent complete concentration on the part of the pupils and teachers.

2. There are not enough "reeducated" teachers having a clear concept of what and why they are teaching.

3. Text books and study materials are very scarce; for example, in one university a senior rarely has more than one of the three required technical books, the price in the school black market being 150 marks, half of a white-collar worker's monthly salary.

In the face of these difficulties and many others, the Allies are attempting to bring about a rebirth of a people who could contribute a great deal to the advancement of civilization. Education is the means by which this rebirth will be achieved. The steps toward the achievement are simple but necessary:

1. A coordinated educational system, based on the same general concepts.

2. Firm administration during occupation.

3. Gradual liberalization by encouraging the forming of a government to act wisely and justly.

4. A continual education of the citizens of tomorrow; teaching for world cooperation and unity.

One can see that reeducating Germany will require patience, hard work, and above all, understanding and a common goal.

For world stability and peace in the future, the youth must be wisely educated in the ways of democracy and justice today.

Justice for Poland

EXTENSION OF REMARKS
OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. CLASON. Mr. Speaker, throughout each year, Western Massachusetts Branch, Polish American Congress, Inc., an organization maintained by true friends of Poland, actively carries on a militant campaign to secure justice for Poland.

I am sure that the great majority of Americans do not understand fully either the underlying or the direct causes of the loss of their freedom by the people of that country. It is one of the outstanding tragedies of all history. A great nation of 35,000,000 industrious people was wantonly attacked by Hitler and his Nazi cohorts. Its leaders were promised the active military support of England and France if they would resist. They did; and the heroic defense of Poland and of Warsaw, its capital, will never be forgotten. But the brave defenders have seen England and the United States, their allies in winning World War II, withdraw all effective support of their country and permit it to be enslaved by Russia.

The members of Western Massachusetts Branch, Polish American Congress, Inc., are endeavoring to place before the American people information dealing not only with the facts about Poland during and since the war, but with efforts both here and abroad to aid Poland and its citizens. Many of them cannot safely return to their native land as long as it remains behind the iron curtain of Russia. As an American citizen and as a Member of Congress, I believe our country is under obligations to live up to the principles of the Atlantic Charter. I regret that those who wrote it were among the first to treat it as a scrap of paper. Their failure to abide by the principles they wrote down is one of the causes of present day international unrest and has given Russia much of her present apparent strength.

I have sought to aid the Polish soldiers and sailors who fought on our side throughout the entire war. I have introduced bills which would permit them to enter the United States and to become American citizens. I know thousands of people of Polish background in my own congressional district. Whether foreign-born or native-born Americans, they are a credit to themselves and to our country. Their names in countless number—many with gold stars opposite them—are printed on the honor rolls of every city and town. Need one say more?

It was my good fortune to be privileged to deliver the first of the 1948 weekly radio speeches of Western Massachusetts Branch, Polish American Congress, Inc. My remarks on Poland were as follows:

Mr. Chairman and friends, I deem it a privilege to have the opportunity to speak on this program for Justice for Poland. With the passage of many months following the ending of hostilities in the recent war, many persons in the United States are inclined to accept as accomplished facts the occupation by Soviet Russia of Poland, the Baltic States and other countries. They are not giving consideration to the struggle for national freedom of the peoples submerged by the overwhelming power of Russia. Even though they are fully informed of the principles laid down in the Atlantic Charter, by which the territorial integrity of these nations ought to be recognized and preserved, they consider discussion of the subject to be futile at the present time. I, therefore, believe it is most fortunate that groups of American citizens, such as your own, are willing to devote your efforts and your money to the high purpose of keeping before the American public the plight of Poland under present day Russian domination.

Following a military inspection trip to Europe in 1945, I spoke on this program. I had visited concentration camps for displaced persons and refugees in Germany. Some of them like Buchenwald and Nordhausen were horror camps where the Nazis brought death to thousands of innocent civilian victims of World War II. Many of these victims were citizens of Poland. Their country had been the first to offer resistance to Germany's military might. Their country was on the side that won—our side. With the ending of hostilities, it seemed certain that treaties of peace would be made by the allied nations concerning Germany, Austria, and Italy. So, in 1947 Italy is independent once again. Foreign soldiers have left her soil. Austria is recognized by the Big Four as a liberated country today. Germany, our arch enemy in the war, is being built up again with our money into an independent nation. What about Poland? Poland was one of the allied nations and perhaps it has suffered greater devastation and losses than any other single country on the side of the Allies.

In 1945 it already looked as if Russia intended to incorporate Poland as an integral part of the Soviet system. Unfortunately, the agreements which had been entered into by the leaders of Great Britain, France, Russia, and the United States not only failed to maintain the territorial integrity of Poland as a free nation but, in fact, were calculated to reduce Poland to the status of a Russian satellite state. Polish people throughout the world will never forget the secret treaties of Tehran, Yalta, and Potsdam. They will never be able to understand the failure of the representatives of the United States to demand that the rights of Poland be determined in accordance with the principles of the Atlantic Charter. The success of the Russian diplomats in securing these secret agreements is now well known to the world. The failure of our American representatives at those conferences has been an important factor in the successive failures of General Marshall in China and, more recently, at the conferences of the Big Four nations in London.

Although the United States furnished the planes and matériel with which the war was won and although our armies successfully overcame Italy, liberated France, and conquered the larger part of Germany and Austria and all of Japan, today we are hard pressed to maintain our present position in Europe and the Far East. The feeling is general that the main cause of our present difficult situation in our relations with Russia is the failure of our State Department and the responsible officials of our own Government to have a foreign policy and program during the war years. Therefore, we were never in a position to secure any particular objectives, for the administration had evolved no postwar program for a world which our armies would once again restore to peace. Two years after the hostilities have ended conditions have become fixed to a great degree. It seems likely that Russia will insist on keeping under its direct control or domination Poland and several other European nations. To the freedom-loving people in those countries, this decision is unbearable; acquiescence in it for any great period of time is unthinkable. It is most important that the fires of freedom shall be kept alive, both in the subjugated countries like Poland and in the United States and other countries where freedom of the individual still exists. Ultimately, the pressure from within and without Poland must give to its brave people freedom, independence, and a standard of living better than they have ever known.

Meanwhile, friends of the brave Polish patriots who fought with the American soldiers in Italy and elsewhere are seeking means for improving their present position as displaced persons or refugees in different foreign countries, particularly England. The number of these soldiers has been estimated as from 100,000 to 200,000 men. It is believed that somewhat less than half of them would like to come to the United States to begin life anew. Many cannot safely return to their beloved Poland since they have borne arms against Russia as well as against Germany in years gone by. In order to help them, I prepared and sponsored a bill now before the Committee on the Judiciary of the House of Representatives. By its terms, any individual who served in the Polish Army or the armed services of Great Britain or France during the period from September 3, 1939, to September 2, 1945, would be entitled to consideration as a nonquota immigrant into the United States, subject to the usual immigration requirements. The benefits of my measure would also extend to his wife and unmarried minor children. In October 1947 I flew over Italy near Mount Cassino, where more than 4,000 Polish soldiers are buried who were fighting shoulder to shoulder with American soldiers in the common Allied cause. If those Polish boys had not been there and sacrificed their lives, it might well have been that an equal number of American young men would be lying in their graves today.

Thousands of other Polish soldiers are buried on other battlefields of the last war. Those surviving fought valiantly, suffered many hardships, and, in many cases, were wounded. I believe that, at this period when the United States is permitting immigration from Europe, these Polish soldiers are entitled to preferential consideration. Their hatred of communism is best evidenced by their unwillingness and inability to return to Poland, their homeland, because of its subjugation by the Soviets. Many of them have close relatives who are already citizens of the United States. The record which the Polish people have made in recent years, during their steady migration to this country, is the best evidence that these Polish soldiers would make fine, industrious, and intelligent citizens of our country.

I am pleased to note that my original bill has been incorporated into other more general bills which have been referred to the same committee for action. In order to conform to the desires of other Congressmen, I have filed a later bill which would permit, under certain conditions, a person born in Poland, Finland, Estonia, Latvia, Lithuania, Germany, Austria, or Italy and who, during World War II, bore arms against the enemies of the United States, to apply for admission for permanent residence to the United States and to be admitted as a nonquota immigrant, if otherwise qualified under our immigration laws. Both of my bills are under consideration in the House committee along with other legislative proposals for handling immigrants during the present period of international stress. It is likely that, in the regular session of Congress in 1948, such legislation will be voted upon in the committee. It is my hope that such measure as may be reported favorably will contain provisions permitting the admission of the Polish veterans who, through their own brave efforts, have already proven their yearning for the freedoms enjoyed by citizens of the United States.

It would be some recompense to these brave Polish soldiers. Further, it would mean much to the people of Poland who have once again been subjugated by a foreign power. It would mean even more to the friends of Poland and its people as they wage their fight for justice for Poland.

Socialized Medicine

EXTENSION OF REMARKS
OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Association of American Physicians and Surgeons, Inc., Colorado Springs, Colo., on October 24, 1947:

I appreciate your cordial and generous reception. Our committee has uniformly received warm support from the medical profession in all parts of the country, and your professional journals have been most encouraging in their analysis and interpretation of our investigation.

Since you are all familiar with the aims and general scope of the subcommittee's work in ferreting out Government propaganda paid for with the taxpayers' money, I shall explore with you tonight one special segment of that inquiry which has not yet been incorporated in a formal report to the House of Representatives. I refer to the closely knit interbureau propaganda organization which exists in Washington for the obvious purpose of agitating for socialized medicine, or state medicine, in other lands. The Bureau of Research and Statistics in our own Social Security Board in Washington is the world headquarters of socialized medicine. The world movement is all paid for by the American taxpayers—and none of it ever has been authorized or approved, as such, by the Congress in its appropriations measures.

As if it were not enough for our medical bureaucrats to be trying to force socialized medicine upon the 140,000,000 people of the United States, they are also forever busy with conferences, round tables, and special missions to advance socialized medicine in Japan, China, India, Burma, Indochina, or Ceylon. During the last 3 years they have sent special survey missions to South America, Hawaii, England, and New Zealand.

That the American people know nothing of these enterprises is a fact of fundamental significance to our committee. And a fact of almost equal significance is that our medical bureaucrats resent any inquiry from Congress as to what they are up to or how much they are spending in these overseas promotional campaigns.

A third fact of great significance, to my mind, is this: While many of these conferences relate primarily to matters of health service and hospital administration, the arrangements and programs are almost entirely in the hands of lay bureaucrats—social welfare workers, statisticians, actuaries, specialists in playgrounds, unemployment insurance, workmen's compensation, or collective bargaining. Rarely, if ever, does a qualified, recognized, and experienced member of the medical profession find a place on these overseas missions. Yet every mission has some aspect of socialized medicine as a part of its agenda.

I submit that these are matters of fundamental significance to the American people. All these overseas missions and enterprises are supported largely by United States funds. Many of the thinkers and planners who throw these conferences together all around the world are full-time employees of the United States Government. Their salaries range from $4,000 to $10,000 a year. They are supplied with office space, office equipment, secretaries, telephones, stationery—all paid for by the American taxpayers. They get free postage for all their propaganda material, which is distributed literally by the ton from Washington every year. Their reports and findings are printed free of charge by the Government Printing Office.

Yet all this work is carried on under a cover of secrecy and intrigue in the Social Security Board and the United States Public Health Service—to the point that every inquiry for information must be first registered, approved, and cleared by the top level bureaucrats. In the sense that the taxpayer pays all the bills, this is all the public's work. Yet every project is shrouded in almost military secrecy until it is ready in final form for the propaganda literature from the Government Printing Office. Plans and projects still in the formative stages are simply none of the public's business, as our medical bureaucrats view their work.

The next important international meeting to discuss extension of socialized medicine is scheduled to be held in New Delhi, India, October 27 through November 8. This conference is called the Preparatory Asian Regional Conference. The agenda includes proposals looking toward the development of broad social-security programs in the countries of Asia. Nominally, this conference is arranged and directed under the auspices of the International Labor Office, a remnant of the old League of Nations. The significant thing about the conference is that while the headquarters of the ILO are in Montreal, Canada, the announcement of the New Delhi meeting comes to us from Washington, D. C., where a branch of the ILO is maintained at 734 Jackson Place. Through that office, the work of the ILO is closely integrated with the studies and projects of the Social Security Board. A number of persons formerly on the staff of the ILO are now full-time Government workers in the Social Security Board; and a few former employees of the Social Security Board are now on the staff of the ILO. To put it another way, these two offices in Washington are but branches of the same enterprise. ILO is the international or world arm of the Social Security Board; and the Social Security Board, through the Bureau of Research and Statistics, is but the American operating unit of the ILO.

I should make it clear that there is no thought on the part of our investigating committee to inquire into the operations and programs of the International Labor Office. That is a matter far beyond the scope of our authority. Neither may we challenge the funds which are being spent by the United States Government in support of the ILO. That program of international cooperation has been duly approved by Congress.

But what does interest our committee is the extraordinary system of working arrangements which exists between the Social Security Board and the ILO in this matter of socialized medicine. Our investigation has convinced me that the Social Security Board is in fact the supply base, so to speak, from which flow most of the basic studies and research reports which power the ILO campaign for socialized medicine in other lands. And this conclusion is confirmed by the fact that members of the Social Security staff usually are the United States delegates to the ILO meetings overseas.

It will be a difficult and tedious matter to establish, through careful audits, just how much of the funds appropriated by Congress for the domestic work of the Social Security Board are actually diverted to the world programs of the ILO.

But I may say that such an audit is now in process, and that a detailed work analysis and project study within the Bureau of Research and Statistics of the Social Security Board will be available for the consideration of Congress before the next appropriation bills are considered for Social Security operations in the fiscal year beginning June 30, 1948.

You have all read in your newspapers recently the story of the special health mission to Tokyo. I shall discuss this mission briefly here, merely because it seems to me to illustrate the whole scheme of the Social Security Board's operations in the world-wide campaign for socialized medicine. A little more than a year ago a Federal civilian employee in Washington (one Stanchfield) was detached temporarily from his job to go to Tokyo to make a preliminary survey of social security and health needs. Upon his return to Washington early this year, Mr. Stanchfield proposed a general health mission to Tokyo. His proposal was presented directly to Mr. Arthur J. Altmeyer, Commissioner of Social Security.

Next, on March 5, 1947, Mr. Altmeyer proposed the mission in a formal communication to the War Department. In that letter Mr. Altmeyer designated the particular individuals who should make up the mission, and then went further to suggest that William H. Wandel, Chief of the Program Division, Bureau of Unemployment Security, be appointed chief of the social insurance division of the public health and welfare section of the supreme command for the allied powers in Tokyo. It is perfectly apparent from the letters we have taken from the War Department files that the personnel of this mission and the planning of its pro-

gram originated in and was dictated from the Social Security Board in Washington.

Up to this point there had been no hint that the proposed health mission had been requested or urged either by General MacArthur or any responsible Japanese source. The suggestion came first from Mr. Stanchfield, who had been sent to Tokyo from Washington for that particular purpose.

Next we found a letter, under date of June 14, 1947, from Mr. Wandel in Tokyo reporting directly to Mr. Isadore Falk in Washington on the progress of the work in Tokyo. In one revealing passage of this letter, Mr. Wandel said:

"We think that our need is for someone who is primarily not so much an economic analyst as one versed in health insurance. Health insurance is the major field of social security in Japan. * * * Permanent revision requires amalgamating national health insurance with health insurance on a compulsory basis."

When the Tokyo Health Mission finally was named, it comprised two men from the Public Health Service, one from Mr. Falk's bureau, and one from the Federal Housing Authority. This mission departed for Japan on August 28 this year, with the understanding that Mr. Altmeyer and possibly Mr. Falk would follow when the work had been sufficiently organized in Tokyo.

Because this instance offers a shocking demonstration of bureaucratic intrigue in violation of the purposes and intent of Congress, I have brought the matter to the attention of the House Appropriations Committee, with the suggestion that when the next budget comes up from the Social Security Board and the Public Health Service, all those engaged in spreading socialized medicine around the world be stricken from the public pay roll, unless, of course, Congress shall determine to support such world propaganda with funds specifically allocated for that purpose.

In my letter to Chairman TABER of the Appropriations Committee, I made eight specific charges against the Tokyo Health Mission. I wish to summarize them here, because they are the nub of our case against the Social Security Board and the United States Public Health Service in relation to all this propaganda supporting socialized medicine.

My charges against the Tokyo Health Mission are as follows:

1. That the health mission to Japan is composed entirely and exclusively of men long identified in the public record as advocates and proponents of socialized medicine not only in the United States but throughout the world.

2. That the real purpose of this mission is to lay the groundwork for a system of socialized medicine in Japan.

3. That the scheme for such a mission originated in the Division of Research and Statistics in the Social Security Board in Washington, and nowhere else.

4. That the nominal request for the mission was engineered through the General Headquarters of the Supreme Commander in Tokyo by Federal employees sent from Washington for that particular purpose.

5. That Gen. Douglas MacArthur does not favor—and does not approve—any plan to establish compulsory socialized medicine in Japan.

6. That the dispatch of this mission to Tokyo for the purpose indicated in Mr. Wandel's letter to Mr. Falk under date of June 14, 1947, is a gross misuse of public funds.

7. That the real purpose of the mission is not to assist Japan in working out her basic problems in health and welfare, but to force upon that country a compulsory system of socialized medicine.

8. That although the questions here involved are of a health and medical nature, the Surgeon General of the United States Army was not consulted in reference to the problems involved.

I deem it inappropriate for Federal employees, at the expense of the American taxpayer, to travel throughout the world preparing or assisting in the preparation of legislation to be adopted by foreign countries when similar legislation, long pending, has not been approved by the Congress of the United States.

It is interesting also to note how closely the Social Security Board's program to assist the development of socialized medicine in Japan follows the general outline published on October 1 by the International Labor Office for the forthcoming Asia conference at New Delhi, India. Regarding the general objectives of the New Delhi conference, the preliminary handbook, or work guide, summarizes general objectives in this language:

"The report suggests the gradual development of a public medical care service in the Asian countries which would be freely available to those who need it, whether they live in urban or rural areas, and whether they are workers or dependents."

This, of course, is a bald proposal for the nationalization of all medical services, to be paid for out of the general revenues rather than by special pay-roll taxes.

So the socialized-medicine plan for Asia, as now put forward through the ILO goes even further than the Wagner-Murray-Dingell bill for the United States. The plan for Asia follows precisely the master plan for socialized medicine as devleoped in Communist Russia, where all medical services are the direct function of the government, with all costs paid directly from the general funds of the Treasury.

It will be interesting to watch the final report and recommendation of the Tokyo Health Mission to see whether it follows the direct government-payment plan put forward by the ILO in the New Delhi agenda, or the special pay-roll-tax plan incorporated by Altmeyer, Falk, and Cohn in the Wagner-Murray-Dingell bill. In other words, the Health Mission to Tokyo must make a choice on the Japanese plan. Will that choice fall to the Russian side, with direct medical payments from the general treasury, or toward the Social Security Board's version of socialized medicine under compulsory health insurance?

Another fact of fundamental significance, as I see it, is that the government propaganda which urges socialized medicine for the United States presents a shamefully distorted picture of what voluntary insurance, medical-service plans, and hospital prepayment plans have accomplished during the last 10 or 15 years. To read the government literature on our health needs, one would gain the impression that there had been no change in the insurance picture in this country during the last quarter century.

This flagrant distortion of the picture is a crime against the Nation. To have the government agencies urging their programs on the basis of conditions which have not actually prevailed in this country since the 1920's is not only an alarming abuse of governmental powers, but a serious and challenging negation of the entire philosophy of American public service.

The Federal advocates of compulsory health insurance insist that the problem of prepayment medical care plans cannot be administered effectively by the traditional enterprise system of insurance. They ignore the fact, as reported by the Health and Accident Underwriters Conference, that more than 42,000,000 persons already are covered by various forms of health and accident insurance. During the decade, 1934–44, the number of such policies in the United States increased fivefold, from roundly 8,000,000 to 40,000,000. In 1920, there were only 4,000,000 policies of this type.

There are more than 400 companies offering such policies today, and the total premiums in this field of insurance now average about $50,000,000 a month, or $600,000,000 a year.

In addition, another group of 5,000,000 persons are enrolled in various types of prepayment medical care and hospital-service plans.

Combining these two groups of insurance arrangements, we find that approximately 5,000,000 people already are protected by various forms of health and accident insurance, as compared with only 4,000,000 thus protected by their own individual arrangements in 1920.

What then is the basis of the contention by the advocates of socialized medicine that the insurance problem in the health field cannot be handled by the existing insurance system? The fact is that, on the basis of individual coverage, considerably more than one-third of the American population already has solved the problem of emergency medical and hospital expenses through the medium of insurance, individually arranged and paid for directly from month to month as an established item in the family budget.

In various forms, as determined by the State insurance laws, this type of protection is now available in all of the 48 States. As actuarial experience develops, these plans are being improved from year to year. Intense competition between more than 400 different insurance companies tends constantly to offer the insured more comprehensive protection and to eliminate abuses which impair the function of insurance principles in the field of health.

Concealing or ignoring such fundamental developments in the insurance field during the last quarter century, our medical bureaucrats present an utterly distorted and unreal definition of the problem they presume to alleviate.

This systematic distortion is a somewhat universal characteristic of collectivist propaganda methods. Every argument for statism must begin with the assumption that no other solution is available, for only a spirit of hopeless defeatism ever can impel men to give up the rights and privileges of freedom in favor of Government regimentation.

Another fact of basic significance revealed in our committee explorations is that socialized medicine, historically, has always been linked pretty closely with dictator forms in Government.

The brand of dictatorship makes no difference—communism, fascism, nazism, socialism—all are alike, in that they enforce a system of state medicine.

Whatever the name of the dictatorship, or whatever the pattern of the particular brand of collectivism in a given country, the system of socialized medicine is always pretty much the same. It is based on compulsion, and is generally administered by a Nation-wide system of political manipulation. The physicians and surgeons themselves usually are forced to a subordinate position in the determination of policies and programs. Now, if the medical profession and all our hospitals can be taken over by the Federal Government and forged into a new and gigantic health bureaucracy, then it would only be a question of time until Washington likewise moved into the field of education, religion, the press, the radio.

Freedom soon would be in total eclipse.

That must not come to pass in mighty America, the last great citadel of freedom and liberty on the face of the globe today.

Ours is a great responsibility to hold aloft the bright torch of freedom and honest representative government. And it has been most encouraging to know that we have the great body of the American medical profession standing behind us in this effort in Congress.

Evidence of this support comes to us from the State medical journals in all sections

of the country. The North Carolina Medical Journal, for example, in its August issue this year, described our committee report on the Health Work Shops as one of the most important publications ever issued by the Government Printing Office.

Many other State journals have been similarly laudatory in their appraisal of our reports, and several have printed the complete text of our findings. Other State-wide medical groups have asked us for extra copies of the reports, to be mailed to every doctor, dentist, registered nurse, and lawyer in the State. Such a response convinces me that even the vast diversion of Government funds to illegal propaganda will not prove sufficient to force a system of socialized medicine upon the American people.

But the question yet remains why we should permit the expenditure of something between $50,000,000 and $75,000,000 a year in Government propaganda?

Even if this Government literature told the truth, the whole truth, and nothing but the truth, I still think we could get along with a lot less of this Government prefabricated thinking.

I insist that the American people are well able to come to their own conclusions on these matters of public policy. They do not need millions of dollars in Government guidance every year.

Our figures from the Budget Bureau show that Government expenditures for publicity and propaganda increased from $28,000,000 in 1941 to $74,829,467 in 1946.

Now everybody in Washington recognizes that certain information services are an essential part of any institutional operation. But Congress insists that there is a clear line of distinction between legitimate information services and those additional operations which tend to build up public opinion in favor of more projects, broader programs, or Federal invasion of new spheres of public service. It is primarily the latter operations which our subcommittee seeks to itemize as to cost and scope. It is my contention that, at least, the people are entitled to know how much they are spending to educate themselves to more spending.

In the Department of Agriculture, committee investigators found 525 persons engaged in public relations work. Salaries ranged from $10,000 down to $1,888 a year.

Total budget estimates for Agriculture's Office of Information for the current fiscal year, beginning July 1, 1947, were $2,307,000, an increase of $335,350 over the previous year.

In addition there was another authorization of $2,260,784 for Department of Agriculture printing.

Here, then, for one Department, we have a total of $4,500,000 for publicity and propaganda.

And all of this material is distributed postage free. If Agriculture and all the other Federal departments had to pay regular postage rates on their voluminous mailings, the total publicity and propaganda cost likely would be increased by at least another $10,000,000 a year.

Our figures indicate that the Federal Security Agency currently is spending about $2,000,000 a year in its public-relations activities—whether you prefer to call it publicity or propaganda. And we know that a great percentage of these funds are going to generate supporting public opinion for bigger and better programs in health, pensions, and welfare.

Yet we have the testimony of an observer at one of the health workshops that, when left to their own devices—without the aid and promptings of the Federal monitor—the laymen at the Jamestown Health Workshop could not think of any immediate, pressing and urgent health needs in their own State.

That incident is not without significance, as it relates to our investigations. Why should Federal taxes be spent by the millions merely to support teams of bureaucrats running around the country telling the people what terrible health they are enjoying?

It seems to our committee to be a proper function of the Congress to determine whether the diversion of public funds from legitimate purposes to purely propaganda purposes for socialized medicine, does not, in fact, constitute a criminal violation of the law.

And on this point, I may say that the Federal Bureau of Investigation is giving that question some serious study at the moment. As you know, we advised the Attorney General, Mr. Clark, last June what we discovered about the Health Work Shops, and we have since been informed that some of the vouchers are in the hands of the FBI for investigation.

All this federally financed activity for socialized medicine heads up in the Bureau of Research and Statistics in the Social Security Board.

Our committee investigators have found in that Bureau a veritable nerve center of socialized-medicine propaganda for the entire world.

Mr. Isadore S. Falk is the Director of Research and Statistics in the Social Security Board. He has been in the Government service for some 12 years. He has always been noted for his militant and aggressive advocacy of socialized medicine.

Our committee, of course, does not challenge the right of any citizen to hold whatever views he may wish on any subject of political or economic policy.

But we are interested that funds appropriated by Congress for public administration shall not be diverted to a world-wide system of propaganda calculated to advance socialized medicine the world around.

Such operations, until specifically approved by the Congress, are positively illegal. And our committee will not rest until they are uprooted and stamped out of the Federal picture.

Americans must never fall into the attitude that all sound opinions are made in Washington and handed down full-fashioned to the people.

That is the way of dictatorship.

Public opinion must be maintained in its free and virile state—in full harmony with the great American tradition of liberty.

If we do that by stamping out Government propaganda at its roots, then we shall have rendered a great service, not only to medicine, but to the whole cause of liberty and freedom the world around.

We all know that freedom is not free.

We all know that bureaucratic powers feeds upon itself—and upon the rights and privileges and liberties of the people.

If we are to support and defend liberty and constitutional government in America, we must begin by keeping clean and undefiled the wellsprings of public information from Washington.

Government propaganda poisons these wells of public information.

Government propaganda is a method of dictators.

Our purpose will be to uproot and destroy government propaganda wherever we may find it.

Iowa Generosity

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. HOEVEN. Mr. Speaker, when the Friendship Train rolled across the continent several weeks ago, Iowa added more cars of food than any other State in the Union. Quite recently, the Iowa Farm Bureau inaugurated a campaign whereby each of the 99 counties of Iowa were asked to contribute at least a car of corn, or its equivalent in money, for direct European relief. To date, Sioux County, in the Eighth Congressional District of Iowa, which also happens to be my own county, is top donor with cash of about $12,500. An editorial which appeared in the Des Moines Register of January 22, 1948, tells the full story, and I include it herewith as a part of my remarks:

A FINE RECORD ON EUROPEAN RELIEF

Iowa Farm Bureau members have completed a remarkable, whirlwind campaign for European relief funds which does credit both to the big hearts of Iowa farm people and to the organizing and promotional ability of Farm Bureau leaders.

The State Farm Bureau office reported Wednesday that it had received $224,211 in cash from county Farm Bureaus. And although the official campaign ended last Friday, the money is still rolling in. Fifteen counties have not yet been heard from, and one county organization sent its donation direct to relief agencies instead of through the State office, so the real figure undoubtedly should be much greater than $224,000.

In addition to cash donations, one county sent a carload of pancake flour, another sent a car of skim milk—and all counties have sent a mountain of clothing. When the campaign began the goal was a carload of corn, or equivalent value, from every county. Farm Bureau members were told to take an old coat or pair of pants to town with them in addition. The clothing donations have far exceeded expectations. "Instead of giving only an old coat," one State Farm Bureau official said, "they must have cleaned out their clothes closets."

To date Sioux County is top donor, with cash of about $12,500; Webster is next with about $11,000; and Hamilton third with $10,000.

In this campaign the Farm Bureau has accomplished more than the collection of a lot of money, food, and clothing for relief of war victims in Europe. It also has made the recovery and relief of Europe a personal thing to thousands of Iowa farm people. This accomplishment may, in the long run, turn out to be the greater of the two.

What Is National Income?

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include an editorial taken from the Saturday Evening Post of January 24, 1948. We speak so glibly about our national income and so few people really know what constitutes the same. The following editorial, therefore, is most enlightening and instructive:

THE EUROPEANS CAN'T EAT OUR NATIONAL INCOME

There are so many sound arguments for American participation in restoring the depleted capital equipment of Europe that it was disappointing to find Mr. Truman guilty

of belittling the case by attempting to show, that in comparison with our national income, the cost of the Marshall plan will be trivial. The President figured that the plan will cost less than 3 percent of our national income during the life of the program.

To compare the worth of tangible assets, from food to locomotives and power plants, which will have to be sent to Europe, with the national income makes no more sense than to compare Johnny's marbles with the Treasury balance at the close of business on January 17. The amount by which we aid Europe or Asia represents actual commodities available or to be made available in this country, and the proper comparison is between the commodities we send abroad and the total inventory of commodities at home. To compare goods for export with that figment of the statistician's imagination known as "national income" is misleading because it misrepresents downward the actual sacrifice that must be made.

What is national income? As estimated by the Department of Commerce, national income includes scores of items which appear in a dozen classifications, but actually represent more or less the same transaction. Thus a man who earns $5,000 a year adds $5,000 to national income under wages and salaries. If he pays $700 a year in rent, that goes down as part of the national income under rental income. Incidentally, if the citizen owns his own home and it is worth $15,000, he is put down as having paid something like $1,500 in rent and this amount is also totted up as national income. The cost of the service of his bank to him as a depositor is included in his income, although the bank may not have charged him anything. Proceeds of insurance policies are part of national income, as is the time that farmers spend working for themselves and the value of the home-grown food they eat. Food and shelter provided free to soldiers and sailors go into the national-income pot, as do the amounts received by the suppliers of these things, the amounts the suppliers pay out to their help, the profit they retain for themselves, what they pay in rent, what their landlords receive and what the grocers patronized by all these people receive and pay out, and so on ad infinitum.

In short, national income is more than anything else an index of the velocity of money and to some extent of the amount of inflation present in the economy. It is a rubber yardstick unfit for measuring the ability of a country to export wheat and canned orange juice and spare parts for tractors. If a rich insurance policyholder dies and his wife collects a $1,000,000 benefit, the national income goes up by $1,000,000, but the amount of Wisconsin cheese in the country is just the same as it was when the policyholder was alive. Anyway, our advice to the Marshall plan strategy board is to lay off figures that merely sound good. What America does on behalf of world recovery should be done with our eyes open to the real cost, not because the man said that $17,000,000,000 is only 3 percent of the number of angels that can dance on a decimal point.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include a letter I have received from the Committee for the Marshall Plan, signed by former Secretary of War, Hon. Robert P. Patterson, and a copy of a letter I have sent to him. It is my frank opinion that unless public opinion is rapidly and actively aroused that legislation that will effectively enable the Marshall plan to be carried out will not pass the Congress. To pass a halfway measure would be meaningless. It is up to those persons and groups who realize the danger that confronts our country, and who also want a decent world in which to live in, to arouse public opinion in support of effective legislation that will enable our country to perform its mission in this critical stage of the world's history. It is only by effective affirmative action on the part of the United States that this can be done.

COMMITTEE FOR THE MARSHALL
PLAN TO AID EUROPEAN RECOVERY,
New York, N. Y., January 19, 1948.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN McCORMACK: The Committee for the Marshall Plan to Aid European Recovery was formed on November 17, 1947, to provide a focus for wide public support of the European recovery program. The committee for the Marshall Plan To Aid European policies outlined in Henry L. Stimson's article in the October 1947 issue of Foreign Affairs, and I am enclosing a copy of this article for your consideration. Mr. Stimson, himself, is the national chairman of the committee, and the members include over 300 leaders drawn from business, labor, farm, religious and civic organizations throughout the country.

In December, the committee published a four-point program of those principles which the committee believes are essential for an effective recovery program. The four essentials are that United States aid must be prompt to be effective, that it must be adequate to achieve real recovery, and not merely to provide stopgap relief, that it must not be subject to conditions which involve interference in the domestic affairs of the recipients, but instead that any conditions must be limited to ones we could honorably accept ourselves, and, finally, that enough of our aid should be in the form of grants so that Europe will not be saddled with a hopeless load of debt.

We believe that the decisions facing the Congress in this session are of momentous importance and will require understanding by the American people of the reasons that lie behind the European recovery program and of our own vital national interests in the successful accomplishment of its objectives.

If we embark on the plan proposed by Secretary Marshall, we must decide now to undertake a 4-year recovery program although we should appropriate specific funds annually. If we merely continue piecemeal aid we will risk the chance of securing stability and peace in the world which we so intensely seek.

The committee believes that Americans will respond to the challenge, and it earnestly asks you and all other Members of the Congress to give support to an adequate and timely program. The committee has prepared background material which it is furnishing as widely as possible in the hope that it will serve to help create an informed public opinion. We will be glad to make any of our material available in quantity if you should care to have it for your own use.

The time is short; the need is urgent. But as Mr. Stimson has said, "If the issues are clearly presented, the American people will give the right answer."

Very sincerely yours,
ROBERT P. PATTERSON,
Chairman, Executive Committee.

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 26, 1948.

Hon. ROBERT P. PATTERSON,
New York City.

DEAR SECRETARY PATTERSON: I am in receipt of your letter, with enclosures, of January 19, in support of the Marshall plan. I strongly believe that our country should use its powers effectively in our national interest, as a means toward peace, and to stop the progress of international communism and the vicious results that follow wherever the Communists take over a government and a people. I am a strong supporter of the Marshall plan to this end. I want to frankly state, however, that unless public opinion is more thoroughly aroused than it is to the dangers to our country if nothing (or halfway measures) is done, that I am fearful of the results. This observation is based on 20 years of legislative experience in the Congress. The situation in the Congress at present to enact legislation that will effectively have the Marshall plan carried out does not look good to me. It is better to face this situation when time exists to arouse public opinion than to wait until it is too late.

With kind regards, I am,
Sincerely yours.

The Price of Defeat

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Gazette:

THE PRICE OF DEFEAT

Thurman Sensing, a publicist employed by the Southern States Industrial Council of Nashville, is singing a song of isolation these days, and he presented a few stanzas of it to the Greater Little Rock Chamber of Commerce at its last meeting.

Europe, said Mr. Sensing, should be able to manage its own recovery without aid from the United States. And by way of illustrating his point he chose a theme nicely calculated to arouse the instant sympathy of any southern audience. The South, he pointed out, also suffered military defeat but managed to rebuild her economy without outside assistance.

And this, of course, is true enough as far as it goes. Every southerner takes honest pride in the saga of the Confederates who came home to face the natural consequences of a lost war compounded by the evils of reconstruction government. But it detracts nothing from the glory of their effort to point out that, in spite of all they could do, the South paid an inordinate price for her defeat, and is still paying for it. It is no accident that a region so blessed with natural advantages lags so far behind the national average in industrialization, per capital income, education, and health. And our imperfect political system is a direct heritage from reconstruction.

Moreover, the South through the years of her travail still had the protection of United States sovereignty. If she received little direct aid from outside her borders she did enjoy the indirect benefits of a stable national economy. And, even more important, she enjoyed complete and absolute protection against foreign encroachment. She could, and did, remain weak and impoverished for half a century without inviting invasion or revolution.

The relationship of the Federal Government and the conquered Confederate States would have been quite different, we feel sure, if a powerful and ruthless Mexican Government had been openly plotting domination of the Western Hemisphere back in 1865. In the shrunken world of 1947 the Russian threat to western Europe is exactly comparable. Self-interest, if nothing else, demands something more of us than permission for our ex-enemies and ex-allies to keep their horses and mules for the spring plowing.

Address by Alexander DeMaioribus

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 6, 1948

Mr. BENDER. Mr. Speaker, under permission previously granted me, I should like to insert in the RECORD an address recently given by Mr. Alexander L. DeMaioribus. A few weeks ago Mr. DeMaioribus retired from the city council of Cleveland, Ohio, after having served in that body as a city councilman for more than 20 years, and as president of the city council for many of those years. Mr. DeMaioribus, in announcing his retirement, issued a statement which embodies so clearly the basic principles of our Republic that I hope it will obtain wide circulation throughout our country. The adherence to these views enabled this man, himself of foreign extraction, to win high public office in his home community as well as the post of chairman of the Republican executive committee of Cuyahoga County, the most populous area in the State of Ohio. I believe this statement reflects glory not only upon its author, but upon the system of government under which we live.

Mr. President, Mr. Mayor, and gentlemen of the council, after more than 20 years of public service, I am leaving the city council with a firm conviction that our form of government offers the greatest opportunity for the progress of mankind that has ever been devised. It offers a challenge to the world to follow our pattern and achieve an era of peace.

These are not mere political platitudes. I have been privileged for the past two decades to witness the living processes of our Republic. Men and women from every walk of life, representing every religious, racial, and philosophical background, have discussed their viewpoints with those whom they have elected to office, freely and fearlessly. They have not hesitated to seek their rights, because they know that under our system those rights are respected.

Nothing better than this has ever been offered to any nation. Our Government and our American citizenship are the world's most prized possessions today. Many of our sons whose names are derived from ancient civilizations or from European origins have died heroically and nobly as Americans that we may live and speak and act as free men. There was no prejudice in the opportunity to die for our country. There must be no prejudice in the opportunity to live for it.

As I leave public office, I am more than ever impressed with the greatness of the vision upon which our country was founded. We live in an age when the poison of hate and intolerance planted in the Old World are a source of danger and infection here. We must translate all the brave words and noble ideals of our history into daily practice. Never should any American harbor the prejudices based on group distinctions. We as Americans must judge ourselves as individuals, because the essence of the American tradition is the worth and the sanctity of the individual. And we must recognize that this belief in the right of every individual to advance, to succeed, and to be valued on his own merits must be emphasized at home, no less than in our schools and our public services.

In these United States of America, where we are endowed with the fundamental rights of "life, liberty, and the pursuit of happiness," there can be no hyphenated Americans. We are a new and a proud people, the product of a melting pot, which must drain off impurities and leave the strong, solid metal.

I am proud to have been a small part of this great Nation. I thank the people of this great community who have given me the opportunity to speak for them in our city council as a member and as a former president of the council.

I am determined to devote my efforts as a private citizen to the development of an ever more vigorous civic spirit in our community. This is one of the most intelligent and dynamic cities in America. We must keep it that way. We can do this if we resolve to be true to our faith in democracy and true to our children, the sons and daughters of the native born and of the foreign born alike.

In these times when the world is groping for leadership and the courage to rebuild its broken spirit, we in America can furnish the inspiration by showing how a free people can live in peace and good will toward all mankind.

The time is now, and we are the people upon whom God's providence has placed the responsibility for the future of civilization. I pray that we shall not fail.

International Implications of the Rubber Problem

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. CRAWFORD. Mr. Speaker, Mr. W. T. Phillips, of the State Department, recently participated in a panel discussion of our rubber problem. His address was entitled "International Implications of the Rubber Problem," and I submit it for the RECORD under leave given me to extend my remarks. It follows:

INTERNATIONAL IMPLICATIONS OF THE RUBBER PROBLEM

Admiral Braine has described to you the importance of rubber to national security. There is general agreement that the United States must take all practicable measures to prevent a recurrence of the rubber shortage which confronted us after Pearl Harbor. We must create an adequate stock pile of natural rubber in accordance with Public Law 520 and we must maintain an adequate synthetic-rubber industry in accordance with Public Law 24. We can count on these two measures to give Admiral Braine the wherewithal to fight another war, if another war must be fought; and, I am sure, we can count on the admiral and his associates to put that rubber to good use.

Fighting a war, or preparing to fight one, is but one aspect of national security. The other aspect is to remove the causes of war, so that the war need not be fought. This second aspect is the principal concern of the Department of State.

As one method of preventing war and minimizing international unrest, the United States must do all that it can to prevent economic depression anywhere in the world, including those areas that produce natural rubber. The mandatory usage of synthetic rubber should be held to the absolute minimum required for national security in order not to deprive natural-rubber producers of the right to compete on equal terms for the United States rubber market.

In writing Public Law 520, the Stockpile Act, the Congress was careful to insert a provision that "materials acquired under (the) act shall be released—only—when, in (the) judgment (of the President) such release is required for purposes of the common defense." This wise provision prevents the security stock pile from being used to influence the commodity markets. A similar policy should be followed in regard to the synthetic-rubber industry while the industry remains in Government hands.

The principal countries producing natural rubber understand that it is to their interest as well as ours that the United States retain a synthetic-rubber industry. They realize that the United Nations could not have won the war without synthetic. They may differ with us on how large our synthetic-rubber industry must be, but they do not deny the need for its existence. Their principal fear is that it will be misused as an economic weapon to depress the price of natural rubber. To a certain extent this effect is unavoidable, since the mere existence of an industry able to produce a million tons of synthetic rubber per year prevents unreasonable increases in the price of the competitive natural product. However, the Government must be careful to operate the synthetic plants only for purposes of national defense or for the purpose of supplementing inadequate availabilities of natural rubber and not for the purpose of influencing natural-rubber prices.

The importance of natural rubber to countries participating in the European recovery program constitutes another reason why the Department of State favors limiting mandatory usage of synthetic to the absolute minimum essential to national security. The United Kingdom, for example, is, as you know, making a determined effort to increase British exports of all commodities. Natural rubber is the largest single dollar earner to the British Commonwealth. It is estimated that 550,000 tons of rubber, valued at $339,000,000, were exported to the United States from British territories in 1947.

During the prewar period (1938–40), rubber constituted, on the basis of tonnage, 38 percent of all exports from Malaya, 37 percent of all exports from the Netherlands Indies, and 6 percent of all exports from Ceylon and Indochina. In the words of the Batt report, "The prosperity of all Southeast Asia was based to a very large extent upon rubber."

The war not only created a synthetic rubber industry in the United States, it also expanded the production of natural rubber in Latin America, Ceylon, and Liberia, whose producers went all-out for the war effort, seriously over-tapping cultivated plantations and penetrating disease-ridden jungles in search of wild rubber. The war brought temporary prosperity to the rubber producers of these areas, but it also brought serious problems of postwar retrenchment and readjustment.

The war also brought a marked expansion in the rubber products manufacturing industries of countries on every continent. New or expanded facilities were constructed in Mexico, Cuba, Venezuela, Colombia, and Peru; in Portugal, Italy, and the Nether-

lands; in Australia and the Union of South Africa. Three tire plants were built in New Zealand, and production in India was doubled. As soon as the backlog of consumer demand which was built up during the war has been filled, these new or expanded industries will present problems not only to the countries in which they are located but also to the exporting countries, such as the United States, which formerly supplied these markets. They are an invitation to and an excuse for protectionism.

Countries attempting to protect their domestic industries from foreign competition or commodity surpluses have relied traditionally on certain devices. They have restricted or prohibited imports; they have arranged bilateral contracts between governments; they have raised tariffs, and they have formed cartels to restrict production. All these devices, except the last, are currently being employed by various countries producing or consuming natural rubber. Import restrictions or prohibitions are in effect in Argentina, Brazil, Ceylon, Cuba, and India. Argentina has concluded trade agreements with other American Republics, including Bolivia and Brazil, providing for the purchase of crude rubber by Argentina. Bolivia and Spain are at present negotiating a clearing agreement in accordance with which Spain would agree to purchase, along with other commodities, about 3,000 tons of natural rubber in exchange for Bolivian purchases of Spanish products of the same value. Tariffs have been raised in Mexico and Cuba.

All these devices may be effective in solving for the short run the narrowly limited conditions which they were adopted to correct. Their broader effects, however, are unfortunate. They force consumers to buy relatively high-priced products, thus lowering the standard of living. They decrease the total of world trade and interfere with normal trade channels to the detriment of other countries.

The United States favors what we believe to be a more constructive approach. Instead of having individual countries raise tariffs, thus restricting world trade and raising prices to consumers, we prefer to see tariffs lowered by reciprocal trade agreements, as was done by the 22 countries meeting at Geneva last year. Instead of having trade conducted by means of contracts between governments, we prefer to see trade in the hands of private individuals. The rapid return of the rubber trade to private hands in the chief producing areas, as well as in the United States, was a heartening sign.

We prefer measures expanding consumption to measures restricting production. This opinion is shared by the other countries participating in the international rubber study group, including the major producers of natural rubber. In this connection I quote from the press release describing the accomplishments of the fourth meeting of the group, held at Paris last July. Admiral Braine was on the United States delegation to that meeting. The group considered what action could be taken to expand world consumption of rubber. * * * They hoped that no avoidable obstacles would be placed in the way of international trade in, and the use of, rubber and that maximum assistance should be given to the countries desiring to make an extensive use of rubber but which, on account of the war, cannot afford to pay in foreign currency for the rubber imports they require.

"The group is convinced that the problems of rubber can be permanently solved only by a sustained and continuous expansion in its use."

One method of increasing consumption is to lower prices. One method of bringing about lower prices is to lower unit costs. That is an old story not only to you technicians but also to your competitors, the men who grow natural rubber. At their urging the Malayan Government has removed all restrictions on new planting and replanting, leaving the producers free to expand their plantings of high-yielding trees.

The United States is doing its part to encourage the economic production of natural rubber in tropical America. If successful—and the Department of Agriculture is confident that the program will succeed—this endeavor will help the economies of the producing countries and also will contribute to hemispheric defense by providing a supply of high grade rubber for admixture with the synthetic rubber of the United States.

The Department of Agriculture is furnishing technicians and advice to the 12 American Republics participating in this cooperative undertaking. There is at least one experiment station in each country, with three central experiment stations, one each in Costa Rica, Haiti, and Guatemala. The annual cost of operating the three central stations is approximately $300,000 and is borne by the United States alone.

The greatest achievement to date has been the successful combating of the South American leaf blight. American technicians have learned how to control the disease on infected trees and how to select new strains which are resistant to the disease. Until the disease had been controlled, the successful cultivation of rubber in tropical America was impossible, and the substitution of cultivated rubber for wild rubber is a prerequisite to the economic production of rubber in the Western Hemisphere.

All practicable measures for expanding consumption, improving the quality of natural rubber, and lowering costs of production, however, may well prove too slow to forestall an impending world surplus of rubber. The Inter-Agency Policy Committee on Rubber predicted a postwar world capacity for producing, every year, 3,000,000 long tons of natural and synthetic rubber. World consumption was estimated at half this figure. The postwar rubber boom has lasted longer than was foreseen; however, it still seems probable that a surplus will develop once the Netherlands Indies have resumed full production and consumption has returned to normal.

Faced with a surplus during the twenties, the countries producing natural rubber resorted to two restriction plans. I have no need to describe to a group from the rubber industry the effects, both good and bad, of those plans. From the point of view of the United States, the effects were unfortunate.

The postwar alternative to another producers' cartel is found in the Draft Charter for the International Trade Organization of the United Nations. The Geneva draft at present is being refined and perfected at Habana, and it is because of his deep interest in promoting the views of the United States and protecting its interests at Habana that Mr. Kennedy was compelled to ask me to take his place here tonight.

The intergovernmental commodity agreements provided for in the ITO charter have marked advantages over the prewar restriction schemes. Such agreements must provide consuming and producing countries with equal voting power. They must be designed to moderate pronounced fluctuations in the price of a commodity on a basis of prices fair to consumers and remunerative to efficient (and note the qualification "efficient") producers. They must provide for the expansion of production—where this can be accomplished with advantage to consumers and producers. They must be designed to assure the availability of supplies adequate at all times for world demand at reasonable prices, and provide for measures designed to expand world consumption. Full publicity must be given to any intergovernmental commodity agreement proposed or concluded, to the statements of considerations and objectives advanced by the proposing countries, to the nature and development of measures adapted to correct the underlying situation which gave rise to the agreement, and, periodically, to the operation of the agreement. This is a far cry from the Stevenson plan or the international rubber-regulation agreement and assures full protection for the interests of the United States.

Oil—Here's Where It Goes

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, with the American people suffering a shortage of oil, it is interesting to know just how they are in that position. The Times-Herald, in a recent editorial, shows what is happening to our supply. I include it as part of my remarks:

WHERE'S OUR OIL GOING?

Secretary of Defense James Forrestal day before yesterday, pursuing the Truman administration's policy of trying to scare the boots off the American people to gain administration ends, painted a horrific picture of our oil situation at a session of a House Armed Services subcommittee.

We're already short of petroleum for one reason or another, said Mr. Forrestal—which was scarcely news to the Atlantic seaboard and Midwest home owners hard pressed for fuel oil to heat their houses.

But, according to the Defense Secretary, that is only the half of it. The rest of it, is the man says, that in another major war our own oil production would most likely run short of our needs by 2,000,000 barrels a day; that the uproar in Palestine may result in Arab cutting of various Near East pipe lines; and that we'd better get busy now on building up a synthetic oil industry in this country at an eventual cost of $8,000,000,000.

It so happened that last Saturday evening our Ambassador to France, Jefferson Caffery, told the American Chamber of Commerce in Paris that between December 16 and January 10—the first 24 days of the stopgap aid program—France had received $53,000,000 worth of essential materials from the United States. Among these, Mr. Caffrey added, was 200,000 tons of petroleum; he didn't say in what form, whether crude, gasoline, light or heavy fuel oil, or shipments of all those commodities.

According to reliable sources of information here, the Caffery statement must have been oversimplified—meaning it seems impossible that 200,000 tons of petroleum could have gone to France from the United States in those 24 days. That comes to 1,500,000 barrels of crude, and 14 tankers would have been required to carry it.

November United States petroleum shipments to France totaled 294,000 barrels; October, 251,000; September, 141,000—with December figures as yet unavailable here. It doesn't seem likely that United States shipments would have ballooned to 1,500,000 barrels between December 16 and January 10.

It is entirely probable, though, that Caffery's over-all figure was correct, and that France did receive in the period under discussion 200,000 tons from various sources—the United States, South America, the Near East, etc.

One more statistic, if you don't mind: Under ideal refining conditions, you can get a 17 percent yield of No. 2 fuel oil out of a

mess of crude petroleum. That means the 200,000 tons that went to France would have yielded 34,000 tons of this favorite heating oil. Whatever petroleum is sent out of the United States carries with it a potential 17 percent of fuel oil which Americans don't get.

United States oil companies control, process, and distribute about 80 percent of all the world's petroleum outside Russia.

On the face of these facts and figures, it looks to us as if the Truman outfit is being far too zealous about funneling oil to other countries and far too lackadaisical about the defense, manufacturing and home oil needs of the American people. Maybe we're wrong, but we think a clear and detailed accounting is due the people as to just what the administration is doing with petroleum and its products.

What was it Senator TAFT was saying a while ago, about how, if Americans are to pull most of the world out of the postwar slump, they should insist on rationing of scarce commodities in all the countries aided before such commodities are rationed here?

Marshall Plan

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. LANDIS. Mr. Speaker, President Truman's request for a 4-year $17,000,000,000 European recovery program is not reasonable. No Congress can bind its successors to future expenditures.

Authorities in Europe say that $20,000,000,000 will not stop communism but may delay it. Many people in Europe believe we are making a mistake because we are creating idleness by these loans and gifts. Foreigners have already developed a tendency to relax their effort to support themselves.

Before we adopt even a 1-year program the American people should have a satisfactory answer to the following questions:

First. Do not you believe that, foreigners holding $3,500,000,000 worth of American securities should be required to dispose of them before we make them any more loans?

Second. Should not foreign countries be required to locate and use several billion dollars worth of hoarded gold and money before we go bankrupt in helping them?

Third. Will the American taxpayers be required to give any more money to Italy in order for Italy to pay Russia $360,000,000 in reparations?

Fourth. Should the American taxpayers be required to furnish money to protect the $15,000,000,000 investment of the American international bankers in foreign countries?

Fifth. Do you think we should finance the royal households of Europe, when Great Britain's royal household, alone costs $2,129,080 per year?

Sixth. Do you not believe any foreign-aid program should be limited to surplus food and materials?

Seventh. Why should not Americans help supervise a foreign-aid program when we furnish the goods and money?

Eighth. Are we to furnish Great Britain with steel and machinery in order for her to trade Russia machinery for grain?

Ninth. Why should not we spend part of this money to purchase more airplanes and set up an air patrol for our national security?

Tenth. Why should not we spend more time and money in halting the encroachment of communism at home before we spend too much abroad in fighting communism?

Artificial Currencies

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mrs. ST. GEORGE. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I include an editorial from the Wall Street Journal of January 22, 1948:

ARTIFICIAL CURRENCIES

Pegging artificial price tags on money is as futile an operation as any other kind of price fixing. The economic planners are now being reminded of it.

The French Government, according to reports from Paris, is about ready to admit that its attempt to set a fictitious value on the franc has failed. The British, who still persist in overpricing the pound sterling, are finding their monetary OPA increasingly burdensome. The International Monetary Fund, which was supposed to stabilize currency prices and get them freely interchangeable, has spent 2 years figuratively wringing its hands.

The trouble is that if a country wants to charge more for its money than the money is worth in terms of actual goods, a stabilization program won't work. On the other hand, if the price tag on a money is set at a realistic rate—that is, one acceptable in the market place—then there is no need for any stabilization devices.

The very fact that a government adopts currency controls and unlimbers the popular stabilization devices is prima facie evidence that its currency is not worth what it says it is. With sufficiently rigid controls the government may seem to maintain the artificial price, but only at a tremendous, although partially hidden, cost to its own people.

The theory that over-valuing a currency is a smart thing to do comes from looking at only one side of the balance sheet.

Britain's big problem, for example, is to get dollars to buy goods here. Since our prices are in terms of dollars, the more dollars a Briton can get for his pounds the cheaper he can buy here. Therefore it seems sweetly reasonable to value the pound as high as possible, relative to the dollar. If the pound is devalued, it will take more pounds to buy the same amount of United States goods; in other words, our goods become more expensive for British customers. Hence, so the argument goes, Britain (or whatever country is debating the problem) will find it expensive to let its currency sink to its free market value.

But the other side of the balance sheet looks quite different. The European countries want to earn more dollars by increasing their exports to the United States. To sell here they have to compete with American goods for the consumer's money, and in this instance the artificially high price of the pound or the franc, or whatever, is a disadvantage.

Britain, for one example, wants to sell autos here. The smallest one will cost an American $1,300 when his dollars are converted into pounds, not far from the price of a bigger, more powerful American car. However, if the United States customer could get more pounds for his dollars he could buy the British car cheaper. The British auto manufacturer would then have a competitive price advantage and sell more cars.

It is quite true, of course, that a cheaper price for the pound or franc would restrict British or French imports from the United States. But in order to maintain artificial currency prices those governments have had to restrict their imports anyway by an elaborate system of trade and currency controls. Artificial currency values, however, restrict exports as well. By struggling to keep fictitious price tags on their monies the trade-deficit nations abroad are guaranteeing that this unbalance will remain chronic. To balance their trade with the United States under this system will require more and ever more American loans. In short, we will have to keep subsidizing the foreign governments so they can keep a "favorable" price on their money.

Until the French currency action is officially announced we cannot judge it. But if it moves the franc closer to its real trade value it will be a step in the right direction.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. BRADLEY. Mr. Speaker, the national board of directors of the Fleet Reserve Association, an organization composed of thousands of Americans who have served honorably in the United States Navy, recently adopted a resolution urging the enactment of a universal military training program. I take pleasure in presenting this resolution to the Congress:

Resolution urging enactment of universal military training

Whereas by the grace of Almighty God and a united, resolute people our great Nation has, in the past, had ample time to prepare for war; and

Whereas the experience of two world wars, plus the tempo of the times, dictate to thinking minds that future wars will be fought around new concepts, using such destructive material as guided missiles, disease germs, chemical gases, atom bombs, overwhelming air forces, and new mechanized units, with actual attack before declaration of war; and

Whereas it is essential that as a united democratic people we demand that this great Nation make every preparation, as soon as possible, in order that the United States of America will be adequately supplied with men and material to meet any act of aggression which might be committed; and

Whereas if our form of government is to survive, we owe to ourselves and our children a fighting chance of survival of conflict, this to be accomplished by systematic mental and physical training of the youth of our land: Now, therefore, be it

Resolved by the national board of directors, Fleet Reserve Association, That we urge the

enactment of legislation to provide for universal military training; and be it further

Resolved, That this resolution be brought to the attention of the President and the Congress of the United States as being policy of the Fleet Reserve Association.

By FREDERICK E. GRAMMER,
National President, Fleet Reserve Association.

Medical Supplies and Hospitals Major Requirements in Greece

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. HAVENNER. Mr. Speaker, the chief need of Greece today is for medical supplies and hospitals, in the opinion of Peter Boudoures, of San Francisco, head of Greek relief activities on the Pacific coast, who has recently returned to this country from a trip to Greece.

Mr. Boudoures says that mass X-ray surveys—made with American equipment sent overseas by Greek relief—reveal that nearly 60 percent of the youth of Greece, both boys and girls, have or have had tuberculosis.

For the information of the Members of Congress, I append an interview with Mr. Boudoures, recently published in the San Francisco News:

Mr. Boudoures has no respect for the Greek Government, not even the liberal prime minister, aged Themistocles Sophoulis, who admitted his hands were tied by self-seeking rightist politicians.

He believes the quasi-civil war which now paralyzes Grecian rural areas was brought about by (1) Rightist persecutions of liberals and democrats (as well as radicals), (2) British policies of division, which he denounces in the strongest terms, and (3) the familiar tactics of Russia in preventing the recovery and democratization of key areas of Europe.

Thousands were jailed when the Royalist Government moved in on the liberal elements of Greece, he said. Many remained in jail—not charged with any crime—for months. Their wives were beaten or murdered; their homes were burned; their children orphaned.

BRITISH AID THE BRITISH

This was the Government placed in power and supported by Great Britain. The British failed so miserably to help war-torn Greece to recover that they withdrew, in disgrace with every element of Greece but the extreme right. The United States was then asked to take over the botched job.

Instead of being strong in our policy, we have vacillated, Mr. Boudoures said.

"We say we won't interfere in Greek internal affairs," says Mr. Boudoures. "What nonsense! What else are we doing there? Let us get over this hypocrisy and direct the spending of the money as we see fit, to support our democratic beliefs—or get out and refuse to help at all."

RUSSIAN ROLE

"The Russians are doing everything in their power to disrupt and delay Greek recovery. We must fight fire with fire—or abandon Greece and its unhappy people to the struggle between communism and the royalists.

"We must spend more money on the military program. If the villages are guarded, if the northern frontiers are patrolled, the guerrillas will collapse.

"They were offered amnesty—yes. But are they to lay down their arms and return to the mercies of corrupt and callous officials of the extreme right, who occupy every local office throughout the country? That is why Sophoulis is helpless. He can't protect them, and they know it," Mr. Boudoures said.

Chemical Engineer's Club of Washington Considers National Rubber Situation

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. CRAWFORD. Mr. Speaker, the Chemical Engineer's Club of Washington, devoted its recent meeting to a discussion of our national-rubber situation and presentations were made in the form of a symposium. The moderator was Adm. C. E. Braine, chairman of the Army-Navy Munitions Board Rubber Committee. Other participants were G. B. Hadlock, of RFC's Office of Rubber Reserve; Donald D. Kennedy, Chief, International Resources Division, Department of State; J. P. Coe, vice president of the United States Rubber Co.; and R. P. Dinsmore, vice president of the Goodyear Tire and Rubber Co. I have submitted for the consideration of Congress the views of these men on particular phases of this problem. It was my privilege to join with them in the discussion, viewing the problem from a legislative angle.

The program for the symposium follows:

RUBBER SYMPOSIUM, JANUARY 13, 1948, AT 8 P. M.

MODERATOR ADM. C. E. BRAINE

1. Statement of Problem from Viewpoint of National Defense, Adm. C. E. Braine, chairman, Army-Navy Munitions Board Rubber Committee.
2. Synthetic Rubber Industry and its Relation to our National Economy, Mr. G. B. Hadlock, Office of Rubber Reserve, RFC.
3. International Implications of Rubber Problem, Mr. W. T. Phillips, State Department.
4. Present Technological Status and Future Outlook for Synthetic Rubber, Mr. J. P. Coe, vice president, United States Rubber Co., New York, N. Y.
5. Stabilizing the Domestic Rubber Industry, Mr. R P. Dinsmore, vice president, Goodyear Tire & Rubber Co.
6. American Synthetic Rubber Industry from Viewpoint of the Congress, Hon. FRED CRAWFORD, Member of Congress.

CONGRESSMAN CRAWFORD'S STATEMENT

Looking at the rubber problem as a Member of Congress, I made the following statement:

Mr. Moderator, gentlemen of the symposium, ladies, and gentlemen:

It is an honor to appear here tonight to participate in a program which includes such leaders in the various rubber fields as our moderator, Admiral Braine, Mr. Hadlock, Mr. Phillips, Dr. Coe, and Dr. Dinsmore.

It has been my duty and pleasure to study the rubber problems of this Nation for the past 2½ years. I participated in the work of the Interagency Policy Committee on Rubber and I have recently accompanied subcommittee No. 3 of the House Armed Services Committee on its inspection trip to Texas, Kentucky, and Ohio. I am fully aware, as are many of my colleagues in the House, of the complexities and the magnitude of our American-made rubber producing industry. I know, in addition, that there exists more than one opinion on many phases of the problem. A group of my colleagues is endeavoring to present legislation which in their opinion will provide adequate national security in rubber and at the same time be sound, practical and satisfactory to the consumers of rubber and to the taxpayers.

Let me say right here that this American-made rubber producing industry comes close to being the most outstanding accomplishment of chemists, physicists, engineers, and businessmen turned out in World War II. Without it this Nation and its allies would have been in bad shape when it came to producing the goods and materials for war. Also, I am positive that the movement and supply of our armed forces would have been curtailed. Furthermore, I hate to envision what would be happening to our production efforts right now and what the past 2 years since VJ-day would have been. The prices of tires would be double or triple and it's a cinch we would still have tire rationing.

I want to say something else that is a pleasure to be able to say with conviction, the American-made rubber producing industry as administered by the Office of Rubber Reserve of the RFC is the greatest example of good government administration and operation that I have observed in my 13 years as a Member of Congress.

However, I have been impressed by certain of the remarks made by Dr. Coe on the subject of the selling price of GR–S latex in comparison with the price of baled dry GR–S. It appears to me that this subject should be reviewed by the Office of Rubber Reserve. If this is not done voluntarily, I believe the Congress should request that it be done.

Sale of intermediates in the manufacture of synthetic rubber such as GR–S type II latex at a delivered price that would enable private enterprise to further process the intermediate and still be on a fair competitive basis with government synthetic rubber. In due course we may find that it will be quite necessary for intermediates in the manufacture of synthetic rubber GR–S type 2 latex at a delivered price that would enable private enterprise to further process the intermediate and still be on a fair competitive basis with Government synthetic rubber.

No bills dealing with rubber legislation have as yet been introduced in Congress, but that doesn't mean that a lot of work hasn't been done in preparation. It is quite probable that a bill or bills will be introduced in the House within a week. So anything and everything I say tonight with reference to future legislation is said for myself and on behalf of my colleagues whom I know to be in accord with my views. We have no way of guessing at this time what form the final legislation will take. We do know that something must be done by March 31, 1948.

I believe we must have a going American-made rubber industry.

To do that we must run some of it and keep more in stand-by condition available quickly in any future emergency.

Personally, and I think there is pretty general agreement on this point, I believe there should be 600,000 long tons of rated production capacity for general purpose rubber. We call this GR–S today. And in addition, there should be 75,000 long tons of rated production capacity for special purpose rubbers, such as butyl, neoprene, and the various N-types.

Then, I believe that one-third of each of the above amounts must be the minimum that will be in operation at all times. I know this is a controversial point. Some people think 100,000 is enough, others say 300,000 or more. That 225,000 figure to my mind is a fair compromise and one that will satisfy national defense and not place undue hardship on the consumers and the public.

Though I don't like the basic principle involved, it looks to me as though mandatory use specifications is the best answer to assure that these minimum tonnages will be consumed. If the price of natural rubber goes high enough, more American-made rubber than required by specification will be used. I feel strongly that more than the minimums mentioned above must be used during at least the next 2 years, because this country must buy natural rubber for the strategic stock pile. Unless the Netherlands East Indies' troubles are ironed out, I don't see that there will be enough natural rubber for world consumption and for our stock pile. So I foresee that the minimums outlined here may well not enter the picture for say 2 years, but nevertheless they must be there in any programs.

Now, also we must arrange for the continued improvement in the quality of our American-made rubber so that in an emergency it can be used in large quantities in more products that will give top service. To do that, it may be necessary for the Government to support certain programs of research and development that private industry will not undertake. I believe this research should be paid for by all taxpayers through appropriations and not paid for only by the users of rubber products, such as car owners, farmers, and trucking companies. Every American citizen will benefit from better American-made rubber, so, to my mind, he should pay the cost of research.

Then, too, the producing facilities not in use, but required in case of emergency, must be kept in top shape. Because we don't want all our eggs in one basket and because the day will come, I'm sure, when we will have surplus farm crops, I feel strongly that included in the stand-by facilities there should be at least one plant that can produce butadiene from alcohol flowing from agricultural products. This also should be a cost to every taxpayer and so should be paid for by moneys appropriated by the Congress.

I want to go back again for a moment to research and development. Our American-made-rubber program has a patent-pooling and exchange of technical information agreement hitched to it. I'm sure that was a good thing during the war, as an asset to help get rubber quickly and to get the best rubber anyone knew how to make. But citizens and industry of our country have, since the beginning, had the protection afforded by patents, I want to see that returned to our people and our industries. But this is a very tough and involved ball of yarn to unwind honestly and equitably. My guess is that there will be considerable debate on this topic, it might even have to be in the form of an amendment from the floor to any bill.

Another hot potato is, Who should own our rubber-producing facilities? Basically again, I believe American industry should own and operate this new giant war baby of ours. But you don't find new venture capital for new giant war babies on every street corner. Ordinarily, a new industry would be developed in small units as demand required. That was not so in the case of our American-made rubber producing facilities. We did things in a big way to satisfy the needs of war. I say let's try to dispose of our Government plants, but be sure we have them available if we need them again. This is such a large and important problem that Congress, the elected representatives of our people, must have the final say. Hence, even though we may appear to be wrapping plant disposal up in considerable red tape, we may have to require a concurrent resolution of the Congress before any facilities may be sold or leased.

Just two more items that make good common sense: Make any rubber goods imported into this country conform to the goods we require our rubber manufacturing industry to produce, and exempt from regulations any goods made exclusively for export.

The Government agency or agencies that will continue to administer the provisions of any proposed legislation should be determined by delegation of authority from the President. Personally, I hope he may find a way to wrap most of the rubber program up in one package. It should be more efficient than having several outfits in the picture.

Then finally we have a problem concerning the financial structure of our American-made rubber producing industry. Personally, I would like to see it streamlined and segregated. However, this may or may not appear to the leaders of the Congress as an opportune time to act on this subject.

It is not within my imagination to believe that a law will be approved which will intentionally impede progress on synthetic rubber developments sponsored and fostered by private industry. Therefore, we may in due course find that—

(a) Permission may be granted for an operating company to install equipment and other required facilities within a synthetic rubber plant under its operation in order to carry out research, development, and production projects on synthetic rubber, with any developments and patents therefrom to remain the exclusive property of the operator.

(b) Leasing of plants or portions of plants to an operating company for such periods as those plants or portions of plants are not required for normal Government synthetic rubber production may be advisable.

(c) Sale of raw materials such as butadiene and styrene to an operating company at a fair and equitable price in order that the operating company may carry out the functions described in (a) and (b) will be necessary.

I leave with you one big basic statement—we will have an American-made rubber producing industry in the United States of America.

I thank you.

Meat Shortages

EXTENSION OF REMARKS
OF
HON. EARL R. LEWIS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. LEWIS. Mr. Speaker, our experience with OPA and its bungling is so recent that I am sure its lessons have not been entirely forgotten. We all can recall how announcements were made by the Director of OPA from time to time of impending scarcities in various kinds of food and that the result of such announcements was a run on the stores by people who were anxious to lay in supplies of the item which it had been announced would be scarce. The effect of that was to create an artificial scarcity and thus to seemingly justify the continuance of OPA regulations and rationing. Certainly we do not want a repetition of this unhappy experience; but, in recent weeks, we have seen announcements by the Secretary of Agriculture which are strangely reminiscent of our experiences under OPA. I am in receipt of a telegram from the manager of a hotel in my district which calls attention to this fact and is as follows:

All wartime scarcities were preceded by Washington ballyhoo which caused people to hoard and created unwarranted glutting of markets. It seems from here that Anderson and Department is doing same on meat. Present-day deep-freezing equipment permits storing hundreds of thousands of pounds of meat indefinitely. Meat Institute says no need for alarm in fact Anderson's Department seem only one crying "Wolf." Looks like they are trying to create need for rationing and urge someone expose them or shut them up if possible.

This hotel manager, who must keep in close touch with the markets for all food, states the facts of the present situation, and it would seem that the Secretary of Agriculture would be well advised to stop his alarmist reports on meat because those reports can only make worse the present situation and undoubtedly create artificial shortages in meat where none exist.

Article by Mrs. Eleanor Roosevelt

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. HOLIFIELD. Mr. Speaker, the European recovery plan aid cannot be divorced from the control of inflation here at home.

Mr. Baruch's sage advice has been ignored, on the over-all economic interdependence of foreign aid and domestic inflation control.

The flank attack on adequate rehabilitation aid has now received an impetus by the recent report of former President Herbert Hoover. I ask unanimous consent to extend in the Appendix my remarks and include an article by Mrs. Roosevelt which appeared January 24 in the Washington Daily News:

PEOPLE ARE SMARTER THAN REPUBLICANS THINK
(By Eleanor Roosevelt)

HYDE PARK, Friday.—The Republicans have apparently repudiated the Baruch plan. First, they insist on supporting the Knutson tax-reduction bill. And then, ex-President Herbert Hoover comes out assailing a continuing plan for European aid, and wants to cut the aid requested by Secretary of State Marshall to $4,000,000,000 for 15 months.

He wishes to bar gifts of capital goods and to put into food the majority of what we send abroad. Since neither he nor the Republicans as a whole have made any suggestions as to holding down the prices of food, he is courting an increase in the cost of living and a consequent resentment on the part of the American people.

Naturally, the Republicans hope that the people would blame the Democratic administration for the disasters that would follow these measures—in inflation and high prices at home and in discouragement in Europe. The Congress, in which the Republicans have

a majority, would then escape the blame. It would be wonderful for them if the people of the United States had as little political knowledge as the Republicans suppose, but I doubt if that will prove to be true.

To cut the President's budget figures so as to offset the tax cut which the Republicans propose, will mean, of necessity, nothing done on the welfare measures proposed by the President. I should be very much surpirsed if both the intellectuals and labor and even some of the farm voters, having read Bernard M. Baruch's proposals, do not wonder why the majority in Congress insists on pursuing measures which must bring hardship both to our own people and the people of the world.

Perhaps the Republican high command thinks that Henry Wallace will take so many votes away from the Democrats, and so little from the Republicans, that it does not matter what the Republican Party does. Victory will be theirs, they assure themselves. When any political party gets this feeling, it is time for that party to beware.

This column is a warning to the Republicans that the voters of this country are more intelligent than they evidently think. Why should I, a Democrat, warn the Republicans, when everything they do is a help to the Democrats? I certainly should let them go on riding high if it were not that the results of their policies will bring suffering to the little people of our Nation, and to the people of Europe and Asia, who suffer enough as it is.

Mr. Hoover is evidently on the side of those who wish to build up again an uncontrolled industrial Germany. The Quaker in him does not believe in war, and yet he has been close enough to history to see how two wars have been brought about by a highly industrialized Germany.

Three Heroes of Virginia

EXTENSION OF REMARKS
OF
HON. J. LINDSAY ALMOND, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. ALMOND. Mr. Speaker, as long as men admire valor and subscribe to the attributes of character manifested in the virtue of individual honor, personal and official integrity, truth and justice, wherever found, the ship of state will sail on triumphant over every storm, hewing opportunity from the shoals of adversity to reach the shores of a glorious destiny.

The Nation should be grateful to the United Daughters of the Confederacy, as that great organization, representing the finest in southern tradition and American womanhood, eschewing every purpose and attempt to fan the flames of sectionalism, keeps aglow on the hearthstones of memory the embers of courage, sacrifice, and devotion to duty so strongly symbolized in the lives and characters of Matthew Fontaine Maury, Robert Edward Lee and Thomas Jonathan Jackson.

The quality and character of its leaders determines a nation's place in history and a people carve their own image in the shrines and monuments they erect to their heroes.

The brilliance and genius of Maury, the Pathfinder of the Sea, his devotion to his native State and his immeasurable contribution to the safety and progress of navigation, wrote an indelible chapter of honor and achievement in the history of his country.

No nobler general ever lived than Robert E. Lee; no braver soldier ever fought than Stonewall Jackson. Both, supreme as gentlemen, the knightliest knights who ever wore the gray, the fruition of the brave heart of embattled Virginia. They exchanged ambition for the sacrifice of service, glory for immortality.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a brilliant address, entitled "Three Heroes of Virginia," the author of which is Dr. M. C. Harrison, head, department of English and foreign languages, Virginia Polytechnic Institute, Blacksburg, Va. This adress was read from the VPI Broadcasting Station on January 19, 1948, by Mrs. M. C. Harrison, representing the Dr. Harvey Black Chapter, United Daughters of the Confederacy:

The month of January contains the birthdays of three native sons of Virginia whom this old Commonwealth delights to honor and whom she will continue to honor as long as time endures. The three Virginia heroes whose birthdays we remember today are Matthew Fontaine Maury, who was born on January 14, 1806; Robert Edward Lee, who was born on January 19, 1807; and Thomas Jonathan Jackson, who was born on January 21, 1824.

All three of these men were loyal to their native State in her time of greatest need, putting aside selfish interests and emoluments to serve Virginia when Virginia cast her lot with the Southern Confederacy.

Maury had become internationally famous as the scientist who had charted the ocean winds and tides to the extent of shortening sailing time between various parts of the world, saving millions of dollars' worth of cargoes from loss by storms, and insuring greater safety for thousands of human lives on the great deep. He had received the name of the Pathfinder of the Sea. His studies of the ocean bed between Newfoundland and Ireland had made possible the laying of the first Atlantic cable. Foreign countries bestowed on him medals, honorary degrees, and other awards.

When Virginia seceded from the Union, Maury served first in an advisory capacity in Richmond. Had President Jefferson Davis acted upon his counsel with regard to building an effective Confederate Navy the Federal blockade would have been an impossibility. Lameness prevented Maury from commanding a ship of war, but he invented an electric torpedo that blew the boilers through the deck of a Federal gunboat in the James River below Richmond. Mr. Davis made the mistake of sending Maury as an agent to England instead of using his genius to the fullest advantage at home.

Thomas Jonathan Jackson, usually called by his battle sobriquet of Stonewall, is known the world over wherever men study the history of brilliant military strategy. A stone wall on defense, he was a thunderbolt in attack. Whether operating independently, as in the valley campaign of 1862, or commanding the Second Corps of the Army of Northern Virginia, as at Second Manassas, Fredericksburg, and Chancellorsville, he was the glory of his friends and the terror of his foes. The sun of the Confederacy set when Jackson died, in May 1863, of pneumonia induced by the wounds which he had received at Chancellorsville. The most discerning military critics have believed that if Stonewall Jackson had been living at the time of Gettysburg that battle would have been a stupendous southern victory.

The peerless Lee will live as long as men revere courage, honesty, honor, sincerity, and truth. Though humble as the simplest private in his ranks, he was the greatest captain of his generation; in fact, one of the superb soldiers of all time. Could unselfish devotion to a cause, unsparing effort, and the genius of leadership have sufficed, Robert E. Lee would have led the Southern Confederacy to victory. But even when his army, because of the enemy's overwhelming numbers and resources, had to lay down its arms Lee's greatness of soul shone like a star of unprecedented magnitude.

All three of the heroes whom we honor today were men of spiritual integrity and religious faith. Jackson, "the Blue Light elder," habitually led his men into battle with hand and arm lifted in attitude of prayer. Maury, the scientist, found God in all of nature's works. Lee's last act of duty was attending a vestry meeting in the church of which he was a member, and his last effort before being borne to his death bed was to ask a blessing at his family's table.

All three of our heroes are associated with the college town of Lexington, Va. Maury died there while employed as a professor in the Virginia Military Institute. Jackson's remains were buried there. And all that is mortal of General Lee rests beneath the chapel of the college of which he was president and which now bears his name. Drive through scenic Goshen Pass and stop for a silent moment at the Maury Memorial. Step into the Lexington cemetery and lift your hat before the bronze likeness of old Stonewall. Stand in awe and reverence before a recumbent figure faultlessly carved from symbolically pure Carara marble—a figure that reposes in the chapel of Washington and Lee; a figure that Gen. John J. Pershing was proud to salute. Then give thanks to God that you have been in touch with souls that placed principle above expediency, honor above ease, and righteousness above reward.

Extend Rent Control Now

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. MADDEN. Mr. Speaker, millions over the country today are very much concerned about the extension of the Rent-Control Act. Neither landlords nor tenants should be kept in suspense as to whether this act will be extended and if so, how long the extension will be.

The leadership of the Congress should use all due haste in calling up this legislation and have it acted upon at the earliest possible time.

One of the reasons for a prompt decision is set out in the following letter from Mr. Jacobs, chairman of the Gary-Hammond, Ind., Rent Advisory Board:

The Honorable RAY J. MADDEN,
House of Representatives,
Washington, D. C.

DEAR MR. MADDEN: As the expiration date of the present rent-control law draws closer, and the housing situation failing to show sufficient improvements since the enactment of that law, it is the general opinion of this Board that the Housing and Rent Control Act of 1947 should be extended.

Another reason for this Board's request for an extension on rent controls is the shortage of rental units in this area. There has been during the past year a noticeable gain in

housing construction, although the majority of the units built are for selling and not renting purposes which, in itself, does not alter the renting situation.

Whatever legislation that may be passed upon relative to this act should be passed in sufficient time before February 29 so that all concerned will know just what they may expect on that date. This act should not have an eleventh-hour decision like the OPA had.

Very truly yours,

DAVID G. JACOBS,
Chairman, Gary-Hammond Rent Advisory Board,
By DELIA B. NAIVE,
Secretary.

A Prolabor Law

EXTENSION OF REMARKS
OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. ELLIS. Mr. Speaker, President Lincoln said, "Labor is the great source from which nearly all, if not all, human comforts and necessities are drawn." There is practically unanimous agreement with this statement of the great emancipator.

When labor is fully employed at good wages it means prosperity for every segment of our population. Surely, every person with sufficient intelligence to read and write is deeply interested in maintaining a high degree of prosperity, and certainly any member of a legislative body would be derelict in his duty if he did not use his good offices to promote the general welfare.

In 1946 the country suffered almost continuous paralyzing work stoppages; 116,000,000 man-days of production, which was so desperately needed, were lost. Who was responsible for this is not debated here. The fact that our industry was not operating was sufficient evidnce that there was something radically wrong with the then existing labor laws or the administration thereof.

It was the duty of the Congress to endeavor to solve the problem of labor-management relations, and the study resulted in the Taft-Hartley Act. Every union man owes it to himself, his employer, and his neighbor not to idly accept criticisms of the law by some person whose own interest is better served by opposing any change in the old law, but to give thorough study to the new provisions and its operation since enactment. This study no doubt will reveal that the position of all concerned has been improved. The opinion of a vast majority is that the law is working and it protects the interest of the individual worker, the union, management, and the public.

Since the passage of the act there has been a much better understanding on the part of unions and companies alike as to what is involved in collective-bargaining process than there has been at any other time in our history. In 1947, 35,000,000 man-days were lost, and the law operated only the last 5 months, in comparison with 116,000,000 in 1946.

Many of the rank and file of labor are doubting their leadership charges that the Taft-Hartley Act is a slave-labor law, because the workers have not become slaves and their unions have not been destroyed. They are now experiencing greater freedom from the excessive power of officials.

The Labor-Management Relations Act of 1947 has not retarded the growth of the labor movement. On the contrary, union membership has increased under the law. The Teamsters' Union, alone, has acquired approximately 100,000 new members since the passage of the act, according to Daniel J. Tobin, international president.

The new law has not affected the ability to bargain for higher wages and better working conditions. Actually, the best contracts ever negotiated, have been signed.

The section dealing with the separation of the prosecution and judicial powers of the NLRB is being accepted by union leaders with considerable enthusiasm.

The following statement by Henry Hazlitt, as published in Newsweek, gives some most interesting information. I direct your attention particularly to the poll of union members on the 10 major provisions of the law. I think their viewpoint at that time has been fully justified:

A PROLABOR LAW

(By Henry Hazlitt)

The fate of the Taft-Hartley Act is an ominous illustration of the power of propaganda. The Wagner Act left the individual worker at the mercy of the union boss. The new law protects the individual worker's rights and interests. It is precisely because the new law does curb the hitherto unbridled powers of union leaders over the rank and file that these leaders opposed its enactment with every technique of propaganda. They did not shrink from any misrepresentation, however fantastic, including the device of denouncing the measure as a slave-labor law.

This was not enough to shake the determination of an overwhelming majority of Congress to pass it. Yet it had its effect, not only on the astonishing language of the President's veto, but on the rank and file of workers. A recent survey conducted by the Opinion Research Corp. found that 54 percent of the employees questioned, and 64 percent of union members, disapproved the law.

But the survey also uncovered a strange paradox. Notwithstanding their declared disapproval of the new law, a majority of workers favored every individual provision of it on which they were questioned. Even a majority of union members favored every feature of it but one. Here is the result:

[Percent]

Favor law to—	All employees	Union members
Require 60-day cooling-off period	78	70
Allow companies to sue unions	77	70
Allow freedom of speech for employers	69	61
Require union financial reports	86	85
Prohibit Communist union leaders	76	77
Prohibit union political contributions	56	50
Allow check-off only with worker's consent	68	74
Allow union shop only with majority vote	79	77
Outlaw closed shop	60	48
Delay strikes in public-service industries	78	70

The new labor law makes it an unfair labor practice for a union as well as an employer to restrain or coerce individual workers in the exercise of their bargaining rights. It illegalizes excessive or discriminatory initiation fees. It refuses to certify a union or allow it to bring complaints to the Labor Board unless it has published a report of its receipts and disbursements, as well as a statement giving its name, the names, titles, and salaries of its principal officers, the manner of the election, the initiation fees and dues of the union, a detailed statement of its constitution and bylaws showing the procedure followed regarding qualifications for or restrictions on membership, election of officers, calling of regular or special meetings, levying of assessments, imposition of fines, authorization for strikes, authorization for disbursement of union funds, audit of union financial transactions, expulsion of members, and the grounds for it.

Every member of a union will want to know every one of these facts. It is only union bosses who find their arbitrary powers threatened, who want to continue to be high-handed, secretive, and irresponsible to the rank and file of their unions, who have anything to fear from such publicity. It is not surprising when such union bosses announce that they will bypass the new law.

Equally important protections for the rank and file are the provision requiring written consent of individual workers for the check-off of union dues, the provision making it unlawful for an employer to buy off a corrupt or blackmailing union leader, and the provision to assure that so-called welfare funds really are used for the union members' welfare and not merely to make labor leaders financially independent of the rank and file of their unions.

If we are thinking not of retaining unrestricted power for a small union oligarchy but of the rights of the union rank and file and the rights of the individual workers, then the much-abused Taft-Harley Act far more deserves the title of a prolabor law than the misconceived Wagner Act ever did.

Poetry Prizes for American Students

EXTENSION OF REMARKS
OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. HARLESS of Arizona. Mr. Speaker, James Patrick McGovern, special Washington correspondent of the Arizona Daily Sun, a distinguished member of the bar of the District of Columbia, and former captain in the American Expeditionary Forces during the First World War, has established the McGovern Poetry Award in the American University and Catholic University of America, both in the National Capital. Succinctly stated, the prizes, selected by the presidents or other executive officers of the two universities, in their uncontrolled judgment and discretion, are to be awarded annually to students for the best original poems submitted in competitions open to all undergraduates, representative of the various cultural, religious, and racial differences of the Nation, thus reflecting Captain McGovern's desire for the tolerance, understanding, and brotherhood that knows no distinctions of race, creed, or color. His special object is to foster the humanizing and creative qualities to which the encouragement of the writing of poetry lends itself, particularly as he believes

that its cultural and spiritual values, as contrasted with the practical and material aspects of much of our college training and of society generally would be salutary in a world which appears to owe much of its strife—nationally and internationally—to the inordinate importance attached to the possessions of wealth and to the slight attention given to those of the mind and heart, an unwise promotion of the material to the neglect of the spiritual. The Catholic University of America has not yet issued its announcement on the subject, but the American University released a press statement under date of January 6, 1948, reading as follows:

To encourage the writing of poetry, James Patrick McGovern, Washington lawyer and member of the firm of Magee, Beedy & McGovern, Munsey Building, has established the McGovern Poetry Award in the American University. Two awards of $75 and $50 will be made at the commencement on May 31, 1948, to students who have submitted the most meritorious verse when Norman Cousins, editor of the Saturday Review of Literature delivers the commencement address. More than 4,000 students of the university are eligible to make entries for the awards. President Paul F. Douglass has appointed, as the committee in charge of the award, Mr. McGovern, as honorary chairman; Prof. Merritt C. Batchelder, chairman of the division of humanities of the College of Arts and Sciences; Dr. Rudolph von Abele, assistant professor of American literature in the School of Social Sciences and Public Affairs; and Dr. Elgin Groseclose, Washington novelist and alumnus of the American University. All manuscripts must be submitted to Dr. von Abele not later than April 15, 1948.

In furtherance of the endowment Captain McGovern has written a poem for publication in the official organs of both universities, which reads:

THE HEART'S UNDYING QUEST

Poetry has nature's root and flower,
The soul of life from essence of the earth;
Born of truth and beauty, it reaps power
To make the mortal of immortal worth.
The spirit which is nurtured in its seed
Can build such health, such faith, such harmony
That wisdom of the heart and mind then lead
To peace and brotherhood and liberty.
The art of poetry owns a domain
Unique and universal in its sphere,
With words like pageants gleaming in its train,
With strains of music blending for the ear;
It is the diamond light of man's unrest,
The rhythms of the heart's undying quest.

—*James Patrick McGovern.*

Truman Can Check Inflation If He Desires

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, President Truman has the power and authority to reduce speculation and, in addition, he can knock inflation into "kingdom come," if he is so disposed. Airtight secrecy is the answer to speculation and if put into effect prices would drop materially. Congressional action is not needed. For months the administration has had a policy that precipitated speculation resulting in an increase in the inflationary spiral. Mr. Raymond Moley, writing in the Chicago Journal of Commerce, calls the turn on this situation. I include it as part of my remarks:

HOW TO CHECK INFLATION

(By Raymond Moley)

An experienced trader in commodities, who hesitates to speak in his own name publicly, points out that it lies entirely within the power of the administration not only to squeeze and reduce speculation, but to attack inflation on a wide and vital front. He says that if Government grain buying could be as secretly managed as the stabilization fund in the Treasury, there would have been no such rise in commodities as has been seen since September, and that in the next 3 or 4 months prices could be materially reduced.

No congressional action at all would be needed for such managed buying. Just skill and secrecy in planning are necessary.

The commodities trader pointed out that the Government already owns 400,000,000 of the 500,000,000 bushels of wheat needed up to May or June. Why not halt buying for a while and enter the market only intermittently for the next few months? Over the period between now and June, only 20,000,000 bushels a month are needed. This amount could be secured without question and at great savings.

A sudden stoppage of Government buying, even though it be temporary, has a powerful effect on speculators. This was shown in late November, when a sudden rumor ran through the exchanges that the Government would stop buying for the rest of the year. Prices dropped suddenly.

The Government's actions over past months have created exactly what the President deplored in his statement on the Republican anti-inflation bill, namely, "speculation, hoarding, dumping, and other actions." Throughout 1947 the administration lost little opportunity to proclaim the danger of shortages and to point out that the supply would fall short of the need. The Department of Agriculture said that we could safely spare 570,000,000 bushels. Government propaganda did much to draw speculators into the long side of the market.

The Department of Agriculture will deny that its buying policies could have been altered in the past few months to prevent the rise. It says it had to buy and that the magnitude of its buying was so great that prices inevitably had to rise.

The Department will, however, find it hard to deny that the farm bloc would have entered vehment protests against real stabilization. It would also find it hard to deny that a valiant effort now to hammer the price of wheat down would be politically injurious to Mr. Truman's chances of winning more support in farming States. It must be admitted by Republicans, also, that they have shown no zest to hit the cost of living in the vulnerable spot, which is the price of wheat.

Meanwhile, the tom-toms are sounded about speculation. And the Republican Congress gave the administration its desired power to hit the distillers again. That curb, which extends to January 31, will no doubt be up for an extension early in this session of Congress. It saves little grain and is of doubtful constitutionality. But it is a safe way to divert attention for a genuine attack on inflationary grain prices.

Discrimination Against United States Veterans

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. MADDEN. Mr. Speaker, last week, Harold Morris, commander of the Indiana American Legion, the State and national adjutants of the American Legion, and others came to Washington to meet with the Indiana congressional delegation to protest the sale of 140 defense houses located at Knox, Ind., to real-estate speculators.

Negotiations were about to be consummated for the sale of these homes, known as Parkview Heights housing project at Knox, Ind., to a real-estate firm from Lorain, Ohio.

These houses have been almost exclusively occupied by veterans of World War II who have been negotiating for a long period of time with the Public Housing regional director in Chicago for the purchase of these homes.

The intent of Congress in passing legislation for the sale of all surplus war housing, as well as other surplus material, was to give the veteran the No. 1 preference.

The facts relating to the negotiations for purchase of this project, as related by Commander Morris and John K. George, a veteran of Knox, Ind., who rents one of these homes, has convinced me and the other members of the Indiana delegation who met in conference last Saturday, that the veterans' purchase application was ignored and the intent of Congress to give the veterans preference was completely disregarded.

Knox Homes, Inc., who entered negotiations with the Public Housing Administrator in the Chicago regional office proceeded to solicit contracts for the reselling of these homes at almost double the amount of purchase even before the contract was signed by the Government. No doubt incidents of this kind in selling surplus housing installations have and are occuring in other localities throughout the country.

The veterans' group from Knox, Ind., have been trying to purchase this property for a period long previous to when the Knox Homes, Inc., made application, but for some reason have not been extended the aid and cooperation in consummating this purchase which the Congress intended the veterans to have.

Through the efforts of the Indiana congressional delegation, a conference will be held this week at the Legion headquarters in Indianapolis, Ind., with the Chicago Regional Public Housing Administrator, with the hope that Knox Homes, Inc., will be denied the opportunity to purchase this property. The veterans group were at all times ready and willing to pay a price equal or in

excess of that offered by Knox Homes, Inc.

I mention this case of veterans discrimination because it is merely one of numerous incidents which have taken place over the country in the disposal of surplus Government real estate and personal property.

In the purchase of surplus personal property, the veteran's preference has almost been made a mockery because of the Administrators' insistence that veterans should buy in allotments far above their capacity to pay.

Another malicious violation of veteran's preference has been the fact that speculators have used individual veterans as a front to secure Government surplus and then sell the same at high and unreasonable profits.

I propose to submit an amendment to the Surplus Property Act, calling for a severe penalty, both for the speculator purchaser and also the veteran who engages in a conspiracy to defeat the intent of Congress which was to give the veteran a No. 1 preference on all surplus Government war property, both real and personal.

Investigate Oil

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. HESELTON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial recently published in the Boston (Mass.) Herald.

This editorial is particularly pertinent in view of the unanimous action taken by the House Committee on Interstate and Foreign Commerce, which was reported by the chairman of that committee, the gentleman from New Jersey [Mr. WOLVERTON], earlier this afternoon.

The emphasis on the fact that the problem is now producing crises in sections of this country, is not necessarily local but rather looms as of national and possibly of world concern, is of great importance. It is clearly recognized, in the action of the House Committee on Interstate and Foreign Commerce, that we are not only dealing with emergency conditions now but with long-range problems which may affect the very peace of the world, quite apart from its comfort and industrial capacity.

May I underline two sentences:

A nation forewarned is a nation forearmed, even if the American way too often is to ignore warnings of an approaching crisis, and then, when it comes, to hunt a scapegoat. * * * Facts, rather than divergent fancies, appear justified, now that petroleum as a source of heat and power are here to stay.

The editorial is as follows:

INVESTIGATE OIL

Cold and snow and the 68-69 prescription for the household thermostat have brought home to New England that there is a fuel oil shortage and that observance of the 15-percent reduction rules can mean the difference between a healthy home comfort and shivering for the balance of the winter. Climate and geographical position and lack of tankers have combined to build up the impression that the oil scarcity is peculiarly New England's own.

Within a week, three distinct Washington advices from official sources indicate that the problem is more than that of an area. It looms as of national and possibly of world concern, or specifically that portion of the world which clings to democracy. Concern has common foundation not in decrease of supplies, but in tremendous increase in demand. Statistically, Secretary of the Interior Krug points to rise in domestic demand from 367 gallons per capita in 1941 to 608 gallons in 1947.

This is fundamentally the basis for his appeal for development of lignite coal and shale deposits and his warning that known United States petroleum reserves would be exhausted in 10 years. It explains the supplementary statement of the director of the Department's oil and gas situation, Max Ball, that 4 or 5 years would elapse before the supply of oil caught up with demand. Of military concern, expressed by Secretary of Defense Forrestal, is peril to the Near East flow from Moslem or Soviet pipe-line interference.

Since the huge wartime demands upon petroleum, a drain that has not dwindled but increased, there have been two schools of thought on the future of our petroleum. Broadly, industry estimates see no danger of exhaustion on the premise that new deposits can be brought into use faster than consumption increases. The administration agencies' view is that known resources cannot stand the postwar gaff, and that coal and shale, the so-called marginal sources, be readied for liquid fuels conversion about 25 times the country's present proved reserves.

A nation forewarned is a nation forearmed, even if the American way too often is to ignore warnings of an approaching crisis and then, when it comes, to hunt a scapegoat. For the facts on what we can expect in petroleum, a special commission to prepare a national petroleum policy in the manner of the Finletter commission on aviation should be set up at once. Facts, rather than divergent fancies, appear justified, now that petroleum as a source of heat and power is here to stay.

Address of Senator Raymond E. Baldwin

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. KEATING. Mr. Speaker, experienced public servant in State and Nation, liberal statesman and forceful leader, Senator RAYMOND E. BALDWIN, of Connecticut, was the principal speaker at the annual dinner of the New York State Bar Association held last Saturday evening in New York City.

The enthusiastic reception accorded his address was thoroughly merited not alone by his always masterful delivery, but equally by the thoughtful and constructive character of his remarks.

As we grapple with the gigantic problems embraced within the European recovery program, it seems to me helpful to bring to the attention of the membership of both Houses the views of one of our distinguished colleagues, who, in experience and devotion to the best interests of our Nation, represents public service in its finest expression. His address follows:

It is sometimes said that our good Pilgrim fathers barely tolerated lawyers—regarding them as a necessary evil to be carefully watched. One of these founders of our country is said to have observed a tombstone inscribed, "Here lies the body of Jonathan Baker, a lawyer and an honest man," and reflectively observed, "A lawyer and an honest man. I wonder what the two of them are doing in one grave."

Perhaps that is a reason historians disagree as to how many signers of the Declaration of Independence were professionally concerned with the law. Some say 26. Others say 32. At any rate, well over half of those who took this lead in finally declaring our purpose of seeking independence were lawyers or judges. And since that time lawyers have consistently played a crucial role in the direction and development of our Nation's policies.

It is a welcome opportunity to talk with bar association members because you can appreciate, better than those not so intimately associated with the law, the problems and the difficulties we have before us in the Congress.

Rather than talk shop here tonight—which I would like very much to do—I would like to talk over with you what I am sure we all believe is the most vital and threatening question before our Nation now—that is whether or not we should enter into a vast program to rehabilitate Europe in an effort to prolong peace.

Certainly there is no issue to which Franklin's warning "we must all hang together or most assuredly we must all hang separately" can more aptly be applied.

One of your own members, the present distinguished Governor of your State, Thomas E. Dewey, was one of the first to impress on our people the vital necessity for regarding foreign policy as a bipartisan American issue. On several occasions during the 1944 campaign, Governor Dewey called for a unified bipartisan foreign policy. I recall particularly that in Louisville, that September, Governor Dewey said, "It is a nonpartisan matter when we are in war. . So also we must learn to make peace a nonpartisan matter to be achieved through united effort."

There are those who refer to such an attitude as a "me too" attitude. Those who do may be guilty of allowing the other party to rule their thinking. It does not follow that either party must always be wrong or always right. Of course, being a stanch Republican, I have been—and am—convinced that right is considerably more likely to be on our side.

Certainly in the matter of foreign policy we can have no rift in our policies that would allow other nations or other ideologies to divide our thinking to the damage of our own principles. This does not mean that we expect, or require, conformation to any rigid thinking on foreign policy, but it does mean that we should cease to regard foreign policy as a weapon of political campaigns. We are—and should be—Americans before we are Democrats or Republicans, or Wallaces. Surely there are still principles, hopes, and causes that all Americans have in common.

The development of our present foreign policy is the product of a bipartisan exchange of views. And I might say, in passing, that it was primarily the efforts of Senator VANDENBERG that changed the administration's recent policy of appeasement to one of firmness. It is the Vandenbergs, the Wilkies, the Deweys of the opposition party that have succeeded, to some large degree, in making sure that American differences regarding re-

lations with other nations cease "at the water's edge."

It is my sincere hope that we will continue to show the world a united, firm, wise, and generous attitude.

We are facing today, a condition different from any in history. There are no precedents. At no time, since God placed man on earth, has one people, one nation, come to such a dominant position of leadership in the affairs of the whole globe. It is gratifying to know that this has not come about as the result of a ruthless, military march in which we started off as the aggressor. The natural wealth of our land, our own love of peace, our free minds and free souls, have built a mightier nation than all the military conquests of history. As a free people, we do not seem to understand and fully appreciate our own strength. We are reluctant to assume the responsibility of dominance in world affairs, such as has never been the case with any nation heretofore. Such a position of leadership brings with it challenging responsibilities. More than any other nation, we, the people of America, are charged with the keeping of the peace.

Not all of us believe peace lies at the end of the same road.

There are those who argue with conviction that we can withdraw to the shores of our own land and build here a wealthy, safe, and secure island of peaceful plenty. Those who foster that belief, daring the advance of science, ignore the changes of modern years, and give themselves up to the inevitability of war.

It is possible that we could build, here, such a strong defense that no nation, or combination of nations, could take our own land from us. But those who depend on such defense here must acknowledge the horrible fact that war then, whether we would win or lose, would be fought on our own streets. Many of those who advocate such an escape from threatening problems couple their arguments with the claim that any other course is too expensive.

During the next 4 years at the present rate of spending, veterans' affairs will cost us about $25,000,000,000, national defense about 45 billion, and service on the war acquired debt about 16 billion. Those three costs of war and costs of defense will, at the present rate, cost more than four times as much as the proposed European recovery plan. We cannot avoid them now, but we can avoid their larger counterparts for the future. Peace is not a gift. It must be paid for—and worked for.

Let it be entirely understood that such expenditures for the aid of other nations are not the heedless spendings of a wastrel nation. They are investments in peace. They are selfish guaranties of our own security. The reconstruction of Europe will bring us a higher budget and add to our taxes. The failure to build freedom and prosperity in other nations would soon make necessary for higher taxes, for defense against a hungry and envious world. There are also those who choose to follow the path of appeasement. Appeasement was not discovered in 1939.

In our own history, we tried appeasement with the pirates of Tripoli. England had an early experience appeasing the Vikings. Those attempts, like others, only prolonged the inevitable day when stronger methods had to be used. Appeasement cannot work because appeasement ignores a human trait of insatiable greed for power once that power has been tasted. Is there any reason to suppose that left to develop her own ambitions, the Soviet Union would halt her expansion over Europe at the present boundaries? There are those who say that makes little difference—that peoples absorbed in the Soviet ideology will soon recognize the failures of the system and will gladly return to our democratic fold. Those wishful thinkers can be shown that once a free people is bound by the chains of dictatorship, there is no turning back. Greedy, envious leaders of other ideologies could then use the wealth and the manpower of exploited nations to threaten our people. It is of great importance that this Nation develop friendly, mutually trusting relationships with the Soviet Union. But I see no way for us to interminably extend our own understanding so long as Soviet leaders refuse to reciprocate. We have, since the war, seen instance after instance in which the Soviet Union has disregarded our mutual plans and has sought to inflame other people against us by violent, and—I might say—malicious misconstructions of our purposes. We can only sincerely hope that Soviet leaders can come to recognize the rights and hopes of free people and join efforts to build peace.

This year of 1948 will be a year of fateful decisions. The fate of peace may well be decided in these next months. There is before us now, the so-called Marshall plan, a plan which bears out our traditional belief that in prosperity and freedom there is peace. The plan has been criticized. It is unfortunate that in those criticisms there is seldom offered an alternative hope.

No loyal, thinking, American favors the spending uselessly, any part of our hard-earned wealth. Our land is not a land of limitless resources. We are not a people of boundless wealth. We cannot waste our substance in riotous giving. It is vitally important that we guard our own economy if we are to keep ourselves free and the world at peace. Poverty here cannot help relieve poverty abroad.

Most of us are now aware that our efforts of the past 2 years during which we spent nearly $17,000,000,000 on relief for Europe must be declared essentially a failure. The generous, willing assistance of our people has been squandered with little or no effect—squandered because the administration chose to follow that familiar policy of reckless spending on useless doles—with a view to relieving rather than rebuilding Europe. So we find ourselves, today, scarcely further ahead than we were 2 years ago. It is indeed discouraging to realize that the generosity of our people has been so ineffectively used. During that time, we have come to be threatened by a dangerous inflation at home. That loss of our wealth—is in itself serious. Even more serious is the fact that this failure has led many of our people to question whether our Government can apply our aid in such a way that we can look forward to the day when the need for it will cease.

It must be clearly understood that in undertaking any new effort, we divorce our efforts from the past. We are starting anew, conscious of the failure of the past, but undiscouraged in our efforts to build a just and permanent peace.

Until this time we have been somewhat in the position of the embarrassed helper of an impoverished friend who anonymously slips a check under his friend's door and hopes that it will help to tide him over. Now we have finally come to the point of walking frankly and openly up to our friend's door and knocking to tell him "I want to help you out of your trouble but I want to see that you use my help in such a way that you'll soon be back on your own feet and able to earn your own living."

This plan must do more than express a pious hope if it is to justify the expenditure of our own wealth. Reconstruction must be accomplished. You, as close associates of many of the powerful business and labor interests of this Nation, can help impress upon our people the vital necessity for their demanding and insisting that this plan be made realistic, efficient, and productive. You can lead our people in insisting that selfish interests must be submerged if we are to maintain the sceurity and freedom of our own homes.

Let me be specific. It is very well to say that we must have a trained expert staff working, for example, on the problem of the reconstruction of the French railroads. It is all very well to say that we do not want to entrust such technical operations to the hands of profesisonal civil servants, but where are we going to get the trained personnel? Where will we actually get the hard-headed resourceful experts we claim are needed? It will be difficult to convince outstanding men that they should abandon their present work to patriotically accept low-paying positions for uncertain periods of time. We run the risk of collecting comparatively unqualified staffs. We run the risk of including on those staffs some who might have, or develop, selfish financial interests. Therefore, unless we secure the full and patriotic cooperation of leaders in labor, management, and agriculture, it will be necessary to rely primarily on professional civil servants who may, or may not, be fully qualified for the work to which they might be assigned. We, in Congress, cannot—by law alone—make this plan work efficiently and effectively. That is up to all who seek peace.

I might say here—it does not necessarily follow that the employment of such professional Government workers is disastrous. More frequently, it is the policies that have brought failure. For example, our State Department is commonly charged with a major responsibility for the lack of effectiveness of postwar relief. At the risk of defending a sometimes unpopular cause, it is only fair to recall that less than 8 percent of the direct relief given to Europe in the past 18 months came under the authority of the State Department. The balance has been administered by such a variety of agencies as the Treasury, the Export-Import Bank, UNRRA, the Army, and the Maritime Commission—a variety so great as to certainly preclude any probability of effective coordination.

The European recovery plan offers hope but it also presents problems. Let's review what some of these encouraging signs are and also look at some of the problems.

The very fact that 16 nations of Europe have agreed to take cooperative measures to stabilize their money, to reduce trade barriers, to provide for the free movement of people between their countries, and to cooperatively use their individual resources is most encouraging. The selfish nationalism of Europe has been the cause of war for centuries. We, who are here tonight, will probably never see the day when the world becomes fully united in a combined effort to preserve the peace forever, but we may be witnessing, now, a beginning of a United States of Europe that will be a vitally important step in that direction. The significance of these 16 nations joining together, should not be overlooked. It is an encouraging and hopeful sign.

Other nations can be expected to join in helping carry out this program. As a matter of fact, at least three of the participating nations, Portugal, Switzerland, and Turkey, will probably be able to pay for the imports we send them. In addition to that, Portugal and Switzerland have indicated their willingness to extend credit to the other nations involved.

This plan places definite responsibilities on the recipient nations and encourages the full use of their own efforts. Each participating country must conclude an agreement with the United States making guarantees of full and open cooperation.

The task we face is not easy. Because of increased population, the loss of overseas investments, the servicing of foreign debts, the increased prices, and the reduction in supplies available from eastern Europe and southeastern Asia, the nations of Europe need to build greater production than they had in prewar years.

They particularly need to restore grain and livestock production, to increase coal production above the prewar production level, to expand the production of electricity, to greatly expand facilities for refining oil, to increase steel production, to expand and rebuild inland transportation and to restore merchant fleets. What kind of an organization can best deal with those complicated and varied problems? This effort should be directed by hard-headed, effective business administration. There can be no quarrel with that. We can depend no longer on the policies of spend and hope that we have seen in the past. However, there might arise difficult administrative problems as to whether we might run the risk of dividing this authority and so create some threat to the proper integration and continuity of foreign policy.

Two somewhat contrary proposals have been made concerning the organization to be established. One is the suggestion of the President which would establish the Economic Cooperation Administration headed by an administrator responsible to the President. He would be independent of all other agencies except where the actions of the Administrator would affect foreign policy, in which cases he would be subject to the direction and control of the Secretary of State.

Under the Herter plan there would be established an independent Government corporation called the Emergency Foreign Reconstruction Authority, whose powers would be vested in a chairman acting under the direction of a bipartisan board of eight. This chairman would also be the executive director of a foreign aid council composed of his eight directors and six other administration officials, including the Secretary of State and four other Cabinet members.

This difference raises a practical question of administrative procedure. Under both plans it is clear that the chairman or the administrator would be responsible for all phases of the program except possibly those affecting foreign policy. Under the administration plan, foreign policy matters would be subject to the control of the Secretary of State. Under the Herter plan this point is not entirely clear. Foreign policy may, also, in effect, be controlled by the Secretary of State, provided the administrator accedes in case of disagreement or provided any difference of opinion were resolved by the President.

It has been made clear both by the Secretary of State and the Herter committee, that in any event the actual organization should and would be set aside from, and not made a part of, the Department of State.

This apparent difference of opinion also brings up a constitutional question. The Supreme Court has consistently held that the power of conducting foreign affairs resides in the executive alone.

In *Marbury* v. *Madison*, Chief Justice Marshall said, "By the Constitution of the United States, the President is invested with certain important political powers, in the exercise of which he is to use his own discretion. * * * To aid him in the performance of these duties, he is authorized to appoint certain officers, who act by his authority, and in conformity with his orders. In such cases their acts are his acts; and whatever discretion may be used, still there exists, and can exist no power to control that discretion. * * * The application of this remark will be perceived by adverting to the act of Congress for establishing the department of foreign affairs. This officer and his duties were prescribed by that act, is to conform precisely to the will of the President. * * *" The act to which Marshall referred did not direct the President to act through the Secretary of State and left the President free to act through another officer if he chose. Traditionally, the President has placed that responsibility in the Secretary of, and Department of, State. There would seem to be grave question as to whether Congress could direct the President to assign any part of that authority elsewhere—if this should be attempted.

However, that is largely a technicality, since for all practical purposes—the direction of foreign policy could remain in the hands of the Secretary of State under either proposal by possible interpretation.

I feel confident that the Congress, has as its purpose, the establishment of an efficient authority close to the working level of the project and that some arrangement will be worked out whereby the lines of authority will be clearly established and a division of authority in matters of foreign policy will not be created. From a strictly political viewpoint, this technical disagreement furnishes an excellent opportunity for bipartisan cooperation—in which both the Congress and the administration must recognize the responsibilities and concern of the other.

The amount of aid that is to be given presents an issue of vital consequence. We are agreed that there is little use in setting up an inadequate program which would only delay the economic collapse of these nations. The fact must certainly be granted that no human being can, with exact accuracy judge what the minimum amount for success must be. We are required to accept the estimates and the judgment of those who have most carefully studied the case. To arbitrarily and without full consideration take the position that this sum now set at 6.8 billion for the first 15 months can be reduced by two or three billion is patently unwise. Whether that sum can be scaled down, whether that amount of aid can be extended without a dangerous effect on our internal economy are matters requiring careful and objective study. However, the amount we appropriate is of far less importance than how we spend it. Next year, after we have had the experience of 1 year of operation, we will be in a far better position to balance the results against the needs and against our capabilities. It has been argued that because an estimated two billion of the amount requested by the administration may not be spent during the fiscal year covered by this appropriation, we need not appropriate more than about 4.6 billion this year. The legislative budget is, of course, based on expenditures, not on appropriations. However, the additional two billion concerned here would be authorized for contracts requiring future expenditures. If that amount is not appropriated, we would be in no position to sign the contracts involved, since the parties concerned would have no assurance that the approiation called for would be supplied, and we would incur a lot of ill will while we were trying to expound the proposition that one who deals with a public official is bound by the limitations which the law places upon that public official's authority.

No doubt, during the long and careful consideration that will be given to this program, many worth-while changes will be made. As a matter of fact, already one significant change has been effected. The administration at first requested an overall appropriation for the full period of 4 years. Because this plan depends for success on the maintenance of our own prosperity, and the encouragement of signatory nations by incentive, it would be most unwise to commit ourselves for a period longer than 1 year. We have now no assurance that our economic conditions here will be such in another year that this this plan can be carried out for the full period. More than that, we would have destroyed one of the best guaranties of the plan, in that these nations, knowing that the degree of their success will be reflected in the following years' appropriations, should be more anxious to make sure that they can present to us the satisfactory certificate of progress.

It was again Senator VANDENBERG who saved the administration from that possibly tragic error.

There has been much concern and much discussion of the guaranties that are to be provided under this bill and the restrictions that are to be applied to our aid. So far as the restrictions are concerned, Congress will certainly insist that the labor and raw materials and supplies available within these countries be properly and fully utilized; that trade restrictions and tariff barriers and selfish financial interests not interfere with the reconstruction of these nations; that our own needs are taken into account fully, and that there be made available to the United States such materials as may be required to help our deficiencies here and to meet deficiencies in the future; that the countries take immediate and effective action to stabilize their respective currencies; that they move as rapidly as possible toward a condition of independence of our aid; and that our dollars, our goods, and our services carry on them the label "Made in the United States of America." We want to have these people understand that it is the strength and the wealth and generosity of free people living under free institutions of government that come to their aid now.

There have been suggestions that this aid should also have political strings attached to it. I do not believe that a free, democratic America, concerned with the development and maintenance of the principles of freedom and democracy abroad, can properly place itself in the position of making political demands on any nation, even though we may devoutly wish their systems were different. To do so would be to risk a justifiable charge of political interference. As a matter of historical record, our attitude on this point was first clearly defined by President Monroe in his address to Congress which later became known as the Monroe Doctrine. Monroe, at the suggestion of John Quincy Adams, after demanding that European nations not interfere in the Western Hemisphere, said, "Our policy in regard to Europe remains the same, which is not to interfere in the internal concern of any of its powers; to consider the government de facto as the legitimate government for us."

Obviously, at that time the present condition was not foreseen. Even so, it does not illustrate our traditional belief in the political rights and freedoms of all people.

I am personally of the opinion that the types of government now in existence in some European nations are not the most conducive to the encouragement of a rapid reconstruction. However, that is the province of the citizens of those nations.

We can, however, and should properly, demand two qualifications: First, that there shall be free elections in which eligible voters can freely elect the government of their choice. Secondly, these nations must meet certain standards of accomplishment. I do not suggest that we can, in any detail, demand that rigid schedules of production be adhered to. There are too many uncontrollable factors that might prevent meeting such schedules. However, we should establish a system of periodic review whereby the concerned nations could be frankly told our opinion of their progress and frankly warned that adverse reports of the effect of our aid would heavily prejudice their chance for further assistance. It would, therefore, be to the interests of the peoples involved to see that their governments are capable of directing adequate progress.

There is also the question of whether or not we should extend aid to nations now under the domination of the Soviet Union. It goes without saying that these peoples attract our particular sympathy because they have not only suffered the destruction and dislocations of war, but have, in that time of despair, seen their freedom fall under a

wave of political aggression. Our offer should in no way exclude these most unfortunate of people, if we can be assured of our reasonable insistance on observation, review, and free elections within those countries. From our past experience, it would seem particularly appropriate, in those cases, to make extraordinary acute observations as to the use made of our assistance.

There are those who will continue to oppose this effort. Some will oppose it with the emotional and attractive argument that we cannot, in view of our threatening inflation at home, waste our needed resources on thankless peoples who have already been charged with being derelict in the pursuit of their own economic reconstruction. That is negative thinking.

Our problem in keeping the peace is not what can't we do, but what can we do? I have no hesitation in saying that I find the cost of this project a sobering subject. I believe it holds a possible threat to our own economic security. However, until such time as another plan is produced offering a cheaper, more promising way toward peace, I see no other alternative.

If those who oppose this plan could demonstrate practical ways and means of better insuring our prosperity here and better assuring peace in the world, I would not hesitate to drop my interest in this plan and actively support the other. To say this, or any plan, guarantees peace would be foolhardy, but so long as it has in it any better hope for peace and security for us, we cannot afford to sit idly by waiting for that more costly alternative of war. We have made errors in the past—serious and costly errors. Our last 2 years have been substantially wasted insofar as the reconstruction of Europe is concerned. But we cannot allow ourselves to be so influenced by failures of the past as to reach the conclusion that we shall not try in the future.

We can be assured that if we do nothing there is the grave probability of disaster. If we go forward with any plan, there is always the risk that it might fail, but the risk and cost of the former is infinitely greater than the risk and cost of the latter.

This year we start fresh. We cannot expect only a few weeks of argument. We can, and we should, look forward to years of work for peace.

We cannot buy peace. We cannot vote peace. We must, and we shall, build peace.

We have before us, two constructive but fundamentally similar approaches to what now seems the best way toward peace. We now have the opportunity to change and improve them. Let us use that opportunity. Let those who deny the value of these plans bring before us a better one. If they cannot and do not, let them join all Americans in what must be a common effort, a common contribution, and a common sacrifice to answer our prayers for peace.

Discussion of Federal Taxation of Earnings of Colleges and Universities

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. CASE of South Dakota. Mr. Speaker, the question of taxation or tax exemption for the earnings of colleges and universities is one of wide interest and concerns many people. Under leave to extend my remarks, I place in the RECORD the following material which deals with both sides of the question:

WASHINGTON LIAISON SERVICE,
Washington D. C., January 13, 1948.

Mr. LLOYD MOREY,
Comptroller, University of Illinois, Urbana, Ill.

DEAR MR. MOREY: Your report on Federal taxation of earnings of colleges and universities is before me.

The only single point at issue at the present time is the proposed application of Internal Revenue Form 990 to educational institutions that are now tax-exempt. You say that the use of this form is unnecessary because land-grant institutions report to the United States Department of Agriculture and "all public institutions and most private institutions publish their financial reports in much detail and also report to the United States Office of Education." You urge this point of view seeking to have it adopted as a substitute for the application of Form 990. I have just concluded a conference with Mr. Emery M. Foster in charge of research and statistics of the United States Office of Education and he repeatedly told me that this agency does not receive any reports which could be used by the Bureau of Internal Revenue as a basis of tax collection. Mr. Foster says and I agree with him that reports of this kind should be received by the United States Office of Education but they are not now currently so received.

It is true that the land-grant institutions do report to the United States Department of Agriculture but these reports are not in such form as to be suitable for the Bureau of Internal Revenue because as you say, the form of accounting which is used in your institutions is not on a profit-and-loss basis. Therefore any talk about substituting reports now received by either the United States Department of Agriculture or the United States Office of Education for a report which might be used directly by the Bureau of Internal Revenue for information purposes is not convincing.

The true value of your report is the statement you make under the head of "Fair competition." You say:

"The mere fact that some services essential in educational institutions may compete with similar activities carried out under private ownership and management would not in itself justify the taxing of income of such services."

Frequently here in Washington we have difficulty in getting candid statements of this nature. This is the economic philosophy at work in the tax-exempt institutions you represent. It is helpful to have the statement for the record.

In a word, you say that you admit that you are in business and want more of it. This is just the opposite to the point of view expressed by Dr. George Zook, president of the American Council on Education, who admits that the universities are in business and wants them to get out as soon as possible.

Examine this situation for what it is. Here you have tax-exempt, nonprofit educational institutions whose very existence is made possible by the earnings of business organizations and individuals who pay taxes in order that these nonprofit institutions shall endure. The nonprofit institutions then take the funds collected from business organizations and individuals who have to operate on a profit-and-loss basis and use these funds to compete with them in the business world. You say truthfully: "No case is known where any sum is included over and above actual costs (speaking of the costs of research projects worked out in educational institutions). Far more frequently the amount realized is below actual costs if indirect administrative and physical operating costs are included."

Now there you have the whole story in a very few words. The nonprofit educational institutions which take on outside industrial research projects take them at a loss and beat down the market for legitimate business organizations which have to buy their equipment without tax exemptions, pay their directors of research an amount for adequate living and pay their laboratory employees fair wages. And yet you say you have a right to compete with the voting tax-paying worker.

Dr. Zook will soon come before the House Appropriations Committee with a request for a great increase of Federal aid for education. Now if it can be shown that he is asking for a vote of confidence and many millions of increased Federal funds to be allocated to educational institutions which will use these funds for the purpose of beating down the price of research in this country under the guise of nonprofit operations, I seriously doubt if any economy-minded Congress will go along with him.

Your observations closing your report seem true to me. You say, "The principal points at which the committee appeared critical are the following:

"(a) Income of alumni corporations or foundations from patents which proved to be commercially profitable.

"(b) Business activities of a strictly commercial character carried on by or on behalf of institutions, even though the entire net income is turned over to the institution itself.

"As a minimum, committee members expressed the belief that such business activities should pay all taxes that any private corporation would pay as direct expenses, irrespective as to whether or not it makes a profit. Some indicated that they would favor continuing the exemption of net income but this point of view was not unanimous."

Under these circumstances it would seem that the application of Internal Revenue Form 990 will be a necessity.

Sincerely,

H. M. DUDLEY.

REPORT ON FEDERAL TAXATION OF EARNINGS OF COLLEGES AND UNIVERSITIES

I. PROPOSALS

Complaint of American Council of Commercial Laboratories, 225 Broadway, New York 7, N. Y. A. R. Ellis, of Pittsburgh Testing Laboratory, chairman of the tax committee. Washington activities carried on by Washington Liaison Service, 1507 M Street NW., H. M. Dudley, operator.

According to an article appearing in the New York Times and other leading newspapers on July 9, this organization on July 8 filed a complaint with Congress charging that 52 land-grant colleges and universities are engaged in business operations netting millions of dollars annually on which they pay no taxes. The complaint stated that in 1943–44 these institutions received more than $22,000,000 for sales and services on which they not only paid no taxes, but also did not have to disclose how they made the money.

This report also attacked educational institutions and foundations for doing research for private companies which would be required to report information and actual total income. * * * "We in the commercial testing research industry do not object to tax-exempt institutions conducting pure research * * * however, when they operate in the field of industrial research for the benefit of a few industries and keep the results of that research confidential to their industrial sponsors and when they operate in the field of testing materials, we deem that they should pay taxes on their fees in that field as well as the rest of us."

New York Times article: The article published in the New York Times and other papers was prepared by Robert S. Allen and distributed by the North American Newspaper Alliance. In addition to the report of the complaint of ACCL, the article stated that the Government has intensified an investigation of the business activities and profits of two tax-exempt organizations—the Aero-Dynamics Research Corp. of Washington and the Robinson Foundation of New York.

It also referred to business activities of the University of Pennsylvania, New York University, Union College, Duke University, and to the research programs of the University of Wisconsin Alumni Research Foundation and the Mellon Institute for Industrial Research connected with the University of Pittsburgh. The article also referred to a study on tax-exempt organizations by the Russell Sage Foundation. (See par. 3.)

Report of Russell Sage Foundation: The report of the Russell Sage Foundation referred to in the New York Times article is briefed in the attached statement marked "B."

Statement by Ways and Means Committee: Under date of November 16, a release was made by the Committee on Ways and Means of the House of Representatives, reading as follows:

"Upon the conclusion of hearings on cooperatives, the Ways and Means Committee will take up foundations, religious, educational, and other tax-exempt organizations.

"We have had no requests for time in connection with such hearings, which leads us to wonder if those activites which operate businesses in competition with private enterprise feel that the profits of such activities should be taxed."

Filing of Form 990 with the Bureau of Internal Revenue: In its activities, ACCL, through Mr. Dudley, is urging that section 54 (f) of the Internal Revenue Code be amended to require that all educational institutions engaging in business amounting to sums of money in excess of $5,000 annually be required to fill out this form. Filling out this form, he asserts, would make available to the Treasury and the Ways and Means Committee detailed information as to the extent of business activities of colleges as a basis for determining whether changes in the law should be made. Recently he stated that "failure of the colleges to testify" in opposition to this request "should be taken by the committee as positive evidence that they do not oppose this change in the law." (The proposal to have this form returned by colleges and universities is not a new one. Several years ago it was made by the Treasury Department, but educational organizations (and others) were exempted from the provision.) However, private corporations not for profit, except religious, educational, charitable, fraternal, and fully owned public, are required to file this form.

II. STEPS TAKEN

Hearings before Ways and Means Committee: On December 11, as a result of the initial steps taken by President J. L. Morrill, University of Minnesota and of the Association of Land-Grant Colleges and Universities, and Russell I. Thackrey, executive secretary of that association, the following persons testified before the House Ways and Means Committee: Dr. George F. Zook, president of the American Council on Education, leader of the group; Lloyd Morey, comptroller, University of Illinois, also representing the Central Association of College and University Business Officers, and jointly with Messrs. Peterson and Lunden, the Association of Land-Grant Colleges and Universities; R. B. Stewart, vice president and controller of Purdue University; A. W. Peterson, director of finance, University of Wisconsin; L. R. Lunden, comptroller, University of Minnesota.

Edward Blythin, financial vice president of Western University, filed a statement with the committee. H. W. Herzog, comptroller of George Washington University and president of the Eastern Association of College and University Business Officers, was present. The principal points presented to the committee are outlined below.

Significance of tax exemption: Tax exemption is a basic principle to American education and has been written into the laws, and it is believed with the approval of the American people. Its continuance, both on the Federal and the State level, is basic to the maintenance of education. Publicly supported institutions in general are exempted from all kinds of taxation and in particular are exempt from taxation by other governments. Educational institutions and organizations of all kinds are exempt from most kinds of taxation.

The effect of increased taxation: Land-grant colleges were established through direct subsidies of the Federal Government to the States. The Federal Government continues to make annual grants to these institutions. Much service is being rendered by all colleges and universities to the Federal Government. To tax the earnings of such institutions would simply be to reduce the amount available for their operation from this source and thus require an increase in the amounts provided from tax revenues of the States, of the Federal Government, or the charges against students for tuition, or an increase in gifts from private sources, or to reduce the services of these institutions.

Another fundamental issue is that of "control" over the educational program of colleges and universities. Taxation of income of these institutions by the Federal Government inevitably would result in some measure of Federal control. There should not be any such external control where problems of fundamental research are involved.

Fair competition: The mere fact that some services essential in educational institutions may compete with similar activities carried out under private ownership and management would not in itself justify the taxing of income of such services. Federal, State, and local governments carry on services which compete with private interests. The important question is what is the public interest involved and for what is the income used.

Institutional business operations are carried out generally on the basis of "fair competition" with any local business operations of a similar kind privately owned. No institution engages in any business activity merely for the purpose of being in that business. It does so because of educational needs, or of the needs of income for educational purposes.

A broad research program is essential to make the instructional program complete. Adequate support for research is difficult to secure. Research projects are used for training future scientists and teachers.

Policies with respect to research contracts vary in different institutions. The policy followed at the University of Illinois, which was placed in the record, is as follows:

"When the university undertakes a scientific investigation or piece of research, whether of its own initiative or at the request of outside parties, the results of the investigation are the property of the university, to be given to the public for the advancement of knowledge. The university will not in any case make an agreement with an individual or corporation to give it permanently the exclusive benefits of the results of such investigation or research, even though the investigation or research be conducted with money contributed by said individual or corporation."

Institutions do not and never have made "profit" out of research. When all costs, direct and indirect, are included, even if any net income does appear from a given project, it will mean that general costs borne by the institution have not been allocated to the specific activities. Any such net income is used only for educational purposes and hence is not taxable.

Nature and use of income: The item of "Sales and services" referred to as received by land-grant colleges, as per Bulletin 16, 1946, United States Office of Education, includes income from "organized activities relating to instruction." Under this head are included experiment farms, dairies, medical-school hospitals and clinics, and university presses. The amount of land-grant colleges for the year ended June 30, 1944, is $21,790,-232. None of these activities are self-supporting. Their income only partially covers operating costs. It rarely provides anything for cost of facilities or general overhead. There is never any real profit from such operations. The expenditures, as institutional accounts will show, always exceed the income.

Colleges and universities also operate auxiliary enterprises of a business character. Under this heading are included residence halls, dining halls, book stores, union buildings. These are all essential adjuncts to the educational program. Intercollegiate athletics frequently appears under this head. An effort is made to make such activities self-supporting. However, their incomes rarely cover more than operating costs or, at the most, replacement of equipment. Complete charges for depreciation, of general institutional overhead, or for entire replacement of building are practically never recovered. Buildings for such activities usually are supplied by public appropriation or gifts and do not have to be amortized. If any net income does arise it is used only for educational purposes.

Research projects are undertaken by educational institutions with financial aid from private concerns or from the Federal Government. The receipts from such projects vary from (a) a nominal subsidy for a program already established out of institutional funds to (b) complete payment for both direct and indirect costs. No case is known where any sum is included over and above actual costs. Far more frequently the amount realized is below actual costs if indirect, administrative, and physical operating costs are included. The cost determination for Federal research contracts has been proposed through a joint committee of institutional business officers, based on a standard formula. Research programs for defense purposes were carried out during the war on a similar basis. This problem should be handled in this manner rather than through the Bureau of Internal Revenue.

In some instances income relating to research programs is carried out through separately organized foundations. In a typical case, all the proceeds go to the institution to be used for educational purposes.

Many institutions with endowment funds have investments in business properties or business activities, including farms. Some of these have been received by direct gift or bequest. Others have been acquired by purchase. Institutions must seek investments with better return than can now be secured from investments in securities, due to the fact that the average return on investments has gone down materially in the last 20 years. All income derived from such sources is turned over to the institution and even if net profit on a business basis does arise, it is used solely for educational purposes and hence should not be taxed.

Educational institutions are not engaged in business in the ordinary sense of that term. They do not operate activities for the purpose of making a profit for distribution to individuals in the form of profits

or dividends. All net income made is used solely for educational purposes.

Financial reports: The complaint of the ACCL referring to the receipts "for sales and services" of land-grant institutions, stated that these institutions "did not have to disclose how they made the money." The particular item referred to falls under the category of "sales and services of organized activities relating to instruction" which is one of the headings used in the standard reporting classification now followed by nearly all universities and colleges. One needs only to refer to these published reports to secure details of the items included under these headings. Among them are farms, dairies, airports, hospitals and clinics, concerts, athletics, publications. Similar detail can be secured concerning all other items in the summary standard classification upon which the report of the United State Office of Education is based. The charge that educational institutions do not disclose how they make their money is utterly without foundation. Few, if any, areas can be found in which the financial reporting is more complete. All public institutions and most private institutions publish their financial reports in much detail and also report to the United States Office of Education, while land-grant institutions also report to the United States Department of Agriculture.

Accounts and reports of educational institutions, however, are not maintained on a "profit and loss" basis. Costs of "general administration" and "physical plant operation and maintenance" for the entire institution with few exceptions are carried under these headings and not allocated to educational functions and activities. Also specific accounting ordinarily is not taken for depreciation on plant investment since the funds for such investment are usually provided by public appropriation or private gift and do not have to be amortized. These facts emphasize the policy of taking published summary reports of such institutions as a basis for the conclusion that they have business operations "netting millions of dollars annually."

One of the objectives in this agitation is to require all educational institutions "engaging in business amounting to sums of money in excess of $5,000 annually to fill out Internal Revenue Form 990." It is asserted that the filing of such forms would make available to the Treasury and to the committee detailed information as to the extent of business activities of the colleges as a basis for determining whether changes in the law should be made in the future and limitations of tax exemption written into the law.

Certainly educational institutions have no objection to full reporting of their financial operations. Generally speaking they now do so very completely. Form 990 is designed for concerns organized and operated for profit and privately owned. To require them to fill out a form of this kind would put a great amount of added burden upon them and unnecessarily duplicate reports already made to governmental agencies. Furthermore, because such institutions are not engaged in business in the usual concept of that term, because they do not operate activities for the purpose of making a profit, and because their net incomes, if any, from operations of a business character are not distributable to individuals in the form of profits or dividends but are used solely for educational purposes, they should not be subject to tax and should not be required to make a financial reporting to the Federal Bureau of Internal Revenue. If any individual situations do exist in which unfair advantage is taken of Government through tax avoidance when taxes in fact are legitimate, these situations should be dealt with individually. Educational institutions as a whole should not be penalized because of a few instances of this kind. The Government should not jump at conclusions based on assumptions that may be erroneous. All facts should be secured and considered before any general change of rule is adopted.

Letter of Dr. Guy E. Snavely: Under date of December 5, 1947, Dr. Guy E. Snavely transmitted to Chairman KNUTSON of the Ways and Means Committee a letter of protest against proposed changes in tax exemption on behalf of the Association of American Colleges, of which Dr. Snavely is executive director.

Testimony of New York University: On December 12, the hearing was continued at which time Mr. Gerde, counsel for New York University, reviewed in detail the operation of business enterprises being carried on for the benefit of New York University by the corporation set up by alumni of that institution. Questions concerning this situation had been raised the previous day by the committee. Mr. Gerde stressed the point that all the net income from these activities was turned over to New York University for its educational operations, and in his judgment should not be subject to Federal income tax.

Attitude of committee: Based on expressions made by members of the committee during the hearings, it appears unlikely that any effort will be made to tax the incomes from any business activity carried on by an educational institution as a part of its regular operations. The principal points at which the committee appeared critical are the following:

(a) Income of alumni corporations or foundations from patents which proved to be commercially profitable.

(b) Business activities of a strictly commercial character carried on by or on behalf of institutions, even though the entire net income is turned over to the institution itself. As a minimum, committee members expressed the belief that such business activities should pay all taxes that any private corporation would pay as direct expenses, irrespective as to whether or not it makes a profit. Some indicated that they would favor continuing the exemption of net income but this point of view was not unanimous.

(The foregoing report has been prepared by the undersigned on the basis of notes made during the hearings but without having access to the report of the hearings. It is believed to cover the principal points which were made and the principal issues at stake, although some points may have been overlooked.)

LLOYD MOREY.

DECEMBER 15, 1947.

A Coal Miner's Sacrifice

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. PRICE of Illinois. Mr. Speaker, the finest tribute a man can receive is that which comes from a fellow worker. With my remarks I include in the RECORD such a tribute. It is a refreshing thing to pick up a community newspaper and find that a neighbor had the thoughtfulness to put into words his feelings for a man whose work he must have followed admiringly for so many years.

Many must have had the same thoughts of Sidney Sullins, but it is good that one among them thought to express his admiration publicly so that Sidney Sullins, and all the good men who go patiently about their daily tasks, may know that their greatness does not go unnoticed, even in this hard world.

Under leave to do so, I include the tribute to which I refer. It appeared first in the Trenton (Ill.) Sun, and later came to my notice in the Lebanon (Ill.) Advertiser. It follows:

A TRIBUTE TO A GREAT AND MONUMENTAL MAN

When sitting in your warm home during these wintry days, I wonder how many of you appreciate the work and sacrifice some miner had to make so that this would be possible for you and your family.

Sidney Sullins, at the age of 74, still working every day, started to work at the East mine in Trenton 55 years ago. Those who know Sid Sullins will say, "He is the hardest and best workingman I have seen," and so it is today. At his age he has the hardest job in the St. Ellen mine at O'Fallon. Leaving town at 5:45 in the morning and driving to the O'Fallon mine summer and winter is a big job in itself without the work. Not for old Sid. He always has a big smile.

Having worked in the mine 55 years, averaging about 200 days a year and producing 6 tons of coal per day, he has put on top of the ground 66,000 tons of coal. Of that total, he has used about 550 tons himself, leaving the remainder for use by others. When he comes home from the mine, he works in his garden in summer, and when the mine does not operate he goes to work on a farm. Just stop for a minute and think how much he has put into this world and how little he has consumed himself.

When I think of old Sid during the war pushing a wheelbarrow from place to place gathering waste paper after working hard all day in the mine, I think only of a great and monumental man, whose greatness is far above the little puppet who helps produce nothing and lives like a leech off the efforts of workingmen.

Joe Martin Is the Best Friend War Veterans in This Country Have Today

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include, in part, an article which appeared in the Washington Times-Herald, Sunday, January 25, written by Tyrrell Krum, lieutenant commander, USNR, retired, veterans' editor of that newspaper:

VETERANS' AFFAIRS

(By Tyrrell Krum, lieutenant commander, USNR, retired)

Here's some of the best news I've been able to report to you for many a long day. * * *

I had a lengthy talk with Speaker of the House JOSEPH W. MARTIN, JR., in his chambers at the Capitol one day last week and gained from him the first official information to be given to the public on what the Republican leadership has in mind in the way of major veterans' legislation for the remainder of the Eightieth Congress.

In the first place, the Speaker said that he is strongly in favor of the House concurring at the earliest possible moment in two Senate-passed legislative measures:

1. The now famous Kearney bill (H. R. 246) which would remove the ceilings placed on combined subsistence and earnings by veterans engaged in training on the job under the terms of the GI bill of rights.

2. Veterans' subsistence increase bill (H. R. 4212) which calls for an upping of the amount of Government aid paid to all veterans pursuing full-time institutional training in schools, colleges, and universities under the GI bill of rights.

Speaker MARTIN said that the third point in the three-pronged program of veterans' legislation which he hoped would make the grade before much more water has passed over the dam would be a suitable and workable veterans' housing bill.

The two items dealing with job-training and college subsistence were both passed by the Senate during the last days of the 1947 session just as the Congress was packing its bags to go home for the summer. Although they originated in the House, the Senate enacted them in House form in the hope they would be concurred in by general consent in the last-minute rush of business.

The original Kearney bill was reported unanimously by the House veterans' committee early in the session and it was hoped that action would be taken immediately thereafter to end the confusion and despair that had descended on hundreds of thousands of World War II veterans who had seen most of their earnings guaranteed them by the GI bill of rights snapped away by the Democratic-controlled Seventy-ninth Congress.

However, the Kearney bill, along with the increase-in-subsistence measure, was jammed into a legislative pigeonhole in the House Rules Committee by a bloc of antiveteran Democrats led by Representative HOWARD W. SMITH, of Virginia. There it remains to this moment.

The measure would remove the old $200 ceilings on the combined wages and subsistence which job-trainees may receive monthly and place them at new high levels as follows: $250 monthly for a veteran without a dependent; $325 for a veteran with one dependent, and $350 for a veteran with two or more dependents.

The subsistence increases for veterans going to school and colleges would go up from $65 to $75 for a man without any dependent; from $90 to $105 if he has one dependent, and from $90 to $120 if he has more than one dependent. This, too, is still in the Rules Committee.

The income restrictions placed on the widows of World War I veterans should be substantially relaxed to make up for the inflated cost of living.

Veterans' pensions should also be raised in accord with the increased cost of living. These and other bills probably will have a chance this year.

We want to congratulate our old friend, JOE MARTIN, on the strong position he has taken on veterans' legislation. And we repeat what we've written before: For our money JOE MARTIN is the best friend war veterans in this country have today.

The Postal Service

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of William C. Doherty, president, National Association of Letter Carriers, at joint installation of officers, Branch 148, Akron, and Branch 1629, Cuyahoga Falls, Ohio, Saturday, January 17, 1948, Carovillese Hall, Akron, Ohio, broadcast over radio station WADC:

ANNOUNCER. Ladies and gentlemen, this broadcast on postal service, policy, and wages comes to you from the letter carriers of Akron and Cuyahoga Falls and their auxiliaries where their officers have just been installed. Mr. Howard M. Nicol, of Cuyahoga Falls, president of the board of directors of the Sick Benefit Association of the National Association of Letter Carriers is now introducing the principal speaker of the evening. Mr. Nicol.

Mr. NICOL. I now give you Brother William C. Doherty, of Washington, D. C., president of the National Association of Letter Carriers, a native of Cincinnati, Ohio, a former letter carrier, and a member of the executive council of the American Federation of Labor, Brother Doherty.

Mr. DOHERTY. Mr. Chairman, postmasters, brother letter carriers, other postal workers, and friends of the radio audience, I would like to entitle my address here this evening, "Service Foremost." Since the inception of the National Association of Letter Carriers in 1889, the organization and its membership have established an unblemished record of sustained loyalty to the Government of the United States. Seventy-nine thousand members of this association stand shoulder to shoulder with millions of like-minded American citizens in condemning communism, and all other forms of subversive activities.

We hereby reaffirm our faith in our democratic form of government, and reiterate our pledge of continuing in unswerving loyalty.

It is common practice on the part of many to consider the Post Office Department as a business. In measuring the success or failure of postal operations, observers are prone to gage success by the presence or absence of the so-called deficit. Unfortunately, such thinking completely obscures many vital facts.

The postal system is basically and fundamentally a service. In early colonial days several attempts were made to operate a postal system for the purpose of personal profit. All such attempts failed. The young American Nation determined from those colonial failures that a postal system to be successful must be operated by the Government, with service as the one and paramount objective.

The Post Office Department is operated to give good mail service to the American people. Mail service and facilities are provided in every nook and corner of the United States. Such operations are established regardless of any consideration of profit. In fact, there are approximately 42,000 post offices, 20,000 of which conduct their operations at a loss. Do our competitive business organizations maintain comparable service? Of course not. Express companies, telegraph companies, and other public service companies and services maintain offices and service only where such operations produce a profit.

Third Assistant Postmaster General Joseph J. Lawler recently stated: "It has long been the policy of Congress to extend special below-cost rates to certain classes of mail and to provide facilities and service for the benefit of the general public regardless of the fact that charges for such services and facilities do not cover the cost of their maintenance."

The only universal service in America today is the postal service. Millions of people do not have electricity; millions live without running water; millions live without telegraph and telephone service or facilities; millions do not have ready access to public transportation. But every American citizen is provided with mail service. It is the one and universal service in the United States.

Those in charge of postal operations have the responsibility of requestin, sufficient funds to operate the Post Office Department properly. Congress has the solemn obligation of providing adequate funds to furnish good service. Unfortunately, under our present system, the officials of the Post Office Department are required to estimate how much money will be needed almost 2 years prior to the period when the funds will be available. This estimate then goes to the Director of the Budget, and finally emerges in the President's budget message. Exalted economic prophets have proven dismal failures in anticipating economic trends. Under the circumstances it is rather absurd of us to expect the administration to be omnipotent forecasters.

If the needs of the service are greater than anticipated, the public, in all likelihood, will receive inferior mail service. In the matter of planning expenditures, the Post Office Department is in a somewhat different position than other departments of Government. Other departments can plan their activities and gage their expenditures accordingly. The Post Office Department cannot do this. It has no control over the volume of mail. It must deliver all mail. It has no control over the area of delivery—if people move, the mail must move with them. Poor guessing and inadequate appropriations can result in only one thing, and that is inferior postal service. Congress should recognize these facts and, when necessary, vote adequate supplemental appropriations to maintain a first-class postal service.

There is an erroneous impression in Congress and among the public that the Post Office Department consistently operates at a loss. It can be readily demonstrated by available evidence that the Post Office Department over a period of years has actually operated at a profit. Misinformation to the contrary should be speedily dispelled.

Unfortunately, since 1940 the Post Office Department has not reflected the credits authorized by the Kelley Act of 1930 and has never considered these credits in any cost-ascertainment reports. The items included under the Kelley Act contain the expenditures of Government departments for mail carried free of charge. The Post Office Department should be credited with payment for this mail either by a transfer of cash or credits from the departments involved, and that this expense should be allocated to the various departments of Government who use the postal service as a part of their operation.

It is true that with the credit allowance provided by the Kelley Act, there are individual years, such as 1946, when losses were shown. It is also a fact that when all the years 1930 to 1946, inclusive, are examined, and the Kelley Act credits are included, that the Post Office Department shows a cumulative profit of $304,247,315. During the war period, the expense of handling the mail for the armed forces was also absorbed by the Post Office Department. The Post Office estimate of the revenues they would have received for this service at regular postage rates is $168,000,000 for the fiscal years 1942, 1943, and 1944. No estimates have been made for 1945 and 1946.

We should at this point pause again to point out that every single function of the Post Office Department has been instituted by Congress with the sole motivation of providing service to the American people. Profit has never been a consideration. Perhaps it is because the operations of the Post Office Department have been so successful that the fundamental purposes of the Post Office System tends to be lost in a maze of account-

ing. It is true that in the past there have been years when the Postmaster General's reports have shown deficits and years when they have shown profits, but the figures for the 17 years just quoted do not support the contention that the Post Office operates at a loss, and we believe that in fairness to the Post Office, to its employees and to its patrons, accounting and cost keeping should be handled in a manner that will give a true picture of expense and income. To do this properly, the credits allowable under the Kelley Act would have to be extended to include many additional items.

If we project the trends of the postal revenue and expense from 1930 to 1947 until 1957, we find revenues increasing substantially faster than expenses, this indicating that consistent increases in volume of business are more important as a means of absorbing expense increases than would be the increasing of rates, which would certainly tend to divert volume to other methods of delivery.

One hundred and seventy years of operation have definitely demonstrated two vital factors in successful postal operation: (1) Greater volume promotes lower unit cost and more economical operation; (2) the reduction of the number of times a piece of mail is handled reduces the cost of operation. The best and most inexpensive way to handle mail is to deliver it immediately. Delayed appropriations and curtailed service are more costly in the final analysis. Adequate appropriations and good service promote efficiency in operation.

In this analysis I have made no attempt to estimate the cost to the American people in poor mail service. The cost of delayed mail to businessmen and individuals is enormous. The American people are entitled to and should demand good mail service. I have not attempted in this study to show all of the operations that are conducted by the Post Office Department on a free or less than cost basis. Before concluding, however, I want to briefly point out the major role that the postal service has played and is continuing to play in the development of the American Nation. The Post Office Department developed our system of roads through construction of post roads. Through preferential payments to railroads the postal service has kept many branch lines in operation. The Post Office subsidized the development of the merchant marine and the air industry. Yes, indeed, it was communication in the garb of the Post Office that took transportation by the hand and conducted it to its present advanced state of development. It was the twins of progress, communication and transportation, that sped our country on to great expansion. What is the purpose of this policy, profit or service? Service and service alone must be the paramount purpose.

One reads in Adam Smith's Wealth of Nations that every man is rich or poor according to the degree in which he can afford to enjoy the necessaries, conveniences, and amusements of human life. Perhaps another way of saying it is that man cannot be expected to give the best service when their minds are on the vital problem of how to live decently. No one will say that living decently is synonomous with living extravagantly; it does not mean living a plush or chrome plated existence. Rather the connotation of the phrase "living decently" would imply living in the accepted American way of life. That simply means providing for one's family in matters of health, welfare, and amusement according to the American standard of living.

I recently returned to Washington, D. C., from a trip which took me across the country to the west coast. The trip provided ample first-hand opportunity to get out among the grass roots of the membership of our organization. I can say from personal observation reinforced by numerous conversations everywhere along the route of my travel, that letter carriers perforce are daily concerned with the vital problem of living decently on their present postal wage. The present high cost of living has brought home to letter carriers the economic facts of life more than anything else within recent years. To even the naive those facts of economic life are not encouraging. They have given letter carriers much concern, and will continue to be a vexing problem until relief is obtained in some measure. This concern has manifested itself in various ways. For one thing, it is readily discernible that a marked lack of interest in their jobs exists among recently appointed postal workers. Any fair-minded person even remotely acquainted with the postal service will admit that a lack of interest in their work is something new among postal employees. It is a condition little to be desired by employer and employee alike. For if there is any one thing in their association with the postal service about which postal employees have been most proud, it has been a pride in their work, and devotion to duty. Call it esprit de corps or what you will, nevertheless it has always been prevalent among postal workers at every level. Indeed, well might it be said that a common spirit of loyalty to their work is the very thing that has rightfully made the United States Postal Service the greatest institution of its kind. It is to be earnestly hoped that in the immediate future the same prideful feeling can be recaptured.

While we express our sincere desire for the return of pristine glory of the postal service, nevertheless, the economic equation being what it is, letter carriers must look for concrete evidence of reciprocity in the matter of faithfulness to duty and pride in their work. The simple truth of the matter is that no country can underpay its employees and expect them to remain proud of their jobs. Private industry long ago learned the wisdom of providing their employees with incentives for remaining on the job. On the other hand, Government has always lagged in setting up equitable wage standards, and attractive conditions of work. Neither Government nor private industry should be so foolish as to believe they can attract and hold high type of employees without proper regard for the economic welfare of those employees.

As mentioned earlier, the greatest concern of letter carriers at the moment seems to be the eternal struggle to strike a balance between present postal wages and costs of living, especially the present cost of food. While it is true in some quarters that prices of certain few manufactured items have shown signs of stabilizing, prices of food have continued to soar upward. It is hardly necessary to point out that food constitutes almost half the worker's budget. As food prices go, so goes the family budget. It is estimated that today letter carriers are paying approximately 43.4 percent more for food than in December 1945. While no statistics are readily available to answer the thought we have in mind, it would be interesting to learn if consumers are eating as well as they did 2 years ago. Also, are they eating more or less? On the basis of my conversations, with letter carriers on my recent trip it appears there is a general agreement that the average household has not as yet been forced to eat considerably less or reduce drastically the content of their diet beyond what is accepted as the norm for an adequate diet. With reference to the alarming increase in food prices, nothing we could show by way of statistical data could be half as eloquent as a housewife's attempt to shop on a letter carrier's salary. Any slight change in diet or any attempt to provide variety necessarily alters her budget. Again it should be noted that food prices have advanced an estimated 43.4 percent during the last 2 years.

The over-all rise in the cost of living jumps to 26.9 percent, computed from January 1, 1946—the effective date of the wage increase granted letter carriers under the provisions of Public Law 386.

All these figures add up to one conclusion; letter carriers have reached the saturation point in their attempt to cope with the present day economic problem, particularly when the only instrument granted Government workers—real dollar value—has been reduced by approximately one-half. Workers in the fixed salary bracket have never been able to get too far ahead of the economic parade, and when the purchasing power of those fixed salaries is slashed in half the struggle goes beyond the desperate stage, the outcome is inevitable. Economic chaos stalks in and takes over. Unless the purchasing power of the letter carrier's dollar is restored to some semblance of the wage value, the struggle to enjoy the necessaries, conveniences, and amusements of human life is a great deal like the old bromide about sending a boy out to do a man's job. It simply cannot be done, and the chances are that the boy will be worse off joining the battle than if he stayed at home. Everybody in and out of the Government has their own idea about the cause of the present high cost of food and living in general. Labor blames industry, business places the onus on labor, the two major political parties blame it on each other. Nobody denies its presence. It is big. It is real. It presents a serious menace to our economy. Labor's Monthly Survey, published by the American Federation of Labor for September-October 1947, attributes the upward sweep in cost chiefly to (1) the worldwide food shortage and a 25 percent loss in the United States corn crop (from bad weather); (2) the hike of prices in manufactured products for wholesale distribution, which have been carried over into prices workers pay. There are other possible factors entering into the picture, although they would seem to be incidental to the two main reasons advanced by the A. F. of L. survey.

The position of this association remains unchanged in its desire for a strong, permanent economy. We realize that although we are not actively engaged in outside industry there must be full production and full employment in industry. If it were left up to letter carriers to decide, we believe the majority of them would much prefer the return of a 100-cent purchasable dollar in place of the present 47-cent dollar. They would prefer a reduction in the cost of living to a further inflated dollar increase only. Perhaps it is an oversimplification of a problem that is actually much more complicated, but either Congress and/or big business will have to reduce prices, or Congress will have to increase wages of letter carriers. There must be some equalization in the present wide ratio between salaries and purchasing power. We not only believe letter carriers have a justifiable claim for an upward adjustment of their present salaries, but we expect the Congress to do something about it.

Let me tell you frankly, the letter carriers of this Nation have done something about this vexing economic struggle they are having today, also the more serious situation facing their retired brothers who are compelled to live on a mere pittance of an annuity granted them in 1935. An annuity which they helped buy with their own money, and which has long since proven wholly inadequate for these loyal men who gave the best days of their lives to the service of their Government and who today are expected to hold body and soul together on the meager sum which, in many instances,

runs below the maximum of $23 per week. On this amount, they must yet pay Federal income taxes.

The national conference held in Washington on Monday and Tuesday of this week was highly successful. At the top of many other good bills which have for their aim the improvement of working conditions and the welfare of active and retired letter carriers they placed two bills—liberalization of the Civil Service Retirement Act; and an increase in salary for active letter carriers to offset the rising cost of living. 700 letter carriers from 45 States responded to the call of your national president to meet and counsel with your resident national officers on plans to alleviate the plight of both active and retired letter carriers.

In the matter of the extremely important subject of retirement liberalization, the Stevenson bill, H. R. 4127, frozen in the last session of Congress, has some very desirable features in its present form. It provides an outright increase of 25 percent or $300, whichever is lesser, for all those now on the retirement rolls. Further, it sets up a new formula for determining annuities. Carriers retiring in the future with an average 5-year high of $3,000, and 30 years of service, upon reaching age 60 may retire with an annuity of approximately $1,650 per annum. It provides a mother's prayer of many years in the form of a widow's annuity equal to 50 percent of the deceased husband's earned annuity. There is one other great feature which was cut out of this bill in last-minute desperation to pass it the last session of Congress, and which our senior Senator from Ohio has already committed himself as being in favor of restoring, and that is the minor dependent's provisions. Originally, it provided for 25 percent of the employees' earned annuity to each minor until the minor reached the age of 18. It also provides for increasing the employee's contribution to the retirement fund from 5 percent to 6 percent of his annual salary. We, as well as other interested employee groups, are pressing for immediate enactment. I predict this or comparable legislation will be passed by Congress within the next few weeks.

On the subject of salary increase, my friends, I dare not be so optimistic. There are numerous bills representing a variety of opinions. To be exact, there have been 46 salary-increase bills introduced in Congress in behalf of Federal employees, 27 of which affect the postal workers. Among this lot is a measure granting an increase of $800 per annum for regular and 40 cents per hour for substitute letter carriers. We know, however, from past experience, it is an easy matter to have a bill introduced but an entirely different matter to get it passed.

The conference representatives, coming as they did from all sectors of this great Nation of ours, and representing a truly cross-section of opinion as regards the increased cost of living, and the salary figure necessary to meet it determined upon two important points: (1) To be realistic in gaging cost increases, and (2) to be honest with ourselves and the Government.

The conferees brought with them extended studies on the major items entering into the cost of living; and the Bureau of Labor Statistics shows the cost of living had risen 26.9 percent from January 1, 1946 to September 1, 1947. Using the Bureau's recognized monthly increase of two points and computing it from September 1, 1947 to January 1, 1948 and adding it to the September figure we receive 27 percent as our total. Thus an $800 per year permanent increase in salary and 40 cents per hour for hourly employees is entirely in line with such figures. The Conference voted unanimously to support such a bill; it also voted to inaugurate a Nation-wide campaign for a voluntary contribution of $1 from every member of our great association to implement this legislative campaign. You can rest assured, my friends, that a sustained drive of our membership has on this day been launched.

It is encouraging to learn that experience of past legislative campaigns has left a good mark on our membership. We step out of one campaign right into another. It might be well they are so timed, and that we have the will, the stamina, and spirit to marshal all our forces of energies for the privilege of securing a living wage. I have pointed out the conspicuousness of reciprocity by its absence. I reiterate: Why should postal workers be compelled to spend themselves entreating our employer, the Government, to recognize economic changes as they occur and meet these new situations? After all, Congress should not have to be told that the present unprecedented high cost of living affects letter carriers the same as other American citizens. As in the past we take our case to the American people tonight for relief. Let us put forth our best efforts behind an all-out drive that will bring swift results. As in the past, too, we encourage the fine cooperation our ladies' auxiliary has given us in the past.

I believe the ladies realize what is before us this time and that we will need their assistance more than ever. I am confident of the valuable aid we will receive from our Ohio ladies, also that the letter carriers of Ohio will uphold their high mark of interest and productivity in our forthcoming campaign. In closing let me leave these thoughts with you:

It is a fact postal employees pay all taxes the same as any other citizen. It is a fact letter carriers have to buy their own uniforms. It is a fact we can retire upon reaching age 60 on an annuity that is grossly insufficient today, but bought with our own contributions to the retirement fund. It is a fact that we have security, of a kind, but actually we have less security than the average craftsman because we spend 11 years to learn the post-office job. We learn a job that gives us no valuable training that we can use elsewhere if we decided to change jobs. Therefore, if we fell out with Uncle Sam or just didn't like the work and wanted to change after 11 to 15 years, we would have to start all over again and learn a new trade or craft; whereas any craftsman can change jobs overnight and take his skill with him to advantage. By this process we surrender a certain amount of economic independence. These are the answers you must be prepared to give to those who are misinformed, who misjudge, or who are indifferent to the welfare of others. I know you know the job that is ahead of you, and if we use our best efforts to sell our case to the people that Congress will really love us this year.

Russian Aims Always Same

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Boston Sunday Post, January 25, 1948, by Lester Allen, entitled "Russian Aims Always Same":

RUSSIAN AIMS ALWAYS SAME—AMBITION OF SOVIETS TO EXPAND BY GRABBING TERRITORY IS SAME AS GREEDY POLICY OF CZARS

(By Lester Allen)

For the citizen sweating out a living, and pondering the somewhat baffling developments of Uncle Sam's quarrel with the Soviet Union, the jargon of diplomacy and high international political blathering is no help at all.

The American mind, rather sharper than most at perceiving a phony, has not digested the somewhat sinuous turns of American-Soviet relationships. One day the Soviet Union is a barbarous land. A few months hence it is courageous. And then it is in the dog house again.

Now, after 30 years of confused thinking, the United States has adopted a firm, clear foreign policy aimed at hemming in the Soviet Union—the experts call it "containing the Soviet Union"—and putting a stop once and for all to the seesawing. Whether this means war with the Soviet Union the individual can decide on a few basic facts.

CONDITIONS EXIST

Bowing out from the job as operating head of the Navy, Fleet Adm. Chester W. Nimitz said: "For any future war to be of sufficient magnitude to affect us seriously it must be compounded of two primary ingredients: Vast manpower and tremendous industrial capacity. These conditions exist today in the great land mass of Central Asia, in East Asia, and in western Europe.

"The two latter areas—east Asia and western Europe—will not be in a position to endanger us for decades to come unless they pass under unified totalitarian control. In the event of war with any of the three we would be relatively deficient in manpower. We should, therefore, direct our thinking toward realistic and highly specialized operations. We should plan to inflict unaccountable damage through maximum use of our technological weapons and our ability to produce them in quantity."

DOUBLE TALK

That's a sample of the kind of guarded double talk the average man is expected to understand at a glance. What Admiral Nimitz means is that only if the Soviet Union grabs western Europe and its industry can we get into a knock-down and drag-out fight with the Soviet Union, and that if they succeed in grabbing western Europe we will have to hit the Reds with atom bombs before they hit us with some.

There are no ifs, ands, or buts about it. The Soviet Union has an avid desire to conquer the world for no other reason than that the greedy dictatorship wants more power. For a long time the earnest liberals who apologized for the seedy look and the sturdy beggar gall of Stalin and his henchmen believed that there was a sincere effort to better the lot of common men and establish a communal way of life for the proletariat. That last is a fancy word that means the wage earners or the laboring classes.

ABSOLUTE MONARCHY

Czarist Russia was an absolute monarchy with an exclusive noble class, and a vast mass of laboring people, farmers, artisans, and laborers. The former exploited the latter for every breath in their bodies and every twitch of their nerves. It was a rotten, pulsating mess and there wasn't the slightest excuse for it.

This Czarist Russia maintained vast armies of forced laborers in Siberia, kept huge standing armies of conscripts massed

on the western and southwestern borders of Russia, and had all of Europe in a stew from the Congress of Vienna which ended the era of Napoleon down to 1917 when a couple of revolutionaries with one clean shirt between them were moved into Russia by Germany as a sort of time bomb to blow up what remained of Russian resistance in the First World War.

Lenin and Trotsky accomplished their mission for the Germans, and, to their amazement, wound up in the seats of the mighty. Pre-World War I Russia had been whittled back by the time Lenin and Trotsky had made themselves secure, losing Poland, Estonia, Latvia, Lithuania, Finland, and Bessarabia in the process.

This was a very fortunate thing for the British, who had made a bargain with Czarist Russia to give the Russian northern Persia, the Straits of the Dardanelles and Constantinople, as well.

SAME OLD SYSTEM

By the time Lenin died and Stalin had eased Trotsky out into the cold, the Soviet Union was back in its same old condition—a few favored men at the top and the rest groaning under the same old Czarist system, only under another name. There were the same Siberian forced-labor camps, the same secret police, the same old objective—power.

Russia of the czars wanted mastery of the Balkans and control of the Dardanelles, also a generous chunk of Manchuria and China. The Soviet Union wants the same thing. And the Soviet Union finally got most of it without fighting a lick. When Stalin made the pact with Hitler he grabbed Estonia, Latvia, Lithuania, and most of pre-World War I Polish Russia. He also invaded Finland and got what he wanted of that. The Germans said help yourself and Stalin did.

At the time there was a lot of guff written in the United States about the Soviet Union being an old meany to make a pact with Hitler and about brave little Finland, but the instant the Germans poured over the Russian frontier that tune soon changed. No one mentioned at that time that Russia was still acting like the old Czarist Russia and that because of his oppressions Stalin was every bit as frightened of being assassinated as was Czar Nicholas because of his oppressions.

REGAIN AREAS

When World War II came to an end Russia moved right back into the very areas which old Czarist Russia had always wanted and for the very same reasons. The reasons were that no one stood guard on those areas with a big stuffed club to whack the bear on the nose.

In short, Russia has never taken on any nation as big as itself on equal terms and emerged victorious. The Japanese kicked the stuffing out of them in the Russo-Japanese war. Even the Turks of the Ottoman Empire larruped them to a frazzle. Russia only moves in under the guise of friendship, or when weakness was so manifest that it was like taking candy away from a baby.

The acquisition of territory by the Soviet Union came from precisely the same reasons and in the same way that Czarist Russia acquired territory. They were not due to Russian courage or Russian martial skill, but merely because there was weakness or sloppy sentimentality. The Germans must be given credit for being very hard-headed about the Russians. Hence German amazement when the rolling power of American arms didn't sweep right on through Germany and hit the bear a swat on the nose. The Germans cannot understand it.

In Washington today the men who make the foreign policy are reading their Russian history, and they know precisely where the Russians intend to go, if they are given the chance. They are going to grab all of China if they can, and they are going to get western Europe's industries to produce arms and war materials to beef up their strength.

WANT TO FIGHT

If we have any illusions about the German viewpoint we may as well discard them. The Germans would dearly love to be armed to the teeth and sent at someone's throat. If the Russians do it, the Germans will turn on France, the Netherlands, Belgium, Spain, and Portugal. If we arm them, the Germans will fling themselves on Russia.

The whole history of Russia has been an endless cycle of territorial acquisition, despotism, and chaos, as if the Russian people were forever fated to let their blood at the whims of ironic and mirthless men whose sole passion was power.

Without the industry of western Europe, Russia can't make war against us now. Ten years hence it is possible. If the Soviet Union is not stopped in its expansion, the living standards of the Western World will be depressed to Russian serf levels.

For the average man in the United States that means that the arduous road to Utopia that Americans have been hewing out of solid granite for almost 350 years will come to a dead end.

Czarist Russia loathed and detested the middle class. By Czarist Russia is meant those at the top who issued the decrees. The Soviet Union has the same loathing for the middle class, and, for precisely the same reason. Space does not warrant tracing that Russian loathing for the middle class, the stabilizing influence of western economies, back to the French revolution, which horrified and dismayed the Russian ruling class.

It has been discovered that the generalization that there is no counter-revolution existent in Russia and no possibility of a counter-revolution because of the activity of the secret police is much too inclusive. The bumbling of Soviet efforts to build mass production industries is not ineptitude, it has been found, but a mournful kind of sabotage, a put-on kind of stupidity, undertaken out of no organized counter-revolutionary effort, but as a sort of dolorous duty the average Russian feels toward his soul.

EBB IN RED TIDE

It is also known in Washington now that the disintegration of Communist influence among writers and thinkers in the United States is viewed by the Soviet Union as a first symptom of an ebb tide of Communist influence in the world. The fellow-travelers who spoke so well of the Soviet Union are recanting publicly and in print. The same men who in the 1920's published passionate novels and tracts urging the rise of the new masses today are throwing brickbats.

Some of the leaders of the Politburo have an obsession that the Communist leaders in western European countries may be drawn into the fold of the socialism practiced in Great Britain, and that the counter revolution will derive its strength from British sources. This may be due to the fact that the British have always understood the soiled Russian motives more perfectly than the Russian themselves.

POLITBURO UNEASY

This probably accounts for the frequent summonses sent out to the Communist Party leaders in France, Italy, and other western European countries to come to Moscow for another shot in the arm of ideology. The defection of hundreds of thousands of French trade unionists from the French Communist front was another symptom that made the Politburo uneasy.

But for the average American citizen, striving to understand what all the cold war is about, there is the assurance that if the Soviet Union is contained the day of the counter revolution in Russia is not too far distant— and the Muscovite is still the same Muscovite that he was under the Czars.

Meat Rationing Again?

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. ARNOLD. Mr. Speaker, numerous letters are being received every day in opposition to any proposed meat-rationing plan. An editorial in the St. Louis Daily Livestock Reporter of January 7 sums up the situation, and, under leave to extend my remarks in the RECORD, I wish to quote it for the information of all who read the RECORD and are interested in this all-important subject:

[From St. Louis Daily Livestock Reporter of January 7, 1948]

The stage is being set for meat rationing. The Secretary of Agriculture has joined the ranks of those implanting the idea. Everybody who reads has taken note of talk headed in that direction, and more will be forthcoming, intended to prepare the public mind for acceptance of the idea and forestall objections. The Secretary implies that he doesn't want it, but that it may be forced by public demand—and is putting in his two cents' worth to build up that demand. Half a dozen Members of the Senate are going along, a couple of them actively promoting the idea. The excuse is an expected serious meat shortage before this year is out; in fact, before it is half out.

This is a proposition that ought to be nipped in the bud before it comes into full bloom. That could be accomplished by an outpouring of opposition on the part of stockmen and others who are convinced that rationing would not accomplish anything constructive, but on the contrary would only make a bad situation—if bad situation it proves to be worse. Rationing would neither increase the supply of meat nor promote its equitable distribution. The fact is, of course, that in both respects its effects would be just the opposite. The record shows that wherever it has been undertaken, in this or other lands, its effect has been to reduce production. And as for distribution, it has invariably taken meat away from the workers and given it to the big spenders, in the same process making a few black-market operators.

Why don't intelligent people see that? They do. But meat is a prime necessity in the American diet. Practically all the people want some of it every day. Thus it lends itself to political exploitation as does no other one thing. The politician seeks to get credit for trying to do something about meat; and he finds ready support from the Government marketing experts, who, as bureaucrats, are hungry for the power that meat rationing would put into their hands. That is the explanation, and a very simple one it is; but at the same time it gives rise to a movement that isn't going to be easy to check. For in theory rationing promises much for the harassed housewife who finds it difficult to make the dollar reach these days,

and meat is one thing she just has to provide. So she is disposed to take at face value the claimed advantages for rationing, coupled, perhaps, with price fixing. In other words, she is easily duped, and don't think the politicians overlook that.

Members of Congress should be flooded these days with protests from stockmen. It won't happen. People who go to the effort of anticipating difficulties. They holler only after they are hurt, and then it is usually too late. So the campaign to pave the way for acceptance of meat rationing will go on apace, and the rationers will almost certainly have their way, if the meat shortage comes up to expectations.

Misleading Language Misinforms the Public

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. BOGGS of Delaware. Mr. Speaker, for quite some time I have been concerned about the loose and careless usage of words, phrases, and terminology in such a manner as to convey a meaning other than that which is substantiated by the facts. Whether such usage is accidental or deliberate makes little difference insofar as the results are concerned, namely, the creation among readers and listeners of a false impression and improper understanding of the matter under discussion.

Only a few days ago there was brought to my attention an important example of the use of inaccurate terminology which, Mr. Speaker, I wish to call to your attention and to that of the Members.

Dr. Edwin G. Nourse, Chairman of the President's Council of Economic Advisers, submitted not so long ago a report setting forth this country's capacity to produce sufficient goods to aid Europe and also to satisfy domestic needs. In that report, Dr. Nourse referred to "the tremendous increase in American productive capacity during and since the war."

As the result of an inquiry from Mr. A. W. Rucker, president of the tool owners union, which has its headquarters in Lexington, Mass., Dr. Nourse now has admitted that he made a major mistake in the report of the Council of Economic Advisers.

Replying on November 7, 1947, to a letter from Mr. Rucker, Dr. Nourse stated:

> The phrase which you underscore was a somewhat unfortunate one in the particular context, and it would have been much better if the word "production" had been used instead of "productive capacity."
>
> Referring to your more specific question of whether the council has any measures of percentage increase in American productive capacity, the answer is that we do not have, and we do not think that it would be feasible to construct such an index.

Although this admission by Dr. Nourse was published in a syndicated column by Mr. Ray Tucker which appeared in approximately 200 newspapers having a total circulation of about 10,000,000, I do not believe, Mr. Speaker, that such publication can be considered as correcting or offsetting the false impression gained previously by so many readers of the reported findings of the President's Council of Economic Advisers.

In view of the fact that the President's Economic Advisers, who presumably are well trained in semantics and the importance of accurate terminology, have made at least one serious error of this nature, some of the Chief Executive's own statements in his state of the Union message become more understandable.

One particular example is the President's statement that "Wholesale prices had increased 40 percent, and retail prices had increased 23 percent" between June 1946 and October 1947. These figures he immediately compared with the rise in prices between October 1947 and January 1948. The latter increase, the President said, was "at an annual rate of 18 percent" for wholesale prices and "at an annual rate of 10 percent" for retail prices.

It may be seen at once that the President was using, for the purpose of causing readers and listeners to make quick comparisons, percentage figures which are not comparable. The natural thing for the average thoughtful reader or listener to do was to add the President's second set of percentage figures on price increases to the first set. Doing so would cause him to believe that between June 1946 and January 1948, the price increases had been 58 percent on the wholesale level and 33 percent on the retail level. Such, however, is not the case as a close analysis of the language used by the President will itself show. Based on the administration's own figures, the actual increases were not 58 percent and 33 percent respectively, but 44.5 percent and 25.5 percent—and in these figures there certainly is a vast difference.

Thus, Mr. Speaker, it can be seen that the President, by the simple expedient of placing actual percentages of price increase in juxtaposition with percentages of annual rate of price increase, has evidently intended to create acceptance of false and misleading conclusions. These are merely examples of many instances in which figures are used to create among our people a false assumption, thus increasing the difficulty with which the majority party is faced in having the people accept and understand the true state of affairs with which this Nation is confronted.

Views of a Citizen Veteran

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include a letter recently received from a veteran of 17 months in the European theater of operations, with respect to the need for increasing the amount of assistance to veterans. This letter so aptly states the veterans' case that I am sure all Members of Congress will profit by reading it. It follows:

JANUARY 19, 1948.

Hon. GEORGE MACKINNON,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE: I am a student at the University of Minnesota. I am married and have a little girl 11 months old today. I served in the Army of the United States for 3 years; 17 months in the European theater of operations, in the Rhineland and central European campaigns, with the Seventieth Infantry Division. That is merely by way of background and not as staking out a special claim. I would, however, like to call your attention to a story on page 1 of this morning's Minneapolis Tribune, wherein it was reported that married veterans are spending an average of $176 a month, which is $86 over the subsistence allowance. It is clear that $90 is no longer the subsistence allowance it was intended to be, and all any veteran feels he is entitled to. I also feel that the educational program of the Veterans' Administration is not merely a benefit to the individual veteran. It is that, but it is also a sound investment for the entire community. The return will be a sound citizenry trained in the skills and sciences we are today so sorely lacking if we are to be capable of leading a distraught world. I hope among the score of demands on your time you will be able to consider these views, and do what you can to secure passage of a bill raising the subsistence allowance.

Respectfully,

MORTON NEWMAN.

Why I Fought

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. PHILLIPS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from a letter written by Mr. T. W. Small, of Beaumont, Calif. It gives his reasons for fighting in both World War I and World War II. It expresses simply, but eloquently, the feelings of many soldiers, as well as many civilians, toward our Government:

> Many years ago as a young man I came to realize that I was a part of the finest government world history had ever known—a republic—in which the difference of opinion of the citizenry resulted in a type of political action, through legislation enacted by duly elected representatives of the people, giving each citizen a proportional power in determining what our governmental policies should be. What more could any freeman ask. I knew then, as I do now, that so long as my country was governed by legislation, enacted by the men and women elected to Congress by the action of voters with differing opinions, my country was worth fighting for and living for.
>
> To you, and to your worthy associates in the House and Senate, my very best wishes

for I know all of you will be in there doing your level best to avoid the pitfalls of a pseudo democracy, thereby assuring every American government as our founding fathers decreed: government by representation, a republican form of government.

Address of Hon. Thomas J. Lane, of Massachusetts, at Memorial Dinner, Greater Lawrence St. John's Preparatory School Alumni Association

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following address which I delivered at the memorial dinner of Greater Lawrence St. John's Preparatory School Alumni Association, held in St. Mary's Auditorium, Sunday evening, January 25, 1948:

Members of the alumni and friends of St. John's Preparatory School, from our earliest days the name of St. John's Prep has been familiar to most of us. Being a preparatory school, it seemed to our youthful minds to be a cut above the ordinary high school. The fact that it was located out of town added to its glamour. Those who attended St. Johns Prep were distinguished as belonging to an exclusive realm of the educational world. They were going to school not because they had to but because they wanted to.

So it appeared to our youthful fancy.

As we grew older, however, we began to discern other and more fundamental differences. St. John's was a prep school, intended to train its students for a continuance of their education in the colleges and universities of our land. It taught them the necessary disciplines to separate the true from the false in the history of man's experience. It readied them for the specialized and exacting studies of the arts and the professions, giving them the know-how of earning a living in service to others. It prepared the way for the acquirement of facts and techniques.

Above all, it taught them religion.

The individual student came to know his obligation to that which is greater than himself or any other man or group of men. Through its inspiration, its solace, and its strength, he understood the meaning of his journey through life and of its final goal.

He realized that his life must not be spent entirely on the treadmill of doing things. It must be measured by his development of mind and heart in his relations with his fellow man. His life will have meaning only as it becomes an example to others by his conduct in the home, at work, or even at play. Within him and all his fellow men is the divine spark which may or may not come to life.

There are more than 900 degree-granting universities and colleges in the United States. There are millions of students in the high schools and even greater numbers in the grammar schools. We have a production line of education that turns out millions of young people with diplomas every year on schedule. We have developed a technology and a manufacturing plant which can make atom bombs. We have more material goods than any other nation on earth, but we have no peace of mind. We've got things, but we don't know how to use them for the good of all.

To me, this is an indictment of our whole educational system. We are taught to do one job well, without being able to relate it to other jobs or other people. We've got the cars, but the one fault seems to be the simple mechanism of the steering wheel and the person behind it.

When it comes to making machines we're tops. In the field of human relations, however, we're like a ship without a rudder. There are many opinions but no facts. Each one of us is right, and the other fellow is wrong. And all because we have not learned to discriminate between the good and the bad, the true and the false.

Who's to blame for high prices? Just about everyone. And what's the answer to taxes? Write your own ticket and insist that it's the correct answer to this age-old problem.

In a democracy, of course, we realize that both sides, or all sides, must give in a little so that we may come together in a common area of understanding. We've got to try and see that there may be some elements of good in the other fellow's viewpoint as well as some weak spots in our own. This makes for effective compromise without conquest or capitulation.

But what about Russia? There's the puzzle within a puzzle. This largest land area in the world is the most secret. High prices, taxes, and nearly every other domestic issue is being affected by the question of Russia and her motives.

There are a few trigger-happy people in our country who think that we could solve the problem by dropping a plentiful cargo of atom bombs over that strange country. Obviously, as a Christian Nation, believing in the ultimate triumph of moral principles, we will do no such thing. By the application of superior force, we could destroy many Russian cities, kill millions of her people, and lay waste her economy. That would set back the material strength of communism, but it would not eliminate the evil of communism, which would live on in the minds of some men. Bear in mind that, although we have destroyed the armies of fascism, we know that its philosophy has merely gone underground. Witness the results of the poll taken in Germany which reveals that the people show no remorse over Hitler and his methods, but simply blame him because he lost. Denazification is not easy. Decommunization would be just as difficult.

On the other hand, we do not agree with those who would appease Russia, at any risk to ourselves, in the hope that she would reform. Unfortunately, words of sweetness and light will not convince the power-mad regime which now controls much of Asia and Europe of the error of its ways.

We must do it by superior example, by showing that democracy provides a higher standard of living without sacrificing basic human freedoms.

That is what your Congress is trying to do as it debates the needs of the 16 European nations outside the iron curtain of Soviet domination. Under the Marshall plan we do not intend to supply arms and munitions to these countries. Rather, we will provide them with an economic transfusion. For, if we get them back on their feet again as going concerns where people prosper with freedom, this cannot help but make the present rulers of Russia take pause. Free peoples cooperating fairly can build a far better way of living than repressive communism can ever produce. The Soviets know this. They will try to sabotage our efforts both here and abroad. They understand that, if we succeed, they will be discredited.

We've got the right idea. The question is, Can we deliver the goods in time to make it work?

Last year the incoming Congress immediately slashed the appropriations for our informational program abroad. This year the Congress has reversed itself and has provided for a complete selling campaign to go along with the material help we give to the distressed nations of Europe. Last summer many Congressmen went abroad to get a first-hand picture of the situation. They returned, convinced that we would have to counteract the flood of Communist propaganda that is sweeping Europe. By giving the facts of United States help, the conditions under which it is being produced, and why it is being given, we can defeat with visible proof the Soviet policy of spreading despair.

The necessary goods will be produced and delivered by the American people in order to prevent another war. It is an investment for security and peace. Even the United States, with all its strength, would be impoverished by another war. We have lost our isolation. The next time we would be hit, and hit hard. Both victor and vanquished would be weakened, perhaps beyond recovery.

We cannot have another war. And yet, in the present state of world affairs, we must be realistic. While we work for peace, we must be prepared to defend ourselves from a sudden and devastating attack. Until such time as mankind can develop a system to outlaw war we must have an Air Force second to none, both as a warning to and as an effective counterblow to any aggressor.

The recent report of the President's Air Policy Commission says that "the people of the country are not kept fully informed of the dangers of the military situation they are facing and of the preparations they ought to make to defend themselves against these dangers."

Asserting that our Nation's Military Establishment must be built around the air arm, the report goes on to warn us that other nations do not appear to have atomic weapons in quantity. This leads us to believe that some other nation has the A bomb in some lesser amount. The Commission estimates that by the end of 1952 we shall be no longer safe from the possibility of atomic attack.

On the danger from germ warfare, the report says that biological weapons are undoubtedly being studied in all parts of the world. That extremely violent bacteria and viruses exist is common knowledge. In any all-out attack on the United States the possibility that they may be used should not be overlooked. The danger from these weapons is, however, not only in time of war. They can be distributed in our cities and among our crops and herds in advance, say a year or so, of a planned attack. They may also be used as part of a campaign to weaken us, without any intention of following up with a conventional military attack. Our plans to anticipate and prevent such sabotage, insofar as this can be done, must be intensified.

These are grim words which should keep us on the alert. It is our duty to be prepared for any eventuality, even as we strive to work out, in cooperation with other nations, a system for guaranteeing a real and lasting peace.

This will demand effort, sacrifice, and vigilance.

We will help Europe, even as we work to strengthen ourselves. But these twin goals must be won without endangering our way of life and especially our civil liberties.

Prepared by education and by faith, we who have been trained to discriminate between the true and the false are twice armed. We shall equally reject the lies of Soviet propaganda and the lies of those who would use the threat of communism as a pretext for curtailing our freedoms here at home.

With clear sights we shall hold fast to the course we have set for our development and shall not be misled either toward the right or toward the left.

Remembering those who went before us, we shall keep our balance as Americans.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on January 24, 1948:

Dear friends of the Triple Cities and my congressional district, tonight, I want to address myself for a moment to the scores of postal employees from Binghamton, Johnson City, and Endicott who are listening to this program.

To you letter carriers who work steadfastly through the year, let me say I met with your local delegates in Washington and spoke at the dinner given New York Congressmen by your State organization. You can bet I am going down the line with them for a pay raise.

This raise embraces all branches of the postal service. I am for it because the Post Office Department was here when George Washington was President and is the oldest, most time-honored division of the executive branch of the Federal Government.

My stand in favor of a raise for you boys is not just lip service to you. The officers in your local chapter of railway-mail employees will tell you I went to bat for all the postal workers at a hearing last week before Senator LANGER'S committee which was listening to testimony about various bills to raise your pay.

Of course, you postal employees know what corner I've always been in. You know every vote I've ever cast on the subject has been in favor of better pay and more desirable working conditions for all of you.

So I was happy to talk in your behalf at the committee hearing and I will vote for that long-delayed raise for you when the bill comes up in the House.

A few would-be big shots who call themselves Republicans hereabouts are making overtures to the Political Action Committee of the CIO to put a candidate up against your Congressman in the Republican primary this year.

Although these disgraceful tactics are being carried on with the utmost of secrecy, sources friendly to me, yet close enough to this cabalistic clique, reveal to me what's happening.

Thus, John L. Lewis, Phil Murray, and William Green will stick their noses into our primary for the first time in the history of this district. With them will come a curious assortment of soreheads, left-wingers, mugwumps, and generally obnoxious plug-uglies.

But they will be well-heeled with thousands upon thousands of dollars, squeezed from the pockets of unwilling members who are sweating to pay their leaders fat salaries in addition to lining their war chests against the people's representative.

Yes, this gigantic slush fund will be thrown into our patriotic district in a desperate attempt to slap down your Congressman. But the labor barons won't be the only contributors. There will be a few anonymous givers, entirely undercover, who would blush crimson, then purple, if their names were brought to light.

Of course, they've gotten away with these subterranean operations against me for years, but I think now I have found a leak through which I can discover their chicanery. I am reasonably sure I can put my finger on them and if I do, they will squeal to high heaven.

Why? Simply because they occupy positions of pseudo respectability in our midst. In spite of the public's knowledge that they are hypocrites, they still can't afford to be found in the same political bailiwick as the left-wing labor boys. They would frankly be afraid of being placed in a position like that, even though it were for the purpose of going in with Beelzebub himself to erase me.

Naturally, they will tread very stealthily. They know the Republican voters will never tolerate an invasion by John L. Lewis as their candidate in the 1948 primary. They know they can't make the Taft-Hartley opposition an issue among Republicans of this section. They know, also, that they will take plenty of heat from my friends if they get funny.

I realize that little has been done in this valley to tell the people the truth about the Taft-Hartley Act. While great stress has been laid on the good this measure is doing in other localities, we have seen little in reference to it, except in condemnation of my vote for it.

Plenty of space has been given to agitators' speeches vilifying your Congressman. But not one word has been uttered in defense of one who has challenged the racketeers and gangsters for the protection of the general public.

Be that as it may, their deliberate omission of all praise and decent reference in my direction will not change the picture. They can bring in all the big-time, national barons they like. They can engineer all the smear and vicious innundoes against me they want to.

But their tons of propaganda, their limitless campaign funds, raised from outside this district, as well as by the naive and the unwitting from within, will not equal or approach the power of the patriotic Americans who will spring to my assistance.

For their information, more people will hear the truth over this program and you can count on my revelations of their nefarious work each week from now on until they are shown up to the public for what they are.

Thank you.

Old-Fashioned Philosophy

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. SCRIVNER. Mr. Speaker, there recently appeared in the Kansas City Kansan, after it had been printed in the El Dorado (Kans.) Times and possibly other Kansas papers, the following editorial containing some sound and sane philosophy:

OLD-FASHIONED COMMANDMENTS

The ten commandments of old-fashioned economy and philosophy, written by Uncle Mac, in the Arkansas Gazette, are being circulated in Topeka, and were published in a paper there recently. We have no hesitation in lifting them for publication here, and suggest that they may be profitably read and preserved, if for no other reason than as a voice out of the dim, dead past:

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help small men by tearing down big men.
4. You cannot help the poor by destroying the rich.
5. You cannot lift the wage earner by pulling down the wage payer.
6. You cannot keep out of trouble by spending more than your income.
7. You cannot further the brotherhood of man by inciting class hatred.
8. You cannot establish sound security on borrowed money.
9. You cannot build character and courage by taking away man's initiative and independence.
10. You cannot help men permanently by doing for them what they could and should do for themselves.

Keep American Ships Under the American Flag

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. BRADLEY. Mr. Speaker, Americans from coast to coast are rising in surprise and indignation as they learn the details of the European recovery program insofar as shipping is concerned. They want American ships kept under the Stars and Stripes. They want our own people to have the jobs of carrying cargoes for which we are paying the bills rather than turning these jobs over to foreigners and putting our own seamen on relief or unemployment insurance.

I submit herewith the following resolution adopted by the Philadelphia Industrial Union Council in opposition to the proposed transfer of American ships:

Whereas the policy of the administration of President Truman has been responsible for the sale of great numbers of merchant vessels to foreign ownership as well as to certain United States citizens who immediately changed the flag and registry to some foreign nations in order to evade taxes and employment of American seamen; and

Whereas thousands of American merchant seamen are unemployed as a direct result of the vast amount of cargo being carried to and from this country in foreign vessels; and

Whereas a provision in the Marshall plan would give to foreign nations a further 500 merchant ships and thereby greatly aggravate the unemployment of American seamen; and

Whereas 25 leaders of labor unions affecting 50,000 maritime and other workers in the Philadelphia area, both A. F. of L. and CIO, met in the hall of the National Maritime Union to take action against the growing unemployment of American seamen and other industrial workers, resulting from the giving away of American ships to foreign nations and the transfer of American ships to foreign registry, the following resolution was adopted unanimously:

"Resolved, That we are opposed to and ask an immediate halt to the assigning of American ships to foreign countries and to foreign flag registry and in particular the sending of Marshall-plan aid to Europe in foreign ships with the loss of jobs and wages to American maritime and other industrial workers. The taxes for foreign aid are paid by American citizens, and we are definitely opposed to forcing them into unemployment

because of the generous aid given abroad. That all Senators and Congressmen be advised of our opposition to this phase of S. 1619, and asked to vote against this section. The support of the Marshall plan, with the above situation corrected, is unanimous. Further that we give full cooperation to the American Bureau of Shipping in carrying this program out."

We request the concurrence of the Philadelphia Industrial Union Council in this resolution and that said council forward same to the national CIO headquarters with a request for concurrence.

Adopted unanimously by Philadelphia Industrial Union Council, January 22, 1948.

WARREN C. EVANS,
Delegate for Marine Engineers, Beneficial Association, No. 13.

UNESCO

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. BUCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. BUCK. Mr. Speaker, under leave to extend my remarks, I include the following resolution with respect to UNESCO adopted by the board of education of the City of New York on January 8, 1948:

Whereas the Second General Conference of the United Nations Educational, Scientific, and Cultural Organization, held in Mexico City November 1947, unanimously adopted the following resolution prepared by Jacques Maritain and submitted by the French delegation:

"The representatives of education, science, and culture, meeting together at Mexico City at the UNESCO General Conference:

"Aware of the responsibilities imposed upon them by the constitution of the organization to further universal respect for justice, for the rule of law, for human rights, and the fundamental freedoms of the peoples of the world, without distinction of race, sex, language, or religion;

"Concerned at the dangers to peace resulting from currents of thought conducive to the idea that another war is inevitable;

"Troubled by the indifference, resignation, and even calm acceptance which such currents of thought meet in certain sections of public opinion;

"Address a solemn appeal to all who are concerned for the dignity of man and the future of civilization, particularly scientists, educationalists, scholars, artists, writers, and journalists throughout the world;

"Adjure them to denounce the pernicious idea that war is inevitable;

"To act as the mouthpiece of the conscience of the nations, refusing collective suicide;

"To combat, by every means in their power, surrender to fear and every form of thought or action which may threaten a just and lasting peace"; and

Whereas the public schools of the city of New York should be a vehicle to the maintenance of peace in the world and should direct their thinking to the best means of maintaining peace: Now, therefore, be it

Resolved, That the Board of Education approves the resolution adopted by the United Nations Educational, Scientific, and Cultural Organization, and requests the superintendent of schools to circulate this resolution among the schools.

Let's Make Up Our Mind

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a copy of an article by the eminent columnist, Constantine Brown, of Washington, which appeared in the Sunday Star of Washington, D. C., on January 25, 1948, as follows:

LACK OF CLEAR-CUT POLICY BLOCKS UNITED STATES STRATEGISTS—ANALYST SAYS OUR TOP MILITARY LEADERS ARE HANDICAPPED IN THEIR ATTEMPT TO MAKE ANY PLANS FOR THE FUTURE

(By Constantine Brown)

The quandary in which our top leaders find themselves over the course America should take at this critical hour in world affairs is much greater than most people realize.

The war planners in our armed forces are churning water to make butter. They feel frustrated in their efforts to make plans on what to do in the event of certain emergencies, which some of them feel to be imminent.

These men can reach no conclusive decision because they do not know what our national policy is. Their liaison officers in the State Department return empty-handed when they try to learn the answers to certain pertinent questions. The State Department, on the other hand, has not been able to formulate a real national policy, because in recent years we have had none.

The Truman doctrine, for instance, could be as much a national policy as the Monroe Doctrine, but after having formulated the new policy concerning nations threatened by the U. S. S. R., State Department policy framers fear that its implementation by the military might lead us into trouble rather than establish the lasting peace they expected when they urged President Truman to make his declaration 10 months ago.

MATTER OF APPROPRIATIONS

The State Department, headed by a distinguished soldier, is unwilling to take the offensive. Secretary of State Marshall, who knows better than any one else the state of America's armed unpreparedness, feels that unless Congress is in a mood to provide much larger sums than the armed forces already have asked, in order to meet their present limited needs, it is of no use to expect any strong measures.

Congress, which is anxious to carry out some big economies as election time approaches, knows only superficially the exact state of things between this country and the nations behind the iron curtain and is unwilling to take any initiative to increase appropriations.

Thus, the staffs of Army, Navy, and Air Force must mark time until the State Department tells them what our national policy is. The State Department no longer receives instructions from the White House and is reluctant to undertake any kind of implementation of policy which might necessitate the use of forces which we do not possess, unless Congress appropriates the money and passes some kind of conscription measure to expand our forces. Congress is sitting tight because it is not its business to make policy.

MARSHALL PLAN POLICY

This vicious circle is little understood in this country, but it is well known abroad and particularly in the U. S. S. R. For the time being we are using the Marshall plan as an instrument of national policy, although the Secretary of State himself, as well as other responsible officials in the Government, fully realize that the European recovery program must be described as an implementation of policy rather than as policy itself.

Many members of the Senate Foreign Relations Committee were concerned during the war with the haphazard manner in which the administration was conducting foreign relations. They called, individually, on President Roosevelt, had talks with his chief adviser—the late Harry Hopkins—and occasionally summoned their principal legal informant on foreign affairs, Secretary of State Hull.

They received kind treatment in their talks with Mr. Roosevelt and Mr. Hull. Many pertinent matters, such as the real effect of the Tehran and Yalta agreements, were kept from them under the excuse that we were then tied to a number of Allies and that revelation of other agreements than those publicly announced would cause embarrassment and jeopardize the administration's war effort.

The Senators had to be satisfied with the frequently reiterated statement: "Gentlemen, at this time our foreign policy is to win the war." When some Senators like Robert La Follette, Jr., pointed out in 1944 that war in itself was not a policy but the implementation of policy, the other stereotyped answer concluded the argument: "To say more would be against public interest."

SITUATION WAS INHERITED

The present lamentable state of affairs must not be attributed exclusively to those now in office. They inherited a situation not of their own making.

The improvisations which we called foreign policy during the last two World Wars are the result of inherent defects in our system and in our psychology. It is true that wars are implementation of policy. The Europeans, to whose rescue we went twice in a quarter century, fought their wars not for ideologies, but for certain definite purposes.

The Central Powers started World War I for the purpose of acquiring more territory and greater prosperity by imposing onerous peace conditions on their opponents. The Allies, who were then at the height of their economic and social prosperity, accepted the challenge in self-defense.

They defeated the Central Powers with the assistance of the United States. But their leaders did not think in global terms; they were concerned primarily with repairing the damage suffered at the hands of their enemies.

While President Wilson and his associates agreed magnanimously not to exact reparations of any kind, David Lloyd George, Georges Clemenceau, and the lesser lights among the Allies demanded their pound of flesh. President Wilson was thinking in terms of one world, peaceful and united. He was thinking in terms of helping the world. The representatives of the other powers were thinking about what was best for their own country, regardless of all others.

SELFISH INTERESTS FOREMOST

While the United States was striving to make a better world globally the others were interested only in their own national segments of the world. They talked loudly about a better world, but actually were thinking about what was best individually for Britain, France, Italy, and the other members of the great coalition. This explains the cat-and-dog fight at the 1919 Peace Conference and the hostility of the former Allies toward each other, as shown particularly at the London Naval Conference in 1930.

A similar situation, on a much larger scale, occurred during and especially after

World War II. Once more we entered the war as crusaders.

During World War II we ignored the storm signals which came from some of the greatest European nations. For the sake of harmony among the enemies of the Axis, we actually handed over to Russia those nations to whose defense we rushed with lend-lease.

Because we did not wish to offend the hard-fighting and hard-pressed Russians as far back as 1943, we never placed conditions on our billions of lend-lease to Russia in keeping with the terms of the Atlantic Charter. And, according to those who were at the center of affairs in those days, nothing would have been easier than to talk with friendly but blunt frankness to Prime Minister Stalin about the actual objectives of the American people in World War II.

Mr. Stalin cannot be blamed for the present situation. He intended from the very first to enrich and enlarge Russia with new territories. He was not interested in one world.

Prime Minister Churchill was interested primarily in the British Empire. That was the reason he so carefully avoided mentioning the Pacific areas in the charter which he and Mr. Roosevelt drafted in the fall of 1941. He was interested in control of the Mediterranean to safeguard lines of communication throughout the world.

It was for that reason that he threw overboard the royal government of Yugoslavia and betrayed Gen. Draja Mihailovich by diverting his support to Russia's stooge, Marshal Tito. In the end, he was double-crossed by Mr. Stalin, but when he changed horses in Yugoslavia he was convinced that he was acting in the best interests of the Empire.

ACTED FOR THE EMPIRE

It was the same reason which prompted the British Government to send troops to Greece. No one can blame Mr. Stalin, Mr. Churchill, or any other head of a government for acting first in the interest of his own country and secondarily in the interest of the international community.

Not so in this country. Our leaders did talk after 1939 in terms of the threat to our own security. But they thought in global terms.

Even after Pearl Harbor, when men—far more important than goods or money—had to be shipped to all parts of the world to be killed there, we still thought in terms of one big and kind-hearted world.

There were a few courageous men in Mr. Roosevelt's immediate entourage who pointed out to him the risks of not having a definite national policy. They were either silenced or removed from the scene. To suspect Russia was treasonable because it meant breaking the harmony between the great powers (the little nations had ceased to count).

This country was created by those who escaped political, social, and economic oppression by autocrats who were ruling Europe. Men from all nations of the Old World came here and worked together, paying no attention to their former social status, religion, or race. They fused into one great hard-working, idealistic nation and got the idea that what has happened in America could happen across the Atlantic as well.

IDEA PROVOKES LAUGH

Our people sincerely believed that when it became obvious that wars did not pay, the people of Europe themselves would put an end to them, joining hands to work for their own good. It was for this reason that the idea of one world which provoked such laughter among Europeans and especially the men of the Kremlin, took root so quickly in the United States.

Many men in the Government are still convinced that a peaceful solution of present world problems is possible if we show continued good will and complacency toward the Russians. They all see the hair-raising reports of what the Soviet is preparing, but they are still willing to brush them off as inevitable exaggerations of a new nation which has tasted victory for the first time and is prankish. Because of this frame of mind, we are still today—as we were before we became a world power—without a clear-cut national policy.

Present Technological Status and Future Outlook for Synthetic Rubber

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. CRAWFORD. Mr. Speaker, under the unanimous-consent permit given me, I desire to submit for consideration of my colleagues a recent statement on the rubber situation by Mr. J. P. Coe, vice president of the United States Rubber Co. His views follow:

PRESENT TECHNOLOGICAL STATUS AND FUTURE OUTLOOK FOR SYNTHETIC RUBBER

(By J. P. Coe)

I like the designation of technological status because it contemplates the practice aspect of the technical situation in synthetic rubber as distinct from the strictly scientific aspect. For the purposes of this symposium, I believe we are concerned with the use of synthetic rubber rather than with the chemistry and the physics involved.

With this in mind, it is my position that synthetic rubber has now proved itself technologically; that it exists and will continue to be manufactured and used on its own merits as material required by industry because of its usefulness; that independently of its importance to the national security and aside from the economic means that will be employed to convert the industry from a wartime to a peacetime basis synthetic rubber is now established in the arts.

First, let me define synthetic rubber. Increasingly since Columbus, rubber—caoutchouc—the exudation of the bark of Hevea Brasiliensis—has been recognized as important because it would do for us things no other material would do. Outstandingly, rubber can be stretched many times its length and still return. It is strong, tough, chemically resistant, heat and cold resistant, possessed of very good electrical properties, easily fabricated into articles, thermoplastic in the raw state and since the discovery of vulcanization is thermosetting.

Until synthetic rubber, no other material would do what rubber would do.

Synthetic rubber, in my definition, is man-made plastic material which also can be stretched greatly and still return and which possesses some of the other properties of natural rubber adequately or to an enhanced degree.

It is important in this definition that synthetic rubber does not need to be a complete duplicate of natural rubber chemically or physically. To be called rubber, it must be rubberlike, and notably that means it must be stretchy, as other plastic materials are not, and it must possess some other rubber-like properties. In addition, it must equal or surpass natural rubber in certain respects or it will not be accepted as useful.

Let us consider the synthetic rubber called neoprene. It is a rubberlike material: stretchy, strong, chemically resistant, easily fabricated into articles. In addition, it is resistant to oils. For example, it is good for the linings and covers of hose exposed to oil, and it enables us to make such articles better than we can make them of natural rubber. Natural rubber is notably allergic to oils. A common expedient before oil-resisting synthetics were developed was a flexible metal lining inside rubber impregnated hose used at gasoline filling stations. Neoprene is entirely adequate in mechanical properties for the manufacture of hose, and it is not important whether its elastic properties or its tensile strength are equivalent to those of natural rubber. In these respects, it is adequate and in addition it is oilproof.

Such uses of raw materials ordinarily do not attract popular attention. Consequently, it is not generally known that neoprene was first sold commercially in 1932 at $1 per pound, when natural rubber was selling for 3 cents. Sales in that year amounted to only 2.3 tons and in 1933 to 24 tons. However, in 1934, the volume tripled; in 1935 it doubled again, and the increase up to wartime—1934–42—was on the average almost exactly 100 percent each year. Probably no one knows the thousands of articles for which neoprene is now considered essential, even though—prewar—its price was three to five times that of natural rubber.

I have gone into the matter of neoprene in some detail to illustrate the following:

1. Synthetic rubber has been with us commercially and on its own merits for 15 years.

2. Not necessarily must it be sold for the price of natural rubber.

3. We are concerned with improvements over the natural product rather than with duplication or substitution.

4. Such advances in industry take place usually without knowledge by the general public except in the improvement of the articles they buy.

Closely allied to neoprene but with different properties is the type of synthetic rubber usually referred to by its German name Buna N or Perbunan. There are also the trade names Chemigum, Ameripol, Hycar, and Butaprene. These are all oil resisting rubbers and hence useful for special purposes. In 1944, national consumption amounted to 14,000 tons chiefly for special war uses. Their manufacture is privately financed and they are sold at the present time for about twice the price of natural rubber. With war uses past the new peacetime uses already consume 5,000 or 6,000 tons per year.

Still another specialty rubber is the product called butyl rubber. In many respects butyl is not as rubberlike as the ones previously mentioned. However, it is sufficiently rubber-like for many articles and it has two outstanding and valuable properties. It is highly resistant chemically, even to strong nitric acid. Glass is also resistant to nitric acid but glass does not stretch. Butyl is highly impermeable to air, and for this reason plus its chemical inertness and other mechanical properties, it is valuable for the manufacture of inner tubes for pneumatic tires.

I believe all inner tubes for passenger tires today are made from butyl rubber—at least half from preference by the experts in the manufacture of inner tubes—in order better to serve the need of the consumer. At present it sells for 18½ cents per pound compared with recent prices of natural rubber between 14 and 25 cents. Consumption is 50,000 tons per year with a free-use consumption of probably 30,000 to 40,000 tons per year.

It happens that in volume the largest consumer of rubber is the pneumatic tire to the extent that between the two World Wars this amounted to about 70 percent of our total rubber consumption. For transportation of merchandise and of people and notably for rapid movement of war matériel, tires were of critical national importance during the war. Large supplies of rubber for this purpose were of utmost importance; so much so that deprivation of our natural rubber supply, in the planning of the Axis Powers, might easily have given them military su-

premacy over us. Accordingly, in 1940 and 1941, we took the synthetic rubber technology we then possessed and decided to produce in large quantity chiefly for tire manufacture a general-purpose synthetic made from butadiene and styrene and known since as GR–S.

GR–S has had a great amount of publicity. Speeches have been made, articles have been written, Government committees have investigated, and Congress has legislated. Most of the automobile-driving public has become interested in the question: Are synthetic rubber tires as good as natural rubber tires?

Admiral Braine has already outlined the importance of synthetic rubber to our national security. Mr. Phillips has explained the effect on international economics of any major change in our prewar practice of purchasing from other countries our quarter to half billion dollars' worth of rubber. Mr. Hadlock has the great problems of administering a manufacturing business which has produced perhaps more volume of synthetic organic chemicals than any other industry in a like period. Mr. Dinsmore is concerned with the economics of our conversation problem and Mr. CRAWFORD will have to take all of this and write some rules for us to go by.

Fortunately for me, this evening I am free of such economic and international and military problems. I am concerned only with the question of how useful is synthetic rubber now and in the future.

GR–S was used 1942–47 to the extent of 2,734,000 long tons. That is about as much as the total rubber used in the United States, 1936 to 1940.

The Allied armies won uncounted battles, the industries of the United States transported millions of tons of merchandise, and the motoring public traveled billions of miles—all with tires made from GR–S. That is the best bit of technical evaluation I know anything about. I might quote abrasion tests of treads and internal hysterisis data, and tensile strength of samples, and processing costs in manufacturing, but such data are nothing compared with the simple fact that GR–S in very wide use over a period of several years has made good serviceable tires.

How good? As good?

The engineers who spend their lives trying to find out the answers to such questions said during the war they could make a tire with natural rubber 15 percent better than an all-synthetic tire. I think no motorist is likely to judge so carefully that he can decide whether his last set of tires ran 15 percent longer than his previous set or not, but the engineers believe that over-all natural rubber has the edge. Some of them tell me that at present-day driving speeds 15 percent is too low.

It is also true that in large, heavy tires for certain definite reasons mostly concerned with hysterisis, at the present time we prefer natural rubber. However, such ratings I consider somewhat academic because no one contemplates or has contemplated for the near future a complete swing from natural to synthetic rubber in tires. We approached that in 1945 and we got along very well. Since that time on a somewhat freer basis we have departed from that position and have reverted to the use of more natural rubber because we think it is somewhat better for tires.

The Rubber Director, Col. Bradley Dewey, in 1944 said he thought that from a quality standpoint for about half our national tonnage requirements we could use either synthetic or natural rubber as we chose, depending chiefly on the economics involved. Whether it is one-half or one-quarter, that emphasizes the fact that a modest price advantage or a modest quality advantage will result in a large use of synthetic on a free basis.

Let us not here attempt to decide of what materials the manufacturer will fabricate our pneumatic tires. Let us trust such decisions to the tire engineers. They have served us well over the past 30 years and have given us improvement in tire life tenfold, coincident with faster driving and lower prices. The product of these improvements is a saving to the driving public of perhaps a billion dollars a year in tire cost.

I have already shown that substantial quantities of synthetic have been used for years and are continuing to be used despite a price disadvantage. Having a continuing advantage in price, unquestionably the tire manufacturer would use a great deal of synthetic. The price competition bids fair to be close. It was estimated a year ago that GR–S types could be produced on a private-operation basis for a price of around 15 cents per pound. With the dollar now a little thinner, that figure may now be a little higher. In Malaya with a less up-to-date dollar and no farm-parity program, good estate operators are not too happy with a 15-cent price for natural rubber. This invades Mr. Dinsmore's territory, but in discussing the future technological outlook, I must list price advantage as a great stimulus to the use of butadiene-styrene rubbers.

Again let me assert that if large quantities are used on a free-economy basis, that material is ipso facto, technologically, a success.

Butadiene-styrene rubbers are possessed of special advantages in resistance to aging and certain of them have specially good processing qualities. For those reasons, plus uniformity, the wire and cable industry a year ago made a concerted and formal request to RFC for a continuing supply of those types specially designed for wire and cable insulation. They stated that at even price they preferred the synthetic to the natural rubber. Certain companies stated they would pay a higher price. May I here encroach on Admiral Braine's territory and express the opinion that such voluntary and preference uses for GR–S types outside the tire industry, even in moderate amounts, should be fostered in the interest of the national security.

For, now, a few years asbestos sheet packing has been considered technically superior if made with a particular GR–S type than if made with natural rubber. Tiling manufacturers prefer GR–S. Battery manufacturers sometimes prefer GR–S.

I have here a tag from a boy's raincoat, recently purchased, and reading, "Buna GR–S rubber guaranteed not to crack, peel, stiffen, or rub off." These are relatively small-volume items but as Mr. Livingston used to remind us we shall make our technical progress in small steps.

I am told some tire manufacturers prefer GR–S latex for solutioning their tire cord. Here is a fundamental economic advantage, also—in case Mr. Dinsmore should overlook it. It costs substantially more to bring into the United States natural rubber in the form of latex than in the dry coagulated form. It costs substantially less to produce synthetic latex than dry synthetic—also in the United States. With apologies to Rubber Reserve's pricing policy.

I have referred above to special GR–S types. Four hundred and thirty commercial variations of butadiene-styrene rubber have been developed as the result of the large and aggressive research program instituted and supported by Rubber Reserve since 1941. Today more than 50 varieties are in regular production and 72 percent of the total production of GR–S is of types developed since 1942 and tailor-made to meet special requirements of industry.

A great deal has been said in the past regarding the difficulty of processing synthetics in the rubber manufacturing plants. It was stated 3 years ago that processing disadvantages in tire manufacturing were costing an amount equivalent to a price increase of 7 cents per pound. Nevertheless, the tire industry in 1943 and 1944 accomplished a change-over from natural to synthetic with such speed and satisfaction that it constituted in my opinion one of the war-production miracles.

At present we hear little said about difficult processing. This is partly because of improvement in the synthetics and partly because of processing skills acquired by the consumer. At present we hear almost as much about processing advantages as about processing disadvantages, although we have still some serious problems in that category.

I do not wish to mislead. Synthetic rubbers have faults and disadvantages. So has natural rubber. So have all the raw materials we use. None of the synthetics yet have fully the elastic properties of the natural product. Generally they are not as strong. In the rubber factory they are not as sticky and therefore do not fabricate as well in a great many instances. Great progress has been made in overcoming or working around these difficulties but there is a great deal of work yet to be done in the improvement of many qualities.

But again I am not speaking of complete substitution. We like rubber footwear to be soft and stretchy, and hence the footwear manufacturer prefers natural rubber. Nevertheless, in certain instances he uses some synthetic with his natural to improve factory processing.

There are certain very important processing advantages which accrue to the manufacturer by compounding the rubber in latex form in the synthetic plant. The largest and most important example is in compounding with carbon black, but there are many other instances involving other compounding materials—some of them difficult to handle by ordinary rubber-factory methods. Carbon black can be added in the synthetic plant with a minimum of dirtiness, whereas in the tire plant its presence is almost a civic nuisance. In addition, this procedure shortens the processing time in the tire plant and enhances the quality of the product.

Of major importance at present is the development of rubbers polymerized at low temperatures—0° to 40° Fahrenheit versus 122° to 128° Fahrenheit past practice. This development is now entering the production stage with two large manufacturing installations nearing completion. Preliminary data has indicated the possibility of tire-tread quality substantially improved over anything we have known heretofore with natural rubber and the more conservative of the tire engineers rate it as "perhaps at least equal to natural rubber according to incomplete data." If this improvement should be established by service performance of tires over this year and next it is to be expected that such rubber will be used almost regardless of price. Since tire-tread rubber amounts to about a third of the national rubber consumption, this use would definitely put butadiene-styrene rubber on an independent footing.

An independent technological basis for synthetic rubber is the sine qua non of its continued existence. Particularly is it needed to support private research conducted in the interest of profit to the investor because as we all know such research in the past has produced great advances in the American scheme of things.

We require further research in the synthesis of rubbers from other raw materials than butadiene and styrene. Already we have had very encouraging results with substitutions for styrene in the copolymer, as with mono and dichlor styrene.

We need continued research on a private basis if we can have it—or on a public-funds basis if we cannot—but we must continue. We in the synthetic-rubber industry are completely confident that steadily we shall improve and frequently we shall add new and valuable items to the synthetic-rubber catalog. We do not expect to achieve full success

overnight. Already natural rubber has been surpassed and supplanted in many places on a strictly merit basis. Already the intensive study of the synthesis of elastomers has increased manyfold our intimate knowledge of the chemistry of rubber, and has disseminated this knowledge among thousands of chemists not previously familiar with it. The chemist will never stop whether he works in a cave or in a marble laboratory. He will succeed more quickly if well supplied with the tools for research.

The future outlook for synthetic rubber from the technological standpoint is very very bright.

Social-Security Law Should Be Amended

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a very fine letter from Mr. W. J. Tutt, of Des Moines, Iowa, relative to the need for revision of the present Social Security Act. He points out a glaring injustice that needs to be remedied by immediate passage of corrective legislation.

The letter follows:

DES MOINES, IOWA, *January 15, 1948.*
Hon. PAUL CUNNINGHAM,
House Office Building,
Washington, D. C.

DEAR PAUL: The Social Security Act as it affects persons in the older age brackets is a puzzle to some of us who are now past the age of retirement.

The writer is in that class—past the 72-age mark.

I am advised by the local office of social security that the limit of any possible earnings I might make after social benefits obtain, cannot exceed $14.99 per month. To a certain class of businessmen who tried to weather the NRA of the 1930's, and lost, they now find themselves with a meager social-security benefit, and a restriction on income (possible) above that benefit. In my case, total social benefits is less than $40, with $14.99 total possible earnings above that. Can a man support a home and wife today on that?

I have not made application for benefit for I can still work, but the day may come when I cannot work as I do now.

It seems to me, Paul, that if the present set-up is as has been explained to me, instead of being called social security, it properly should be called social poverty.

Many businessmen who went through the trying period of the 1930's—and I was one of them—were obliged to take a complete loss of their business. They are now past the retirement age and not able to recoup the financial losses.

What does social security hold for them?

Many of these men could employ their time and sales commission to help augment their social benefit, but not above $14.99 per month. That, I think, is very unfair. For 10 years now, 1 percent of all of my earnings has gone to social security. It looks now, at age 72, I don't stand any show of getting that back. Can you offer any suggestion? Best wishes to you.

Yours,

W. J. TUTT.

The Herter Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. KEATING. Mr. Speaker, whatever other objections may be leveled at the Herter bill, H. R. 4579, I am convinced that the taint of unconstitutionality cannot successfully be charged against it.

In this discussion, one concession should be made at the outset. In the broad sphere of international relations—that is, the area of negotiation, agreement, and diplomatic exchange—the President is the sole organ of the Federal Government.

In this vast external realm, with its important, complicated, delicate, and manifold problems, the President alone has the power to speak or listen as a representative of the Nation. * * * Into the field of negotiation the Senate cannot intrude; and Congress itself is powerless to invade it. (*U. S.* v. *Curtiss-Wright Export Corp.* ((1936) 299 U. S. 304).)

In addition, the President is given by the Constitution the responsibility to "take care that the laws be faithfully executed"—article II, section 3—thus of necessity conferring on the President a certain amount of discretionary power in order that he may effectively enforce and execute congressional law and policies both home and abroad. See Sayre, The Constitutionality of the Trade Agreements Act, 1939, volume 39, Columbia Law Review, pages 751, 759.

Yet the problem is not settled when these powers are conceded, for they—like all other governmental powers—"must be exercised in subordination to the applicable provisions of the Constitution"—United States against Curtiss-Wright Export Corp.

The Herter bill, H. R. 4579, in the interest of coordinating the formulation of foreign-aid programs, creates a Foreign Aid Council, consisting of certain members of the President's Cabinet and others, with the Secretary of State as chairman. In this activity the Council shall advise and consult with the President. The bill also establishes an Emergency Foreign Reconstruction Authority, with capital of $500,000,000, which shall assist the Council, meet emergency needs of foreign countries for food, fuel, and fertilizer, make available to such countries limited categories of other consumer goods which will provide incentives to production and distribution, and make available limited quantities of productive machinery.

The board of directors of this Authority shall be bipartisan and shall consist of a full-time chairman, who shall be the executive head of the Authority and executive director of the Council, and seven other members appointed by the President by and with the consent of the Senate. The Authority must make periodic reports to the President, who in turn shall submit them to Congress. Commodities furnished to foreign countries are to be paid for, and the methods of payment, under certain circumstances, are outlined. These features of the bill, therefore, indicate on their face no interference with the President's conduct of foreign affairs. Instead they set forth means whereby money and commodities may be made available, on certain terms, to aid foreign nations in their reconstruction following World War II. In so doing, Congress is exercising certain powers residing in it by constitutional grant.

In article I of the Constitution, Congress is given certain express financial powers. Section 8, clause 1, provides that—

The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States.

It is settled that under this provision Congress may appropriate and spend money for the general welfare, and that the means of so doing rests primarily in the discretion of Congress. (*Helvering* v. *Davis* ((1937) 301 U. S. 619); Turner, the Fifth Horseman of the Apocalypse ((1947) 22 N. Y. U. L. Q. Rev. 19, 21–24).)

In section 9, clause 7, it is prescribed that—

No money shall be drawn from the Treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

Thus the absolute control of the moneys of the United States is in Congress, which is responsible for its exercise of this great power only to the people; and Congress may indicate the class of persons who shall not be paid out of general appropriations but who shall come to Congress for relief. (*Hart's case* (1880), 16 Ct. Cl. 484; affirmed, *Hart* v. *U. S.* (1886), 118 U. S. 62.)

In this respect Congress does not interfere with the executive functions or powers.

Moreover, "Congress in making appropriations has the power and authority not only to designate the purpose of the appropriation, but also the terms and conditions under which the executive department of the Government may expend such appropriations." The matter is one "solely in the hands of Congress." (*Spaulding* v. *Douglas Aircraft Co., Inc.* (S. D. Cal. 1945) 60 F. Supp. 985, affirmed (C. C. A. 9th, 1946) 154 F. (2d) 419.)

It has even been urged that where a treaty calling for expenditures is involved, Congress—the House acting first—has the power, as distinguished from moral obligation, to refuse an appropriation. (Corwin, The President's Control of Foreign Relations ((1917) 92–98); Crandall, Treaties, Their Making and Enforcement ((2d ed. 1916) 177–182); Borchard, Treaties and Executive Agreements—A Reply ((1945) 54 Yale L. J. 616, 654–655 (but conceding the power with respect to executive agreements)).)

In *Turner* v. *American Baptist Missionary Union* ((C. D. D. Mich. 1852)

Fed. Cas. 14, 251), the court said with respect to a treaty—and it would follow with respect to any other law calling for the expenditure of money:

> The representatives of the people and States exercise their own judgments in granting or withholding the money. They act upon their own responsibility.

The Herter bill involves the expenditures of large sums of money for foreign aid and reconstruction. In carrying out such purposes, Congress is not limited to the mere act of appropriating the money. It may set up the machinery for the expenditures and specify the conditions under which they may be made. It may create agencies or representative bodies to supervise and coordinate the expenditures and report thereon. The power to do such things is a natural concomitant of the exclusive power to appropriate and spend, for Congress has also the power to "make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof"—Article I, section 8, clause 18.

Through control of spending, Congress may put into effect and implement a national policy, and in so doing does not necessarily infringe on the powers of the Executive. See Hart's Case, supra; Turner, op. cit. supra.

In 1935 former Attorney General Cummings declared:

> Not only may the Congress protect and aid those specific national activities over which it has been delegated authority by the Constitution, and in so doing enter into fields of the country's life beyond the Federal authority save for their effect upon such specific national activities, but it may also provide adequate protection and aid for agencies created by it to exercise Federal powers. This is so even where such agencies have been given some functions which, considered alone, might be beyond the power of Congress to authorize (38 Op. Att. Gen. 258, 265–266).

As stated in *Farmers' and Mechanics' National Bank* v. *Dearing* ((1875) 91 U. S. 29):

> The power to create carries with it the power to preserve. The latter is the corollary from the former.

In addition to the foregoing, Congress has the constitutional authority "to regulate commerce with foreign nations"—article I, section 8, clause 3.

Concerning this power, the Supreme Court in *Henderson* v. *Mayor of the City of New York* ((1875) 92 U. S. 259, 270) stated:

> As we said in *United States* v. *Holliday* (3 Wall. 417), commerce with foreign nations means commerce between citizens of the United States and citizens or subjects of foreign governments. It means trade, and it means intercourse. It means commercial intercourse between nations, and parts of nations, in all its branches. * * * To regulate this trade and intercourse is to prescribe the rules by which it shall be conducted.

Since the Herter bill contemplates that commodities and machinery will be furnished and will be paid for in cash or other commodities, or in the furnishing of strategic materials, and since the bill also deals with certain export controls and allocations, such transactions and exchanges would seem to be within the broad definition of "commerce with foreign nations" set forth above.

It is true that in carrying out the terms of the Herter bill, the activities of the agencies created by Congress thereunder might sometimes conceivably come close to the line of authority deemed to reside solely in the President. It is equally true that the doctrine of separation of powers is firmly imbedded in American constitutional law. But the doctrine at its strongest does not demand an absolute and complete separation. As a practical matter of government there must be a considerable accommodation of power, and each branch has certain authority which necessarily infringes upon the authority of the other branches. *Ex parte Grossman* ((1925) 267 U. S. 87); Frankfurter and Landis, Power of Congress Over Procedure in Criminal Contempts in "Inferior" Federal Courts—A Study in Separation of Powers ((1924) 37 Harv. L. Rev. 1010).

In the latter article, the authors point out that from the beginning the Supreme Court has refused to draw abstract, analytical lines of separation and has recognized necessary areas of interaction; moreover the Supreme Court has consistently sustained congressional discretion when moving in the general legislative field not bound by specific limitations, even though the particular field may border on territory dominantly in control of another department of the Government—Frankfurter and Landis, (op. cit. supra, pp. 1014, 1016).

In Ex parte Grossman, supra, the Supreme Court declared:

> The Federal Constitution nowhere expressly declares that the three branches of the Government shall be kept separate and independent. * * * Complete independence and separation between the three branches, however, are not attained, or intended, as other provisions of the Constitution and the normal operation of Government under it easily demonstrate.

The Court then enumerated instances demonstrating the proposition that each branch of the Government is subject to certain positive and negative restraints by the other branches. These instances, the Court said, show that the independence of each branch of the Government, legislative, executive, and judicial, is qualified and is so subject to exception as not to constitute a broadly positive injunction or a necessary controlling rule of construction.

The method of handling any program of foreign aid goes to the very heart of the problem now before Congress. As the ardent advocates of this, that, or the other plan advance their arguments, it seems helpful to clarify the issues by eliminating the contentions which seem to lack substantial merit. One of these, it is submitted, is the attack on the Herter proposal on the basis that it violates constitutional limitations. It does not deserve opposition on that ground.

Address of Walter H. Van Hoesen

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Walter H. Van Hoesen, president of the New York Foreign Freight Forwarders and Brokers Association at the annual dinner held at the Hotel Commodore, New York City, on Tuesday evening, January 13, 1948:

It is worthy of more than passing note that 1,400 executives of steamship lines and other concerns active in foreign trade should be gathered under one roof, and I am pleased to speak on behalf of the New York Foreign Freight Forwarders and Brokers Association, in expressing to you our appreciation for your attendance on this occasion.

It is significant of the role played by foreign-freight forwarders when so many of you take advantage of the opportunity to get together. Most of us are acquainted one with the other, but the demands of daily business prevent us from getting together very often for the purpose of discussing problems of mutual concern. I think it fair to say that we here tonight handle a larger proportion of world commerce than any other group.

During the war the foreign freight forwarders at the port of New York, with the cooperation of all the firms represented by you, were engaged almost entirely in expediting the movement of essential materials and supplies. Our functions consisted of the routing of consignments to and from all parts of the world by way of New York. We obtained steamer space, secured export licenses, prepared documents, and attended to the hundred and one other details which are of daily occurrence in the conduct of our business. Many of us held high positions in the various Government agencies, and I am informed that in no instance was the confidence misplaced.

Since the war our efforts have been turned to assisting in the revival of world trade through regular channels. We have aided in reestablishing contacts between widely separated consignees and shippers; we have sought to overcome obstacles created by currency and other restrictions imposed by practically every country in the world. During the last year we have been able to move billions of dollars in combined value of imports and exports through the port of New York. The months ahead may be even more difficult than the period during and since the war days. Economic conditions in the countries of Europe have become increasingly critical, and we are now shipping large quantities of goods under an interim-aid plan approved by the Congress. A long-range program of foreign relief is certain to follow under the provisions of the Marshall plan as it may be finally adopted. It is likely to involve the expenditure of from sixteen to twenty billion dollars in food and other products which will have to be shipped during the next 3 or 4 years. It will be a stupendous task to see that foreign-relief shipments are handled properly with a minimum of delay and expense to the United States Government.

The New York Foreign Freight Forwarders and Brokers Association, believing that its members are adequately and best qualified to

have a part in this work, has offered the facilities of its members to the Government agencies with which the traffic will originate. Members of the Congress have stated for the record that it is their wish to have foreign-relief shipments handled by commercial forwarders whenever possible, and Government officers have stated that it is their intention to take advantage of our assistance. I am confident that we shall have the cooperation of all those engaged in foreign transportation so that the job may be well done.

The Year of Decision for Italy

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Human Events for January 7, 1948:

THE YEAR OF DECISION FOR ITALY

(By a correspondent in Rome)

What will happen to Italy in the near future?

There are many reasons for anxiety, in spite of American support; notwithstanding inclusion of the moderate Socialists in the government and the calling off of the general strike in Rome. Attacks against the foundations of the young Italian Republic have become particularly insistent since ratification of the Italian Peace Treaty by Russia last September. Now, with evacuation of the Allied occupation forces, these attacks seem to have reached their peak.

This belief is strongly confirmed by the alarming events which took place throughout Italy during the last 2 months of 1947. In France, the Communist attempt to paralyze the country by a general strike completely failed. In Italy, on the contrary, demonstrations of a similar kind have on the whole succeeded.

We refer to the unexpected and daring assaults which the Communists tried in Milan during the last week of November, when for 3 days they took over all local government, and also to the general strike which was called in Rome during the second week of December. There is an attempt to minimize the importance of these connected "incidents." In fact it is hardly possible to view these events placidly. Their alarming significance is too evident.

The direct action of the Italian Communists in Milan revealed a number of disquieting facts. It showed that: (1) In Italy, at any time, well-disciplined Communists can be mobilized in sufficient strength to assume control of all municipal functions; (2) it is possible to set up a Communist soviet, which can force the national government to negotiate with it; (3) at least a part of the police forces are unreliable; (4) the great majority of the Italian people is politically tired and does not react with vigor and decision against occurrences which threaten the very existence of democratic institutions.

The recent Italian disorders prove incidentally that there is a great difference between the struggle which the French and the Italians are waging against Communist onslaught. The way in which the French stood up to the test is significant. It shows that the French people, having by tradition a strong feeling for the close interdependence between their internal and external politics, are again conscious of the historical greatness of their country.

II

The popular reaction to the Communist offensive in France shows that the French people realize the necessity for a close cultural, economic, and political collaboration between France and the great Anglo-Saxon democracies; that they understand the vital importance of defending their colonial empire and their national prestige. For all those reasons the French resolutely and in ever-increasing numbers turn against those alien elements which are trying to drag France into the abyss of political impotence and collective slavery.

The Italians, on the other hand, give only a feeble indication of understanding the events of our time. Twenty years of Fascist rule, culminating in a lost war, have made this country politically apathetic. The Italian sense for foreign politics, and its importance for national life, is surprisingly undeveloped. The people lack historic appreciation of their own institutions.

In regard to colonial empire and world prestige, the Italians no longer have anything to defend. Through their eastern frontier, difficult to control, undesirable strangers pass by the thousands. All the big Italian cities swarm with Russian spies and foreign agents. Efficient check on their subversive activities is in this country more difficult than in France. The French have already arrived at a point where, in their struggle against communism and Russian penetration, they are to a great extent helping themselves. The Italians still depend on the help, advice, and support of others.

This must be kept in mind if one realizes that in Italy the decisive battle with the Communists is still to come. Communism in Italy is at the present time on the defensive. This does not mean that the party has given up the struggle. Very much to the contrary. As a Moscow-trained tactician, Palmiro Togliatti, the leader of the Italian Communists and one of the shrewdest revolutionaries of our time, knows only too well that the best means of defense is to attack.

Togliatti certainly sees with displeasure that the general trend is against his cause. The Communists in Italy, too, are gradually losing ground. The number of their antagonists is growing, and the present Italian Government, its prestige noticeably increased by the inclusion of the independent Socialists (Saragat) and Republicans (Pacciardy), has a fair chance of winning in March the first free parliamentary elections of the new Italy. But these very facts force Togliatti to redouble his efforts and attacks against the De Gasperi government, against its American friends, and, in general, against everything which blocks the transformation of Italy into a Soviet satellite.

III

"Every day a stroke, every day an attack, every day a revolt of some sort," is therefore Togliatti's present slogan. "Not a moment's peace for the De Gasperi government and its supporters."

This attitude seems strange and incomprehensible to many American observers of Italian events. "The Italian Communists," they argue, "are fighting a hopeless battle. Should they lose, they will be weaker than before. So what sense is there in squandering their forces?"

Those who argue in this way unwittingly put the Communists on the same level with any other ordinary political party. This is a great error, for the Communist Party is not political in the ordinary sense. It is a very extraordinary party. When a political movement is backed by a mighty and unscrupulous world power and, in addition, can count on the support of hundreds of thousands of "fifth column" agents in almost every country, then such a party is not fighting a hopeless battle. It can very well permit itself the occasional luxury of squandering its forces, because they are practically inexhaustible.

Confirmation of this could lately be seen in France. Most likely a nation-wide general strike will before long be called in Italy, too. With the important difference, however, that the Italian Communists are much more easily supported from across the border (Yugoslavia) than their French comrades. Therefore, the situation of Italy—should it come to direct action on a grand scale—would have a more dangerous aspect and be more difficult to solve than was the case in France.

In view of these prospects, the question arises: What can be done by the United States to give the young Italian Republic more efficient support in its struggle against communism?

IV

Until recently the great majority of Americans have laid stress on the economic side of the problem. "It would be quite sufficient," they said in substance, "to give the Italians enough to eat. Then the specter of communism will disappear." Even the Marshall plan seems to a great extent based on this assumption.

Is this thesis incontestable? We in Italy doubt it. Those of us who have seen the Communist agitators succeed in districts where there is hardly any economic distress have necessarily come to the conclusion that there must be some error in this calculation.

Italy cannot be saved by economic aid alone. Something more is needed. And it must be forthcoming soon, if one wishes to save Italy from falling, like so many other European countries before her, a prey to Communist and Russian aggression.

The interest shown by Americans over the fate of Italy is greatly appreciated by all democratic-minded and freedom-loving people. "But what precautions," one hears them asking, "have been taken to assure that the help offered Italy by the Marshall plan will come in time?" Russia, after a long period of hesitation, in September suddenly ratified the Italian Peace Treaty. That is generally interpreted as demonstrating Moscow's wish to synchronize the departure of the Allied forces from Italy with the particularly difficult midwinter season; and with completion of the necessary underground preparations.

What are the plans of the vast Communist underground organization in Italy? Overthrow, by legal or illegal means, of the Christian democratic government of de Gasperi and its replacement by a leftist government of the so-called people's bloc would be the first step. The next move would be a radical fusion of Italy's whole internal and foreign policy with that of the Balkan bloc. The Communists hope that the installation of a new leftist regime in Italy and the turning of its policy in a new direction may be accomplished before March, the date fixed for the first parliamentary elections of the new Italian Republic.

The coup can be expected to take place before adoption of the Marshall plan and before any revision of the Italian Peace Treaty. Representative government is necessarily slow in avoiding and preventing dangers that threaten peace. Moreover, 1948 is the year of the Presidential elections.

The whole public life of the United States of America, the Kremlin calculates, will, to a great extent, be paralyzed during 1948 by the election campaign. This, therefore, will be the right time, first to lull American public opinion by a show of collaboration with the western democracies, then to strike a hard blow at a place—Italy—where success seems most likely to be assured in advance.

The Rights of Labor—Democracy Versus Totalitarianism

EXTENSION OF REMARKS
OF

HON. JOHN J. ROONEY
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. ROONEY. Mr. Speaker, the following article entitled "The Rights of Labor—Democracy versus Totalitarianism" has been published in booklet form by the International Labor Relations Department of the American Federation of Labor, Matthew Woll, chairman. It is a splendid comparison of the rights of the workingman under the Soviet system and his rights under our free American form of Government. Every Member of this House, yes, every member of the laboring class of our Nation, should be familiar with its contents. If every man and woman who has to work for a living knew the facts contained in it there would not be a corporal's guard of Communists holding office or influence in the labor movement in our country.

The American Federation of Labor and its International Labor Relations Department are entitled to our commendation for preparing and distributing such a valuable booklet. The article follows:

THE RIGHTS OF LABOR

Though democracy and totalitarianism vary in particulars in different countries, each system has certain essential distinguishing features.

The sharp contrast between these two systems is clearly illustrated in the following comparison of the rights of labor in the two countries which are the strongest protagonists of democracy (United States) and totalitarianism (Russia).

This comparison holds basically true for all democratic nations and totalitarian countries.

1. RIGHT OF ASSOCIATION

U. S. A.

The American worker enjoys the right of association and organization into (differing) economic, educational, political, and religious bodies of his own choosing as well as the right of combination into trade unions free from domination by employers, by the Government, or by any political party in or out of office.

U. S. S. R.

The Russian worker can join only such organizations as are approved by the Soviet Government for whom the choice is predetermined by the Communist Party—which is the only party in existence. The Communist Party has unquestionable monopoly control and domination over the entire vast government machine, the trade unions, all economic agencies, all cultural organizations, and all religious denominations.

Article 126 of the Soviet Constitution provides for the existence of only one political party—namely, the Communist Party. It declares that this party is the leading core of all organizations of the working people, both public and state. Thus, it is the Soviet Constitution itself which provides that all associations of any kind whatsoever are to be run and directed by Communist Party "cells." On March 14, 1947, Pravda, central organ of the Russian Communist Party, declared:

"The trade-unions enter a new period of their activities and in this important period the party organizations must give them the necessary help, incessantly watch the preparations for the conclusion of collective agreements and strengthen the entire organizing and educational work of the unions. * * * In this respect, the directing and leading role of the party organization is particularly important."

2. RIGHT TO JOIN A UNION

U. S. A.

The American worker enjoys the right to join a union of his own choosing and to elect its officers for a specified period. These elected officers are subject to rules and regulations and to a constitution adopted by the union membership.

The A. F. of L. holds its convention annually.

U. S. S. R.

Since 1932, the all-Russian trade unions have not held a single national convention. In the spring of 1937 the central council of the trade unions decided to hold a convention in October of that year. But somehow this convention was never held. The blood purges were on. Thus, Russia's Central Council of Trade Unions has been headed for years by individuals who were never elected by a convention.

3. COLLECTIVE BARGAINING

U. S. A.

The American worker enjoys the right of genuine collective bargaining. American labor enjoys the right to fight against any attempt by government or employers to restrict or reduce the effectiveness of collective bargaining, such as the Taft-Hartley law. The American worker enjoys the right to fight for the extension of effective collective bargaining.

U. S. S. R.

Every trace of genuine collective bargaining has withered away in Russia. The practice of collective agreements was discontinued in 1934, except for the lumber and water transport workers and commercial employees whose collective agreements expired in 1935.

On July 8, 1933, Trud, central organ of Russia's trade unions, announced: "No other than economic officials can be primarily responsible for the wage scales, fixing of production quotas, piece rates, etc. Today the idea is rooted in the consciousness of some comrades in the factories that the trade union has to have equal say with the economic agency in fixing wages. This is a leftist and opportunistic deviation, an attempt to destroy the one-man leadership and to interfere with the administration. This must be ended."

In Pravda, on December 29, 1935, A. Andreev, in behalf of the Politbureau of the Communist Party, announced: "The wage scale must be left entirely in the hands of the heads of industry." In an attempt to allay the workers' dissatisfaction over being robbed of this right, the Russian authorities maneuvered in the spring of 1937 to bring back "collective agreements." But this was an obvious sham.

The aim of the new type of collective agreements now operating in Russia is not to defend the interests of the workers but "to guarantee that the production plan of the government is fulfilled and surpassed."

4. RIGHT TO STRIKE

U. S. A.

The American worker has the right to strike. American labor has the right to fight back against any attempt by employers or Government agencies to infringe upon the right to strike, such as the Taft-Hartley law.

U. S. S. R.

In Russia, there are neither strikes nor strikers. If coal miners, maritime workers, machinists, or any other workers were even to talk or threaten strike—let alone actually engage in a strike—they would be liable to prosecution for counterrevolutionary activities or sabotage which would result in their deportation to some penal labor camp in Siberia or a similar region.

5. RIGHT TO CHANGE JOB

U. S. A.

The American worker is free to change his place or type of employment. He can change jobs or move from city to city.

U. S. S. R.

The Russian worker has no right to change or leave his job on his own volition. Under a decree issued on June 26, 1940, the management of an enterprise can grant a worker permission to leave his job only if he is unable to continue on his job on account of illness or disability and if the management cannot provide him with another job in the same factory, or if he has become eligible for an old-age pension, or in a few other cases. Any Russian worker leaving his job without such permission is guilty of a crime punishable by 2 to 4 months' imprisonment if he is employed in a nondefense industry and from 5 to 8 years if he is employed in a defense industry.

According to a decree of December 20, 1938, the Russian worker must carry a "labor book," similar to the one Hitler's regime imposed on the German workers. In this "labor book"—deposited with the plant manager for "safekeeping"—are noted all infractions of the extremely rigorous "labor discipline" rules to which Soviet workers must submit.

According to the decree of June 26, 1940, and the ensuing decision of the Supreme Court of the U. S. S. R. on August 15, 1940, any worker who, "without any valid reason," is absent from—or late in coming to—work for more than 20 minutes is considered as having committed a crime punishable by a maximum of 6 months of "corrective labor" at his place of work with "a 25-percent deduction from his salary"—if this absence or lateness occurs three times during a month or four times during two consecutive months.

6. RIGHT TO EMIGRATE

U. S. A.

The American worker has the right to leave temporarily or to emigrate permanently from the United States.

U. S. S. R.

Any Soviet worker who attempts to leave Russia temporarily or to emigrate permanently from the U. S. S. R. is liable to prosecution for treason—a crime punishable by 25 years at penal labor.

7. PUBLIC SCHOOLING

U. S. A.

The American worker is entitled to have his children receive a public-school education free. In many sections and cities of the country, high-school education facilities are also free. Some city- and State-endowed colleges provide the children of the American worker with an opportunity to secure even a university education free.

U. S. S. R.

Since 1940, the Russian worker must pay for his child's education beyond the seventh grade (decree of October 2, 1940). Consequently, the number of Russian workers' children getting anything more than the most elementary education is very small.

8. FREEDOM OF OPINION

U. S. A.

The American worker enjoys the right of freedom of opinion and expression and has the right of access to the opinions of others.

U. S. S. R.

The Russian worker is not entitled to voice any opinion other than the one approved by the monopolistic, monolithic Communist Party which alone determines all the policies of the government and of all cultural,

artistic, scientific, religious, sport, and economic bodies. Non-Communist critics of the party line or dissidents within the party risk deportation, imprisonment, concentration camp, or liquidation upon the slightest evidence of expression of differences or diffusing of such different opinions or communicating them to others.

9. ACCESS TO INFORMATION

U. S. A.

The American worker enjoys the right of free access to the opinions and publications of the workers of other countries. The American worker has the right of exchanging opinions and information with the workers of other nations in regard to trade-unions, economic, political, social, religious, cultural, and scientific matters.

U. S. S. R.

No Russian worker is allowed to subscribe to or receive the publications of labor or other organizations outside of the U. S. S. R.—unless he receives special permission from the government. For the Russian worker to request permission to receive such material is to invite investigation and surveillance and risk severe punishment by the dreaded secret political police (M. V. D.)

To this date, the Moscow government has denied Russian labor the right to receive the A. F. of L. publication "International Free Trade Union News" in the Russian language edition.

Any Russian worker who would attempt to exchange by mail opinions or information with the workers of other countries would run into grave risks, since all mail going out of or into Russia from abroad is subject to the strongest censorship and since any communication with people abroad might be regarded by the Soviet police as espionage or counterrevolutionary activity.

10. RIGHT TO CRITICIZE GOVERNMENT

U. S. A.

The American worker has the right to criticize publicly his Government, the dominant party in office, even the highest Government official, the leadership and program of any political party or any particular Government policy or law. The American worker has the right to organize and work for the repeal of any law he deems to be unjust, unfair, or hostile to the best interests of the public or the working people.

U. S. S. R.

The Russian worker does not enjoy even a shred of such rights. He dare not criticize and cannot change the government of his own country. Generalissimo Stalin and the Communist Party, which he rules with a rod of steel, are supposed to be infallible in every field of activity and avenue of expression. The deification of Stalin knows no bounds.

To attempt criticism or even questioning of this all-inclusive infallibility would be to insure disaster for the Russian citizen guilty of such rash judgment.

11. CIVIL LIBERTIES

U. S. A.

The American worker enjoys freedom from arbitrary arrest, detention, search, and seizure. He is entitled to a fair public trial by jury or competent and unprejudiced court constituted in accordance with normal judicial procedure. The American worker has the right of habeas corpus and enjoys freedom from arbitrary imposition of penalties. In cases where individuals or groups or local or State authorities seek to infringe directly or indirectly upon these rights or succeed in limiting these rights (through interfering with civil rights or discriminating in employment on account of race, color, or creed), the American workers have the right of assembly, organization, and judicial guarantees for defeating such attempts at infringement. Thus, some States have already enacted laws to help overcome these antidemocratic and un-American practices. In Congress, similar corrective legislation (FEPC) is still under consideration. Its enactment, fully supported by the A. F. of L., has so far been blocked by reactionary forces exploiting parliamentary procedure.

The American Constitution, however, is a living document. Our Declaration of Independence is a ringing charter of freedom.

U. S. S. R.

The Russian worker is subject to surveillance, investigation, and arbitrary detention and arrest by the secret police force (the MVD) which may send any individual to a concentration camp without trial by a court.

The rights allegedly guaranteed to the Russian people by the Soviet Constitution are practically nullified by a whole series of utterly antidemocratic laws and decrees and a tyrannical penal code. Thus have the Russian workers been deprived of their rights as human beings and producers.

12. FREEDOM OF LABOR

U. S. A.

In the United States, involuntary servitude in any shape, manner, or form, or under any guise has been outlawed by the Constitution and discontinued. Today, there is no longer any State which resorts to the chain gang as a system of punishment for convicts.

Besides, American labor enjoys the right of fighting against—and the opportunity to defeat, abolish, or repeal—any practice or legislation which even in the least degree smacks of forced labor.

The United States no longer holds any prisoners of war.

U. S. S. R.

In Russia's numerous concentration and penal labor camps, 10,000,000 to 15,000,000 people are doomed to slave labor. These "corrective" (forced) labor camps are operated under the jurisdiction of the dreaded political police (MVD) and are filled with millions of Russian political dissidents and millions of other liberated nationalities and prisoners of war. Slave labor constitutes a very important segment of Russian economy.

13. FREEDOM OF PRESS

U. S. A.

Freedom of the press is guaranteed in the United States. There is no press censorship.

U. S. S. R.

All books or periodicals published in Russia—except Communist Party publications—are subject to censorship. Any publication may be prohibited if "it contains agitation or propaganda against the Soviet Government or the dictatorship of the proletariat" or "if it reveals state secrets"—the latter being interpreted by the Russian authorities in an elastic and rather all-embracing manner.

14. RIGHT TO VOTE

U. S. A.

In the United States the elections are free. The workers enjoy the right of fighting freely and energetically against the limitations and infringements imposed on free elections through such schemes as the poll tax and white primaries. The extent to which the American people adequately exercise the right and opportunity of participating in free elections depends, in large measure, upon the extent to which labor utilizes the rights and potentialities of the free and secret ballot and discharges its responsibilities of good citizenship.

U. S. S. R.

Under the one-party system in Russia, there are not and there cannot be any real elections. Actually, the vast majority of the Russian citizens are disfranchised. They are marshaled to participate in the farce of "electing" candidates who cannot be opposed. Public officials, including judges, are in effect appointed by the Communist Party, since the nomination of an uncontested Communist candidate is equivalent to his definite selection for the office in question. Hence, Russia's so-called elections are nothing but an empty formality. The solemn "election" ceremony is designed to confirm post facto these appointments through a sham popular consultation at which attendance is compulsory and no opportunity is given the voters to choose between contestants.

Prospects for Trade in the Far East

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the record, I include the following address by Hon. James A. Farley, delivered before the National Foreign Trade Convention at the Hotel Jefferson in St. Louis, on the very timely topic of prospects for trade in the Far East:

The postwar picture of the world seems disheartening and melancholy. After two victorious world wars against predatory powers bent on conquest, we have not made the world safe for democracy as Americans understand it. Nor have we removed fear from struggling humanity or extended the "four freedoms" to the extent promised. Ancient sovereign nations of central and eastern Europe have fallen under the heel of a new oppressor, our ally of yesterday, Soviet Russia, and the independence of the other nations of Europe is threatened. Manchuria, Korea, North China, and the nations bordering Soviet Russia are being, directly or indirectly, coerced to bow to this insatiable dictatorship.

Are there any bright aspects to this melancholy picture? I believe there are, when we view it as a whole, in perspective, and from the long range point of view. I shall try to point out four such hopeful aspects. There may be and doubtless are others.

First, there is today potentially a larger area for world trade than ever before in the history of the world. That area is coextensive with the countries committed in varying degrees to representative government under free democratic institutions in our sense of the term. This area, roughly, is the entire world outside of Soviet Russia, and her controlled satellites.

The spirit of freedom has awakened the vast masses of the world and stirred them to activity for national independence. In the Far East, China with scarcely more than the brave determination of her people, withstood the cruel might of Japan, shook off foreign domination, and took her place among the independent nations of the world. The Philippine Republic is launched on her independent career. Indochina is hopefully struggling for her national freedom. Indonesia is shedding her colonial status and with the help and guidance of the United Nations is striving to take her destiny in her own hands. India and Pakistan have taken their equal place as dominions in the British Commonwealth. Burma is receiving from Parliament her independence. In the Near East, Egypt and the Arab states are enjoying independent sovereign status.

In the vast area then, from the near to the far east, containing more than one-half of the peoples of the world, colonialism and

semisubject status have yielded to national independence and self-government. It may be said that almost all the peoples of the world outside of Russia and her satellites, are today striving toward government from, by, and for the people, nurtured by free democratic institutions. This potential is a larger trading area than ever before.

Secondly, today national self-sufficiency, so fashionable between the wars, and corrosive isolationism, are discarded. Today as never before the interdependence of nations is taken as an axiomatic principle underlying the relationship among nations.

Thirdly, there is more intelligent, vigorous, and methodical effort to solve the world's problems through cooperative action than ever before in the history of the world.

Fourthly, so long as Soviet Russia will not join us and the Allied Nations to establish peace and then cooperatively through the United Nations to go on with the tasks of reconstruction, I believe the very violence of her attacks is a bright aspect in the depressing world picture. When she uses the veto in the Security Council of the United Nations, for example, solely as a device to wreck and demolish every cooperative plan put forth by the other nations, we, and the other nations are put on guard. When we are told, in a strangely familiar way, that we are decrepit, that our free-enterprise system will collapse, and in the same breath, that though we are at the brink of the abyss, we are out to enslave the free peoples of the world, and further that the true and genuine democracy is the one practiced behind the iron curtain, naturally we are alerted, and I believe, that all other peoples outside the reach of the Soviet Army are similarly alerted.

Now whatever our personal view of the world situation may be, whether optimistic or gloomy, the question remains what are we to do about it? Obviously it is not enough to point the finger of guilt at Soviet Russia for sabotaging constructive efforts and perpetuating chaotic conditions. We must exercise our leadership and play our full part in remedying the situation. We must put our shoulder under the long-range program of our Government and the United Nations to achieve the objective sought in common by all, namely, to increase production, raise the standard of living, increase purchasing power, reduce trade barriers, and increase the flow of goods among nations. If we do our best in promoting these ends, Soviet Russia's disruptive opposition can well be accommodated.

At this point I should like to make some comments touching upon both short- and long-term projects:

1. In our dealings with Europe necessity has brought us to a realization of the wisdom in the words "The Lord helps those who help themselves." We cannot undertake to do the impossible in these matters, but we should give prompt and realistic help to countries which are working to help themselves but have been seriously handicapped by crop shortages resulting from the drought of last summer, wartime destruction of plants, lack of coal and other raw materials, and the like.

2. Apart from prompt credits for food, the granting of credits to foreign countries should be conditioned primarily upon the utilization of the funds for producing and exporting goods so as to acquire the dollars needed to equalize their balance of payments. In making future credits we should learn from and be guided by our experience with previous extension of credits. We should insist that the credits be used for the stated purpose.

3. Naturally, the recovery in Europe is in a large measure dependent on recovery in Latin America and the Far East. The importance of building a strong economy in the Western Hemisphere has been recognized and we are all looking forward to the elaboration of a realistic plan of self-help and mutual aid at the Bogotá Conference next winter. Incidentally, let us hope that the Conference will go deep into some of the obstructions to the bringing into a country of capital and "know how" that are found in laws and practices which are not in harmony with present needs.

4. As for the Philippines, we have a special interest in helping this new state get on its feet after the devastation suffered at the hands of the Japanese. Presupposing a continuing policy of nondiscrimination against Americans, it should be possible to rebuild prosperity with our aid on the foundations laid before that country become independent.

5. The Chinese Government is believed to be earnestly endeavoring to bring order out of chaos. It must be remembered that China has been engaged in warfare since 1931, first with the Japanese and then with the Chinese Communist forces. Inevitably transportation is disrupted, production is reduced, inflation has gotten out of control, the currency has become almost valueless and, putting it mildly, trying to carry on business under such conditions is exceedingly risky. Nevertheless, steps are being taken to establish order and the Government has listened to objections presented by the National Foreign Trade Council and other organizations against discriminatory features in new legislation. A treaty of establishment has been signed and we hope that a fair basis is being laid for an eventual and safe recovery of business relations. May the Chinese authorities facilitate the continuation of American enterprises previously established there under a different regime so that by their example others will follow. Correspondingly, may the American authorities take cognizance of present difficulties in the application of laws intended to facilitate trade with China.

6. Indonesia, the Malay States, and Burma, as well as India, are all countries which should afford splendid fields for development in the future. They are all seeking the aid of American capital and technical guidance.

The new dominions of India and Pakistan, emancipated Burma, and the Malay States all need what we have to offer, and we can use their raw materials. However, there is need for treaties on taxation and establishment to assure American enterprises of the treatment they are accustomed to enjoy in other lands. As soon as hostilities cease in Indonesia obviously whatever we can profitably do in that rich country will benefit in some degree individuals in the Netherlands and Great Britain who have invested in companies operating in Indonesia. This observation, of course, applies to the benefits accruing as the result of reconstruction in Latin America and the Far East to many Europeans who have invested in those territories.

7. In short, the American program for reconstruction must be global because economically the world is indivisible. One part of the world cannot be economically sick without endangering the health of other parts. Mr. Krug has reported that our resources are sufficient to cover our own needs and those that may have to be provided under the Marshall plan. However, we must husband our forces so as to be able to help our friends also in the Western Hemisphere and the Far East. Obviously, we cannot afford to give away all this substance without receiving in return not only goods but also safeguards for Americans who trade or invest in the other countries.

As we cannot foresee changing conditions and needs we cannot expect to make a rigid 4- or 5-year plan.

As generally speaking, aid must be contingent on what the other country produces, the need of our assistance should be evaluated on a year-to-year basis. Longer term needs might be referred to the World Bank.

8. It has been suggested that the aid should be handled by a specially created corporation rather than by the State Department or another department. Such a proposal merits consideration. Obviously, if the corporation were headed by men with business experience and run along lines similar to those followed by the world-trading corporations represented here, the corporation should be in a good position to carry out its program realistically. Moreover, it should regularly consult with the men represented at this gathering in order to have the advantage of their experience in formulating plans and reaching decisions.

Statement by Otis D. Ashworth, Commander, Department of Mississippi, Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. WILLIAMS. Mr. Speaker, on Tuesday of last week Hon. Fielding L. Wright, newly elected Governor of the great State of Mississippi, delivered his inaugural address to the Mississippi State Legislature. In his address he warned against continued efforts on the part of both major political parties to cram antisouthern legislation down the throats of the people of the South. Governor Wright's speech was inserted into the RECORD in the other body by Senator JAMES O. EASTLAND, of Mississippi, and can be found on pages 466 and 467 of the RECORD of January 23, 1948. In this connection, I include herewith a statement issued by a distinguished Mississippi Democrat, Rev. Otis D. Ashworth, Department of Mississippi, Veterans of Foreign Wars of the United States:

Along with other God-fearing Mississippians who believe in States' rights and the efforts of our own people to improve the lot of all our citizens irrespective of race, color, or creed, I am wholeheartedly in accord with Governor Wright's recommendation that we warn our national leaders against further trampling of our ideals.

Governor Wright did not suggest that we secede from the party but on the other hand said we should make our voice known and felt within the party councils. We should let our national leaders know that we will demand of them the same loyalty to our ways of life that we have given our party during the past 80 years.

As the Governor so ably said, "This is a new day in State and national politics, and circumstances may make necessary a new, and we hope, a temporary approach to national politics by our State and Southland."

Leaders in all national parties are attempting to force repeal of segregation laws, destroy our dual system and our social institutions, and reconstruct us by using the power of the Federal Government against us.

Southern States have waged a strong fight to regain influence in the party since losing it when they agreed to abolish a rule that required two-thirds majority vote.

Mississippi has for 80 years been democratic, and the efforts by some to force Mississippi to submit to legislation that would destroy every vestige of States' rights and the right to govern her internal affairs has

been most vigorously condemned by Governor Wright in his timely warning.

I only regret that we do not have a President with Governor Wright's ability and courage. It is my impression that the Governor did not threaten to bolt the party, for, as a matter of fact, the party "took a walk" on Jefferson democracy long ago.

In my opinion, the Governor gave an invitation for the national party leaders to return to the party.

Appointments and Citations Made by the Australian Ambassador

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. SADLAK. Mr. Speaker, on yesterday at noon at the Australian Embassy, I was privileged to witness the appointment by the Australian Ambassador of Adm. Thomas C. Kinkaid, United States Navy, to be honorary companion of the Military Division of the Most Honorable Order of the Bath—C. B.—and the appointment of Vice Adm. Daniel E. Barbey, United States Navy, to be honorary commander of the Military Division of the Most Excellent Order of the British Empire—C. B. E.

These citations were made upon Admiral Kinkaid who commanded the Allied naval forces in the Southwest Pacific and Vice Admiral Barbey as commander of the amphibious forces, Seventh Fleet, in recognition of outstanding services in their respective capacities leading to the reconquest of New Guinea and for their spectacular and successful seaborne operations which resulted in the destruction and neutralization of considerable enemy forces in territory administered by the Commonwealth of Australia.

Though I, as a communication watch officer, had been attached to the staff of the Seventh Fleet under Admiral Kinkaid and subsequently in a like capacity under Vice Admiral Barbey when he replaced Admiral Kinkaid as commander of the Seventh Fleet, I was not so attached at the time mentioned in these appointments and citations which commence with November 1943, but I had ample opportunity subsequently to observe both of these fine, courageous men of the sea who have adhered to the highest traditions of our Navy upon which service they reflect great credit as individuals, as outstanding leaders, men of great courage and skill, cooperative with others joined in a common cause, true Americans.

I know I speak for all former Seventh Fleeters, officers and enlisted, who served under the commands of Admirals Kinkaid and Barbey in the Pacific and express their admiration and congratulations to each upon the honors which have been bestowed in grateful appreciation by the people and Government of Australia through his Majesty the King.

I did not have such a personal acquaintance with Vice Adm. Arthur S. Carpender, United States Navy, retired, Col. Sidney Forrester Mashbir, United States Army, or Col. Abraham Sinkov, United States Army, who also received appointments and acknowledgment of their services at the ceremonies mentioned. I am sure that we all join in the sincerest congratulations in recognition of their distinguished services in the Southwest Pacific area and include the citations for each that accompanied their respective appointments.

His Majesty the King has been graciously pleased to appoint Admiral Thomas C. Kinkaid, United States Navy, to be honorary companion of the military division of the most honorable Order of the Bath (CB).

"Admiral Kinkaid assumed duty as commander, Allied Naval Forces, in the southwest Pacific area in November 1943. During the period of his command, successful assaults were made on enemy-held territory from Cape Gloucester to Leyte Island. These spectacular and successful sea-borne operations resulted in the destruction and neutralization of considerable enemy forces in territory administered by the Commonwealth of Australia.

"Admiral Kinkaid commanded the Allied Naval Forces, including His Majesty's Australian ships *Shropshire* and *Arunta* in the notable victory in the battle of the Surigao Straits. The award is bestowed in recognition of outstanding services to the Commonwealth whilst in command of Allied Naval Forces which were engaged in the capture of Japanese positions vital to the reconquest of New Guinea. By his inspiring leadership and wholehearted cooperation, Admiral Kinkaid has rendered invaluable service to the cause of the United Nations."

His Majesty the King has been graciously pleased to appoint Vice Adm. Daniel E. Barbey, United States Navy, to be honorary commander of the military division of the most excellent Order of the British Empire (CBE).

"Vice Adm. Barbey assumed duty as commander, Amphibious Forces, Seventh Fleet, in November 1943. During the period of his command, he rendered distinguished and meritorious services to the Commonwealth of Australia in the successful amphibious assaults on enemy strongholds in New Guinea and elsewhere in the southwest Pacific area. By his skillful and resolute conduct of these hazardous operations, Vice Admiral Barbey has given outstanding service."

His Majesty the King has been graciously pleased to appoint Vice Adm. Arthur S. Carpender, United States Navy (retired), to be honorary commander of the military division of the most excellent Order of the British Empire (CBE).

"Vice Admiral Carpender took over from Admiral Leary the command of Allied naval forces in the southwest Pacific area in September 1942 and held that appointment until November 1943. During that period the organization worked smoothly and efficiently and a number of additional facilities were provided for Naval Forces. Successful landings covered by the Allied squadron took place at Lae and Finschhafen. Vice Admiral Carpender rendered valuable and successful services in the organization and operation of Allied Naval Forces in this area."

His Majesty the King has been graciously pleased to appoint Col. Sidney Forrester Mashbir, United States Army, to be an honorary officer of the military division of the Most Excellent Order of the British Empire, for distinguished service in the Southwest Pacific Area.

"Colonel Mashbir was the coordinator of the Translator and Interpreter Service and the information obtained from documents and prisoners processed by his section was of the greatest value to operations in this and other theaters of war."

Col. Abraham Sinkov, United States Army, officer of the Most Excellent Order of the British Empire (military division).

"The work done by Colonel Sinkov has been altogether outstanding and his enthusiasm and exceptional cooperation, far in excess of the normal course of duty, have provided a constant inspiration to his comrades-in-arms of the Australian military forces. His technical work in the field has been unsurpassed, and his contribution to the Signal Intelligence organization in the Southwest Pacific Area has been outstanding."

Federal Tax Collections in Illinois

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. CHURCH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Chicago Daily Tribune for January 27, 1948:

UNITED STATES RETURNS MILLIONS FOR TAX BILLIONS—ILLINOIS SECOND IN FEDERAL LEVIES

(By Robert Young)

WASHINGTON, January 26.—Illinois received $106,262,992 from the Federal Government in the fiscal year ended last June 30, but during the same year individuals and corporations in the State paid $3,447,148,353 in taxes into the Federal Treasury, comparative figures showed today.

The nearly $3,500,000,000 of Federal tax collections in Illinois in the 1947 fiscal year included $1,644,731,039 in individual income taxes, $610,044,861 in corporation levies, and $1,192,172,453 in other taxes.

The $106,000,000 in Federal funds allotted in Illinois in the same fiscal year included various grants and payments under such Government programs as social security and old-age assistance, agricultural adjustment and extension work, public roads and works, school milk, wildlife conservation, veterans' administration, National Guard, vocational rehabilitation, aid for the blind, child and maternity care, and nurses training.

STATE CONTRIBUTES

Most of the Federal grant total—$78,328,692—went to Illinois under the 18 programs administered by the Federal Security Agency. All but two of these programs are on a Federal-State partnership basis, with the State contributing funds of its own to match the Federal payments.

The five "Chicagoland" States of Illinois, Indiana, Iowa, Michigan, and Wisconsin paid a total of $7,222,047,236 in Federal taxes during the year ended last June 30 while they were receiving $324,478,490 in grants and payments from the Government. The Federal funds allotted to Illinois were more than double those received by Indiana, Iowa, and Wisconsin and exceeded those of Michigan by nearly $25,000,000. Illinois tax collections, however, topped those of Michigan by more than $1,500,000,000 and those of the other 3 States by as much as $3,000,000,000.

TABLE OF COMPARISON

The following table compares Federal tax collections with Federal grants and payments in the 1947 fiscal year for the five "Chicagoland" States:

State	Taxes paid	Federal grants
Illinois	$3,447,148,353	$106,262,992
Indiana	916,678,240	49,131,194
Iowa	348,763,454	41,996,267
Michigan	1,779,425,893	81,476,062
Wisconsin	730,031,296	45,611,975

Federal tax collections in Illinois for the 1947 fiscal year were the second largest among all the 48 States, being exceeded only by New York's $7,723,855,345.

The Nisei Discover America

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert an article from the Reader's Digest entitled "The Nisei Discover America." More properly, this should be entitled "The Nisei Discover Chicago and the Middle West." Chicago has afforded these citizens an opportunity to make use of their talents and abilities, and has enabled these people to make their proper contribution to the American way of life. Because of proposed and pending legislation, I believe it is appropriate for Members of Congress to know as much about these people as possible.

The article follows:

THE NISEI DISCOVER AMERICA

(By Bradford Smith, condensed from the American Magazine)

Before the war there were about 300 Japanese in Chicago. Today there are between 15,000 and 20,000—more, probably, than there are in any other city in the country. Most of them are Japanese-Americans (Nisei), with a sprinkling of Japan-born parents (Issei).

Before the war most of our Japanese lived in Little Tokyos on the west coast. Today, 5 years after being evacuated from their homes to desert camps, many have gone back. But the Nisei have discovered America. In midwestern and eastern cities like Chicago, Minneapolis, Cleveland, St. Louis, New York, and Philadelphia they have found that they are not excluded from residential areas and preferred types of employment. Their skills are sought after, their abilities put to use.

The move from the West began with a trickle from the relocation centers in 1943. Victims of wartime prejudice and hysteria, thievery, and vandalism, they were as suspicious of other Americans as most Americans were of them. But as the need for manpower grew desperate and as the record of the fighting Nisei corrected the impression regarding them, Midwest employers began to call for more. Nisei who found that they could lead normal lives began to write to other Nisei in the centers, urging them to come out.

The Nesei and their parents have almost completely altered their prewar employments. On the coast they were farmers, produce merchants, fishermen, gardeners, and domestic help. In Chicago many have turned to factory work and work for more than 2,000 employers. Wage earners report an income from 2 to 10 times what they got on the west coast. Some Nisei are supervising employees of all races, a situation practically unheard of in California. Less than 10 percent are employed in domestic jobs.

A good many have set up shop for themselves. The American-born are lawyers, physicians, dentists, optometrists, photographers, commercial artists. They operate garages, beauty parlors, packing services, groceries. The older men with capital generally put it into real estate. One estimate says they have invested more than $2,500,000 in property and small enterprises.

Al Doi, a young college graduate, came to Chicago to teach Japanese to military government classes at the university. Later he started a business. He now employs more than 150 women making artificial flowers. They earn $35 to $50 a week. Being an Oriental helps in this business, I was told. Customers think Orientals have an artistic touch other folks don't have.

There is the Hiura family, with nine grown children. Five of the sons are in Chicago—three of them optometrists, two dentists. They are all busy, and much of their trade is non-Japanese.

Many women have found well-paying jobs in the clothing industry, earning as much as $20 a day operating sewing machines. Their reputation as good workers soon spread. When Kuppenheimer recently appointed a Nisei as personnel manager it was partly in the hope that he would attract 500 Issei women as garment workers. So far the demand greatly exceeds the supply.

When the wartime need for stenographers was at its peak, Nisei girls were hired, at first reluctantly, then with enthusiasm when their good qualities became known. These girls rarely had a chance at good secretarial jobs back on the coast.

Before evacuation Sam Terao helped his father run a restaurant in Seattle. Two years ago they came to Chicago looking for a similar business in which to invest. One of the prospects was a kosher delicatessen. Sammy didn't know gefüllte fish from matzoth, but it looked like a good business, and he bought it. For a couple of months business was very slow. The neighbors hesitated to get their strudel from an oriental. But when Yom Kippur came, Sammy saw the shops closing up all around him, and decided to close, too. After that business picked up remarkably. Customers found that Sammy could make as good a pastry as if he had been brought up in the synagogue.

Recently I asked Sammy if he intended to stay.

"Sure," he replied. "I'll never go back West. It's better for us here. The evacuation was a blessing in disguise, as far as we're concerned."

Another young Nisei said: "It's been over 2 years since I left Tule Lake with a few dollars in my pocket and half-hearted hope. Today I have a swell job, a sense of responsibility, and self-respect."

In spite of the housing shortage in Chicago, which has forced many Nisei into an undesirable area north of the Loop, no Little Tokyo has developed there. Nor will there ever be anything like the kind of segregated community which, on the coast, was the result of prejudice and discrimination, and which led to all the mistaken notions about the "Japs."

In Chicago the Japanese are part of the great city. Their stores, interspersed with others, cater to the general public; and whereas in Los Angeles the Nisei had to look to their own community for employment, they now work for all kinds of employers. Instead of setting up their own churches, they attend more than 100 of Chicago's established churches, and find themselves welcome. The pastor of the First Baptist Church, by the way, is the Reverend Jitsuo Morikawa. Attendance has doubled since he went there.

The Nisei have stretched out socially. The younger group is finding outlets in characteristic American ways—in basketball tournaments, bowling leagues, dancing, sports, and discussion groups. By doing things together with other Americans, the Nisei are overcoming the bitter hurt and disillusionment caused by the evacuation.

Adjustment has been harder for the alien parents, the Issei. The Little Tokyos of the west coast made it possible for them to make a living without knowing much English or following American ways. Resettlement caused a complete change in their lives.

But their faith is fixed on the American-born generation. Mr. Osato and his wife sent three sons into the Army, though evacuation and the acts of hoodlums had deprived them of their little shop, their personal possessions, and much of their savings. Their daughter left a relocation center to take an office job in Chicago and, when she had saved some money, sent for her parents. The city frightened Mrs. Osato and her first trip alone on the elevated required great courage. She made it in order to get a job at a packaging plant. Meanwhile, Mr. Osato had taken a dishwashing job. It hurt his pride, for he was a merchant, an independent man. But the main thing was to carry on until his boys came back and finished their education.

The Nisei often feel a touch of homesickness for the West. For one thing, Chicago's weather has been hard for them to take. Jimmy Takemura quit a good job as laboratory technician to return to Los Angeles. For weeks he tried to get work, but no one would employ him in his specialty. He is back in Chicago. "Chicago is colder," he explained, "but it is also wider." You can't have everything.

In Chicago, as in other cities, many people have learned for the first time that there is nothing "mysterious" about an oriental. They know that American principles of fair play demand an equal chance for all Americans, regardless of race. And that is the meaning of Sammy Terao, who runs a kosher restaurant in a town settled by the Indians, discovered by the French and ruled by an Irish mayor.

Let's Have an Interoceanic Canals Commission

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. BRADLEY. Mr. Speaker, the American Coalition, composed of a large number of women's patriotic societies, while in annual convention in the city of Washington a few days ago, adopted a resolution urging the creation of an Interoceanic Canals Commission for the purpose of studying the whole interoceanic canal situation and for making recommendations in the premises.

I am pleased to present this resolution for the consideration of the Congress:

INTEROCEANIC CANALS

Whereas there have arisen the questions of increased facilities of the Panama Canal and the Canal's adequate defense, together

with proposals for the construction, maintenance, and operation, by the United States, of another waterway, at a new site, connecting the Atlantic and Pacific Oceans; and

Whereas these matters are of such grave importance to the United States, and to world advantage and security, that it appears wise and necessary that there be created, by congressional action, a commission charged with the duty of investigating these questions in the most thorough manner possible, and making findings and recommendations in the premises: Therefore be it

Resolved, That the American Coalition, in annual convention assembled, approves the principles and purposes embodied in H. R. 4833, recently introduced by Representative WILLIS W. BRADLEY, of California, and respectfully urges the prompt consideration and enactment by Congress of this measure.

Establishment of an Enduring Peace and the Fight Against Inflation

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks in part made by me before the B'nai B'rith, Jewish Community Center, Fitchburg, Mass., January 26, 1948:

Declaring that the two greatest problems facing the country at present are the institution of an enduring peace and an immediate attack upon inflation and high prices, Congressman PHILIP J. PHILBIN, guest speaker at the Jewish Community Center before members of the B'nai B'rith pleaded for toleration and mutual understanding between various groups of our people.

"One of our greatest and strongest and most cherished American traditions is equal opportunity and equality under the law for all. Racism, prejudice, and bigotry directed against an individual or a group is violative of this fundamental American principle. Our nation has weathered many storms and has achieved incomparable progress and prosperity because it has been able to enlist the service, loyalty and devotion of our citizens regardless of race, creed, class, or station in life. I am very proud of the fact—as we all must be—that respect for the rights of others and toleration for the origin and the beliefs of others is an outstanding characteristic and practice of the people of this congressional district and our Commonwealth. Let us endeavor to spread our example of sterling Americanism throughout the Nation so that the evil and detestable spirit of intolerance and bigotry and all its abominable works may be stifled and banished. There is no place for hatred of race or creed or class in America."

PHILBIN discussed current international problems and urged recognition of the principle of self-determination as the surest path to lasting world peace. "Wars are caused sometimes by unbridled militarism and warmongering," said the Clinton Congressman, "but the underlying causes of many wars spring from injustice and oppression—efforts by strong nations to subjugate or dominate the weak and deny to them their God-given right of individual liberty, self-expression, and self-government. No peace treaty or arrangement based upon injustice or oppression can be lasting, and no peace treaty based upon betrayal and repudiation of democratic ideals or solemn agreements can long endure. If we intend to adhere, not only to the expressions of the Atlantic Charter and the Four Freedoms but also to the basic doctrines set forth in our own unmatched Constitution, then we must acknowledge the right of every people to set up and order their own government and that principle includes the Jewish people just as much as it includes any other people in the world.

"We believed that the question of a free, autonomous Jewish homeland had been settled long ago. We believed long ago that the great British Empire had acted in good faith and would carry out its promises and pledges regarding this question. There is no reason why these promises and pledges should be broken, and if we intend to be true to our own principles and our own war aims, if we intend to stand by and live by our own faith in democracy, there is no reason why our Government should not strongly repudiate the betrayal of a great race whose only crime is that it seeks to establish a homeland for its own people, not only as a self-governed political entity possessing all the attributes of our democratic form of government, but also as a haven and refuge for an afflicted and oppressed people who have been beset by misfortune, tragedy, and cruel, heartless, and merciless persecution never exceeded in the annals of history."

Touching upon the problems of the displaced persons in Europe, Congressman PHILBIN pointed to the fact that an overwhelming number of these unfortunate persons are non-Jews. "It matters not what their racial origin is or of what nationality, creed, or group they are composed. They are human beings and fellow creatures. Most of them have suffered terrible persecution, all of them have been driven from their homes and native land to which they may not safely return. They are without means of support in war-shattered countries where the doors of opportunity are closed, and where hunger, starvation, misery, and distress are prevalent. Our Government has held out the hand of succor and relief to this sorely afflicted group and our Congress has appropriated money to assist them until such time as they are able to become resettled and earn their own livelihood. In the name of charity, mercy, and justice we cannot turn our backs on these unfortunates. In common with other democratic nations of the world, in conjunction with the United Nations, we must assume a full, generous, and wholehearted share of the burden of taking care of them and aiding them to find a refuge and a haven under free institutions where they can escape from stark tragedy and make their own way in life. We cannot and must not evade our plain humanitarian duty toward these people."

Congressman PHILBIN also touched in some detail upon current problems of our domestic economy which he stated were extremely grave and critical. "Talking about inflation and high prices is no solution," he said. "Under the leadership of the Government, labor and management must promptly tackle these problems in the free American way as I urged long ago, so that our people and especially our working men and women and their families may be relieved from the onerous burdens of skyrocketing prices of essentials and necessaries of life. Americans do not want a controlled or regimented economy because that is the way of the totalitarian state. We do not want black markets and bureaucratic domination of the lives of our people. But we insist upon an immediate, forthright, affirmative attack upon inflation which, if it continues, will not only further diminish our standards of living but in the end will undermine our fundamental business institutions and drive us toward the abhorrent police state."

Let the Present Board Decide

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport (La.) Times for January 25, 1948:

LET THE PRESENT BOARD DECIDE

President Truman once again has called attention to the difficulty in obtaining qualified men for important Government posts because of the low pay in such posts and the fact this Nation does not train youth for Government service as a career, as does Britain.

The particular instance to which Mr. Truman refers this time is vital to Shreveport and a huge mid-South travel area extending north, south, east, and west from this city for it involves three appointments to the five-man Civil Aeronautics Board. The Board has before it the application of Delta Air Lines for a new New Orleans-Washington-New York air route which automatically would give the mid-South Shreveport travel area, with its potential 35,000 passengers a year, a one-carrier, one-plane service to and from those nationally and internationally important cities.

Recently the CAB has lost two members, and will lose a third on May 1 through the resignation, announced a few days ago, of Harllee Branch. Previously Clarence Young had resigned to take a much more lucrative job than the $10,000 a year the CAB post pays, and Mr. Truman did not reappoint Chairman James M. Landis when his term expired the first of this year. Mr. Branch is resigning for the same reason as did Mr. Young—he has devoted many years to public service at low pay, he is not a man of independent wealth, and at the age of 68 he must think about a more lucrative post for his declining years.

Despite this personnel shortage on the CAB and the President's self-stated inability to remedy the situation—he said he had offered the chairmanship to six persons and was turned down by all—there is no need for the CAB to delay its decision in giving the huge Shreveport Mid-South travel area the through air service that is so vital to its present and its future. Nearly 10 months ago a CAB examiner fully approved installation of this service, recommending that Delta be the operator. It has been nearly 6 months since the CAB held its own hearings on the examiner's report.

The Times believes that the entire Mid-South area affected by the pending decision stands united in being willing to rest its case with the three present commissioners—Mr. Oswald Ryan, acting chairman; Mr. Josh Lee, former Senator from Oklahoma, and Mr. Branch, who does not leave the board for another 3 months or more. All are fully qualified by background and knowledge of Mid-South air needs, and by knowledge of the pending applications to provide the needed service, to make the decision. Although Acting Chairman Ryan was not present at the CAB hearings on the air lines' application, he has, of course, the record of those hearings and the examiner's report, and his long and commendable record as a member of the CAB fully qualifies him to act. Mr. Lee is from the State of Oklahoma whose oil interest tie right into our own

area and he is fully qualified to judge our air needs. Mr. Branch was the first chairman of the original CAA when it was formed back in the 1930's. He is a former Atlanta, Ga., newspaperman and probably no one in any Washington air agency is better qualified than he to judge the needs of this southern area as to air transport. The fact that Mr. Branch has resigned effective May 1 does not affect his qualifications or his jurisdiction in the pending case. We have full confidence in their judgment and integrity—in fact, in view of Mr. Truman's difficulty in getting qualified men for the CAB any delay would create undue jeopardy for our own case by running the risk that this highly important decision later would be made by men not having the personal qualifications of the present CAB.

Aside from those factors, there are others which we believe should carry weight with the present CAB members, particularly the rapid industrial and commercial growth in the Shreveport travel area.

Shreveport, for example, now has 254 manufacturing establishments, a considerable number having come here since the war. It has, according to recent statistics from Sales Management magazine, effective annual buying income of $175,225,000 for 1946 against $170,213,000 in 1945; its retail sales in 1946 grossed $126,353,000 against only $95,213,000 the previous year; it has grown from 98,000 to 128,000 since 1940; it is a city that did not swell either in population or economically through a war boom, but which has grown steadily through both the war and postwar years.

This record of growth, and of increasing prosperity, is matched through the whole mid-South travel area now so sadly lacking in through east-coast air transport. The Times sincerely commends study of these facts to the present CAB personnel.

National Guard and Reserve Corps

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune for January 27, 1948:

NOT GOOD ENOUGH

Representative SMATHERS, of Florida, has introduced a bill to encourage enlistment in the Reserve by pledging to reservists the same death and disability benefits accorded officers and men of the Regular services injured or killed during training. Present law extends these benefits only if the training period is 30 or more days.

Mr. SMATHERS believes that his scheme would give the Nation security without resorting to peacetime conscription because it would act as an inducement to the 12,000,000 veterans of World War II, most of whom show no interest in the Reserve program.

As an attraction, however the proposed legislation is not good enough. The Tribune recently noted some observations made by Maj. Gen. Henry D. Russell, of the Georgia-Florida National Guard Division, on the lack of pension provisions applying to members of the National Guard and Reserve Corps. Regulars receive retirement benefits, and, in qualifying under disability retirement rules, get 75 percent of their salary in any temporary grade they hold. The payments are tax-free.

The guard and Reserve do not ask for any such fancy rewards, but they do feel that men who put in years between wars in these organizations without any compensation at all and are ready to respond in time of national emergency do merit some modest retirement benefit. The amount discussed in legislation which has twice passed the House, only to be defeated in the Senate, is small. It is as nothing compared with costs for conscription, which have been estimated as high as $6,000,000,000 a year, yet this provision against the old age of guardsmen and Reserves would probably suffice to develop a sufficient militia and Reserve to give the country adequate force to deal with any threat.

Future of America

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include the closing but thought-provoking remarks of my distinguished colleague, the Honorable ELLSWORTH B. FOOTE, from the Third District of Connecticut, which were delivered over the National Broadcasting Co. network on January 24, 1948, on the "Coffee With Congress" program:

I believe that the future of America lies in our ability to arouse in each and every American the responsibilities which rest upon our Nation today. We are the champions of democracy. Yet in order to maintain and further that basic spirit of the American republic we have to realize that gouging our neighbor, that black marketing and gray marketing, that profit without honor, is not the American way. We have to decide what is a just profit? What is a just wage? What is an honest effort? When is a good job well done? The American tradition of free enterprise so well portrayed in the farming communities of New England, the spirit of community cooperation, of community consciousness and community pride, those are the answers we seek. The pride of being a good neighbor and a good friend. We have to prove ourselves not only at home, but abroad. We have to show the world that our system works, and works well. In order to do that, we have to maintain order and a decent way of life in these United States. We have to demonstrate that the poor boy can still become the rich man and that the pasture poet can reach greatness in the mansions of the mighty. We cannot be strong abroad unless we are vigorous and powerful at home. We cannot hold ourselves up as the model of man's freedom unless we have within our National grasp the achievements, which such a philosophy will give. Each of us must answer the question for ourselves. Are we giving an honest day's labor? Are we giving the customer a fair purchase? Are we giving the buyer an honest bargain? Only in basic honesty and integrity can we find the strength and the courage and the conviction of being right. We must give a hand to our neighbors and join hands together, believing that as always the best way is the way of men united, freely, in a common purpose under law. I say, let us build on our own soil that our work may stand forth for all men to see and admire and follow. The hope of America and of the world lies in our hearts and hands. Can we do a good job at home and abroad? Together we can move mountains.

Increased Compensation for Federal Employees

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. DEVITT. Mr. Speaker, I have long advocated increasing the compensation of our Federal employees. They constitute a large part of a forgotten class of our American workers who have suffered most as a result of the increase in the cost of living.

A most cogent argument in support of the salary-increase bills now before the Congress is furnished by two letters that I received in my office yesterday. These letters outline the financial status of two St. Paul, Minn., postal workers, and have attached to them itemized statements reflecting their monthly expenses for the bare necessaries of life. These letters and their attached figures argue much more effectively than words in support of the passage of adequate salary increases for these workers.

Under unanimous consent, I include this material as a part of my remarks:

ST. PAUL, MINN., *January 22, 1948.*

Hon. EDWARD J. DEVITT,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN DEVITT: I am writing to you in regard to a much-needed salary increase. I work in the St. Paul post office as a clerk. My salary is, at the present time, on a $3,100 a year basis. I am the father of four children, three boys and one daughter; one in grade school, one in high school, one in college, and one is married. We also have my wife's sister living with us.

On the attached page I have listed my budget on the bare necessities of living. If you will study my budget you will notice that there is no money left for clothing, household goods, recreation, or sickness, over which we have no control. I send my children to Catholic schools for which I pay tuition which is not listed as this is not a necessity.

If you will honestly study this budget with the present-day prices and no prospect of any drop in prices, you will realize that they are rather accurate. So I beg of you to please work and vote for a salary increase for the postal clerks and carriers.

Yours respectfully,

LOUIS W. GARDNER.

Rent	$40.00
Union dues	1.25
Lights and gas	10.00
Water	1.25
Paper	1.40
Telephone	3.25
Fuel	26.00
Transportation	8.00
Haircuts	2.00
Hospitalization	4.00
Income taxes	14.00
Vegetables	125.00
Total	262.15

ST. PAUL, MINN., *January 22, 1948.*

Hon. EDWARD J. DEVITT,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I am writing this letter at the request of the legislative representative of the St. Paul Post Office Clerks Union, to bring before you the financial problems confronting me, a typical post-office clerk, the sole support of a wife and three children ranging in age from 1 to 8.

Our present salary is insufficient to take care of the bare necessities of life. To substantiate that statement, I have outlined my budget on the accompanying page, and you can readily see that a pay raise is a "must" if I am to properly maintain my home.

I am a veteran, 34 years of age, and have been forced, because of the serious housing shortage, to live in a Quonset hut, for which I pay $37 per month rent. This does not include any of the utilities. During the past year I have had medical and doctor bills in excess of $1,000, and, having no money saved to take care of these expenses, I have had to borrow money and also seek assistance from one of the welfare agencies in this city. These are just a few of the problems that confront me.

I therefore respectfully request your favorable support of any legislation introduced recommending a pay raise for postal employees.

Very truly yours,
ANGELO M. TODORA,
Post Office Clerk.

Budget

Net income for 1 month	$240.00
Expenses:	
Groceries, meat, and milk	110.00
Rent	37.00
Insurances (life, health, and accident)	18.00
Electricity	6.00
Telephone	3.00
Newspaper	1.80
Credit union (to repay loan made to meet medical expenses)	13.00
Church	2.50
Carfare	5.00
Lunch	8.00
Tuition	2.00
Fuel oil (used 12 months per year for heating and cooking)	20.00
Clothing	20.00
Drugs	5.00
Barber	1.65
Union dues	1.25
Miscellaneous	5.00
Total	259.20

You will note that the above budget makes no allowance for doctor or dentist bills, which is an absolute necessity with growing children; nor is any allowance made for recreation or savings.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. HESELTON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I want to quote from a portion of an address by our colleague the gentleman from Massachusetts [Mr. HERTER] before the Twenty-third Conference of the New England Council at Boston during November. This deals ably with the unanimous recommendation of the House Select Committee on Foreign Aid that a corporate agency should be established with responsibility for screening the requests from foreign countries, determining what commodities are available with which we can meet those requests without weakening our own economy, allocating them, and then instituting a competent continuing examination over the exercise of export controls now lodged in the executive department by congressional legislation. Certainly the amazing decisions recently made by the Office of International Trade in approving applications for the export of petroleum products in the first 3 months of this year is a glaring example of the probability that, without the creation of such authority, this country will be constantly under the strain of shortages in such vital materials as petroleum products, steel and steel products and products manufactured with steel, as well as an unlimited number of items not only needed here to maintain a sound domestic economy but absolutely essential if we are to maintain a production schedule which would permit the fulfillment of an European recovery program.

I submit that the House of Representatives was most foresighted in the creation of this committee, that the reports which have been made unanimously by the committee have amply justified the action by the House and that we can all have great confidence in the soundness of its ultimate recommendations when the program comes before us for action. Speaking personally, I think it is regrettable in the extreme that opposition has developed toward this phase of the committee's recommendations, but I am encouraged by the apparently increasing growing endorsement of it in the course of the hearings now being conducted in the other body.

The address referred to follows:

The Select Committee on Foreign Aid of the United States House of Representatives agreed that if American dollars were going to be spent, and wher I speak of American dollars I mean commodities, that we ought to have a very clear idea as to what we were doing, how we were going to do it, and how we were going to make it effective for ourselves and the recipient countries.

We came to the conclusion that there were certain categories of aid that could be financed as commercial operations. First, was the capital goods that are required. We felt that the International World Bank was set up for the very purpose of long-range loans for capital goods, and that that first category ought to be financed that way.

We felt that in the financing of raw materials, specialized machinery, such as agricultural machinery, etc., that could be taken care of by the Export-Import Bank, which is today operating, to my mind, in a very hard-boiled and realistic manner.

FOOD, FUEL, AND FERTILIZER

But those would be commercial loans. We felt we had every right to expect repayment on that kind of loan, provided the third category of commodities was taken care of in a different way.

That third category is food, fuel, and fertilizer. They are the things that are absolutely essential if there is to be anything done for these countries. They represent, roughly, 60 to 65 percent of the total requirements over there. We felt that it was right to put a dollar sign on the loans of these already established lending agencies, and that the loans from those lending agencies were perfectly proper loans, with reasonable hope of repayment.

But at once we struck this dilemma. What are you going to do in the financing of these commodities? You can either make a dollar loan for their purchase, and be entirely hypocritical about it, knowing that there is very little chance of repayment, and the other countries, knowing that they have very little chance of repayment. If you do that, you stop these other agencies from functioning as they should function.

The alternative is to give it away. We have had some very unhappy experiences in giving away something for nothing. So we have come to the conclusion that we ought not to give away anything for nothing; that in the first instance in the food, fuel, and fertilizer category we ought to make all the purchases, or direct all the purchases ourselves in this country, so as to stop competitive purchasers in a very tight market, which in many instances have driven prices up very high.

In the second instance, we felt that we could make deliveries on allocations of those commodities to the best of our ability, and then take local currencies in payment, those local currencies in the meantime not to be translated into dollars until such time as the international monetary system feels it is safe to do so, but in the interim to be used for constructive purposes within those currency areas themselves for reconstruction of those countries. All of which requires machinery to operate.

And in the setting up of that machinery, we were convinced that only this category required new machinery. We feel that a new corporate set-up should be established, an emergency one, with a very brief span of life, but set up in such a manner so that it might attract the kind of abilities and technical skills that today you can't attract in many cases of a similar nature requiring action, because frequently your line of procedure is such that an able man is certain to find himself unable to get anything done.

We are convinced that this new corporate machinery must be set up, that it must have the responsibility for screening the requests from foreign countries, finding out what commodities are available to meet those requests, allocating them, and then exercising a really strict watch over export controls.

COMBINED RESPONSIBILITY

We believe that unless we combine responsibility in some such new set-up as that, we are going to have distributed responsibility such as we have had in the past. And we are not going to have the technical skills available to make sure that the requirements that are asked for are proper requirements, that the available supplies are properly available without injuring our own economy, and finally, that the money, when spent on the other side, is properly spent by technical supervision, not by governmental supervision, of a broad character.

Why Create Further Inflation?

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I am in-

serting in the RECORD a news release from the National Federation of Small Business, Inc., which I think is quite newsworthy:

The administration was bluntly charged today with definitely creating inflation in our own Nation by C. W. Harder, president of the National Federation of Small Business, Inc., which has the largest individual membership of any business organization in this Nation.

In a statement issued in the form of a letter to George J. Burger, director in charge of the Washington office, Mr. Harder cited four manifests of steamships unloading in the Philippine Islands. One of these manifests from a British ship shows, Mr. Harder pointed out, that the United States Government is paying English concerns to transport American relief supplies. Furthermore, in the face of a critical shortage of gasoline and oils, the administration is shipping huge quantities of oil some 6,000 miles away to the Philippines for relief purposes, despite the fact that such products are available less than half that distance from the islands.

Other manifests show tremendous shipments of wheat to the Philippines Mr. Harder revealed. This in the face of the known fact that the Filipinos do not want wheat, they prefer rice. "How can we expect to have decent prices for grain, either in the United States or Canada, when this kind of condition is brought about," Mr. Harder demanded.

Mr. Harder called upon Members of Congress to recommend a full-scale investigation not only of these items that are going to the Philippines, but also the manifests covering all foreign shipments. Mr. Harder bluntly stated that the ulterior motive of the bureaucrats in Washington is to create reason for an emergency so they can build up controls. Therefore, he insisted, they definitely are creating inflation in our own Nation.

Mr. Harder further disclosed that he had received significant information from a man whom he declined to identify by name beyond saying that he has been on a great many missions throughout the world for the Government and private enterprise during the last 30 years. This man declared that the United States is in no financial condition today to either listen to pressure of foreign politicians or cater to the favor of cartels with an attempt to build up nations for them to promote their selfish interests, which in the end has bad repercussions in our domestic markets in their competition with independent business.

Mr. Harder deplored the disheartening aspect of the Nation being jeopardized by terrific waste being created by spending huge sums of money that he said are actually doing a lot more harm than good. "One," he said, "is siphoning off the incentive of the people in these foreign nations to help themselves.

"There is no problem before any national legislator today," he concluded, "that is more important than this."

The Defense of the New Jewish State

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me over radio station WEVD, Saturday, January 24, 1948:

THE DEFENSE OF THE NEW JEWISH STATE

If there were no other reasons—and very many other reasons do exist—for intervention in favor of the Jews of Palestine, the upholding of the authority and prestige of the United Nations would suffice. If member nations continue to conduct their foreign affairs as if there had never been a decision on Palestine, the United Nations is thereby reduced to a nullity. If the United Nations cannot effect an implementation of its legally arrived at recommendations, all its panoply must crack with its futility in open display.

Such is the case with Palestine. Every member nation was well aware of the difficulties that would surround partition. The Arab spokesmen made no secret, to put it mildly, of their intended belligerency. The disorders in Palestine, fomented by the Arabs, are no surprise to anybody. Therefore, it follows logically that both implicit and explicit in the partition decision was the fact that force would be necessary to effectuate partition.

Yet what has happened so far is a do-nothing policy both on the part of the United Nations and on the part of the United States which took the leadership in the UN discussions. The do-nothing policy has actually, ironically enough, resulted in favoring the Arab violation of the United Nations decision.

The United States has placed an embargo on arms to Palestine. The only effect this has had is to deny arms to the Jews who are not only defending their homeland, but defending as well the decision of the United Nations. The Arabs can easily obtain and do obtain arms from the neighboring Arab countries. As sovereign peoples they can negotiate for the purchase of arms from countries willing to sell. The Jews of Palestine, as defenders, are not yet sovereign and are not in the favored position of the Arab states. Thus, the total effect of the embargo has been to permit the arming of the aggressors and the disarming of the defenders. A crueler perversion of purpose I have yet to see.

The United States has imposed the embargo on arms to Palestine in the name of neutrality. How an attitude of neutrality is arrived at by our State Department is more than I can understand. The United States took open and unquestioned leadership in arriving at the Palestine Partition recommendation. As a member nation, as well as the leading influence, it is committed to uphold partition. There is no question of neutrality here. Its vote in the United Nations was not neutral. It was affirmative. How consistent is that with an arms embargo that plays into the hands of the Arab insurgents? If the United States had voted against partition, we might be able to see the logic of such an embargo. I am leaving aside all the other commitments the United States had made, verbally, anyway, to favor the establishment of a Jewish state in Palestine. I demand that the embargo be lifted.

The Arab people because of the embargo assume that the United States doesn't really support the partition plan. In fact, they are being told that the action at Flushing Meadows was only a gesture for political purposes on the eve of a Presidential election. It is passing strange that nothing has been done in Washington to dissipate the views that have been spread over the Arab world about the insincerity of the United States. I demand that definite clear-cut action be taken by the State Department to support, not sabotage, partition.

Six hundred Arabs commanded by Syrian officers crossed the borders of Palestine last week in an attempt to storm Jewish quarters in Upper Galilee. This was a raid under the direction and auspices of the Syrian Government, a member nation of the UN. It was incumbent upon some other member nation to lodge protest with the Security Council for this unprecedented and defiant action on the part of a government which was sworn to uphold the decision of the United Nations. Certainly, the logical member to so protest is the United States. The fact that we did not protest emboldens the Arabs to further maraud and plunder. I demand that our United Nations delegates offer protest and that a persistent follow-up ensue.

The situation in Palestine deteriorates each day. Arab leaders like Faris El Khoury of Syria and Janal Huessini, representative of the Mufti's higher committee for Palestine have openly declared that American public opinion has turned in favor of the Arabs and against the stand taken by the United States at the UN. Arab newspapers published in the United States are assuming this attitude. This is a natural corallery to the absence of any definite and concrete support of the partition decision and in the absence of any protest of the Arab incitements.

It is difficult to understand the mawkishness of our State Department with its arms embargo and its failure to remonstrate against the Arab war againt the Jews. Or perhaps it isn't so difficult to understand. There are those in our State Department who are avowed Arabphilles and they do not hesitate to do all in their power to undermine the leadership we took on the Palestine issue at Lake Success. Their knuckles must be cracked. If they do not cease the tune piped by the Arabs they must go.

Surely, it should be clear to even these obstructionists that neutrality is a mockery and that the final result will only make for more bloodshed. Whether they wish it or not, or the Arabs wish it or not, partition will be. The new state of Judea will be. It is the matter of cost, the degree of murder, rapine, and plunder that must be withstood before peace is reestablished.

It is clear the British are taking no steps to avert a catastrophe. Adequate policing is deliberately withheld, the Haganah is not permitted to operate legally as a defense force. There is no embargo of arms imposed by Great Britain and it is common knowledge that Britain even prior to the military pact she signed with Iraq wherein provision is made for the supply of arms to Iraq, sent 150 armed vehicles, 75 planes, 2,000 nonmilitary vehicles to Palestine's neighbor.

It is noted significantly that our arms embargo is imposed against Egypt, Lebanon, Syria, Saudi Arabia, Trans-Jordan, Iraq, and Palestine. Yemen is not included, nor is Pakistan. These last-named countries can buy unlimited arms from the United States and route same to Palestine Arabs. Thus, our embargo shuts off much needed supplies to the Jews, while the Arabs, with the aid of Britain directly and with American arms indirectly supplied through Turkey, Iran, Yemen, or Pakistan, can continue their gruesome acts of aggression and violence.

Over and beyond that, fullest responsibility rests with the Security Council to take immediate steps to implement its decision on Palestine. There must be developed an international constabulary. The UN Palestine Commission of five members is agreed on this. The only difficulty is as to who is to constitute this force. The obligation of the UN cannot be shirked any longer in this regard. Partition was recommended by the General Assembly as a measure for meeting a situation likely to impair the general welfare of friendly relations among nations. The affirmative and expeditious action of the Security Council is imperative if its authority as an international body is to be permanently and firmly established. There are many historic precedents for an international force to police areas in dispute.

The difficulties in Palestine today could be overcome if—

1. The United States embargo were lifted at once.

2. The United States filed notice of violation by Syria of the terms of its membership with the UN.

3. An international constabulary were established immediately.

4. The port of Tel Aviv were opened immediately to Jewish immigration and for the entrance of food and matériel necessary to sustain the Jewish defenders of their homeland.

What is asked for is neither unreasonable nor impossible. They spell out peace in Palestine. They likewise establish the effectiveness of the United Nations to act as the international agency for peace. What is needed most of all is the will to act.

A United States City at Work: Bridgeport

EXTENSION OF REMARKS
OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Parade for January 25, 1948:

A UNITED STATES CITY AT WORK: BRIDGEPORT

(By James B. Golden)

(Never before in peacetime have more Americans been employed, never have they made so many things, done so much. To see, in miniature, America at work, Parade went to Bridgeport, Conn., found what follows.—Editor.)

Bridgeport, industrial nerve center of Connecticut, is today the same prosperous, productive giant that it was 4 years ago when it was working around the clock at the peak of war production.

Like industrial areas throughout the country, Bridgeport went through a period of reconversion but in a relatively short time. Now, for more than 2 years the city has been on a firm economic basis.

The brighter side of Bridgeport's economic picture reveals industry going at full tilt, pay rolls and employment at peak peacetime highs, retail sales soaring. Optimism permeates the city.

The other side of the picture is darker. A few, but nevertheless some, forsee a recession during the first 6 months of this year. Labor, faced with a steadily mounting cost of living, says it must get more in its pay envelope if it is to buy as much from local merchants as in the past. Housing continues to be the number one municipal headache.

That, generally, is Bridgeport today—and, with a few variations, almost any other industrial city in the United States.

Unlike other sections, Bridgeport, with an industrial population of 30,000, as early as late 1938, had begun to turn out war material. But good jobs attracted workers from other States to such an extent that in 1943 the population, industrially, was about 115,000. Today the figure stands at 75,000, or two and one-half times the number holding jobs in 1939. Unemployment is negligible—4,314—and the majority of these are between jobs.

That industry was able to absorb this great influx is due to the long-range plans started in 1943. Every activity in the community was invited by the Chamber of Commerce to participated in planning the physical and human reconversion of the area. The blueprints drawn up were so accurate industry went from total war production to peacetime manufacture within 30 to 40 days.

The General Electric Corp., one of the largest plants in Bridgeport, literally went from torpedoes to washing machines in 1 week flat.

GE's vice president, Hardage L. Andrews, foresees unprecedented prosperity for the immediate future, but adds that this prosperity may be accompanied by a slight price and employment recession.

LIKE ALL AMERICANS, BRIDGEPORT LEADERS ARE GLAD TO HAVE PROSPERITY BUT DREAD A POSSIBLE RECESSION

Like most leaders of industry and labor, like housewives and men on the street in every corner of the United States of America, the people of Bridgeport realize that they are living in an era of high production and of accompanying high prices.

They enjoy the feel of cash, but are regretful to find little of it left when they have paid for the goods they want, the services they need.

Like all Americans, they are apprehensive of what may follow a period which, economically, at least, seems unstable. In Bridgeport, they take refuge in the fact that their basic plants are diversified, so that if some of them were affected by an economic set-back others might not be.

One of Bridgeport's industrialists who feels this way is Lewis Lucas, treasurer of J. L. Lucas & Son, machinery rebuilders, employing about 90 men. He is optimistic about his firm's future, considers that the world need for machinery will keep his men at their lathes and benches for a long time to come, even if other industries experience hardship.

Bridgeport's merchants, like those in other cities, are also sanguine. Daniel Van Dyk, president of the D. M. Read Co., one of the large local department stores, reports that the rise in the city's population and the return of merchandise in quantities has pushed retail sales to a peak. Dollar volume has increased 55 percent since VJ-day, he reports, and unit sales have gone up nearly 10 percent. "This year promises to be an even greater one than 1947 for the merchants of Bridgeport," Van Dyk predicts.

This business optimism is shared by Raymond L. French, executive secretary of the local chamber of commerce, who is in daily contact with local business and industrial leaders.

GOOD TIMES FOR NEXT 6 TO 12 MONTHS

"No one in Bridgeport looks for a big economic drop for 2 years," he told Parade. "The majority of people here feel that present prosperous conditions will last for at least 6 months to a year, provided there are no big strikes in such industries as coal and steel. Still, I know a few men who feel that a recession will set in before June."

In justifying his optimism, French points to Bridgeport's diversified industrial pattern, its peak savings bank deposits, cordial relations existing between industry and labor, and the fact that wages there exceed the United States average by about $4.50 a week.

Bridgeport's labor leaders, on the other hand, are somewhat more cautious in assaying the city's prosperity. Both Irving Abb, president of the Bridgeport Industrial Union Council of the CIO, and Joseph Cleary, vice president of the A. F. or L. Central Labor Union, acknowledge that Bridgeport's wages are higher than average, but stress that the cost of living is correspondingly higher.

"Unless wages allow workers to maintain a decent standard of living, unless they can purchase the products they produce," Abb and Cleary agree, "inevitably we will have a short boom, then bust."

On one thing, though, the entire community can reach agreement, and that is on the remarkable work done by the Community Advisory Service Center for Bridgeport's 32,000 veterans of World War II.

In this respect Bridgeport may not be typical of other cities since the service center has been exceptionally successful in helping to solve the thousand and one problems the veteran faced when he returned to his home.

Launched in early 1944 it became a community-wide project comprising 36 committees with about 800 large and small organizations participating. Everyone pitched in to see to it that the returning veteran's reintegration into the workaday life of the city was as painless and speedy as possible for all concerned.

Under the direction of Dr. Randall B. Hamrick, the center has taken care of more than 150,000 requests for help by veterans. These ranged from mother-in-law trouble to requests for GI loans.

The vocational training and educational aspects of the center's activities consumed the most time and had the greatest results. By judicious counseling, Dr. Hamrick said, the labor turnover among veterans was cut by more than 25 percent.

THE CONSCIENCE OF THE CITY

The center is prepared to carry on its work especially with the city's 3,300 disabled veterans. "To that end," Dr. Hamrick said, "one man, Reverend McEnerney, has been appointed as the relentless conscience of the community to look after their needs."

Bridgeport's socialist mayor, Jasper McLevy, who just entered his fifteenth consecutive year as the city's chief executive, said that in Bridgeport, as elsewhere in the country, the greatest single difficulty was housing.

"During the war it was an acute problem," he said in his small office on the third floor of the city hall. "And it continues to be acute."

Since the end of the war, he went on, there has been quite a bit of private building of one- and two-family homes in Bridgeport's environs.

"But, even though this single-enterprise construction has taken some of the pressure off us, much of our housing is still overcrowded. Moreover, this new construction is beyond the financial means of the average worker in Bridgeport."

As for the future, Mayor McLevy declined to make any long-range predictions.

"The city is in good financial shape," he said. "And without making any predictions as to future prosperity or depression, we here in Bridgeport are in a sound position. Because of the great diversification of our industries—we're manufacturing everything from lipstick to cases of washing machines—I believe that even if an economic emergency does arise, we will be able to meet it and cope with it."

WILL THE CITY'S PROSPERITY LAST?

Bridgeport's economic stability is buttressed, as most people will tell you, by the great number of different industries in the Bridgeport industrial area.

The difference of opinion on various subjects, especially economic, is just about as varied as the industrial output of the city. It ranges all the way from predictions of great prosperity to the dim view of a recession shortly.

Parade reporters talked with many businessmen, key figures in industry, labor leaders, working men. Some of their views are presented here:

A. F. of L. Leader Joseph Cleary talks with teamsters' union member, Mike Powers, both agreeing that every wage increase we've gotten has been wiped out by the rising cost of living.

Gilbert Valery, expert machinist, is one of the thousands who went to Bridgeport during the war, decided to remain. Employed by the firm of J. L. Lucas & Son, he is rebuilding a milling machine.

Executive secretary of the chamber of commerce, Raymond L. French, mirroring business and industry thinking, says, "No big economic drop for 2 years * * * good business for the next year."

General Electric Vice President Hardage L. Andrews predicts unprecedented demand for company products because of new residential construction, home remodeling, and rural electrification.

Irving Abb, spokesman for the CIO in Bridgeport, believes that relatively few are aware of what will happen if the cost of living continues to go up. "The others are riding a bubble," he said.

Bridgeport has been home for Alex Hogg since he arrived from Scotland in 1906. Head of the Lucas shipping department, he says "I've got a good job. The Lucases are good people to work for."

While making no predictions, Mayor Jasper McLevy has faith in Bridgeport's ability to ride out an economic storm, should it come, because of the diversification of its industry.

American Aid to China

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith by request a statement issued by the American Chamber of Commerce, Shanghai.

It was the desire of the American businessmen in Shanghai that Members of Congress be informed of local conditions, as they find them.

The statement follows:

MAKE AMERICAN AID TO CHINA EFFECTIVE

(A statement from the American Chamber of Commerce, Shanghai)

American help to China has already been far greater than is generally realized, but its size and importance have been minimized by terrific waste. Further aid to China of any nature should be so planned and controlled that it will truly be aid, and that which is sent henceforth should be safeguarded. The fact must be faced that unless proper channels are employed the Chinese capacity for self-help will be further inhibited and a need will be built up for perpetual future grants.

The American business community of Shanghai has special interest in and knowledge of the economic sphere. We urge most earnestly that in giving economic aid, there be emphasis on points promoting constructive practice or preventing the development of evils now growing. As a prerequisite to any further aid which may be granted, it is our considered opinion that full agreement must be reached on the following points:

1. Conditions should be attached to any economic aid which will curb the present tendency of the Chinese Government to foster its own enterprises or companies in which officials have interest, and to encourage rather than stifle private enterprise both Chinese and foreign. Current policies restrict private trade and force business increasingly into official or quasi-official channels, building the Chinese equivalent of a Japanese Zaibatsu or a Russian Amtorg.

2. There should be elimination of Chinese Government sponsored monopolies in trade, and such official enterprises as the Shanghai fish market which has handicapped UNRRA efforts to increase China's food supply.

3. There should be a reversal of the Chinese Government policy of delegating its functions to monopoly-bent guilds which development is most dangerous and in our view represents a menace to sound individual enterprise whether Chinese or foreign.

4. There should be insistence that China adhere to international practice with reference to shipping in inland waters. Abnormal restrictions on foreign vessels, on behalf of a small group of private Chinese interests now greatly reduce China's communications facilities while increasing shipping costs.

* * * * *

6. There should be encouragement for rather than discouragement of the entry of foreign capital into China. This can be gained only by the elimination of present unsound restrictions and controls.

Relief in some of these cases and assistance in others seem to us essential if fruitful results are to come from fresh aid. Unless the standard processes of private business are given opportunity to function in China with relation to new help, such help must fail as all previous efforts have failed in getting China's economy in gear with the rest of the world. A sound procedure will give the Chinese people an opportunity to get on their own feet.

Resolution of Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

VETERANS OF FOREIGN WARS OF THE UNITED STATES, GREETINGS AND SALUTATIONS

To the UNITED STATES SENATOR OF THE STATE OF PENNSYLVANIA, HON. EDWARD MARTIN:

Whereas in true accordance with the established principles and high ideals exemplified throughout your military and civilian career, you, fearless of condemnation, did express your sincere sentiments in an address to a delegation of Pennsylvania Communists attending that Party's Veterans National Convention, such address appearing in the CONGRESSIONAL RECORD of Friday, May 9, 1947, Eightieth Congress, first session, of which portion is quoted:

"First, let me make clear that I respect the veteran and all that his uniform stands for. But when you come here, representing the Communist Party, you have no right to claim the respect and treatment due to veterans. No one can be faithful to American ideals and accept the teachings of communism.

"I will not now, nor at any future time, discuss the welfare of our veterans with men who uphold your communistic philosophy, even though you have worn the American uniform. Anything I have to say on that subject will be said to the officers and members of recognized veterans' organizations, or to other patriotic unaffiliated veterans. And if I want advice about veterans' needs, I shall go to those same groups. They recognize the great gulf between American freedom and communistic dictatorship. They do not straddle. They stand four-square on the side of individual liberty and rights of free men. You are on the other side.

"The Russian people can have the form of government they want. We are not trying to force our system on them. I will fight with all my power any effort to foist their system on this country whether it comes from you or anybody else.

"I have had over 40 years of service in the armed forces of my country; I love its uniform and its flag. I respect that uniform even when worn by a Communist, but I have no respect for the philosophy you have accepted."

Whereas we fully appreciate the manner in which you exercise the true spirit of democracy by being one of our kind of folks, in witness of which you have said: "Share the same concerns, the same years, and the same high aspirations for our country's future. This devotion has been shaped by our kind of folks having worn our country's uniform in battle;" and

Whereas your outstanding military record throughout the 44 years of service, with which we are conversant, has brought you the distinction of advancement through the miltary ranks from private during the Philippine Insurrection, 1898, to commanding general of the Twenty-eighth Division, World War II in 1942; and

Whereas not being satisfied to rest upon your military laurels but desirous of serving your people, you as a civilian were inaugurated Governor of the State of Pennsylvania on January 19, 1942, and were elected to the United States Senate on November 5, 1946; and

Whereas your membership in the Hawkins Home Post, No. 927, Washington, Pa., of our beloved organization, makes us justly proud to claim you as a comrade, one in harmony with our spirit of comradeship and in full accord with the ideals for which we stand: Therefore be it

Resolved, that in appreciation of outstanding achievements, the expressed determination further to serve God, country and fellow man and in commendation for patriotic service and accomplishments we, the officers and members of the Department of the District of Columbia, Veterans of Foreign Wars of the United States, do herewith present to you this citation.

Given under my hand and seal this 27th day of January 1948.

ALBERT M. ARMSTRONG,
Department Commander.
MARTHA J. REYNOLDS,
Department President of the Ladies' Auxiliary.

Attest:

CLYDE W. KEIRN,
Department Adjutant.

The Importance of Secondary Roads to Our National Transportation System

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. STEFAN. Mr. Speaker, pursuant to permission granted me to extend my remarks in the RECORD, I include the following address that I delivered before a midday meeting of the American Road Builders' Association in Washington on Monday, January 26, 1948:

THE IMPORTANCE OF SECONDARY ROADS TO OUR NATIONAL TRANSPORTATION SYSTEM

While looking over a recent table issued by the Public Roads Administration (table RM-3, 1945, issued March 1947), a startling figure attracted my attention. This table told me that at the end of 1945, there were over 3,000,000 miles of rural roads in the United States. That number can be better

appreciated if you consider that it represents a distance greater by more than 120 times the distance around the earth at the equator.

My first reaction to this discovery was what that of any American would have been—one of intense national pride in the courage, the initiative, the know-how, the tireless energy, and the vision of the hard-working Americans responsible for getting this tremendous job done. That reaction has not changed since. In fact, my admiration for the road builders of my country has been strengthened by the knowledge that, of the more than 3,000,000 miles of rural roads, nearly two and one-half million miles were classified as county and other local rural roads.

The place of the roadbuilder in American economy is definitely established. He, together with the farmer, the trucker, the railroader, the processor, the warehouseman, and the shipper, is a member of a team upon whose success in getting our basic agricultural products to the ultimate consumer depends our security as a people in war and our prosperity as a people in peace.

It is vital to our way of life that each member of this team performs to the full extent of his ability and resources. That is why road builders, especially those engaged in the construction and maintenance of secondary roads, cannot be lax in the constant study of their job and their determination to get it done.

Let's look at the function of secondary roads in the winning of the late war. There is no truer maxim than "an army travels on its stomach." This Nation not only fed its own armed services, but it also fed the fighting men of our allies, the peoples of the liberated countries, the peoples of the conquered countries, and the people whom the armed forces of our own country and those of our allies took prisoner. The American farmer did that under conditions which would have broken the will of lesser men. He did it with only about 40 percent of the normal number of farm workers. He did it with old men, women, and little children pitching in to do the work. He did it with worn-out, broken-down machinery and equipment. No man ever gave so much to so many with so little with which to do it.

You men, charged with the responsibility of building and maintaining secondary roads, know what the American farmer went through during the trying years of war. You know because of your own trials. You know because you were the link between the American farmer and the primary distribution point of his products.

The American farmer was equally alive to the problems of the road builder. He knows that your trucks were at Salerno, your tractors were at Omaha beach, and your bulldozers were at Tarawa, Saipan, and Okinawa. He knows that your skilled workers who might have been building that road up to the lane in front of his place from the concrete highway 3 miles away were busy elsewhere—working in the jungles and the mountains on the Burma Road, repairing the vital lines of supply behind General Patton's fighting Third Army. It broke the heart of many a road builder during those trying times that he couldn't do more. The wartime road builder labored in blood, sweat, and tears and became a silent partner in the victory.

The end of the shooting war by no means meant the end of the battle for secondary roads nor for the urgent need for those roads. That battle, that need, still exists today.

It is a conservative estimate that 60 percent of the goods produced to tide Europe through the winter of 1947–48 originated on American farms. However, not a single European could have been saved from starvation had not that vast production been moved from the farm to the market, from the market to the processor, from the processor to the shipper, and from the shipper to the European distributing center. In this instance, life depended on the moving of goods. So, the miles between the farm itself and the hard-surfaced primary road became the first line of battle.

Farmer Swanson fought through eight miles of gumbo to get his truckload of life-giving food to the concrete. He did this over roads you constructed, Mr. Road Builder. He did this over roads which, through no fault of your own, you had not been able to maintain and repair in the war years.

Yes, the official figures tell a story, but they do not tell the whole story. They say that there were nearly two and one-half (2,397,629) million miles of county and local roads in 1945. But they do not tell the struggle of Farmer Swanson in that single figure. You have to look beyond. You have to find out that of the original two and one-half million miles, nearly one and a half million miles consisted of nonsurfaced roads, three-quarter of a million miles were primitive and unimproved and only a little over one-half million miles were graded and drained. We Nebraskans have learned by experience what heavy rains and floods can do to nonsurfaced roads.

It is up to road builders, State officials, and officials of the Federal Government to get together on building new farm-to-market roads—where such construction is both feasible and possible—and, when it is not expedient to build new roads, to get those secondary roads in repair that do exist, so that food products can roll from the farm to the consumer, wherever that consumer exists, whether at home or abroad.

The operation of roads now in use is no small task. Recently, a check was made on operation costs by the Highway Research Board and the results were issued as a "Progress Report of the Project Committee on Maintenance Costs" in December of 1947. It is my considered opinion that the conclusions of this spot-check should be passed on to the American public, since it is your fellow Americans who gain by the work the road builders do.

The report states:

"1. The total cost of maintaining and operating the 10,000 miles representative of the entire system of State highways in 1947 is 71 percent higher than the 1935 cost and 58 percent higher than the 1940 cost.

"2. The 1947 maintenance labor rates are 98 percent above the 1935 level and 77 percent above the 1940 level.

"3. The 1947 cost of maintenance material is 46 percent above the 1935 level and 45 percent above the 1940 level.

"4. The 1947 equipment rental rates are 53 percent above the 1935 rates and 43 percent above the 1940 rates.

"5. The 1947 overhead costs are 62 percent higher than in 1935 and 47 percent higher than in 1940."

Naturally, the identical percentage rates of maintenance increases do not pertain all over the Nation. In some localities, they are lower than those quoted; in others, they are higher. The same trend is noticeable in construction as in maintenance, in secondary roads as in primary roads—costs are up all along the line.

How does this trend affect the lifeline of America—her secondary roads?

Secondary roads depend for their construction and care upon the public treasury, whether that treasury is that of the Federal Government, the individual States, or communities. These public treasuries, in their turn, rely upon taxation for their funds. To meet taxation demands, money is being taken in the form of taxes from the farmer who supplies the world, from the road builder who connects the farmer with his market, from the processor who changes the original farm product into a more efficient commercial form, from the manufacturer who builds road machinery and equipment, from the steel companies, the coal companies, and the oil companies.

The burden of our existing national debt, plus the burden of supplying and reconstructing the world is a millstone about the neck of American progress. Every place in government—from our Federal Government to our township government—conscientious servants of the people are seeking to cut expenses so that taxes may be lowered and the unbearable burden eased. All too often road building and maintenance have been selected as a target for reduction.

I decry this situation. To me, it is the essence of false economy. It is not my idea of common sense to cut down the corn and let the weeds grow. Neither is it my idea of common sense to curtail essential Government services while continuing or adding to useless governmental frills. Yes, the very increase in the cost of road construction and maintenance has placed the entire national, State, and local program in peril. And the obvious point of greatest danger is the secondary road system.

Hundreds of thousands of people live along the Lincoln Highway. Thousands of communities get their living because of that highway. Local trade and tourist trade help the merchants. Thriving merchants build up towns and cities. If the Lincoln Highway should fall into disrepair an atomic howl could be heard from every hamlet through which it passed. Legislators in State and National Capitals would be bombarded by letters, telegrams, and phone calls. Officials of the Public Roads Administration would never have a quiet moment.

But what about the 11-mile spur of road, once graded and drained, yet neglected all through the war—which ends in Farmer Swanson's barnyard?

There are 30 families on that road. The condition of that road means life to these families. It not only means the difference between failure and prosperity, it actually does mean life. Ask any doctor in any small town and he will tell you it means life should he be able to get 11 miles off of the paved road in a half hour instead of 5 hours.

The Swanson children are entitled to a high-school education. Farmer Swanson pays taxes to keep up a consolidated school a mile west of the place his road meets the concrete. Yet, his children are under a handicap from the start. Either he must make arrangements for them to live in town or they must begin their school day after having had a fierce struggle to get to school at all, placing them on an unequal basis with their fellow students.

As for the economic side, the story is well known but needs retelling. Swanson can grow a bumper crop. Still, it would be the same as if he had grown nothing at all if he isn't able to move that bumper crop.

Can't these 30 families on the Swanson road protest and demand improvement? They can and they generally do. But they are few and not united. Their voices are not loud. They are refused help outright. They are put off by promises. What they have to say may be heard in the county seat, and the echo of what they have to say may be heard as far off as the State capital. It seldom gets farther.

You know the results of these two examples I have cited—the vocal beneficiaries of the highway, the silent users of the Swanson road. The highway gets the priority in repairs. The secondary road is repaired—if and when anybody gets around to doing it. In the Old Testament, we read about the ancient Hebrews making bricks without straw for an Egyptian king. We thought that to be a high point of hardship. Yet, in modern America—in 1948—thousands of American farmers will be helping to feed the world without roads.

On November 26, 1947, Senator HOMER CAPEHART, of Indiana, and I announced the joint introduction in both Houses of Congress of a bill to establish a department of transportation. We said in a joint statement at that time: "Efficiency is and has been sadly lacking in governmental functions with respect to all forms of transportation and it is our aim in the introduction of this measure that coordination of the many scattered agencies and bureaus under a single department with a single head will work toward the efficiency needed to bolster the transportation facilities of the Nation."

It is my firm belief that unless new secondary roads are built and unless the ones already in use are made fit for year-around use, this bill and all others looking toward efficiency in war and security in peace are doomed to certain failure.

Secondary roads demand—and they must get if we are to survive and help others to survive—the most careful planning, the most immediate attention, the hardest work and the most unceasing study of every sincere, forward-looking citizen in this Nation today.

Foot-and-Mouth Disease in Mexico

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. TEAGUE. Mr. Speaker, it is of utmost importance that the foot-and-mouth disease existing in Mexico be confined to the areas now affected and that every effort be made for the systematic eradication of that disease throughout Mexico. The Agricultural and Mechanical College of Texas, under the leadership of its president, Gibb Gilchrist, has carefully studied the situation in Mexico and has given its endorsement to the program of eradication of foot-and-mouth disease by zones.

Dean C. N. Shepardson, of the school of agriculture at A. & M. College, has recently issued a news release which contains the statements of Dr. J. C. Miller, head of the animal husbandry department; Dr. R. C. Dunn, dean of veterinary medicine; and Dr. H. Schmidt, chief of the division of veterinary research.

Mr. Speaker, under leave to extend by remarks in the RECORD, I wish to include the following news release from the A. & M. College of Texas, College Station, Tex.:

COLLEGE STATION, TEX.—Declaring the prevalence of foot-and-mouth disease in Mexico to be the most serious threat to the livestock industry of the United States in its history, a committee representing Texas A. & M. College today gave full endorsement of the college to the program of eradication by zones. This is the program which the House Committee on Agriculture recommended on December 3, 1947.

Strengthening of the border patrol between the United States and Mexico and increased precautions to prevent the spread of the disease within the United States were also urged. It was pointed out that an aggressive attack designed to completely eradicate the disease through destruction and burial of infected animals was the only practical solution to the problem. Vaccines, the committee said, have not proved effective in stopping hoof-and-mouth disease, and little hope was held out for development of a permanently effective vaccine.

Issuing the statement on behalf of Texas A. & M. College were Dr. J. C. Miller, head of the animal husbandry department; Dr. R. C. Dunn, dean of veterinary medicine, and Dr. H. Schmidt, chief of the division of veterinary research. Their statement follows:

"The livestock industry of the United States received a severe shock when about a year ago the first reports of the presence of foot-and-mouth disease in Mexico reached this country. The Bureau of Animal Industry immediately sent veterinarians into Mexico who soon verified its presence. Following the verification an agreement was promptly negotiated with Mexico for its speedy eradication by the slaughter and burial method. Due to the difficult terrain, lack of communication, and other obstacles, the disease has continued to spread until the infected region now covers about one-third the area of Mexico and involves almost half the livestock population.

"In spite of the slaughter of some 500,000 cattle and many small animals, the disease continued to gain ground until the Mexican Government—whose wholehearted assent is of course a necessary prerequisite to any activity on Mexican soil—notified the United States Department of Agriculture on November 24, 1947, that the economy of that country could not stand the immediate slaughter of the tremendous number of livestock which had by that time become infected or exposed to the disease.

"Accordingly, on November 26, 1947, the Department of Agriculture announced a modification of its program. In plain words this meant abandonment, at least for the present, of efforts to eradicate the disease from Mexico by the slaughter and burial method which has several times conquered it in the United States and acceptance instead of a quarantine and vaccination program designed to control the disease so as to prevent its spread outside the present generally infected area.

"On the same day the House Committee on Agriculture announced a hearing beginning December 3, 1947, in which all interested parties were invited to participate, for the purpose of analyzing the threat to the livestock industry and the economy of this country presented by the failure of the eradication campaign, and to consider the best steps which might now be taken to keep the disease out of the United States.

"Having considered carefully all of the evidence available, the committee made the following recommendations, which are endorsed by the A. & M. College of Texas:

"1. 'That the campaign against foot and mouth disease in Mexico shall be conducted on the following basis: First, an all-out effort by both countries to hold a quarantine line immediately north of the present infected area, including a sterile zone as wide as possible south of such line in which all infected and exposed animals will be subject to immediate slaughter and burial, in order to prevent the spread of the disease into northern Mexico and the United States; Second, extension and enlargement southward of that sterile zone as rapidly as circumstances will permit, with vaccination being employed by the commission only as an adjunct to quarantine.'

"2. 'That it shall be understood definitely by all participants that the program now undertaken is not an abandonment of the effort to eradicate foot-and-mouth disease from this continent but is merely a postponement of that effort until it can be undertaken and accomplished in a manner which is more acceptable to the Mexican people and tolerable to the Mexican economy.'

"3. 'That the best available scientists and economists be assigned immediately to research and study in Mexico and elsewhere on the disease itself, its prevention and control, and the effect of the disease and of proposed eradication methods on the economy of Mexico and the United States.'

"The decision of the Mexican-United States Commission to withdraw its forces to a strategically more favorable line undoubtedly was a wise one under the prevailing conditions provided it was for a new, better-organized, and more aggressive attack envisaging the complete eradication of the disease. Merely trying to hold a quarantine line against foot-and-mouth disease without complete destruction of the hosts of the virus and therewith the virus itself in affected areas has been tried many times and has never been successful. Vaccines against foot-and-mouth disease developed in recent years have not proved effective in stopping the disease elsewhere and to rely upon their use to prevent the further spread of the disease in this instance would be temporizing with a very serious situation.

"For the information of those who hope for a vaccine which will give permanent immunity, it should be pointed out that there is little hope of increasing the effectiveness of vaccines against foot-and-mouth disease by further research because the present effectiveness of vaccines is now practically equal to the immunity established by recovery of the animal from an acute infection.

"An aggressive attack of the disease behind the quarantine line is therefore urged, using the only method that promises success, that of slaughter and burial. Confinement of efforts to merely control the disease is not acceptable to the United States livestock industry.

"Representatives of the livestock industry at the A. & M. College of Texas are acutely aware of this situation and therefore urge that everything possible be done immediately to halt the spread and eventually to stamp out the disease in Mexico.

"It is further urged that:

"1. Every effort be made to strengthen the border patrol between the United States and Mexico to prevent the movement of man or beast across the border from Mexico to the United States other than through legal channels.

"2. The greatest precaution be exercised through sanitary measures, to prevent the spread of the disease to the United States through commercial and tourist travel.

"3. Livestock producers and handlers, extension and vocational agriculture workers throughout the United States familiarize themselves with the visible symptoms of the disease and be on the alert to report immediately any suspicious cases to the nearest licensed veterinarian, State veterinarian, or the Bureau of Animal Industry.

"4. That State and Federal authorities be prepared to have available on short notice the necessary heavy machinery for prompt slaughter and burial of any infected or exposed animals found in this country."

Caesar

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1948

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Chicago Tribune for January 27, 1948:

CAESAR

It can't be said that James C. Petrillo is totally indifferent to collective bargaining. He deals with the employers of his musicians on a take-it-or-leave-it basis, but he is willing to sit down across the table with parties whom he considers equal to himself in importance and power. The only party that so qualifies, in Mr. Petrillo's mind, is the United States Government. In Washington he has just offered to dicker with Congress.

His lawyer has suggested that Petrillo will lift his ban on recordings if Congress will permit him to resume his shake-down of recording companies for a so-called union benefit fund, of which he has sole control. Contributions to such a fund are prohibited by the Taft-Hartley Act.

As a union czar, Mr. Petrillo has taken the position that he can shut down a whole industry, furnishing employment to thousands of people and products which millions of people want to buy. Having done this, he offers to dicker on the conditions on which his criminal interference with interstate commerce will be stopped. He has even found a Member of Congress, Representative KEARNS, of Pennsylvania, to write Petrillo's provisions into a bill to be introduced in the House.

John L. Lewis never exhibited such megalomania as this. Some day very soon the ceiling is going to fall on Mr. Petrillo, and the rejoicing will be great.

Address of Commodore Robert C. Lee

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Commodore Robert C. Lee, executive vice president of the Moore-McCormack Lines, at the annual dinner of the New York Foreign Freight Forwarders and Brokers Association held at the Hotel Commodore, New York City, on Tuesday, January 13, 1948.

The First World War, as some of you are old enough to recall, was fought with the slogan that it was the "war to end all wars." A lot of the young officers of the Army and Navy—among them myself—took the slogan seriously and began looking around for other means of support. I resigned from the Navy in the early days of 1920 and decided to go into business in New York. I knew about business just what any naval officer having had my training and experience would know, which was absolutely nothing. It looked to me like being a foreign-freight broker was an easy way to make a living and that was my first attempt. It did not take me long to switch to something else.

It strikes me that some wrong thinking is being done by a sector of the shipping industry, of which you are an important segment, on the subject of its stability. The man who hopes to get his cargo to market under modern competitive conditions cannot depend upon "horse and buggy" methods of transportation. It was said of the late unmourned Mussolini that he at least had the trains of his country moving on time. When you consider that he held that country in domination as long as he did, with little other than regular trains and the conquest of a virtually defenseless neighbor to offer his people, it would seem clear that regularity of transport can be an important factor in modern life.

The recent tie-up of transit due to the snowstorms emphasized our dependence upon transportation. We came to appreciate the meaning of schedules once we found that schedules as such no longer existed. We have adapted our everyday living to schedules, to the knowledge that we can plan our day, distributing our time among our social and business activities the most effectively.

The same is true with our trade. If we had to live with nothing more than hope that our cargoes would eventually be picked up and eventually landed at their destinations, nothing of the efficiency that had made American business the model of the world would be available to us. You can no more imagine your trade routes dependent upon the uncertainties of tramp shipping than you can imagine a home routine of setting your alarm clock at daybreak and getting to your station in the hope that a train would come along sometime before 10 o'clock.

There was a time, of course, when people lived like that. But we have gone far beyond. We think in terms of budgeting, whether it be our time or our finances. That is living, that is business, as we practice it today. We cannot deviate from it and keep our place in the world. Those relatively few people who think we can carry on world trade, of all things, without thought of budgeting, are not realistic. They belong in a dream world; and you men know that foreign trade has no place in dream worlds.

In addition, there is, of course, the broader aspect of this matter of merchant tonnage which concerns the expansion of our merchant fleet, and its maintenance as an instrument effective in keeping the United States in first rank in world trade and also in front rank in national defense. We in shipping have long pounded away at the claim that our merchant marine is a vital arm of national defense. I think the record of our merchant ships during the war should set at rest all questions of the merchant ship as a fighting instrument. Perhaps the picture has changed and we now must switch the emphasis from national defense to trade.

Let me quote a man who is not a ship operator, but who has spoken as clearly as any man can speak in fixing the value of merchant shipping as a factor in the development of this Nation's trade. I quote Vice Adm. E. W. Mills, Chief of the Navy's Bureau of Ships. He said recently:

"The value of a merchant marine to our country, aside from its essential support to the armed services, does not accrue from the income that is derived from operation so much as it does in foreign trade development and the protection of our foreign trade from absorption by other nations. It has been repeatedly demonstrated in the history of the United States that we can build and operate ships to prosper in world trade; that we do so in the future as well as now is essential to our welfare and the peace of the world."

Admiral Mills made that statement knowing that in the recent war our merchant marine was able to deliver its timeliest blows in time—I emphasize in time—only because we had started to build ships before the war came and so were able quickly to expand our tonnage to met the war emergency until it became one of the two or three more vital instruments in the victory.

I could quote another man who speaks, not for a ship line but for our Government, the Honorable Richard Parkhurst, a member of the United States Maritime Commission. He said:

"The whole problem of the merchant marine is now under the most searching scrutiny in many responsible circles, both in and out of Government. I sincerely hope that the outcome of these studies will result in a sound program of long-range development on a scale which will insure not only first-class American-flag service in the domestic and foreign trades, but also a modern and dependable maritime organization shipside and shoreside, which will be able at a moment's notice to place itself again, if needed, in the front line of defense of our country."

Both these men emphasize the need of building and maintaining a merchant marine both as a carrier of our trade and as an arm of national defense. You, as businessmen, know that you do not solve today's business problems today; you solved them yesterday or last month, even last year. Certainly in an activity like shipping which involves a variety of men and a variety of talents and materials, we cannot afford to wait for our need to arise before we start to plan and build our ships.

But how can we plan and build unless we have some degree of certainty in our planning? We cannot operate on a hit-and-miss basis; millions of dollars are involved, and we must provide some sort of insurance for those millions. The operator who comes to you with a bargain, whether its freight rates or a diamond, is likely not to be around when the time comes to test the quality of the diamond or the quality of his shipping service. He cannot afford to back up his bargain. On the other hand, the man who hangs out his sign and takes a long-term lease will back up his wares; so will the ship line that comes to the shipper, places all his cards on the table, and says in effect, "Here is what we need if we are to survive. This is our cost, this is the rate that must be charged if we are to maintain our ships so they can best serve you." The ship lines that function together in our freight conferences are in that position. They are the lines that will back up their claims, they are the lines that will be on hand when the shipper needs service and needs it fast.

I look with profound suspicion upon anyone who cloaks himself with all the virtues, even though he is doing it by means of advertising in the public press. My experience with these "holier than thou" fellows is all to the bad. The conference system has its defects, as what human endeavor does not?

My belief is that ocean transportation needs regulation the same as any other public utility. No better system of regulation has yet been devised than that set up by the Congress of the United States permitting the establishment of conferences and laying down the law for their regulation. It is an American system devised by the American people and probably not understandable to some Europeans. Like most other things American, it will probably prove better than anything they have ever thought of.

The thoughtful American citizen must today be somewhat appalled by the position we occupy in the world, because of the tremendous responsibility that position imposes upon us. It is as near certain as anything could be that the future of civilization as we know it here, and as they knew it in western Europe, depends almost entirely upon our strength. A very vital part of that strength is the American merchant marine.

The Farm Program of the American Farm Bureau Federation

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. CAPPER. Mr. President, I have just heard a statement of the farm program of the American Farm Bureau Federation as presented to the Senate Committee on Agriculture and Forestry today by Mr. Allan W. Kline, president of the Bureau. I ask unanimous consent that his remarks be printed in the Appendix to the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

1. The American Farm Bureau Federation realizes that all segments of our society are interdependent. We, therefore, urge the adoption of sound over-all policies which will lead to a high level of production, employment, income, trade, and a stable general price level. Stabilization at levels considerably higher than during the prewar period is essential if this Nation is going to meet the financial and other obligations resulting from the war.

2. The American Farm Bureau Federation believes that farmers and consumers have received fundamental benefits through the numerous basic agricultural laws which have been enacted. We realize the necessity for revising this legislation to meet changing conditions. We do not believe, however, that an entirely new and revolutionary farm program should be written, but rather that we should confine our efforts to refining and improving the present program. We believe revision of this basic legislation should be deferred for the present in order that postwar conditions in which the legislation will have to operate will be more clearly appraised, and additional consideration can be given to needed changes.

3. Agriculture's reconversion period is still ahead. We in agriculture are still operating under wartime urgency. Therefore, we recommend that the Steagall Act and the Bankhead Commodity Loan Act, which were enacted into law to assure consumers of adequate supplies of food and fiber and to protect farmers during the reconversion period, be extended for an additional year.

4. We urge retention and strengthening of the Soil Conservation and Domestic Allotment Act, the Agricultural Adjustment Act, and related measures, including conservation of soil, water and forest resources, machinery for acreage adjustments, mandatory commodity loans, and marketing quotas when needed for basic agricultural commodities.

5. We believe that when the permanent farm program is written, existing legislation should be amended to provide a program based upon mandatory variable price supports for agricultural commodities. Such variable price supports should be applicable with or without quotas. The level of such supports should vary from 60 to 90 percent of parity, depending upon the importance and peculiarities, as well as the supply and price position of the commodity. Sufficient flexibility should be provided to give producers of a commodity maximum authority to determine the level of the support price of their particular commodity, and to utilize the marketing-quota features of the program. Sufficient flexibility in acreage adjustment programs should be provided to meet changing needs and to permit adjustment of individual production plans so as to encourage efficient land use and avoid freezing acreage allotments in rigid historical patterns. We believe that the protection provided in section 22 of the Agricultural Adjustment Act, as amended, which authorized import fees or quotas in cases where imports prevent the successful operation of certain domestic agricultural programs, should be extended and used when necessary.

6. We favor modification of the parity formula. This should be done by retention of the present parity formula, with adjustments among the various agricultural products according to the price relationship which existed among the products on the basis of a 10-year moving average. In making the transition from the present to a modernized parity formula, the parity price of a commodity should not be lowered by more than 5 percent in any one year. The Secretary of Agriculture should be required to adjust the parity price for any commodity that is out of line with the parity price for other agricultural commodities.

7. The welfare of agriculture and the Nation as a whole requires the restoration and maintenance of our soil fertility and the conservation of our soil, water, and forest resources. We therefore urge the Congress to provide adequate funds to continue and expand the agricultural conservation practices program.

8. The Commodity Credit Corporation, the key agency in the stabilization program for American agriculture, should be made permanent. In granting a new Federal charter for the Commodity Credit Corporation, we urge the Congress to provide adequate lending authority, and to provide sufficient flexibility of operation to assure that unforeseen contingencies which arise in agricultural production and distribution can be met. The corporate funds should not be used for financing programs of foreign or domestic relief except as may be incidental to the disposal of agricultural commodities acquired under its loan or support programs, unless these expenditures are reimbursed by appropriations. No funds of the Corporation should be used for consumer subsidies.

9. As a part of the long-time program, we urge aggressive efforts to stimulate increased consumption of agricultural commodities through research and education; the school-lunch and improved nutrition and health programs; development of new and expanded domestic and foreign markets for agricultural products; diversion of surpluses into byproduct uses; disposal of surpluses in export markets at competitive world prices, using export payments when necessary; development and use of international commodity agreements, and wisely planned programs designed to utilize a maximum of surplus agricultural commodities. We favor the retention of section 32 funds for use in supporting farm prices and in disposing of agricultural surpluses in foreign and domestic markets. All funds appropriated in section 32 should be used for the purposes originally intended and for no other, and these funds should remain available until expended.

10. Marketing agreements have proven their value during the past decade as a method of effectively handling difficult problems, especially in fruits, vegetables, nuts, and milk. The advantages of this program should be extended to other producers who can demonstrate the need for and feasibility of this type of program.

11. We favor Government crop insurance, provided rates on a sound actuarial basis with regional adjustments are maintained. We feel that further study and experiments should be made before it is extended to all areas of the country.

12. Farmers are rightfully concerned over the duplication, overlapping, and conflicts which exist in the administration of various phases of the farm program. In the interest of economy, efficiency, and effective coordination without centralized control, we urge that the administrators of the regulatory features of the programs, including conservation payments to farmers, be made responsible to bona fide farmer committees of the Production and Marketing Administration at State, county, and local levels; that the educational, demonstrational, informational, and technical service features be assigned to the State agricultural extension service; and that all research phases in the States be administered by the State agricultural experiment stations. To attain these objectives, we urge enactment of the Reed-Stewart bill (S. 1621), and the companion house bills, Cooley bill (H. R. 4150) and the Hill bill (H. R. 4151).

13. The cooperative credit system as provided in the farm credit legislation is essential to the welfare of American agriculture. Steps must be taken to make the farm credit system fully cooperative, farmer-owned and farmer-controlled. The farm-credit agencies should be placed under the direction of an independent bipartisan policy board. We favor legislation which will encourage the complete ownership of the banks for cooperatives by the cooperative associations. We favor a land-bank commissioner type of loan, to be made by the Federal land banks, provided that the proportion of the loans above the present 65-percent lending limit be underwritten in some manner designed to insure the banks against loss on the extra risk portion of the loans. The present ceiling on loans by the Federal land banks to any one borrower should be eliminated. The farm-credit system must be kept strong in order that it may serve as a reservoir for agricultural financing in the years ahead.

14. We believe cooperatives are an important part of the private enterprise system. We resent the attacks by certain groups upon farmer cooperatives. We believe that cooperative earnings currently returned to members as patronage refunds should not be subject to tax in the hands of the cooperative, since such refunds are taxed as income of the individual members. We will support such changes as may be necessary to require that there be income-tax exemption or deduction from taxable income on only reasonable reserves and on that portion of cooperative savings which are currently distributed or clearly shown on the books of the cooperative to be the property of the patron and subject to tax in his personal income. The American Farm Bureau Federation will support any needed revision of law or regulation which will define more clearly reasonable and necessary reserves.

15. The American Farm Bureau Federation believes that a national soil-fertility program is essential to the long-time welfare of the Nation. The fertilizer industry should be encouraged to expand its plant capacity for the production and distribution of fertilizers. Farm organizations should acquire adequate natural resources of phosphate and potash and develop programs for the production and distribution of high-concentrated materials. The Tennessee Valley Authority should construct and operate an experimental phosphate plant, for a period of not to exceed 5 years. At the end of that time the plant should be disposed of to private industry. The TVA should acquire reasonable phosphate reserves in the Florida area. The phosphate and potash reserves in the intermountain area should be developed. A limited test demonstration program should be

provided for under the direction of the Secretary of Agriculture in cooperation with the land-grant colleges.

16. The foundation of the American Farm Bureau Federation's program is education and research. We urge the Congress to provide the full amount of funds authorized by law in order to carry out the agricultural education and research programs. Farmers are increasingly concerned over the failure of retail prices to reflect downward movements in the farm price of agricultural products. We believe research should be conducted on methods of making the free market operate more effectively. Expanded research and educational programs are essential for the continued development of American agriculture.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of a statement which I gave to the press yesterday on the subject of the St. Lawrence waterway. In this statement I pointed out that a victory for the seaway would enhearten friends of democracy throughout the world, and that a defeat would be a real blow to democracy and a source of joy to our enemies.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ENEMIES OF DEMOCRACY WILL REJOICE IF SEAWAY IS DEFEATED

I am confident that the St. Lawrence seaway bill can pass the Senate. We have already seen, however, evidences of the tactics of the opposition—suggesting more interminable delays, throwing up smoke screens, presenting a thousand and one picayunish questions to try to cast doubt on the reliability of the estimates of seaway proponents although those estimates have been attested to by the greatest engineers of the land in voluminous study for several decades. If the opposition persists in obstructionism, daily sessions of the Senate will be requested next week.

If we can enact the seaway resolution, as I firmly believe we can, it will serve to enhearten the friends of democracy throughout the world, because America will be able to ship abroad more food, more raw materials, more machinery, speedier and cheaper than ever before in addition to importing those items we need.

If we do not enact the seaway resolution, however, there will be rejoicing in Moscow which will have, as the old saying goes, "A horse's laugh" on the United States for a number of reasons:

RUSSIA WOULD MOCK OUR INCONSISTENCY

Foreign expenses

1. For one thing, the Russians would laugh at the ridiculous inconsistency of the United States which, following the war, has invested billions upon billions of dollars in UNRRA, in the International Bank, in postwar lend-lease, in the British loan, the Greek loan, interim aid, without even the semblance of expectation that it would be returned. Yet, the United States, if it turned down the seaway, would refuse to loan—loan, not give—to its own people a relatively small sum of $428,000,000 for the St. Lawrence seaway itself, including costs during the 6 or so years of construction, which come to the small sum of around $71,000,000 a year. The seaway plus the power project would only cost seven hundred and twenty millions—of which two hundred and thirty millions is in Canadian cost. In the last 14 years Uncle Sam has spent $1,615,000,000 on river and harbor projects alone in our country—not a cent of which in construction costs is reported to be repaid. Yet the seaway and power project would be self-liquidating in full.

Power crisis

2. The Russians would laugh because they would know that in the event of another national emergency, America would find itself desperately short of power. The Russians recognize that even now there is a terrific power deficit in the New England area (even while some men in New England are trying to sabotage this project which would supply more power than any other single American project with the exception of Grand Coulee). Meanwhile, the Russians are increasing their 1945 capacity in electrical energy by 2.1 times by 1950. The United States, however, expects to increase its capacity by only 1.3 times during that 5-year period. Thus, the relative advantage held by the United States in power is fast diminishing.

Rail bottleneck

3. The Russians would ridicule America which is even now finding its railroads a terrific bottleneck of transportation and yet refuses to develop the seaway which could help relieve the staggering load on our overloaded railroads.

Widespread endorsements

4. The Russians would sneer at us for the ineptness, the near-sightedness and the incredible stumbling of a constitutional republic, which, after 14 years of solid study and debate on this issue, after bipartisan endorsement by every American President—Wilson, Harding, Coolidge, Hoover, Roosevelt, Truman—after endorsement by the National Grange, the American Farm Bureau Federation, the National Cooperative Milk Producers' Federation, outstanding leaders of American railroads themselves and countless other leading individuals (Hull, Stimson, Byrnes, Stettinius, Dewey, Stassen, Hughes) and organizations, still questions the value of this mighty project.

Sectional versus national

5. The Russians would rejoice if the United States Senate succumbs to petty provincial sectionalisms, to the narrow greed of certain few selfish interests, seeking to maintain their financial grip in northeastern transportation even if it means sacrificing a national project as vital as this. The Reds would rejoice at the triumph of fear, fancy, folly, and frustration here.

Ignoring leadership

6. The Russians would be pleasantly amazed if the United States, which committed 14,000,000 men to the trust of our military authorities in the Second World War, were to refuse to accept the judgment of these same military authorities—the Joint Chiefs of Staff, General Marshall, General Eisenhower, and others, that this project would be valuable to national defense—as a great, 2,500-mile sea highway for importing Labrador ore and other items as well as exporting items.

BUSINESS SUPPORTS SEAWAY

The grounds of the opposition are a mass of misrepresentation, misrepresenting the views of the rank and file of American railway labor, misrepresenting the views of their own constituents who, for example, in the New England area, in New York State and elsewhere, have time and time again indicated their vigorous support of the seaway, although some of their leaders purporting to represent them, oppose the seaway.

Fifty-four percent of New England business in one poll favored the seaway, 55 percent of Mid-Atlantic business, 75 percent of North Central business, 55 percent South, 73 percent Midwest and 62 percent mountain, with a national average of 63 percent of American business for the seaway.

Conditions in Palestine

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. BREWSTER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement regarding the situation in Palestine and our own policies in relation thereto, together with certain memoranda dealing with the statutory and constitutional situation, as well as clippings from the New York Herald Tribune dealing with this matter.

Mr. President, the situation in Palestine is one which should invite the very earnest attention of every one concerned with the peace of the world. I do not take further time because of the other problems which are pressing, but I do hope this subject will have the considered attention of the Senate and of the country before it is permitted to drift into chaos and one of the worst menaces to world peace.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Maine?

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT ARMS EMBARGO AND RECALL OF PASSPORTS OF AMERICAN VOLUNTEERS IN PALESTINE

STATEMENT BY SENATOR BREWSTER

On December 1 of last year I stated in this very Chamber that "The United Nations has not only given birth to the new nation of Palestine, but must see to it that this infant shall be properly nourished and developed." Instead of nursing this infant, the State Department has recently placed a double-barreled embargo upon a people whose only objective is to defend themselves against willful and organized massacre. One, embargo on arms and defense ammunition going to the Jews; second, embargo upon those who are desirous to fight voluntarily for law and order in the new state. By these two embargoes our State Department permits the slow starvation and strangulation of the very state to the birth of which it has given its blessing.

It is difficult to understand just what the State Department proposes to accomplish by these two acts, unless it means to disavow its own policy, one made crystal clear by our underwriting of the United Nations decision to partition Palestine.

In the same speech of December 1, I submitted a proposal that through the mecha-

nism of the United Nations a volunteer force be organized to guarantee law and order in the new state. It so happens that a number of young Americans, who find themselves in Palestine today, have expressed their eagerness to help defend the rights of men, women, and children against Arab onslaught. Those young Americans wish to act as volunteers, but they must reckon with an embargo on their enthusiasm, which says, that they must remain idle if they wish to remain American citizens.

The action of the State Department in instructing the Consulate of Jerusalem to withdraw the passports of American citizens in Palestine who volunteered to help in the defense of the Jewish community and of the United Nations' decision, against brutal attacks, is extremely shocking. It is bad enough that neither the United States Government, nor the United Nations Security Council on which America is a leading member and often exercises initiative, has taken any steps to implement the United Nations resolution and to curb the brazen aggression of Arab States against Palestine in defiance of the resolution and of the United Nations Charter. It is bad enough that the American Government went out of its way to prohibit the export of arms to those who are today the only ones to defend the United Nations resolution in Palestine. But, this last action of the State Department, aimed at preventing American citizens from voluntarily defending an international decision, is so blatantly contrary to all tradition of American history, that one can only express one's amazement at the length to which the administration seems willing to go in an attempt to kill, by indirection, a policy which has been officially supported by it and agreed upon by the United Nations.

What exactly, does the Department of State wish to happen? Taking no initiative at the United Nations against the aggression of the Arab States; refusing to exercise its influence vis-à-vis the British Government to fulfill its responsibility in maintaining law and order; raising all kinds of objections to the project of creating an international force; cutting off the supply of arms to the Jewish community of Palestine now under attack; unwilling to have even American volunteers participate in the securing of international law in Palestine—though perfectly willing to send American troops to other areas; and now seeking to prevent the flow of high-minded American youth who, as private individuals, desire to come to the assistance of a righteous cause—the administration seems to be bent on making certain that the decision to establish a Jewish State, to which it gave ostensible support, be now permitted to die.

This enthusiasm of young Americans for a worthy cause is not without precedent. Before the last war many American boys enlisted in the Canadian Air Force, the British Royal Air Force, the Free French, and other Allies, before we declared war. I have my doubts that any of those who volunteered either had their passports recalled or lost their citizenship. Many American boys fought in the cause of Ireland, when that Nation after 800 years of struggle regained its freedom, independence, and standing in the family of nations.

And if we go back to our own Revolutionary War, when the Thirteen Colonies were fighting for their independence, we too, welcomed aid from France, Poland, and other countries without burdening their enthusiasm with conditions to renounce their national citizenship and adopt ours.

Memoranda on Statutory Authority for Arms Embargo

Statutory authority, pursuant to which shipments of arms and ammunition out of the United States may be curtailed by the President, is found in the act of July 2, 1940 (54 Stat. 714), which reads as follows:

"Sec. 6. Whenever the President determines that it is necessary in the interest of national defense to prohibit or curtail the exportation of any military equipment or munitions, or component parts thereof, or machinery, tools, or material, or supplies necessary for the manufacture, servicing, or operation thereof, he may by proclamation prohibit or curtail such exportation, except under such rules and regulations as he shall prescribe. Any such proclamation shall describe the articles or materials included in the prohibition or curtailment contained therein. In case of the violation of any provision of any proclamation, or of any rule or regulation, issued hereunder, such violator or violators, upon conviction, shall be punished by a fine of not more than $10,000, or by imprisonment for not more than 2 years, or by both such fine and imprisonment. The authority granted in this section shall terminate June 30, 1942, unless the Congress shall otherwise provide."

The termination has been variously extended and this section is in operation at the present time. The Secretary of State ordered discontinuance of shipments of arms to Palestine on December 5, 1947, and his reasons for that action are set forth in a press release dated December 5, a copy of which is attached:

"Department of State,
December 5, 1947.

"In view of the current disorders in the Middle East, the United States is discontinuing for the present licensing of all shipments of arms to the troubled areas. The shipments of arms and ammunition licensed to the countries of the Middle East area affected during 1946 and the first 10 months of 1947 are as follows:

Country	Description	1946	1947
Egypt	Arms	$50.00	$709.63
Do	Ammunition	658.10	222.17
Lebanon	Arms		800.00
Do	Ammunition		2,020.00
Syria	Arms		
Do	Ammunition		
Saudi Arabia	Arms		2,060.00
Do	Ammunition		306.44
Transjordan	Arms		
Do	Ammunition		
Iraq	Arms	432.00	
Do	Ammunition		
Palestine	Arms		
Do	Ammunition		

"Similarly this policy extends to this type of article which may be located outside the United States, including transfer and retransfer of lend-lease arms and ammunition and the sale of United States surplus arms and ammunition."

Memorandum

The basic authority pursuant to which the Secretary of State is authorized to license shipment of arms, ammunition, etc., to foreign countries, lies in the joint resolution (H. J. Res. 306) adopted November 4, 1939.

Section 12 sets up a National Munitions Control Board under the administration of the Secretary of State and subsection (d) thereof, reads:

"It shall be unlawful for any person to export, or attempt to export, from the United States to any other state, any arms, ammunition, or implements of war listed in a proclamation referred to in or issued under the authority of subsection (i) of this section, or to import, or attempt to import, to the United States from any other state, any of the arms, ammunition, or implements of war listed in any such proclamation, without first having submitted to the Secretary of State the name of the purchaser and the terms of sale and having obtained a license therefor."

This authority has been implemented by Presidential proclamation at various times and the current proclamation, No. 2717, promulgated February 14, 1947, is attached:

"Enumeration of Arms, Ammunition, and Implements of War [1]

[Released to the press by the White House February 15]

"By the President of the United States of America

"*A proclamation*

"Whereas section 12 (i) of the joint resolution of Congress approved November 4, 1939, provides in part as follows (54 Stat. 1!; 22 U. S. C. 452 (i)):

" 'The President is hereby authorized to proclaim upon recommendation of the National Munitions Control Board from time to time a list of articles which shall be considered arms, ammunition, and implements of war for the purposes of this section.'

"Now, therefore, I, Harry S. Truman, President of the United States of America, acting under and by virtue of the authority conferred upon me by the said joint resolution of Congress, and pursuant to the recommendation of the National Munitions Control Board, and in the interest of the foreign-affairs functions of the United States, hereby declare and proclaim that the articles listed below shall, on and after February 20, 1947, be considered arms, ammunition, and implements of war for the purposes of section 12 of the said joint resolution of Congress:

"Category I

"(1) Rifles and carbines using ammunition in excess of caliber .22, and barrels for those weapons;

"(2) Machine guns, automatic or autoloading rifles, and machine pistols using ammunition in excess of caliber .22, and barrels for those weapons; machine-gun mounts;

"(3) Guns, howitzers, and mortars of all calibers, their mountings and barrels;

"(4) Ammunition in excess of caliber .22 for the arms enumerated under (1), (2), and (3) above, and cartridge cases or bullets for such ammunition; shells and projectiles, filled or unfilled, for the arms enumerated under (3) above;

"(5) Grenades, bombs, torpedoes, mines and depth charges, filled or unfilled, and apparatus for their use or discharge;

"(6) Tanks, military armored vehicles, and armored trains; armor plate and turrets for such vehicles.

"Category II

"Vessels of war of all kinds, including aircraft carriers and submarines, and armor plate and turrets for such vessels.

"Category III

"(1) Aircraft (piloted), both heavier and lighter than air, unassembled, assembled or dismantled: (a) classified from the standpoint of military security; or (b) especially designed for warlike purposes; or (c) having a weight empty greater than 35,000 pounds;

"(2) Nonpiloted aircraft and guided missiles, unassembled, assembled or dismantled;

"(3) Any part, component, accessory, or device, of or pertaining to an aircraft either heavier or lighter than air, whether shipped alone or in an unassembled or assembled aircraft: (a) which is classified from the standpoint of military security; or (b) which (1) is not in general use in commercial aircraft and (2) is either especially designed for warlike purposes or adaptable substantially to increase the efficiency or performance of aircraft used for warlike purposes.

"Category IV

"(1) Revolvers and automatic pistols using ammunition in excess of caliber .22;

[1] 12 Federal Register 1127.

"(2) Ammunition in excess of caliber .22 for the arms enumerated under (1) above, and cartridge cases or bullets for such ammunition.

"Category V

"(1) Livens projectors, flame throwers, and fire-barrage projectors;

"(2) a. Mustard gas (dichlorethyl sulfide);

"b. Lewisite (chlorvinyldichlorarsine and dichlordivinylchlorarsine);

"c. Methyldichlorarsine;

"d. Diphenylchlorarsine;

"e. Diphenylcyanarsine;

"f. Diphenylaminechlorarsine;

"g. Phenyldichlorarsine;

"h. Ethyldichlorarsine;

"i. Phenyldibromarsine;

"j. Ethyldibromarsine;

"k. Phosgene;

"l. Monochlormethylchlorformate;

"m. Trichlormethylchlorformate (diphosgene);

"n. Dichlordimethyl ether;

"o. Dibromdimethyl ether;

"p. Cyanogen chloride;

"q. Ethylbromacetate;

"r. Ethyliodoacetate;

"s. Brombenzylcyanide;

"t. Bromacetone;

"u. Brommethylethyl ketone.

"Category VI

"(1) Propellent powders;

"(2) High explosives as follows:

"a. Nitrocellulose having a nitrogen content of more than 12.20 percent;

"b. Trinitrotoluene;

"c. Trinitroxylene;

"d. Tetryl (trinitrophenol methyl nitramine or tetranitro methylaniline);

"e. Picric acid;

"f. Ammonium picrate;

"g. Trinitroanisol;

"h. Trinitronaphthalene;

"i. Tetranitronaphthalene;

"j. Hexanitrodiphenylamine;

"k. Pentaerythritetetranitrate (penthrite or pentrite);

"l. Trimethylenetrinitramine (hexogen or T_4);

"m. Potassium nitrate powders (black saltpeter powder);

"n. Sodium nitrate powders (black soda powder);;

"o. Amatol (mixture of ammonium nitrate and trinitrotoluene)."

"p. Ammonal (mixture of ammonium nitrate, trinitrotoluene, and powdered aluminum, with or without other ingredients);

"q. Schneiderite (mixture of ammonium nitrate and dinitronaphthalene, with or without other ingredients).

"Effective February 20, 1947, this proclamation shall supersede Proclamation 2549, dated April 9, 1942.

"In witness whereof, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

"Done at the city of Washington this fourteenth day of February in the year of our Lord 1947, and of the Independence of the United States of America the one hundred and seventy-first.

"By the President:

[SEAL] "HARRY S. TRUMAN,

"G. C. MARSHALL,

"Secretary of State."

MEMORANDUM

Subject: Loss of United States nationality.

The controlling legislation on the subject of loss of United States nationality is contained in the Nationality Act of 1940, approved October 14, 1940. The pertinent direct quotes from the law read as follows:

"SEC. 401. A person who is a national of the United States, whether by birth or naturalization, shall lose his nationality by:

"'(b) Taking an oath or making an affirmation or other formal declaration of allegiance to a foreign state; or

"'(c) Entering, or serving in, the armed forces of a foreign state unless expressly authorized by the laws of the United States, if he has or acquires the nationality of such foreign state'."

To accommodate those persons who entered the armed services of other nations prior to our entry into the First or Second World Wars, Congress amended the Nationality Act on April 2, 1942, as follows:

"SEC. 323. A person who, while a citizen of the United States and during the First or Second World War, entered the military or naval service of any country at war with a country with which the United States was or is at war, who has lost citizenship of the United States by reason of any oath or obligation taken for the purpose of entering such service, or by reason of entering or serving in such armed forces, and who intends to reside permanently in the United States, may be naturalized by taking before any naturalization court specified in subsection (a) of section 301, the oaths prescribed by section 335. Any such person who has lost citizenship of the United States during the Second World War may, if he so desires, be naturalized by taking, before any diplomatic or consular officer of the United States abroad, the oaths prescribed by section 335. For the purpose of this section, the Second World War shall be deemed to have commenced on September 1, 1939, and shall continue until such time as the United States shall cease to be in a state of war. Certified copies of such oath shall be sent by such diplomatic or consular officer or such court to the Department of State and to the Department of Justice (as amended by the act of April 2, 1942)."

[From the New York Herald Tribune of January 28, 1948]

ACTION ON PALESTINE

While the United Nations Commission prepares the report due February 1, the situation within Palestine steadily deteriorates. What had been plain to many observers from the beginning—that partition could not succeed without being enforced—is now too plain for anyone to deny. Yet the means of enforcement are still far from being put into effect, to say nothing of being generally agreed on. The major constructive move of UN, the best example of cooperation between the western countries and Russia, and a policy to which our own country stands deeply committed, all are in jeopardy because men have not been able to act according to the clear compulsions of necessity and interest.

The timetable of the steps which were to lead by next October to the establishment of a new Jewish state has already been cast into the discard. A port will not be opened to substantial Jewish immigration by the beginning of February. In all likelihood, provisional governments for the Jewish and Arab areas will not be set up by the beginning of April. What will ensue when Britain's withdrawal is completed by August becomes increasingly problematical, in view of fighting which seems to be changing its character from spasmodic riots to settled war.

The United States cannot undertake by itself enforcement of the partition plan, nor should it seek by unilateral action to arm the present Jewish militia for their own defense. But our direct stake in a solution, derived from a humanitarian concern for the Jews, a belief in UN, and a strategic interest in the Middle East, permits no evasion of responsibility. The United States must act, and the obvious form of action is through UN, demanding that the Security Council take immediate steps toward a settlement. The amount of force that will be required to reach the settlement will diminish in proportion as we move swiftly and place the whole force of our prestige behind that of the international organization.

[From the New York Herald Tribune of January 27, 1948]

CHAOS IN PALESTINE

COST OF TIMID PROCRASTINATION

(By Sumner Welles)

Within the past 8 weeks, Palestine has become a shambles. Open warfare, carnage, assassination, and reprisals are the order of the day. The tally of the dead and injured is mounting hourly. To an increasingly callous public, Palestine seems to have already become just one more tragedy in a world that is filled with them.

There is all too little recognition in this country of the danger to American security and of the threat to the survival of the United Nations that are inherent in this drift toward chaos.

Our national effort is now directed toward the preservation of the independence of Italy, Greece, and Turkey as the surest means of preventing Russian domination of the Mediterranean. If large-scale hostilities break out in the eastern Mediterranean, which enable the Kremlin legitimately to claim that Russia must take armed action to safeguard her vital interests by restoring peace in a region adjacent to her frontiers, is it likely that our policy will be successful?

The Arab Higher Committee has informed the Secretary General of the United Nations that it will try to prevent the establishment of an independent Jewish state in Palestine by every means within its power. This is a flagrant violation of the solemn commitments into which the Arab states entered when they subscribed to the United Nations Charter. It is nothing more nor less than a declaration of war upon the United Nations.

The newspapers in Syria and in the Lebanon openly boast of the recent invasion of Palestine by troops equipped and trained in those two countries. One hundred and ten Egyptian officers have been granted 6 months' leave with full pay to command Arab volunteers in Syria. The Egyptian Government has appropriated $2,000,000 to help to arm the Arab forces fighting against partition. The Cairo press reports that arms and ammunition are being sent by friendly governments to Arab League headquarters for the use of these forces.

The Arab League would never have dared pursue this policy of defiance had the Arab states known from the outset that the United Nations was able and prepared to enforce its partition decision.

In the final days of the Assembly debate the United States suggested the establishment of an international volunteer constabulary to serve in Palestine. The proposal was obviously ill-advised. These volunteers could not have been adequately screened. The Soviet and American Governments would each have claimed that such a constabularly was a Trojan horse containing agents of the other. The suggestion was fortunately rejected.

When the partition resolution was finally adopted it included a mere appeal to both Jews and Arabs to create local militias. Such a recommendation, without any provision for United Nations control, was tantamount to an incitement to conflict.

Until now, the United Nations Palestine Commission, set up by the Assembly to supervise partition, has done nothing more effective than discuss how such militias could function or whether the Security Council should be asked to intervene.

The Security Council, notwithstanding the acts of aggression committed in Palestine, and notwithstanding its clear-cut obligations under article 39 of the Charter to take action "to maintain or restore international peace and security," continues to be silent. And in this case, since the Soviet Union officially supports partition, the veto is not the cause of inaction.

If the wave of anarchy in Palestine spreads further, human passions will soon be out of control.

The British Government persists in its stultifying policy of noncooperation. But the blame for what is going on should be laid primarily upon the United Nations for its timorous procrastination. It should also be laid upon the United States for its failure to assume leadership before the adjournment of the Assembly by insisting that adequate measures be taken to prevent this threat to the peace of the world, which could then already be clearly foreseen.

If the United Nations either will not or cannot enforce such decisions as its decision upon the partition of Palestine, it cannot survive.

I long since urged in this column that the measure that could best prevent the outbreak of a major war in the Near East, and at the same time avoid increased antagonism between the United States and the Soviet Union, was the dispatch by the Security Council to Palestine, in accordance with article 43 of the Charter, of a United Nations police force composed of small contingents from the regular military establishments of five or more of the intermediate or lesser powers.

A token force should be sent immediately to Jerusalem as a symbol of United Nations authority. This should be gradually increased to replace the British troops as they evacuate. There is no plan that has yet been suggested that can prevent rivalries between the major powers, keep the peace in Palestine, and restrain the ambitions of the Arab League.

If the whole of the Near East is not soon to be aflame in a devastating conflagration, if our own national policy is not to fail ignominiously, and if the United Nations is to preserve any semblance of authority, instant action by the Security Council is imperative.

United Nations in 1948

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. TAYLOR. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address on the subject United Nations in 1948, broadcast December 31, 1947, by Arthur Gaeth, the well-known commentator.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Truman greeted his last news conference of the year today voicing confidence that the world will achieve a workable peace through United Nations in spite of difficult 1947.

When Mr. Panyushkin presented his credentials, the President told the newly appointed Soviet Ambassador that both Russia and the United States must show a mutual spirit of good will and confidence in solving the present world situation.

In Vatican City, the Pope pleaded with the great powers to remember that peace is indivisible. He emphasized that the Holy See does not accept the thesis that the year 1948 may be the most disastrous in history.

The stories of the President's personal physician, Dr. Graham, and his brokers, Bache & Co., do not agree. Graham said he had been an unwitting speculator in grains. The company said, "Tain't so; he'd been a customer since 1946 and all transactions were made with his knowledge."

In a few hours we will enter what may be one of the most perplexing of years. Certainly it will be exciting. First of all it will be a grab-your-man year. Then, we will have national elections. Mr. Wallace added to the perplexities when he threw his hat into the Presidential ring on Monday. Speculation has it that as a result Mr. Truman can't win. Mr. Wallace couldn't win anyway so that the Republicans will be able to turn to the politico's favorite, Mr. TAFT, and he'll be the next President.

But, not so fast. Not so fast. Anything can happen. The Republicans have promised they would open every session of Congress with a prayer and close it with an investigation. They are in an uncovering mood. Their Senator BREWSTER is now in Arabia risking his neck but looking into oil. He thinks there is something unsavory in that oil area. Syria and Lebanon refused to let him into their country. The State Department frowned, but he is there, and he is investigating. The Republicans can uncover and make their political opponents look bad but they cannot cover up a congressional record—that they must make.

Nineteen hundred and forty-eight will not be a year to chart in advance. Top administration economists talk about no depression and prosperity in 1948. But the way things are going, we won't need a depression for many people to get hurt and then take it out on someone in voting.

For example, in 1947 we had a national income which increased 12 percent or $22,000,000,000 over 1946 but that huge buying power couldn't force down prices. Agriculture didn't increase production one bit. While industrial products increased 9 percent, the goods we stocked in warehouses and on shelves went up one-fifth or $8,000,000,000. While you and I spent almost $28,000,000,000 or 22 percent more money in 1947, the purchasing power of our wages and salaries in terms of what they bought before price control was wiped out was actually 6 percent less.

If conditions continue as they are—and Congress has done nothing to change them in spite of all the talk—Mr. Truman told his press conference today they didn't even give him a slice of bread with their legislation instead of what one correspondent called a half a loaf—if conditions continue, some economists think the cost of living can rise another 25 percent in 6 months—that Congress may be forced by May to vote price control and rationing. Republican Senator WILSON of Iowa recently told his colleagues to quit kidding the public. While buying power hasn't increased and people are taking from their savings—while the national income went up 12 percent corporation profits after taxes went up 33 percent—a disproportionately large gain. No wonder the President's economic advisers stated in their report of December 13 that "the accumulations of capital over the years * * * involved deprivations of the rank-and-file worker and that our system cannot go on progressing or even functioning efficiently unless its expanding product goes to all potential consumers."

All this plays a role in the way people vote. In spite of Mr. Wallace, the Republicans have no election security.

It is with their foreign policy the Democrats can have trouble, not only from the Republicans but from the electorate. They have operated on a crisis basis. Now, if the next crisis were to include sending troops abroad—American mothers and fathers might do some deep thinking.

Greece is still in a crisis. Walter Lippmann wrote on Tuesday that it might not be the Yugoslavs or Russians who are making that crisis but the actual conditions inside Greece. Our people who said last March that if we would only let the Greeks have $300,000,000 and 78 advisers, that would pull them out of a hole—are now saying we must let the Greeks have two divisions of our soldiers—then they'll pull through—otherwise our reputation is at stake. We are feeding 100,000 Greek soldiers—have sent them 74,000 tons of military equipment. And the 20,000 guerrillas seem to be gaining in strength. Are the Russians and their supporters responsible? Much closer to the truth may be the fact that the people lack confidence in their government. Now that a revolutionary government exists, more Greeks may actually try to get in touch with it, continuing to undermine the monarchist regime—so that our "Operation Rathole" can continue indefinitely. It could cost us another billion.

A new clamor has begun for China—not only that we send supplies but also hurry up some troops, or Chiang will be beaten. In Nanking, President Chiang Kai-Shek today called for an end to the Communist menace which he said came from within and from without. To keep the record straight—Henry Stimson, Republican in President Roosevelt's Cabinet, stated in his biography—excerpts which have been published in the Ladies Home Journal—that during the war the United States offered to train Chinese divisions but Chiang opposed. Stimson says the whole Chinese regime was riddled with graft and personal power politics—that Chiang's entire preoccupation was with keeping himself in power. Chinese leaders cried for our help but they wouldn't help themselves. Now that the times are catching up with Chiang—advocates of the American century want to pour American wealth into China.

Over in France there is trouble. Certain Americans have begun flirting with De Gaulle. While Stimson was in favor of supporting him during the war, he said about De Gaulle that he had inextricably confused the cause of France with the cause of General de Gaulle. Roosevelt regarded him as a narrow-minded French zealot with too much ambition for his own good and some rather dubious views of democracy.

It is in this field of foreign affairs that Mr. Truman and the State Department may have their biggest troubles with the voters. Our policy backs national leaders who can be accused of not having had the best interests of their own people at heart. Our policy aims to aline the American public with causes which in the long run will not succeed, while they bring us the animosity and antagonism of the Chinese, Greeks, French, and others, for intrenching such leaders—and the American people pay for it.

To keep out of those rat holes will not be easy. There are Russian and American power politics involved. Both countries have sought to weaken UN, an institution they cooperated to create. There is no hope of escaping the inevitable result of power politics in an atomic era. Over 300 years it has only led to war. There is hope in collective security—where no nation can have its own way, where there must be compromises—and where patience and faith must be maintained if the long-range goals of peace and a world in which all people can exist

in spite of environment and belief—are to be maintained.

Tonight, on the eve of a new year—a year in which the most important problem confronting world peace is that of blunting the horns of the Russian Foreign Commissariat and the American State Department and turning them back to graze in the international pasture with the rest of the world—I asked the Secretary General of the United Nations for a special New Year's message. The man who will speak to you by transcription is a 51-year-old Norwegian—son of a carpenter, Oslo University graduate, long-time labor lawyer, and Norway's Foreign Minister during the war. He is a man given to much common sense, not easily discouraged in causes for the interest of humanity. The Honorable Trygve Lie, Secretary General of the United Nations:

"Throughout the world, tonight, men and women and children say farewell to another fateful year and turn their thoughts to a fresh New Year, full of hope that it will bring them a better future.

"The year 1947 was the second full year of peace after the Second World War.

"We could not have expected that this period, in the immediate aftermath of a world catastrophe, would be free of troubles.

"What we did hope for was steady progress back toward a normal world, in which human beings could pursue their lives in freedom from fear and hunger and the many problems which afflict humanity.

"We hoped that this year would help to dissolve the differences which have divided the great powers since the war—that it would restore the feeling of comradeship which brought them victory.

"Some of those hopes have been realized. Many countries which were stricken by the war have begun to recover economically and to restore to their peoples a fair degree of normal living. Other peoples have realized aspirations for independence which they have cherished for many generations.

"In the councils of the United Nations the member nations have found it possible to come to agreement on many matters which affect the well-being of the world.

"Yet we have been disappointed in the greatest hope of all—the hope that the great powers would be able to move, definitely and progressively, toward an understanding on the questions which divided them.

"This lack of understanding has prevented us from achieving all that we should have achieved in relieving the plight of tens of millions of suffering human beings.

"Let us look these facts full in the face as we turn toward the year to come. Let us, above all, not forget for one second that our first duty in these tragic times is our common, collective duty to improve the situation of these miserable millions of our fellow men.

"In this situation we all have one thing in common—the United Nations. In the Charter we have a solemn and binding set of principles and an agreement regarding the methods which we must follow in realizing those principles. Today 57 nations subscribe to those principles. These 57 nations meet regularly to settle their differences in accordance with the rules laid down in the Charter and to devise methods by which they can accomplish the constructive goals of the Charter.

"During 1948 we must continue to hope for a change in the tide of disagreement between the powers, so that we may be allowed to move more swiftly forward in settling our problems. We must never give up hope for an agreement and we must never stop working for it.

"On the other hand, and at the same time, we must make the most of what we have. We must stand behind the United Nations and increase its strength. We must believe in it and we must make sure that other people believe in it. Its prestige must be so great, in the minds of all people, that it will be able to defend, and to practice, the principles for which it stands.

"With the combined support of ordinary people, all over the world, the United Nations stands today as a mighty barrier to war and the hope of all mankind for a better world. Believe in it, work for it, defend it during the years to come."

Thank you, Mr. Lie. It is the hope for the future we dare not lose. We must back it with support for the United Nations, insisting that our leaders must not bypass instruments of cooperation, faulty as they may be, until better ones are achieved—that going our own headstrong way because we have power makes only for war and not for peace.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD two statements on the St. Lawrence waterway which I have issued today, as well as an editorial on the same subject from the Detroit News of January 26.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

COMMENTS ON PROPAGANDA CAMPAIGN AGAINST ST. LAWRENCE WATERWAY

The worst propaganda deluge of half truths and untruths has assailed the Members of Congress on the St. Lawrence waterway, surpassing the propaganda barrage, I believe, of any previous issue in the Eightieth Congress. All sorts of letterhead organizations, inspired by a certain few selfish interests, have poured in a mass of unjustified criticisms of the St. Lawrence seaway in a futile hope, I believe, to defeat the project.

Even distinguished organizations like the railroad brotherhoods, from which we might have expected a more forthright approach, have deluged their members with fear propaganda to the effect that railroad jobs would be destroyed by a project which would actually create thousands of new railroad jobs and would have an insignificant, if any, adverse effect on existing railroad jobs.

A whispering and rumor campaign has been set in motion against the St. Lawrence seaway too. Among the false rumors and innuendos is the one to the effect that the St. Lawrence seaway will compete with funds which would otherwise have been made available to other projects throughout the United States. This is a base rumor, which should be nailed as a complete fabrication.

The St. Lawrence seaway actually involves insignificant appropriations, probably around $70,000,000 at the most, for each of the years of its construction. It would be ridiculous to assume that this small sum would detract from the hundreds of millions of dollars which we are spending for other domestic purposes. The seaway is entirely unique, a natural sea artery presented to us almost complete by nature and unlike any other project anywhere else in our land.

The opponents of the St. Lawrence seaway stand accused before the American Nation of unleashing this fear campaign, a campaign designed to arouse the most provincial, sectional feelings, the most selfish interests, rather than to appeal on a national basis to the common sense and wisdom of the American people in looking after the interests of their entire country.

COMMENTS ON ST. LAWRENCE SEAWAY

The headlines in every American newspaper regarding America's current problems belie the ridiculous contentions of the opposition to the St. Lawrence seaway, which are fantastically out of step with our times. The headlines tell us of a fuel-oil shortage because of lack of transportation, which the St. Lawrence seaway might have helped divert, if it had been previously established.

The news of the terrific bottleneck in shipment of foods via rail also serves to render ridiculous the assertions of the seaway's opponents that this new 2,500-mile sea artery is not necessary. Reports of Russian industrial and electrical energy expansion abroad are a further stark commentary on the incredible short-sightedness of opponents of the waterway.

Opposition to the waterway on sectional grounds is obviously wholly unjustified because of its value to national defense and commerce and because no harm would actually be done to any single section of the country by the waterway. On the other hand, opposition to the seaway on national grounds is even more ridiculous because of the testimony of the Joint Chiefs of Staff to the national defense value of the seaway as well as the endorsements of every leading American political figure—every President since Harding, on the national importance of the seaway.

If the opposition to the seaway succeeds in once again delaying this project, it will have on its conscience the guilt of delaying the natural development of our country and of sabotaging, in part, our future progress and military defense.

[From the Detroit News of January 26, 1948]

MIDWEST WANTS ROUTE TO THE SEA

"The perpetually 'dream-walking' St. Lawrence plan seems a reverie beneficial only to a small Great Lakes section—and Canada."

This observation winds up a Boston Herald editorial on the seaway, which in several other respects is careless with the truth about the project.

The small section to be directly benefited by the seaway includes some 40,000,000 Americans, almost the population of Great Britain. It includes 46 percent of American manufacturing capacity, 85 percent of the steel industry. It includes a very large part of the country's food production.

This section, though landlocked, originates a respectable portion of American foreign trade, which with opportunity would be bigger. It wants access to ocean transportation, which Boston has.

It feels that, if it is all right to spend Federal money on deepening Boston harbor, it is equally right to spend on damming and flooding out a few miles of St. Lawrence rapids that alone bar deep-draft navigation from the Great Lakes to tidewater. However, the seaway plan now calls for ship tolls, plus electric power revenues, to repay the cost in full, making it no burden at all on the Treasury.

The seaway is a dream, yes; yet much more than a dream.

It is a project, for which blueprints long ago were ready, the test bores made for the navigation and power works. During its 30 years as a project, it has been studied as to potential traffic and economic benefits, local and national, far more thoroughly than any public project in American history.

And that includes even the Panama Canal, which had to overcome a similar campaign of lying misrepresentation.

Seven Presidents of the United States have urged construction of the seaway, and all

that has stood in its way has been the kind of dog-in-the-manger opposition typified by the Boston Herald's sneer at Midwestern aspirations.

This project may in fact remain perpetually a dream, until the Middle West at long last gets mad over that sort of thing and strikes back.

That "small section," besides people and industry, also has votes. It has plenty, for example, to block the harbor improvements for which Boston, New York, and the rest so cheerfully expect midwesterners to pay.

Ideology or Balance of Power?

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding and excellent article entitled "Ideology or Balance of Power?" by William G. Carleton, reprinted from the Yale Review. Mr. Carleton is professor of political science at the University of Florida. I am informed by the Public Printer that it is estimated the article will make 2⅓ pages of the RECORD at a cost of $165.67.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IDEOLOGY OR BALANCE OF POWER?

(By William G. Carleton)

If you are a teacher of a college class in international relations, as I have been for the past decade, the moment will inevitably come that you half dread and half eagerly welcome: one day some student will rise and ask the $64 question. "Professor," he will say, "are we Americans wary of Russia because we fear communism or because we fear that Russia will upset the balance of power? Which is more important—that thing we call ideology or the balance of power?" That question raises the fundamental philosophic issue of our time—the issue which goes to the very heart of international relations.

What is the chief element in formulating the foreign policy of a nation? Is it ideology or is it balance of power? Is it both? If both, which weighs the more?

Did Sparta and Athens fight the Peloponnesian War because of the conflict of their social and political systems or because each feared the collective power of the other? Was Whig Britain at war with Bourbon France because of the rivalry of different institutions or because of the clash of competitive imperialisms? Did Burke's Britain fight revolutionary France because of Tory fear of the Jacobins or because Britain feared for the balance of power? Did the United States go to war with Germany in 1917 and again in 1941 because of a conflict of cultures or a conflict of power?

What is this thing called "ideology"? There are, of course, ideologies and ideologies, and the term needs clarification.

Nations differ from each other in cultural and institutional patterns. But institutions inside nations are forever undergoing changes. These changes bring on institutional conflict within nations. Some fear these changes while others favor them. Very often the institutional conflict taking place inside one nation is at the same time also taking place inside other nations. In other words, the struggle for institutional change often cuts across national boundaries.

In one age, the emphasis is on one aspect of cultural or institutional change; in another age, the emphasis is on another aspect. In the sixteenth century and the early seventeenth century, the chief institutional conflict inside countries involved religion. In some countries the Protestants won, and in other countries the Catholics won. But inside Protestant countries, there were Catholic minorities, and inside Catholic countries, there were Protestant minorities. Later, the chief institutional conflict was over constitutional and representative government. In some countries constitutional government won, and in other countries absolute monarchy held its own; but in countries where constitutional government won, there were still those who clung to the divinity of kings, and in countries where absolutism won, there were minority groups which favored constitutional and representative government. Still later, the chief institutional conflict was over political democracy. However, in countries where democracy triumphed, there were minority groups which opposed it, and in countries where democracy made little headway, there were minority groups which championed it. Today, in this middle of the twentieth century, the chief institutional conflict centers around the ownership of productive property. The struggle is one of capitalism versus some form of collectivism. Inside almost every country this struggle is taking place in one way or another. In some countries collectivism is farther advanced than in others. Those in one country who favor collectivism find themselves in sympathy with those in other countries who favor it. Those in one country who oppose collectivism find themselves in sympathy with those in other countries who oppose it.

The decisive institutional conflict of any age has come to be known as the ideological conflict. While, in general, that conflict was in the seventeenth century waged over religion, in the eighteenth century over constitutional and representative government, and in the nineteenth century over political democracy, in the present century it is being waged over socialism.

That the institution or ideological conflict is waged inside many nations at the same time, that the new institution struggling to be born is farther advanced in some countries than in others, that this conflict cuts across national lines and leaves people and groups within the various countries with ideological sympathies for similar groups in other countries—all of this enormously complicates international relations. International wars often take on the appearance of deep-seated ideological conflict involving not only national interests but future institutional and cultural development. Men who belong to minority groups are often torn between two loyalties—loyalty to ideology and loyalty to nations. Such men may be damned as Trojan horses and fifth columnists if they follow their ideological impulse; they may be damned as disloyal to their ideology if they follow their national impulse.

What if a situation arises in international policies in which ideology and national interest do not coincide? In that case, which is put first by those who conduct the Nation's foreign policy—ideology or national interest?

As we look back on the past, it seems that, when the hour of decision struck, the national urge was generally stronger than the ideological. During the Thirty Years' War, in an age when the chief ideological conflict was religious, Catholic France went to the aid of Sweden and the German Protestants in their conflict with Catholic Austria. To Cardinal Richelieu and other French leaders of the day it was more important for France to check Austria, for the Bourbons to humble the Hapsburgs, than for Catholics to stand together against Protestants. In the late seventeenth century and in the eighteenth century, it usually seemed more important to the absolute monarchs of Vienna and Berlin to check the French nation than that Hapsburgs, Hohenzollerns, and Bourbons should stand together in ideological alliance to maintain absolutism against the slowly rising tide of constitutionalism. Britain fought Bourbon France, Revolutionary France, and Napoleonic France, for while the ideologies shifted and changed, the national rivalry and imperialist conflict did not. In more recent times, Tsarist Russia has been allied with republican France, democratic Britain with oligarchic Japan, democratic America and democratic Britain with Communist Russia, and Communist Russia with Nazi Germany. National interests make strange bedfellows—in the face of a threat to the balance of power, nations will make alliances with the ideological devil.

Where, in general, the dominant ideology within the Nation and the national interest do coincide, in what direction have the ideological minorities usually gone? In a crisis, what have these minorities done—have they followed their ideologies or their national patriotisms? In the past the tug of national loyalty has generally won out over ideological persuasion. British Catholics rallied to Elizabeth in her fight with Catholic Spain. Charles James Fox's Whigs rallied to Pitt in the national fight against Napoleon. And in the two global wars of this century the Socialists did what they boasted they would never do—in the main, they rallied to the national standards. A Coriolanus and an Alcibiades, a Vallandigham and Petigru, a Quisling and an Einstein, a Laval and a Thomas Mann are relatively rare in history. (This is, I know, an incongruous list of saints and sinners, but they have this one thing in common: in one way or another, all sacrificed homeland for ideology.) And should all our hopes of peace collapse and the future see a third world war involving the Soviet Union against the United States, it is still a safe prediction that Eleanor Roosevelt and Col. Robert McCormick, Max Lerner and Hamilton Fish, Philip Murray and John Bricker, Henry Wallace and Lawrence Dennis would be fighting side by side in the name of national interest and national survival.

However, it would be a mistake to come to the conclusion that because ideology has not played the leading part in historic international relations it has played no part at all. It has played its part, an important part. Where national interests and dominant ideology within the Nation coincide, a national war can be made to appear an ideological one, morale can be strengthened, and enthusiasm intensified. If a nation possesses considerable ideological unity it will be in a stronger position to win a war, if a nation's enemies are ideologically divided those enemies will be more susceptible to fifth-column tactics. When a country is rising to challenge the old balance of power, nations thus threatened will make alliances more easily and earlier if they have similar institutions and cultures; alliances will be more difficult and will come later (perhaps too late) if the nations thus threatened have dissimilar institutions and cultures.

Just as national interests and balance-of-power considerations seem to have been the most important causes of war, so also they seem to have been most affected by war. The results of international wars seem to have been more significant in their national and balance-of-power aspect than in their ideological aspect. The Grand Alliance against Napoleonic France checked France and saved the European balance of power but did not succeed in arresting the spread of revolutionary ideas. The Grand Alliance

won the war nationally but in the end lost it ideologically. However, when nations outside of France became more and more influenced by French revolutionary ideas, those ideas took on the appearance of being their own—they were assimilated into their own national cultures. Again, at the close of the First World War, it appeared that middle-class democracy would triumph in the world, but now we can see that instead, the First World War marked virtually the end of the advance of middle-class democracy in any large areas of the world. However, the First World War did parry the German threat to the balance of power; it did temporarily satisfy the national interests of the victors; the war was won nationally even though it was lost ideologically. Again, the victory of the United Nations in the Second World War saved the world from a second German threat to the balance of power—that much is certain. Perhaps, it will also have hastened socialism, but, in any event, the ideological results are not so clear as the national ones.

It seems, then, that the influence of great wars on the cultural and institutional trends of the time is exaggerated. These trends arise out of conditions and forces operating within the nations. Wars affect them. Wars may accelerate these trends or slow them up. Wars hardly create them.

The Marxists would claim that what appears to be the national interest has in fact been primarily the interest of the dominant class in control of the state and that class interest has governed the foreign policy of national states and involved national states in wars for class ends. The great national wars, according to Marxist doctrine, have been wars in the interests of the dominant economic classes in the warring nations—conflicts of rival imperialisms. Where, in the past, ideology has seemed to split the dominant class, such ideological conflict, according to the Marxists, has been superficial or at least secondary to that class' economic interest. When a threat has appeared to the economic interest of the dominant class, these secondary ideological ranks have been closed in the class interest masquerading in the name of the nation. Of course, say the Marxists, the Catholic landlords and businessmen of Elizabeth's day rallied to the fight against Catholic Spain because their profits were involved. Of course, the Marxists say again, the Charles James Fox Whigs, enamored though they were of many of the principles of the French revolution, rallied to the war against revolutionary France because their dividends from the British East India Co. and from many another chartered company were at stake. (They fail to recall that the peace party in Britain led by Fox did not actually rally to the war until France under Napoleon had threatened to control the Channel and invade Britain.)

To be sure, the great conflict is ideological, say the Marxists—an ideological conflict between the exploiting capitalists and the exploited workers—and when this ideological conflict comes to the fore and cuts across national states, then the conflict between nations will be seen to be a sham and a swindle, the ideological factor will become stronger than the national factor in international relations, national wars will be converted into civil wars, and the erstwhile dominant economic class, now embattled, will find it more and more difficult to cloak its class interests in the garment of nationalism.

It may be that the Marxists are correct as to the future. It may be that the ideological will supersede the national as the No. 1 factor in international relations. It may be that now the great institutional conflict within nations has come to be directly economic (and not indirectly so, as in the case of many of the ideological conflicts of the past) and the fundamental issue easier for all to see, that more and more will men respond to the class and ideological appeal rather than the national appeal. And if men more and more are learning to think as the Marxists do (the postwar elections in Britain and especially in Continental Europe indicate that they are) then it is quite possible that our century will see international relations conducted in fact and in name more along ideological than national lines. Indeed, the Second World War was in many ways a series of civil wars, with Socialists and Communists in Axis countries praying for an Allied victory and fascists in Allied countries supporting collaboration with the Axis. Ideological minorities were cooperating with the national enemy on a scale never equalled in the days when Protestantism or constitutional government or political democracy was the pivot of ideological conflict—though perhaps some of this cooperation should be credited to the increase and improvement in the means of communication. And today, Henry Wallace speaking to Britain in a way hostile to the views of a majority of his own countrymen or Winston Churchill speaking to America in a way hostile to the views of millions of Left-wing Britons is another example of how in our time ideology cuts across national boundaries.

At present, the United States and the Soviet Union face each other as the predominant powers of the earth. Each is viewing world politics in a different light from the other.

Our policy-makers are thinking more in the old terms of nationalism, self-determination, and the balance of power. Soviet influence on leftist parties the world over is looked upon largely as old-fashioned aggression and imperialism. There is widespread fear that Russia as Russia will upset the balance of power in Europe and Asia. Poland and Rumania and Bulgaria and Yugoslavia and China are appealed to by our Government on the basis of national self-determination. (National self-determination, once a liberal rallying cry, has become also a conservative shibboleth.)

The Soviet leaders, on the other hand, are thinking more and more in terms of idealogical conflict, class warfare, social politics. To Soviet policy makers the contest in the world today is not so much one between the United States and Russia as it is between world fascism and world communist. And those in other countries who follow the Soviet lead take much the same view. Communists and extreme leftists the world over are giving their allegiance not so much to nations as to ideology. Russia is merely the instrument to be used in spreading ideology. Moscow influences Communist parties in all countries, and Communist parties everywhere influence Moscow. There is common indoctrination, consultation, cooperation. It is a two-way street, though the preeminence of Russia in the movement makes the outgoing counsel from Moscow weightier than the incoming counsel.

If a third world war should come—a war between the United States and the Soviet Union—for millions of leftists the world over that war would be viewed almost exclusively as an ideological one. In countries where the extreme left is in control, national policy would be made less on the balance-of-power idea and more on ideological considerations. In the United States, where Marxist ideas have scarcely penetrated at all, the war would be viewed in the old nationalistic terms. It would be a war to protect our shores from invasion, to uphold the balance of power, to save the world from Russian domination. As has already been said, in a final show-down nearly all of us would stand together. Our Communist fifth column would be smothered by the avalanche of nationalistic sentiment. American psychological warfare abroad would naturally reflect our own view of the situation, and we should probably err on the side of making too much appeal to nationalistic sentiments, which in large areas of the world would be effective only in rightist circles. Our own failure to take into account the enormous strides the ideological point of view has made among the masses of people in Europe and Asia in recent decades, and particularly since the Second World War, might betray us into making very serious mistakes in the conduct of that war.

Should the Communists eventually win control in important countries outside Russia—in China, in Germany, in France, in Italy—it is quite possible that ideology would triumph over nationalism and a new international state emerge. After all, the nations themselves were built not so much on contract as on class and functional foundations. The feudal states of western Europe were put together into national states by the rising bourgeoisie joining hands across the boundaries of feudal provinces and communes. Just as the national state (which sometimes cut across nationality) was made by the bourgeoisie, so a new international state may be made by the cooperation of leftist parties joining hands across national boundaries. If an international state should come about in this way, then, of course, the old balance of power as played by national states will be relegated to the historical limbo. The Communists still confidently expect that communism will lead to such an international state.

Of course, the Communists may be wrong about this. Nationalistic forces may be stronger than Communist intentions. When the Communists come into actual power in a country they inherit the national paraphernalia—the nation's history, culture, aspirations—and concessions have to be made to them. The Russian Communists have made many concessions to nationalism. The Chinese Communists have often pursued a course independent of Moscow, and if they should gain actual power in all China they might have to follow an even more independent course. Thorez, Communist leader in France, says over and again: "Different countries, different methods." And the moderate Socialists, even more than the extreme Socialists or Communists, have, of course, made many more concessions to nationalism and have proclaimed this as a virtue. Moreover, if the United States should use the moderate left (Socialists) to check the extreme left (Communists), such a policy might help to prevent a third world war and also help to halt a trend toward a Communist world state with the Soviet Union as its nucleus. Then, too, it is even possible, as Edward Hallett Carr has suggested, that in a state where everybody's work and wages and social security are dependent upon government, where the mass of people will seem to have as direct a stake in the national government as at one time only the bourgeoisie enjoyed, the mass of people may feel even more keenly their tie to the national government, and Socialist states might end by being a nationalistic or even more nationalistic than bourgeoisie states. If this should turn out to be the case (although the Marxist analysis that private ownership of the productive processes and private profits are the basis of imperialism and international conflict may prove to be sounder) then socialism, like the Commercial Revolution and the Protestant Reformation and the French Revolution and the early stages of the Industrial Revolution before it, will have ended by intensifying nationalism, in spite of the aims and intentions of many of its disciples. And then, should socialism spread and thus turn out nationalistic, the old historic pattern of the national balance of power would continue the dominant role in international relations, even though Socialist and Communist states remained nominal members of an international organization like the United Nations.

Of one thing, I think, we can be sure; even the creation of an international Communist state would not end the conflict over power. Within the international state would be dif-

ferent social and economic groups with different interests. They would fight for control, just as groups and classes within national states now fight for control. The international state would end the national balance-of-power conflict, but it would not end the ideological conflict inside it. The ideological conflict of the future will be different, but it will continue in some form. Even if the Marxists should achieve one-half of their ideal, the international state, they would not succeed in achieving the other half—the abolition of all its internal group differences. Within the international state would be geographical sections, cultural diversities, a wide gamut of different industries and economic enterprises, and various social classes: commissars, managers, unskilled technicians, skilled workers, unskilled workers, farmers, and so forth. These various factors and groups would generate conflict over government policies and there would arise struggles for power which even Communist purges could not keep down. These struggles would cut across the old national boundaries.

In short, evidence is already strong that the Marxists may be able to make the ideological conflict rather than the national conflict the pivot of midtwentieth-century international politics. As a result of this ideological conflict the more extreme Marxists—the Communists—may even be able to establish an international Communist state, but this is far less certain either because they may not win the ultimate international conflict even after succeeding in making the issue an ideological issue, or because the forces of nationalism may be too strong for the Communists once they inherit the various national governments. But even should the Communists win and establish an international Communist state, it is almost certain that new social and economic groups would arise to continue the struggle for power within the international state, peacefully perhaps, but a struggle nonetheless. If so, then national conflict over the balance of power would disappear, but ideological conflict within the international state would persist.

Should there be a third world war and should the United States, using the old shibboleths of nationalism, win the war, it is doubtful even then if political nationalism and the balance of power would continue as they have done in the past. We are perhaps too close to events of the last 30 years to be able to see just how far the old foundations of nationalism have already been eroded away. In the fifteenth century, participants in the wars of Louis XI and in the Wars of the Roses were too close to those events to realize that feudal power was being overthrown before their very eyes and a strong national power built. So probably with us today. The historians of the twenty-second century, more clear-eyed than we, may look back and see that the great international wars of the twentieth century were in fact dissolving nationalism and building internationalism.

For nationalism today is truly beset from all directions. Among the dissolving agents are: the cumulative impact of technology and science resulting in the continued drastic elimination of distance and space, the atomic bomb, the release of atomic energy, and the overwhelming necessity of having to extend international functionalism to control what in the future will probably be the world's most important source of industrial production; the palpable absurdities of Fascist nationalism and the revulsion from fascist nationalism even in countries which experienced it; the realistic education given millions of men who participated in the great wars of the twentieth century in areas remote from their homelands; the glaring fact that real national power in the international power conflict is today possessed by only two nations, leaving all other nations as mere outsiders with no important power; the growth of international cartels; the Socialist appeal to the brotherhood of man; the Communist insistence on international action and the actual cooperation of Communist parties from country to country; the Socialist outlook of many of the "nationalistic" leaders of the colonial countries in revolt against imperialism; the body of practical experience in international cooperation gained through the League of Nations and the United Nations. The Communists would put the world together through something like a Communist International; a majority of the people of Britain and the United States would prefer to see the world put together by the slow functional growth of an organization which originated in contract—the United Nations. (Inside the United Nations, too, there would, of course, be power politics, but as international functionalism grew it would come to be less and less power politics based on nationalism and more and more power politics based on ideology, that is, group and class conflicts cutting across the old national lines.) And there are those, like James Burnham and the oversimplifiers and distorters of Arnold Toynbee, who are so impatient with the slower and wiser methods of bringing an international state that they would have America attempt to build a universal empire to end "a time of troubles." Whatever method of putting the world together will ultimately prevail is still anybody's guess, but that the world in our time is in painful process of being put together is more than a guess—it is a hypothesis based upon a growing accumulation of evidence.

Thus anyone called upon to answer the crucial question in international relations today would be, I think, on safe ground in saying that, from the rise of national states and up to about now, the chief element in international relations has been nationalism and the national balance of power. But he should warn the questioner not to be misled by this historic fact or by the superficial aspects of the present diplomatic duel between the United States and the Soviet Union, especially as that duel is generally interpreted in the United States. Because this middle of the twentieth century may be witnessing the epoch-making shift in the foundation of international politics from the nationalistic balance of power to ideology, evidence of which we shall ignore at our peril.

Philosophy of Cyrus P. Ching

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article on Mr. Cyrus P. Ching, Director of the Federal Mediation and Conciliation Service, by Mr. Louis Stark, from the magazine section of the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR NO. 1 LABOR CATALYST

THE PHILOSOPHY OF CYRUS P. CHING, CHIEF MEDIATOR, CAN BE SUMMED UP IN THE PHRASE: "GETTING ALONG WITH PEOPLE"

(By Louis Stark)

WASHINGTON.—All a labor conciliator has to know is: How labor feels; how management feels; what the law of the land is; how human nature operates. If this seems an exacting set of qualifications it may be said at once that they are presented in impressive array in the person of Cyrus P. Ching, who recently became the Nation's No. 1 conciliator. His official title is Director of the Federal Mediation and Conciliation Service, which Congress set up as an autonomous agency after 34 years under the Labor Department. The change signalizes the coming-of-age of conciliation; it also brings to a key post in the Government the man who has been called the dean of industrial relations experts.

It will be Mr. Ching's job to direct the Mediation and Conciliation Service in its efforts to settle—or, better yet, prevent—serious labor disputes. His team will consist of a 12-member labor-management panel, appointed by the President, and a staff of 225 conciliators. These latter will be the field force, to be dispatched to any part of the country in which labor troubles threaten.

The conciliation chief, 6 feet 7 inches tall, Canadian-born and hardy as a northern pine, is a disarming man. As he unwinds his long frame to greet the visitor and his deep-furrowed face breaks into a slow smile, he gives the impression of a country boy grown up. Which he is, except that most of his "growing up"—nearly 50 of his 71 years—has been among the contentious ranks of employers and employees rather than on his father's Prince Edward Island farm.

It was as director of industrial and public relations of the United States Rubber Co. and an industry member of the National Defense Mediation Board and National War Labor Board that Mr. Ching gained the experience and developed the philosophy that led to his present job. The essence of this philosophy may be expressed in his dictum that all relations in life, including those called public and industrial, are human relations and that there is therefore no one program for solving the problems that arise between employers and employees.

"Promoting proper labor relationships is nothing you can do overnight," he says. "It isn't anything you can do by law. You can set up machinery to soften the blows of people not inclined to get along together. You can pad their gloves a little, and it may be necessary to have a referee to do that. But in the last analysis labor relations begin down in the bottom department of the plant between the foreman and the employee."

The practical phase of the Ching labor philosophy can be summed up in the phrase, "getting along with people"—which may or may not be easy, according to the circumstances.

"There is not too much literature on the subject," he observes dryly. "However, one of the modern articles I have read in this field is in chapter V of the Book of Exodus. Pharaoh, the boss, in order to cut down expenses after suitable time studies had been made, said the boys would have to furnish their own straw to make bricks. Most of the straw had apparently been gathered by someone else and when they went out to get it there was nothing left but stubble and the quality of the bricks deteriorated.

"There was discussion also of the speedup system and some reference was made to outside agitators. The sitdown strike had not come into vogue at the time, so there was a walkout and the Israelites walked across the Red Sea and for the time being this incident was closed."

Regarding his new job, to which he was appointed by President Truman in August, Mr. Ching says the office of the conciliation chief "will not be a fire department."

"Stopping a strike is the same as putting out a fire. The more fires—disputes—the conciliators run to, the more fires there are going to be. People get used to having conciliators put out their fires.

"But we cannot measure the efficiency of a conciliation service by the number of fires it extinguishes. We can measure it only by

the machinery we build up to encourage people to settle their own disputes. In other words, the test of conciliation is how few disputes lead to strikes and how many disputes are settled directly by the parties, with whatever help we can supply. My job is to contribute to fire prevention."

Mr. Ching may occasionally contemplate the turns of fortune that led him to devote his life to human relations in industry. It was not for lack of opportunities that he did not enter a half dozen other fields.

When he left his father's windswept Canadian farm, he enrolled in a provincial business college with no clear idea of which way he was headed. Barely 19 when he finished college, he struck out for the great Northwest, where he bought grain for elevator companies. Home on a visit after several years at this work, he received a letter not to return, because poor crops in Alberta had wiped out his job.

In those days young men in the Maritime Provinces who considered leaving Canada made for either Boston or California. Young Ching chose Boston. On October 31, 1900, he stepped off a train in the Hub City carrying a gripsack, a copy of Bryce's The American Commonwealth, which he had read at 14, and $31. He went to work as a streetcar motorman.

For 3 months he was on the extra list and earned $8 a week. Later he was assigned to a regular run at $2.25 a day. One day he saw an employee in the car barn struggling with the accounts of the conductors and other employees. The man was plainly unhappy and the new motorman volunteered help. The offer was gratefully accepted. It was Mr. Ching's first opportunity to use his business-school training.

A year later the new elevated system was inaugurated, and men had to be trained to handle the electromagnetic brake system which controlled the multiple-unit cars. Mr. Ching soon mastered the technique and was eventually placed in charge of equipment and service.

Here he gained his first insight into what he felt was the wrong way of dealing with employees. He learned that the grievances of the men were not concerned primarily with wages and hours but with the manner in which they were treated as human beings. There was a spy system on the road and the men lived in perpetual fear of being fired. They did not trust one another, lest a fellow-employee should turn out to be a company stool pigeon.

In 1912, just before the historic strike on the Boston Elevated, Ching, then 36 and head of the rolling stock and the shops, was called into the company office to discuss "a little trouble." The management had no inkling of the real feeling of their employees.

"Pardon me, this is not a little trouble," the shop chief said. "There will be a strike next Wednesday." There was, and that was how he became an industrial-relations officer.

Ching's first act in his new assignment was to abolish the road's espionage system. He assured the employees that no company spy would attend union meetings and that henceforth he would deal with the union on an aboveboard basis. In a short while peace was restored.

Relations between the men and the management were not always smooth, however. The local union once threatened to strike over a grievance. "You won't strike," Ching told the union's spokesmen. "We'll arbitrate this dispute. I'm going to be arbitrary about it and name the arbitrator."

The impartial arbitrator he chose was William D. Mahon, the president of the A. F. of L. streetcarmen's union. The dispute was over interpretation of the contract and Ching felt the union president would interpret it fairly. But whatever the verdict, he was ready to abide by it.

During this time he became acquainted with Samuel Gompers, then president of the American Federation of Labor. He had such faith in the labor leader that he frequently called on him for help in working out labor problems on the Boston Elevated. One result of such cooperation was that the Boston Elevated had no further tie-ups while Ching remained with the company.

When Ching left Boston for the United States Rubber Co. he did so in characteristic fashion. He looked over the world of business, decided that rubber seemed a promising industry, then arranged to talk things over with Fred Hood, the leading rubber manufacturer. Hood advised him to offer his services to a competitor, the United States Rubber Co. Ching promptly wired C. B. Seger, president of the latter company, that he would call on him in New York the following morning at 10 o'clock.

"I don't want a job," he told the rubber executive the next day. "I want to help you run this company. My references are the motormen, conductors, and directors of the Boston Elevated." A month later he went to work.

One of Ching's first tasks was to handle a threatened strike in a Montreal subsidiary. The company's policy was that employees had no right to strike, that they were expected to do as they were told. The "special representative," as Ching was called, prepared a letter for the local manager's signature, notifying the employees that the company was soliciting their views on mutual problems. A copy of the letter was sent to the press.

Mr. Ching's solution was distinctly novel. He might have been fired for it, but he was not, and gradually the "open discussion" policy bore fruit. In the years that followed and up to the enactment of the Wagner Act in 1935, United States Rubber dealt with employees through joint labor-management committees.

Today the admiration of organized labor for Mr. Ching is unusually high. Most labor leaders feel that he is not bound by the past, but is adaptable and open to conviction. They also know that once having made up his mind he is not likely to change it.

"If Cy Ching gives his word, we can be sure he'll carry it out," one labor leader remarked recently.

Looking back at his earlier Government service and finding therein certain guideposts for the future, Mr. Ching believes that the time he devoted to the National Defense Mediation Board just before the war represented a greater contribution to public service than his duties with the better known War Labor Board. In the former case the emphasis was on mediation and conciliation, on voluntary action by the parties to disputes rather than on compulsion. In the resultant atmosphere of judicious compromise and ironing out of differences, he felt completely at home.

Later when he joined the War Labor Board, which was in the habit of issuing "directives," he was less happy. "The War Labor Board pushed people around," he says today. "That type of labor adjustment is not so satisfactory as the voluntary method."

As a pioneer innovator in industrial relations Mr. Ching has found himself frequently classified as a left-wing industrialist, but this does not disturb his equanimity. At a time when the Wagner Act was distinctly unpopular with business men he addressed a meeting of the United States Chamber of Commerce and advised its members to deal with unions.

"If we have confidence in our employees and they in us and they decide to join a labor organization, then should we not welcome that organization as another means of dealing with employees?" he asked. "The question of what organization our employees wish to join to deal with us is not so important as the nature of the dealings."

That speech, which was greeted with what he says was "the loudest silence I ever heard," was prophetic. In it he observed that industrialists usually deplore the inflexible regulations imposed on them by Government, and added:

"If industry persists in its attempt to put handcuffs and leg irons on organized labor and labor goes along with the politicians to put more shackles on industry, some of these days we'll both find ourselves where neither of us can do anything but spit at each other and then the politicians will stand by and laugh at us both."

Regarding the immediate future of labor relations he is making no predictions, but he is confident of one thing: in the long run the industrial scene will be more peaceful as the principle of collective bargaining is better understood.

Public Opinion Polls

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Harvey M. Brown, president of the International Association of Machinists, which appeared in the Machinist, the weekly newspaper of that organization.

Mr. Brown's article comments on an article recently published in Look Magazine about so-called opinion polls on the Taft-Hartley Act which were conducted by that magazine. The latter article was printed in the Appendix of the RECORD, and so I think Mr. Brown's article should be printed there also.

I think the light Mr. Brown's article throws on the subject will be of interest to many Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STOP, LOOK, AND LISTEN: THERE ARE JOKERS IN OPINION POLLS

Of all the propaganda now being distributed in defense of the Taft-Hartley Act, that best liked by employers everywhere is an article reprinted from Look magazine.

Look reported the results of one of those supposedly impartial public opinion polls through which it made the discovery that American working men and women really like the major features of the Taft-Hartley Act, even though they dislike the law itself.

This finding by the Opinion Research Corp., Princeton, N. J., so popular with the National Association of Manufacturers that the NAM News reprinted it in full, praising Dr. Claude Robinson, president of Opinion Research, as a research pioneer.

The Look article, NAM said, is based on "conservative, established public opinions sampling techniques."

To help our readers better understand this type of propaganda, we are this week reprinting here a careful analysis of the Look poll. The analysis was prepared by the staff of the Machinist, weekly publication of the International Association of Machinists.

Look itself explained how this poll was taken in the following words:

"We talked with union members and nonunion employees, with skilled, other manual and white-collar workers * * * we interviewed only persons who are employed and who live in cities of 25,000 population or more."

Each worker was asked if he had ever heard of the Taft-Hartley law, and those who said they had were then asked this question:

"Do you think Congress should have passed the bill or not?"

Look's tabulation showed the following results: 54 percent said "No"; 31 percent said "Yes," and 15 percent had no opinion.

Next, Look said, it wanted to find out what features of the law were most unpopular so it asked each worker 10 additional questions, each purporting to be a simple, nontechnical statement of a major provision of the Taft-Hartley law. In each case the person questioned was not told that the questions were related to the Taft-Hartley law.

When Look averaged the replies to these questions, it found that 73 percent of those questioned said they favored all of the 10 proposals and Look and Dr. Robinson, therefore concluded:

"On the basis of our investigation, it seems clear * * * that the American worker favors what is in the Taft-Hartley law, but doesn't know it."

In order to see whether American working men and women are as gullible as Look made them out, the Machinist examined the 10 questions for jokers. Here are its findings:

1. Look's pollsters asked: Do you favor a law to require unions to give 60 days' notice before they can go on strike?

The Taft-Hartley Act does much more than this question implies. It denies unions the right to strike unless they have given notice 60 days in advance to both Federal and State mediation agencies, thus giving the employer 2 months to prepare to defeat the strikers. The effect of this provision is to require all unions, in self-protection, to file strike notices as a matter of course when negotiations begin, whether they intend to strike or not.

Look should have asked: Do you favor a law that will encourage unions to file strike notices before beginning negotiations, whether or not they believe the dispute can be adjusted peacefully?

2. Look's pollsters asked: Do you favor a law to give the company the right to sue the union if the union breaks its contract?

In at least 35 States the company had the right under State law to sue a union, or anyone else, for breach of contract. The Taft-Hartley Act gives the company the right to bring suit against a union in Federal courts regardless of the size of the damages claimed. The result is to encourage the company to sue the union, by permitting it to shop around between State and Federal courts for an antilabor judge.

Look should have asked: Do you favor a law that encourages employers to take court action against the union?

3. Look's pollsters asked: "Do you favor a law to allow employers to talk to the workers or promise rewards for not joining?"

The Taft-Hartley Act permits the employer to call meetings on company time and compel attendance. The employer can defame unions without violating the law. Under the act, the employer can make deliberately false statements about the union.

Look should have asked: "Do you favor a law that gives the company the right to call compulsory meetings and force employees to listen to antiunion speeches?"

4. Look's pollsters asked: "Do you favor a law to require unions to make reports on the money they take in and what they spend it for?"

This section of the Taft-Hartley Act was framed deliberately to force unions to publicize their weakness when their treasuries are low, and their suability when their treasuries are substantial. The weak financial report is invitation to the employer to launch an all-out attack on the union either through expensive and costly court suits or resistance to bargaining demands.

Look should have asked: "Do you favor a law that will advertise the financial weakness of small unions, thus notifying the employer of the correct timing for an attempt to break the union?"

5. Look's pollsters asked: "Do you favor a law to prevent Communists from holding offices in unions?"

The Taft-Hartley Act does not prevent Communists from holding any office in the union. The act does require all union officers to swear that they are not Communists before the union is permitted to use the National Labor Relations Board.

Look should have asked: Do you favor a law which penalizes an entire union's membership when a single union official fails to sign a non-Communist affidavit?

6. Look's pollsters asked: "Do you favor a law to prohibit unions from spending money or making contributions in connection with political campaigns for Federal offices?"

The Taft-Hartley Act prohibits the expenditure of any trade-union funds for political purposes, including the publication in union newspapers of the voting records of Members of Congress.

Look should have asked: "Do you favor a law which prohibits a trade-union spending any of its funds to support or oppose a candidate for public office, including the publication of the voting records of Congressmen?

7. Look's pollsters asked: "Do you favor a law to allow the check-off only if the worker agrees in writing?"

The Taft-Hartley Act requires that each individual union member must sign a check-off authorization before his dues can be deducted automatically—whether or not the local union has approved such a deduction by majority vote of its membership and whether or not the employer has agreed to make the deductions.

Look should have asked: Do you favor a law that makes it more difficult for a union to collect dues from its members?

8. Look's pollsters asked: "Do you favor a law to forbid a company to have a union shop until a majority of all the workers vote in favor of it?"

The Taft-Hartley Act prohibits an all-union shop unless a majority of those covered by the agreement vote for it. Under the law as written anyone who fails to vote in the election because of sickness or negligence is counted as a "no" vote. Nowhere else in the United States are citizens penalized because of the failure of others to vote. Congress, itself, adopts laws by a majority of those present and voting, not by a majority of the entire Congress.

Look should have asked: "Do you favor a law forbidding a company to have a union shop unless a majority of all eligible voters, and not merely a majority of those voting, declare in favor of it?"

9. Look's pollsters asked: "Do you favor a law to outlaw the closed shop?"

The Taft-Hartley Act ignores the traditional right of union members to refuse to work alongside strikebreakers and nonunion free riders who accept the benefits of unionism without accepting any of the responsibility for them.

Look should have asked: "Do you favor a law compelling union members to work with strikebreakers and free riders?"

10. Look's pollsters asked: "Do you favor a law that, in industries considered vital to the country's welfare, allows the Government to get a court order preventing a strike for several months while settlements are being attempted?"

The Taft-Hartley Act empowers the Government to intervene in disputes involving the public welfare only by taking the side of the employer. The law requires the Government to obtain an injunction forcing men to work for the profit of their employer at wages the men have decided are too low.

Look should have asked: "Do you favor a law which would force men to work in disputes involving the public interest without at the same time penalizing the employer?"

11. Look's pollsters stopped at 10 carefully hand-picked questions. Here are a few questions which apply to the Taft-Hartley Act which Look did not ask. Would you favor a law which:

Gives employer charges against labor unions priority over all union charges against employers?

Urges union members to vote on the employer's last offer, but makes no provision for the stockholders voting on the union's last offer?

Substitutes damage suits for grievance procedure?

Permits employers to petition for elections before a union has completed its organizing campaign?

Vests in one person the power to determine when the weight of the Government shall be pitted against a union, with no right of appeal to higher authorities?

Permits the Government to interfere in collective bargaining by preventing labor and management from reaching voluntary agreements that they find mutually desirable?

Gives the company the right to enlist the aid of a Government agency to keep his men at work when there is no question of a national emergency?

Comment: Dr. Robinson's technique—which Look bought—is to ask an innocent question and then leap to the conclusion that the answer fits the not-so-innocent Taft-Hartley Act. That law cannot be justified by asking a few plausible questions which overlook the context of the provision as used in the law. After analyzing Look's findings, the Machinist could only conclude that American working people are much more aware of what's in the Taft-Hartley Act than Look's editors.

Presentation of Gold Medal to Dr. Archer Chester Sudan

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Oscar R. Ewing, Federal Security Administrator, before the house of delegates of the American Medical Association, at Cleveland, Ohio, on January 7, 1948, on the occasion of the presentation of a gold medal to Dr. Archer Chester Sudan, of Kremmling, Colo.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I am very grateful for this opportunity of greeting the members of the American Medical Association. And I am particularly honored in being asked to present this gold medal to Dr. Sudan, whom you have selected as an outstanding general practitioner.

If I were a doctor, it seems to me that I would value this medal as the greatest honor that could possibly be conferred upon me by my profession. The general practitioner

symbolizes something that is very close to the heart of America. The vast majority of contacts between the citizen and the medical profession are those of a suffering individual turning to the general practitioner for relief. The particular illness may be small or great, but to the afflicted individual it is all-important. In the hour of his need he turns to the family doctor, the general practitioner, with yearning hope for relief.

And then the great kindly doctor goes to work. With an understanding heart, he learns his patient's symptoms. The family doctor has probably known the patient for years—perhaps he even brought the patient into the world—and can fit the symptoms into a background and history that could never come from questions and answers between strangers. Out of the reservoir of his professional skills the doctor prescribes his remedy. But at the same time he prescribes, either consciously or perhaps more often unconsciously, to the mind and emotions of the patient. The very presence of the doctor inspires confidence, hope, and faith.

It has always seemed to me that the great doctor possesses something far beyond professional techniques and skills. He has an indefinable quality of heart, a quality of spirit that lifts him from mediocrity to greatness. It is the quality of understanding. It is a great compassion coupled with a high degree of intelligence and professional skill. It is indeed a rare combination. This award goes to the doctor who, in the opinion of your profession, possesses those qualities most honored by your profession.

Those of us who are charged with the administration of health agencies cannot endow the general practitioner with those qualities of spirit which make for greatness, but we can, at least, endeavor to put within his reach as many as possible of the resources of modern medical science. And I pledge to you and to your fellow practitioners that during my tenure as Federal Security Administrator everything within my power shall be done to bring you these aids.

As most of you know, I only became Federal Security Administrator at the end of last August. I came from the legal profession. And what did I find? I found a controversy raging between the proponents and opponents of national health insurance that was absorbing a substantial part of the time and emotions of those who must furnish leadership in the battle for better health. I found that this controversy had diverted attention and energies from other programs that were completely noncontroversial and upon which everyone agreed. For example, there is, by and large, complete agreement as to the necessity for more medical research, for more and better medical education, for more hospitals, for local diagnostic clinics, for local health officers.

I quickly came to a conclusion as to what should be done. It was obvious that we should be moving ahead in the noncontroversial areas while we are fighting over national health insurance.

Having come to this conclusion I sought an opportunity to discuss the situation with the officers of the American Medical Association because I need, in my job as Federal Security Administrator, all the help I can possibly get from organized medicine. I had a most cordial talk with your officers. I told them frankly how I stood on the issue of national health insurance. President Truman had made known that he and his administration favored national health insurance, and, naturally, I had no right to accept an office in his administration unless I was wholeheartedly prepared to go along with the President's policies. Furthermore, I explained that I happened to agree with that policy thoroughly, and that it was one for which I expected to fight. On the other hand, I told your officers that while we were disagreeing over national health insurance, I did hope we could work together in the various noncontroversial areas to which I have referred above.

I could not have asked for more cordial response. Your officers expressed their complete willingness to cooperate with me in these noncontroversial matters and everything that has happened since our first talk has been in harmony with this program.

I believe that with this cooperation between the organized medical profession and the Federal Government we can make enormous strides in bringing you and your fellow general practitioners the aids of modern science.

In the field of medical research, for example, there is so much to be done. Look at cardiovascular diseases—our No. 1 killer. Compare cardiovascular research with our cancer research program. Cardiovascular diseases kill 3½ times as many people as cancer and yet, as nearly as we can figure—and these figures may not be entirely accurate—last year the total expenditures by both Government and private institutions, foundations, and the like for cancer research were around $26,000,000 while the expenditures for research in cardiovascular diseases were about $2,500,000. In other words, cardiovascular diseases, which kill three and a half times as many people as cancer, had only about one-tenth as much money spent in attempts to find their cause and cure as was devoted to cancer research. I do not, for one instant, say that too much money was spent on cancer research, because it was not. But I do say that not nearly enough was spent on cardiovascular research. It is in that field particularly that the Federal Security Agency hopes to give some leadership and perhaps obtain some legislation, and with your cooperation, put over a program of vast significance. There have been within very recent months some rather startling developments in the study of cardiovascular diseases. We may have found something that actually turns back the degenerative processes of arteriosclerosis.

Our best research work is being done in cancer. We have more money for it than for any other type of medical research. That is the result of a great program of publicity. It was a grand job but there are other things that must be done too. Take, for instance, mental hygiene. Two-hundred million dollars a year is being spent in this country for the hospitalization of those who are mentally ill. A fraction of that sum spent in mental research could probably cut that figure in half and could save the expenditure of a hundred million dollars a year. And this is not a wild dream. The Army and Navy during the war did brilliant work with mental cases at many hospitals. The Federal Security Agency saw this particularly in the Navy work at St. Elizabeths. They were able to release 65 percent of the military patients that went into those hospitals within 3 months and another 20 percent within 6 months. Those were highly successful programs and a wonderful job was done and they show what can be accomplished by the use of the latest techniques. As a matter of fact, more research is needed in connection with practically every human illness.

To help the whole field of medical research, the Federal Security Agency is planning a great research hospital at Bethesda, Md., which will be the answer to the dream of the research worker. Congress—and Congress has been very generous about this—has appropriated over $2,500,000 for the purchase of land and the preparation of plans for this research hospital. It will be the first time anything like it has ever been built. We are planning a 500-bed hospital—on one side of the building the hospital and patients, and directly across the hall on each floor will be the research laboratories to study the disease of those patients. There will be 150 beds for research study of cancer patients. There is practically no opportunity today to study chronic cases of cancer in hospitals because the hospitals must necessarily keep their beds in use by patients whose conditions can be improved or have some hope of being cured. Such an institution will complement, rather than compete with private hospitals.

These are merely a few examples of the things that must be done in the way of medical research.

But medical research, however impressive, is just one phase of medical progress. Another vital consideration is the proper distribution of medical facilities and personnel. An honest appraisal of the situation existing at present shows room for great improvement.

A step has been taken in this direction by the hospital construction program. Last year the Federal Government appropriated $3,000,000 to help the States survey their health center and hospital needs and seventy-five million to defray part of the actual construction costs. Each dollar of Federal funds must be matched by $2 of State and local funds. Since the program is to run over a 5-year period, the grand total of Federal and State expenditures for hospital construction under this program comes to a potential $1,125,000,000.

This program seeks to locate hospitals and health centers in the places that need them most. It will remedy somewhat the uneven distribution of facilities and will be a factor in securing better distribution of personnel.

The better distribution of medical personnel is still an unmet challenge, but it is hoped that it, too, will be solved in the not-too-distant future. An attack on the problem has begun already. Your association has set up a bureau of information to aid physicians in determining where they are most needed. Another example of the increasing awareness of the situation was evident when Dr. Steve Pascal Kenyon, president of the Georgia medical society, in a speech at the southern medical society meeting recently suggested that the States guarantee general practitioners in rural districts a minimum yearly income. Such a plan would make for great progress. A number of States, including Maryland, Virginia, Mississippi, North Carolina, Georgia, Alabama, and Indiana, have approached this problem by enacting legislation. As one example of State legislation, the 1945 session of the Mississippi Legislature, after a study of the shortage of physicians, medical school tuition and living costs, set up a medical education scholarship program designed to obtain general practitioners in rural areas quickly. Under the same program deserving students are aided to meet the costs of a medical education. Here is the way the plan works: Any Mississippi boy or girl who has completed a pre-medical course and is acceptable for enrollment in a class A medical school—but who needs funds to complete a medical education—may apply for a loan up to $1,250 a school year for a maximum of $5,000 in 4 years. The student must sign a contract agreeing to return to the State and work for a minimum of 2 years in a rural area approved by the State Medical Education Board. Should the student practice medicine in the approved area for 5 years, his loan is discounted at one-fifth of his total loan for each year.

In other States, the medical associations have attacked the problem directly and established their own funds. In Kentucky, for example, the State medical association joined with the Louisville School of Medicine in a campaign to raise scholarship funds. Within a few months, $150,000 was subscribed. Students are able to secure loans to pay for their tuition from this fund, providing they agree to practice in rural areas after graduation. In Indiana, the State medical society bears the principal cost of six $500 scholarships offered annually to students who agree to practice in areas designated by the asso-

ciation as most urgently in need of medical service.

I have touched merely on a few of the jobs ahead of us—fronts on which we are all agreed. I think it would be fitting indeed if we could signalize this year as an outstanding one in the public health program. For within 12 months we mark two great anniversaries: the centenary of the American Medical Association in 1947, and the one hundred and fiftieth anniversary of the United States Public Health Service in 1948.

Federal participation in national health programs, you know, dates back to 1798, with the establishment of the Marine Hospital Service, from which the Public Health Service has developed. History already has recorded part of the job which the Public Health Service has performed so magnificently, but we are hoping that this is just a beginning.

May I say to you, Dr. Sudan, that for my part I take very seriously my responsibilities as Federal Security Administrator for the future developments in medicine. Those qualities of greatness, of compassion, of understanding which so characterize the general practitioner will ever be an inspiration to me as I endeavor to do my part in the struggle for the better health of America. It is a struggle that deserves the best that is in us. It demands the cooperation of all, particularly the cooperation of organized medicine and Government. I know I need the help of organized medicine. And we must never be satisfied until we have attained the best possible health for the last one hundred and forty-millionth person in this broad land of ours. Only when we have achieved that, can we say "well done."

Dr. Sudan, with pride and humility, I bestow—on behalf of the American Medical Association—this medal honoring an outstanding general practitioner. It is a recognition of the finest qualities of one of the finest of professions. More I cannot say.

Pride in Service

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Wednesday, January 21), 1948

Mr. COOPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "Pride in Service," from the National Tribune and Stars and Stripes of November 27, 1947, which I received from Hon. A. M. Causey, adjutant of Col. Thomas J. Smith Camp No. 11, United Spanish War Veterans, Bowling Green, Ky.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EDITOR'S CORNER

PRIDE IN SERVICE

In recent months our desk has been swamped with protests from veterans of Spanish-American War service who are resentful over slurs cast in their direction by veterans of later wars. From time to time we hope to reproduce some of these letters because we believe that facts speak in greater volume than words, and we are certain that few of the younger veterans are supplied with a knowledge of some things that took place before they blessed us with their presence on this earth.

Two comrades have forwarded to us in as many weeks a list of reasons why they are proud to be veterans of the Spanish-American War. Their pride is based on being:

Veterans in America's first war for humanity.

Veterans of the only 100-percent volunteer army the world has ever known.

Veterans of the only war in history that has paid dividends.

It was a war that was not fought to a draw—we dictated the terms.

It was responsible for the building of the Panama Canal.

It was responsible for the passage of the National Defense Act.

It caused the abolition of yellow fever and kindred diseases.

It united the North and the South so that there now is no North, no South, no East, no West, but one great people united under one great and glorious flag.

It furnished every commander in World War I from the Commander in Chief on down.

It was the first campaign fought on foreign soil.

We did not bring the flag home—we left it where we put it and it is still there.

We fought the war with poor equipment, poor food, antiquated guns, and black powder.

The commands preserved their State entities and were responsible for the honor of their States.

It caused the improvement in maintenance of the Army and Navy and for the formation of a standing Army through training camps.

It marked the industrial reconstruction of the South.

It taught the lesson of unpreparedness that claims more lives than war.

It caused the United States of America to take the head of the table in the concert of nations.

It marked the rebirth of a Nation.

Four hundred and fifty-eight thousand were engaged in this conflict, exceeding in number those engaged in the Revolutionary War, the Mexican War, or the War of 1812.

The losses in deaths from all causes were 4.3 percent as compared with six-tenths of 1 percent for the Civil War and seven-tenths of 1 percent for World War I.

The average length of service was 14 months as compared with 9 months for World War I and 11 months for the Civil War.

The pay was $15.60 a month as compared with $30 for the World War I and $50 for World War II.

We received no bonus, no war-risk insurance, no adjusted compensation, no vocational training, and no hospitalization until 1922, 20 years after war was over.

The cost of the war was $1,800,000,000; the Civil War, $8,100,000,000.

The Marshall Plan and the Price of Gold

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28 (legislative day of Monday, January 26), 1948

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a thought-provoking letter, written to me by an outstanding attorney of Denver, Hon. Joseph F. Little. It deals indirectly with the Marshall plan, but it is broader in its direct application, being world-wide in its scope. It proposes a sensible practical cure for the world's monetary problems.

In this day of planned economy, currency tinkering, printing-press money, unilateral devaluation of currency, threat of communism, and an epidemic of world-wide devastating inflation, it is refreshing to find someone proposing to deal with causes instead of symptoms. Mr. Little's letter is a down-to-earth, grass-roots, bird's-eye analysis of what is wrong with money. I urge Members of Congress to read it and study it.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

J. F. LITTLE,
Denver, Colo., January 19, 1948.

Hon. ED C. JOHNSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: Last November I talked with you about the Marshall plan and the price of gold. I would now like permission to extend my remarks.

Both the Bretton Woods agreement and the proposed Marshall plan contain stipulations for currency reform and currency stabilization. These stipulations have just as much permanent value as the well-intentioned promises of a future bankrupt. I don't believe that they provide any rule or standard by which currency shall be stabilized and thereafter maintained. Until we have a world standard of value which complements world-wide standards of measurements, world trade will probably continue in a chaotic condition. The Marshall plan does not go far enough. It treats effects but not causes. It is similar to a doctor treating a typhoid epidemic without purifying the water system. Nations have learned that by devaluing their currencies in terms of other currencies they can get at least a temporary economic advantage over other nations. They have learned how easy it is to manufacture paper money, and unless and until they are required to adhere to an objective standard of value over which they have not absolute control, currency tinkering will continue despite Bretton Woods or similar agreements.

The gold standard provided not only a relatively stable monetary standard, but also a check on currency inflation. Under it the amount of a nation's currency was limited by its gold supply. Unfortunately gold production has not kept pace with the increase in world trade and commerce. It never has. Consequently it has been necessary from time to time in the past to increase the value of gold. I think it must be done again. Despite its huge gold reserve, this country could not maintain the gold standard at $35 an ounce for any length of time.

Most everyone knows that at $35 an ounce gold is very undervalued. Mining costs are more than four times as much as they were when gold was revalued at $20.67 an ounce. These costs are at least twice as high now as they were when gold was revalued at $35 an ounce. And if we now went back on the gold standard and made paper money redeemable in gold at $35 an ounce, our gold reserves would simply disappear. Gold would be exported to get the higher world price. This has happened twice before, once after the act of 1792 and again from 1929 to 1932. Foreign holders of our paper money would reap a sizable profit and much of our gold would go into private hoards as an investment to await an increase in price.

I think managed currency is responsible for much of the present world ills. Its very origin is suspicious. Lenin argued that debauching a nation's currency was one way of procuring a revolution in that country. Managed currency denies one fundamental

qualification for a monetary substance, namely, it must have an intrinsic value of its own. Money must be an investment in itself. Managed currency is only valuable for what it will buy now. Recent reports from Europe indicate French farmers refuse to sell grain; laborers refuse to work. Because of shortages the paper money they would receive wouldn't buy much now and if they hold this paper money until goods are again available, the paper money may be worthless.

The history of managed currency is too brief for any absolute conclusions, but its record so far has been one of continuous depreciation in value and all Europe knows it. On the other hand, gold never depreciates. It either remains stable or gains in value. Gold currency or currency redeemable in gold has an intrinsic value of its own, a value which never depreciates.

Under the Marshall plan we are to give Europe up to $16,000,000,000. As past history indicates, it will be a gift, paid for by the American taxpayer. No doubt some immediate aid is necessary for Europe, but we should also insist that Europe use the means at its disposal to help itself. European governments have several billions in gold. In addition there is an unknown amount, probably quite large, hidden in private hoards. We can never bring this latter gold out of hiding at a price less than its actual worth. If the price of gold were increased to its present actual value, which, judging from present costs of production and black markets, is now around $60 per ounce, I think it would result in these five benefits: (1) the increased value of Europe's gold would correspondingly decrease the amount required under the Marshall plan; (2) the American taxpayer would benefit by not having to provide the amounts now required under the Marshall plan; (3) an increase in the price of gold would increase the value of our own gold stocks, which increase could be applied toward the payment of our national debt; (4) a real tax cut would be justified at this time; and (5) since gold is everywhere recognized, European gold could be used to buy its needs in other parts of the world and thus reduce inflationary pressures in this country.

If the Marshall plan provided immediate aid on condition that the recipients and the United States reform their currencies and return to the gold standard, we would not only save ourselves a lot of money, but we would eliminate one of the causes of Europe's troubles.

At present we are in a cold war with the dictator nations. Yet in money matters we work hand in glove with them. Managed currency is a chief support of dictatorship. Deprive the dictator of the power to regulate the value of his fiat money and require his money to be valued by an objective standard over which he has no absolute control, and every dictator would find it more difficult to participate in world trade. Had the Russian ruble been on a gold standard or had it possessed any intrinsic value, that country would never have succeeded in its recent deflation of the ruble.

Finally, if our huge national debt is ever to be paid, we must continue the high level of prosperity in this country. The Nation is gradually adjusting itself to higher wages and prices. If further inflation could be prevented and our economy stabilized at or near present levels, we could not only pay our national debt, but remain quite prosperous. So long as the price of gold, our basic monetary medium, remains at the level of 1935, there is always the possibility that our economy may be forced back to that level with resultant national bankruptcy. On the other hand, an increase in the price of gold commensurate with our present economy will tend to stabilize that economy at existing levels. Such a plan is no more inflationary than the Marshall plan. It could be far less inflationary, for if we return to the gold standard the amount of currency this or any country could issue would be limited by the amount of its gold.

I apologize for the length of this letter. As you know, I have a personal interest in gold mining, but even if it were otherwise, I would still feel the same way. After the First World War this country loaned several billions to Europe, one of the reasons being that it would help save Europe from Bolshevism. I sometimes wonder whether the Marshall plan is another world-wide share-the-wealth scheme.

I sincerely believe that gold will sometime increase in price. If so, are we going to give Europe the double advantage of the benefits of the Marshall plan and the increase in the price of gold, or would it be better to require that Europe use its gold now at a higher price to help fill its needs?

I know that any increase in the price of gold will benefit the gold miners, but that is one industry which has special reasons for being heard. It is the only industry which was arbitrarily closed down during the last war. It is the only industry which is by law compelled to sell its product to one customer at a price fixed by that customer. I don't know of any other industry which has since 1935 had its costs doubled, while the price of its product has by law remained the same.

Many thanks for your consideration.

With kindest personal regards, I am

Very truly yours,

JOE.

European Recovery Plan Endorsed by Spiritual Groups

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. HOLIFIELD. Mr. Speaker, as an indication of the upsurge of moral and spiritual force which is supporting the European recovery program, commonly known as the Marshall plan, I wish to insert in the Appendix of the RECORD a letter from one of our great Americans, Charles P. Taft.

Mr. Taft is the president of the great Protestant association of religious groups known as the Federal Council of the Churches of Christ in America. I also include the resolution of support passed by the Federal Council:

THE FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA,
New York, N. Y., January 28, 1948.

HON. C. HOLIFIELD,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HOLIFIELD: The European recovery program is wholeheartedly supported by the executive committee of the Federal Council of the Churches of Christ in America, in the conviction that (this program) can b one of history's most momentous affirmations of faith in the curative power of freedom and in the creative capacity of freemen.

The motives and objectives behind this program should be, in the judgment of the federal council, above political partisanship, and should transcend considerations of narrow self-interest.

The federal council believes that the United States must be zealously on guard against imposing, or appearing to impose, conditions in the granting of foreign aid which would seem to threaten the political independence of the nations of Europe, or their right to choose their own way of life. It is pointed out, however, that the United States has a right to expect that the nations participating in this program carry out their own expressed intention to work cooperatively, to maintain monetary stability, and to reduce trade barriers, in order to make the program effective.

The federal council is also of the opinion that if, in addition to voluntary controls, certain governmental controls should be required to assure a fair allocation of needed goods for foreign aid and domestic consumption, such controls should be adopted.

I am enclosing herewith a copy of the action taken by the executive committee of the Federal Council of the Churches in Atlanta, Ga., January 13, 1948. I have been authorized to appear before the appropriate committee of Congress to present the statement. The federal council is also initiating a program of study among its constituent communions based upon this statement.

Respectfully yours,

CHARLES P. TAFT,
President.

THE CHURCHES AND THE EUROPEAN RECOVERY PROGRAM

(A statement submitted by the Department of International Justice and Goodwill and adopted by the executive committee of the Federal Council of the Churches of Christ in America, January 13, 1948)

As Christians, we support the European recovery program in the conviction that it can be one of history's most momentous affirmations of faith in the curative power of freedom and in the creative capacity of free men.

The ways and means of that program will, of necessity, be largely economic and political. The motives and objectives behind it should be essentially moral and spiritual. They should be above political partisanship. They should transcend considerations of narrow self-interest.

The European recovery program must be a material investment, though not primarily for material reasons. It must also be an investment in the world's moral and spiritual resources and in the means for their speedy release. If it is to contribute thus to the healing of the nations and to the fruitful employment of the creative will and spirit of the peoples, the material investment must be an expression of these Christian convictions:

First, that man, who is endowed by his Creator with inalienable rights, is also endowed by Him with inherent aspirations for a life of freedom and fellowship.

Second, that these God-given aspirations can now, with our help, be given conditions more favorable for fulfillment.

Third, that to provide all men with a better opportunity to fulfill them is the only basis for the hope that the world can make a peace which will be durable because it is just.

The nations of Europe have been struggling courageously with their problems. Some of these nations, however, are fearful of the possibility that the United States may seek to make Europe over in its politcal and economic image, just as they are fearful in the knowledge that Soviet Russia is seeking to make Europe over in its image.

The European recovery program must be the means by which Europe and the world are released from such fears and freed from the shackles they impose. This it can be if, in its framing and administration, it clearly expresses our conviction that Europe possesses abundant assets of mind and spirit. To these we can add our moral and material aid, for the remaking of Europe and the consequent enrichment of our civilization.

This program, therefore, cannot be a prescription of what we expect the nations of Europe to do. It must be an expression of confidence in the peoples of Europe, who have been making earnest efforts at self-help; a vote of confidence in what, with our aid, they will choose to do for themselves.

But our aid is indispensable. In the wake of the devastations of the war, these nations have been visited by unanticipated dislocations and disruptions through two postwar years. We are called upon to help them to overthrow these accumulated obstacles to recovery. But that help will fail of its most important purpose if, in extending it, we attempt to fashion or shape their future. It will succeed if we affirm and undergird the rights, the desires, and the capacities of these peoples to work out, for our common good, their own destiny.

An undertaking so conceived and directed merits our material sacrifices because it is a cause which enlists our Christian conscience and conforms to our Christian commitments.

If it is to fulfill its potential promise, the European recovery program must be guided by a positive and dynamic conception of the reconstruction task. To this end we urge that consideration be given to the following principles.

1. Basic reconstruction is an enterprise for the releasing of the creative energies of men. It is for this that we are providing them with tools. The material obstacles to recovery in Europe lie partly in the shortage of capital equipment, partly in the instability and unexchangeability of currencies and partly in artificial financial and trade restrictions. But deeper obstacles lie in the fear of another war and despair for the future. It is of the utmost importance that the curative and creative possibilities of the European recovery program shall be so emphasized and so kept to the forefront as to appeal to the consciences, arouse the wills, and enlist the best efforts of men of good will on both sides of the Atlantic. There is, we believe, no other way by which the full potentialities of this program can be realized.

2. American aid for such a recovery program cannot be devoid of risk. Vast uncertainties are involved. We should be aware, however, that the risks of failure are much smaller and much less certain than the risks of inaction. American aid must therefore be an act of faith, a faith which has a sure foundation in our Christian conception of what man is and may become.

3. Financially, the prudent and conservative course is for us to plan now and boldly. Less than an adequate initial program will delay the day when Europe can take over for itself the task of restoration. Less than that may reduce the entire program to the level of costly relief.

4. The United States must be zealously on guard against imposing, or appearing to impose, conditions in the granting of foreign aid which would seem to threaten the political independence of the nations of Europe, or their right to choose their own way of life. We must not hamper efforts to establish European cooperation. As the European recovery program is carried forward, our Nation must seriously honor the basic purpose of the program, not to infringe but to protect and strengthen and enlarge European freedoms and the development toward a community of free societies.

5. We have a right to expect that the nations participating in this program carry out their own expressed intention to work cooperatively, to maintain monetary stability, and to reduce trade barriers, in order to make the program effective. Such a procedure is the best insurance that out of this struggle for recovery there will emerge a more healthful European economy and a more united European community. The United States must make sure that its own policy toward Germany not only fits into this cooperative pattern but provides a demonstration of it.

6. The European recovery program should give encouragement to the United Nations Economic Commission for Europe and other United Nations agencies to undertake, as the area of cooperation is extended, an increasingly important role in the recovery effort. We are bound both by our commitments to the United Nations and by the purpose of the European recovery program to see to it that United Nations machinery serve to develop broader trade relations within Europe and eventually as a means for the fuller coordination of the economic relations among the nations.

7. From the start it is essential that the European recovery program encourage the development of trade between the participating states and the countries of eastern Europe. The resources of these countries are required for the recovery and development of western Europe just as they, in turn, need the manufactures of western States. It is encouraging that the present opposition of the Soviet Government to the European recovery program still does not prevent mutually beneficial trade agreements with eastern Europe. It is also important for the United States to persuade and assist nations outside of Europe to provide goods for European recovery, thus broadening the area of cooperation and speeding reconstruction. The recovery program, together with the contributions of other nations, should meet the net import needs of the cooperating European countries that are essential to their recovery.

8. If the United States is to fufill its long-term responsibility in the world economy it must help enable other countries to manufacture and sell their own goods and services in order to buy what they need. Therefore, the European recovery program should be linked with long-range planning to increase American imports so that European economic life as well as our own may be maintained at a high level.

9. The American people will be called upon to accept certain specific limitations on their own economic desires during this critical period in order that the larger good of world recovery may be served. In view of the great human objectives, Christians should accept such limitations willingly. In emergencies such as this our customary waste of food and other scarce commodities is scandalous and un-Christian. If, in addition to voluntary controls, certain Government controls should be required to assure a fair allocation of needed goods for foreign aid and domestic consumption, we believe that such controls should be adopted. From the point of view of morality and even of self-interest the stakes are too high to permit either selfishness or short-sightedness to prevail.

These principles, we believe, can make the European recovery program a cooperative effort to deal with the basic causes of tyranny and war. Such an effort is in keeping with the constructive peace strategy for which our churches stand.

Rose Ellen Speaks for Democracy

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting with my speech today a copy of the prize-winning talk, I Speak for Democracy, by a friend, constituent, and fellow citizen of mine, Miss Rose Ellen Mudd, of Missoula, Mont.

Rose Ellen, a senior in the Sacred Heart Academy, in Missoula, was one of the four winners in a Nation-wide contest in which over 20,000 high-school students participated. The contest was sponsored by the United States Junior Chamber of Commerce, the National Association of Broadcasters, and the Radio Manufacturers Association. They are to be commended for the initiative they have shown in sponsoring this project, and the Missoula Junior Chamber of Commerce and radio station KGVO of Missoula are to be complimented in fostering Rose Ellen's interest and eventual victory.

Rose Ellen's triumph is due to hard work, good teaching, a lively interest in life, and a deep and profound respect for the ideals which have made this country great. She is a distinct credit to the fine school she attends—the Sacred Heart Academy—she is a credit also to Missoula and Montana and I know I speak for all the citizens of our State when I say we are proud of Rose Ellen and the renown and prestige which she has achieved.

Mr. Speaker, I should also like to inform the House that at the awards' luncheon yesterday Rose Ellen had the largest State delegation in attendance to applaud and give her the credit due. In attendance were Senators James E. Murray and Zales N. Ecton and also the Honorable Justin Miller, Montana University law graduate and now president of the National Association of Broadcasters.

The Sacred Heart Academy, the city of Missoula, and the State of Montana were all honored in Rose Ellen's victory, and I know how happy her sister Tex and her whole family were. Montana could not have had a more charming entrant than Rose Ellen nor could we have had a more talented and outstanding speaker. We, of Montana, know how hard she worked to achieve this goal; we know that the road was not easy, but we know also that what she won she earned. Her speech is a challenge to all Americans—to read, to study, and to practice. In no other country in the world are there the opportunities for our young people as there are in the United States. We do Rose Ellen honor here today, but she has done us a greater honor by bringing with her to Washington the charm, the integrity, and the ability which have made her what she is. Good luck, Rose Ellen, we're all proud of you.

I SPEAK FOR DEMOCRACY

(By Rose Ellen Mudd)

I am an American. As an American, I can do many things. Is it a coincidence that the word American ends in "I can"? That "I can" is the basis for democracy? It expresses the free will and determination of a free people—people who govern themselves.

"I can" was the spirit of the pioneering Americans when they faced the hardships of an unknown, uncivilized land, and overcame them. Their spirit remained when they faced overwhelming odds and great dangers to gain their freedom from England.

"I can" was the spirit of the Nation, when, looking at the political systems of the other countries of the world, and their results, the American statesmen formed our Constitution and the Bill of Rights. They vowed to

insure, to themselves, and to us, their posterity, the rights of mankind—freedom of speech, of the press, of religion. Freedom from want, and from fear. Freedom from the tyranny of government—the right to rule ourselves. The voice of America, the Constitution, was born.

"I can" was the spirit of the people when our liberty was threatened in 1918, and again in 1941. We had to win to save an ideal. The voices of democracy spoke, and we did. The cost was great, but the willingness to pay was greater, for we knew the worth of the prize that was threatened.

The men of America who instituted our democratic principles, the great emancipator who enforced them, the American people who have held them so securely—all have the spirit of the Constitution, and a wholesome pride in their superior government which gave them freedom. With this spirit democracy has triumphed many times in many things.

To share this great gift with the rest of the world is our goal. But first we must show the world the worth of democracy, and help others to see its advantages. Our spirit of brotherhood, tolerance, and respect for our fellow men—that is the essence of democracy. We must speak for democracy in a strong voice—telling the world of its greatness, and urging it to enjoy it with us.

I am an American citizen of 1947—in whose hands a portion of the peace of the world lies. I, too, remember the Constitution, its meaning, and its worth. I have a share in the voice of democracy, and I wish to speak in its behalf. I want the people of America to live democracy. I want to share the blessings of freedom with the world, for I know that to keep the world, I must help to keep the peace.

I have the spirit of "I can." I want to share that spirit, and with God's help, I will.

Universal Military Training

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein a recent article from the New York Times captioned "Two hundred and nineteen college heads vote against universal military training." This action was taken by the Association of American Colleges at a recent meeting. The association is comprised of practically all the leading liberal arts colleges in the country. In voting overwhelmingly against any form of compulsory universal military training, these representative American educators overruled the urgent personal appeals of Dr. Harold W. Dodds, president of Princeton University, and a member of the President's Advisory Commission on Universal Military Training.

It is very pertinent to note in connection with this action that the association also voted in favor of an adequate Army, Navy, and Air Force thoroughly trained and equipped, for auxiliary agencies to support our armed forces, and for technical and scientific research and experimentation for war as well as for peace. These educators have performed a distinct public service. They have made a real contribution to current thinking on national defense problems. They have outlined a strong, vibrant, pro-American, democratic program thoroughly in line with the basic doctrines of the Nation. They have also expressed the considered views of predominant American church groups, labor organizations, agricultural and farm associations, and other important and influential organized groups.

The article follows:

TWO HUNDRED AND NINETEEN COLLEGE HEADS VOTE AGAINST UMT—ONLY 69 AT CONFERENCE OF THE AMERICAN ASSOCIATION BACK MILITARY TRAINING

(By Benjamin Fine)

CINCINNATI, January 13.—After a spirited debate the Association of American Colleges today voted overwhelmingly against any form of compulsory universal military training.

In its place the group, representing the 700 liberal arts institutions, and one of the most influential education organizations in the country, adopted a seven-point program for national defense. A strong Army and Navy, a firm foreign policy and broader scientific research program were proposed by the 600 educators attending the conference.

Overriding urgent appeals by Dr. Harold W. Dodds, president of Princeton University, and other key leaders, the association voted 219 to 69 against military training.

Numerous college heads waxed bitter as they threw academic reserve to the winds in a vigorous battle of words. During the discussion they split sharply into two diametrically opposing opinion groups. Many arguments were advanced for, and against, the proposal to adopt a military training bill. Friends of the national measure warned that this move was essential for the defense of our country, while its opponents insisted that a service bill would be a menace to the democratic way of life and would serve no useful purpose.

DODDS PLEADS FOR UMT

In speaking for compulsory military training, Dr. Dodds, who was a member of President Truman's Advisory Commission on Universal Military Training, pleaded with his colleagues to support his position. This program is needed, he declared, to make the United Nations function. Conceding that military service in peacetime is at variance with the American philosophy of education, Dr. Dodds held that it is now justified on the grounds of great necessity.

"There is no question in my mind that America must engage for a time in power politics," Dr. Dodds continued "in my opinion, the real issue turns on how we use our power, not on whether or not we should exert power."

Pointing to the disintegration in world affairs, Princeton's president observed that Russia had demonstrated an unwillingness to make use of the United Nations so long as Moscow can attain its goals through old-fashioned methods. In the meantime, he said, it is Russia's policy to do all possible to pull the United Nations into contempt. The time has come, he added, to consider Russia's record and not on the basis "of what we had hoped for."

"This does not imply that war is imminent or even inevitable," Dr. Dodds held. "It does imply that appeasement unsupported by power and clear evidence that we are willing, if need be, to use that power is hopeless."

FOUR POINTS FOR TRAINING

A compulsory military training program, he declared, would have these four important military benefits.

1. It would initiate our young men into the substantial psychological adjustments of a soldier's life under conditions uncomplicated by the strains of war. It would develop responses to situations that would win battles and save lives, if war should come.

2. It would make a young man familiar with the basic essential techniques of soldiering, and advance him in unit and branch training to a point at which the National Guard and the Organized Reserve could build a more competent soldier than they have ever been able to do in the past.

3. It would facilitate the classification of our young men into the various branches of the armed forces and industry, and the channeling of them into field and branches important to national defense.

4. It would afford the only practicable means for building up the National Guard and Organized Reserve to the size and efficiency which our security requires. One of the difficulties that the National Guard has had to face in the past is that even after repeated enlistments, it could not hope to carry along citizen-soldier so far as 6 months of universal training would accomplish.

DR. GUERRY IN OPPOSITION

Opposing this viewpoint, Dr. Alexander Guerry, president of the University of the South (Sewanee, Tenn.) be ineffective and inadequate for national defense. It would not serve the purpose it is intended to serve, he maintained, adding that an adequate Regular Army, Navy, and Air Force would be more effective in the building up of a strong national defense.

Universal training, he declared, would change the character of the American people and the nature of this country. He warned that the Federal Government and the military would extend their control over the lives of the people and gradually take away all freedom.

"Little by little they will destroy our initiative, our independence, our differences and diversities which are, with unit, the source of our strength and greatness, and lead us into more and more regimentation," Dr. Guerry predicted.

It is folly for this country to adopt military training at this time, he said, as it would amount almost to an open declaration on our part of the inevitability of war. A strong armed force, he urged, would be infinitely better than a program of universal military training.

Military service would not develop discipline and citizenship in our people, he continued. The arguments advanced that military service will make better citizens "are so wrong and misleading that they are proof in part of our impending misfortune if this Nation adopts a program of compulsory military service."

MANY BACK THE UN

In the general debate that followed the statements presented by Dr. Dodds and Dr. Guerry, many of the college presidents urged that greater reliance be placed on the United Nations as a force in shaping world peace.

Dr. Benjamin E. Mays, president of Morehouse College, in Atlanta, warned that military training would set a pattern for a world armament race that could only end in war.

Other speakers insisted that if the association went on record as opposed to military training, the public might believe that they took this position because of selfish interests.

After the motion to support compulsory military training was defeated, the association, by unanimous vote, adopted a resolution favoring this seven-point platform:

1. A firm, clear foreign policy for the United States.

2. A willingness and determination by the United States to take its role in world affairs and to accept the responsibility of world leadership that has come to us.

3. An adequate Army, Navy, and Air Force thoroughly trained and equipped.

4. Development of auxiliary agencies to support our armed forces.

5. Development of technical and scientific research and experimentation for war, as well as for peace.

6. Reduction in armaments of all nations as circumstances permit.

7. A constant declaration of our desire to live at peace with other countries, and an everlasting effort on our part to help build and maintain an effective federation of nations for the purpose of putting an end to war and aggression and preserving peace, liberty, and justice for all peoples on this earth.

Price-Rise Blueprint

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. REED of New York. Mr. Speaker, under unanimous consent, I am inserting in the CONGRESSIONAL RECORD the following editorial which appeared in the Maryland Gazette January 15, 1948, entitled "Price-Rise Blueprint," as follows:

PRICE-RISE BLUEPRINT

When President Truman made his first political speech of the 1948 campaign—his report on the State of the Union to the Congress—he laid down a perfect blueprint for increasing inflation and prices.

The speech was in effect a sort of political cafeteria, where any individual or group of voters could get whatever they desired. It was a campaign document in every sense of the word and will probably be treated as such by the Congress.

If all the expenditures and controls he recommended were enacted into law, the Nation would see the Federal pay roll increase by leaps and bounds and the costs of government soar to new highs. He recommended subsidies and increased services that would more and more inflict the country with the regimentation of a central government.

It is noteworthy that in the entire speech the President gave no indication of a plan to drastically curtail the expenses of the administration, or cut down on the size, or eliminate any of the agencies or departments that blossomed and grew under the spend-and-spend philosophy of the New Dealers.

His suggested program of allowing a $40 tax credit to every income-tax payer and $40 additional for each dependent, and making up the loss in revenue by increasing taxes on corporations is a sure way of running up the costs of various articles to consumers.

The President points out that his income-tax-credit plan would be a saving of $3,200,000,000 to individual taxpayers, and that this sum should be made up by increasing the taxes on business.

Although it is obvious that the program was suggested with an eye on the ballot box next November 2, it is economically unsound. Businessmen, or corporations, to survive, must charge their taxes into selling prices. Therefore, if the President's plan were adopted and additional taxes were levied upon corporations, these taxes would be passed on down the line to the consumers, with the result that the very persons whom the President suggested be aided would be carrying the burden.

For instance, if a manufacturer is selling an article at present for $40 and makes a $1 profit, a tax increase of $1 would wipe out his profit. He would be forced to boost his selling price to $41 to absorb the tax.

So, in effect, when the President recommended that a single person, for instance, be allowed a $40 credit on his income tax, then, because of the increased taxes on business and higher prices that would necessarily result, the citizen would probably pay out the $40, or more, during the year on his purchases. In other words, he would indirectly be contributing $40 in higher living costs to get a credit of $40. That, in a general way, would be the negating effect of the Presidential suggestion.

This is on a par with using the taxpayers' money to pay a subsidy on a food article in order to save the taxpayer money. We have had plenty of experience with that sort of foolishness in the past.

But the Presidential message was contradictory in itself. He pointed out that the Nation is "far short of the industrial capacity we need for a growing future." Then he continued:

"At least $50,000,000,000 should be invested by industry to improve and expand our productive facilities over the next few years."

That statement is correct, but the President did not explain how the $50,000,000,000 was to be invested in industry when he was proposing to lay a new tax on industry to consume $3,200,000,000 annually of the money that could be invested into expanding "our productive facilities."

He talked about business profits, but spoke, like most of those that do, in general terms. It is true that last year some concerns made money, but there were many who had a higher gross return, but less net return than in 1946, because of higher operating costs and the high tax burden.

The investors who put their money in the stock of the Nation's corporations and who would have to supply the $50,000,000,000 the President declares should be put into productive expansion, take a more pessimistic view of the situation. The stock market, the yardstick of the investor on the worth of the Nation's business, is an indication of this.

The following quotations on the stock of several companies on December 31, 1946, and December 31, 1947, show how the stock investor has discounted all the rosy reports that are made by the President and others on the business profits of the Nation.

Corporation	1946	1947
American Telephone & Telegraph Co	$171.50	$151.375
National Dairy Products Corp	36.875	29.00
General Foods Corp	43.25	35.75
Borden Corp	49.25	41.25
Consolidated Gas, Electric Light & Power Co	79.00	71.00

General Motors Corp. stock was selling for $75.625 per share on December 31, 1945. Because of the strike it dropped to $52.50 on December 31, 1946, and on December 31, 1947, had regained only back to $58.25 per share.

Remember, the people who put their money in the stock of the business corporations are pretty hard-boiled about it. They are investing to make a profit and naturally seek to invest in corporations where they can get the highest return for their money. If they were convinced that business were at such high peak, there would be a great demand for stocks, sending up their selling price. However, the demand is just the opposite—the market has been dropping.

As stocks are looked upon as an inflation hedge, this dropping market in times of inflationary tendencies is indicative.

Most corporations today are in the position in which a home owner would be if in 1941, when the war started, he decided that in 5 years he would have to purchase a new automobile, heating plant, and refrigerator, and decided to lay $1,000 annually for 5 years aside to pay for them in 1947. So he would have saved $1,000 for this purpose in 1942, but the regular and excess-profits tax would have stepped in and taken up all but $200. The same thing would have happened in 1943, 1944, and 1945. In 1946 the tax left him, say, $500 of his $1,000. So, in 1947, instead of finding himself with $5,000, he would have had only $1,300, yet he needed the automobile, heating plant, and refrigerator, as his had worn out during the 5-year period. So he faced the task of trying to buy them for $1,300, only to find that a price increase had run them to a total of $6,000 instead of $5,000.

Naturally, he would have to get along with his old equipment. The same thing has happened to many factories. They were not able to accumulate funds during the war period to purchase new equipment, on a rising market, when the war ended. Therefore, the Nation's productive machinery does need replacement.

Yet we have the suggestion that more and more taxes be placed on business—at the same time the President points out that business should purchase more production facilities.

What this Nation needs is a holiday from political thinking, and a curtailment of domestic governmental costs that would allow a fair tax reduction for both individuals and corporations.

"Let the Eagle Scream"

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. BECKWORTH. Mr. Speaker, last Tuesday Frank Fister, of the Junior Chamber of Commerce of America, gave me an article written by my friend, the president of the United States Junior Chamber of Commerce, John Ben Shepperd. The article, Let the Eagle Scream, appeared in the Christian Science Monitor November 28, 1947. With Mr. Fister I commend the reading of this very timely, worth while, and well-written article:

"LET THE EAGLE SCREAM": UNITED STATES WARNED TO HOLD TORCH OF DEMOCRACY ALOFT—HEAD OF JUNIOR CHAMBER OF COMMERCE HITS APATHY

(By John Ben Shepperd, president of the United States Junior Chamber of Commerce)

It's time to let the eagle scream.

As is often the case when a people are born to advantages, Americans, humanly enough, are apathetic toward their system of government—a system unique in that it grants and protects the sanctity of the individual and freedom of religion, speech, and enterprise.

Even in the face of organized efforts which ultimately would change our Government, our system of democracy, and free enterprise goes pathetically undefended, unsung, unheralded.

IN PALM OF OUR HAND

Yet it is as simple as this—freedom is held in the palm of our hand, in the hand that records our vote. There is too much criticism and too little constructive thought and effort in governmental affairs by the majority of the people. It has become a popular pastime to slur "politicians." There is a stigma connected with running for or holding public office.

Of the various ideologies that form the basis of governments elsewhere, the most formidable one is communism.

This is a system which admittedly would sacrifice the right of the individual to work

and earn for himself according to his ability and diligence—a system which would discard our type of freedom in favor of one which would divide the wealth of a country, at least in theory, equally among all its people. But because of human inequities, because of the love of power on the part of straw bosses and imposing leaders and the lack of checks and balances, we have had illustrated to us too well that such a system cannot work, and that it utterly destroys the initiative, the effectiveness, and the dignity of men so governed.

COMMUNIST THREAT

Yet communism is well organized in this country. Communists are a zealous lot. The best weapon with which to fight their insidious infiltration is with good old-fashioned American salesmanship. Fire must be fought with fire, and for every pro-Communist or fellow-traveler speech in this country, let's come back with three for democracy.

Yes, now is the time to let the eagle scream. Too many of us are unnecessarily selling America short. We go out of our way to be critical. We are too partisan. We put national security on a political basis.

To protect our democratic system and free enterprise, we must take stock of our heritage. To perfect it, the approach to our problems must be positive. To promote it calls for public education. We must educate our people to think, to take stock, to study—a thorough knowledge of American history is the best manner of promoting a love for its advantages.

The necessity of educating the public was brought forcibly to my attention while on a recent tour of Europe, where I observed the spirit of young men sinking into discouragement and chaos due to lack of security and opportunity for advancement. They had lost hope, ambition, the incentive to produce.

Talking to them about their form of government or the ever-present threat of communism, they would reply, "What can we do about it? Today we may be working on our job—tomorrow our Government may move us across the country to an entirely different kind of work. We do not have the opportunity to utilize our training or the experience gained in the war by entering a new business because our Government has closed these fields of endeavor to us."

On the way home, the thought occurred to me that our country would be in a tragic state and would be easy prey to communism if our young men—who have their lives before them and have the most to lose if our free-enterprise system were lost—should lose their hope, their ambition, the incentive to produce.

In 1944, the United States Junior Chamber of Commerce passed a resolution asking that a fifth freedom be added to the then recently announced Four Freedoms, and that this freedom be the freedom of opportunity of enterprise. With this in mind, I launched, during October, the "Fifth Freedom Flight" through 27 States, with stops in 63 major cities, in an effort to mobilize not only our 250,000 members, but all young men toward a keener appreciation of the American way of life.

The enthusiastic response to the message indicates a vast untouched range of potential understanding of young American citizens of their business and governmental heritage.

The Fifth Freedom Flight of the "Jaycees" is a sample of what can be done. A contest we are sponsoring in co-operation with the National Association of Broadcasters, "I Speak for Democracy," enables youngsters to compete for prizes on a national basis and creates an incentive for added interest in the rich traditions of our country.

BROADER KNOWLEDGE

Historical quizzes and other forms of competition are other means of broadening the understanding and knowledge and thereby promoting love of our country and its institutions. No one should miss the Freedom Train as it goes through our communities. We should have larger and more intelligent celebrations of our American historical anniversaries, such as the Fourth of July and Lincoln's and Washington's Birthdays.

The scream of the eagle must be heard around the world. We must adopt a positive program of selling our way of life to the whole world. When we help the less unfortunate in Europe under the Marshall plan, we should accompany it with the old-fashioned gospel of democracy—pointing out that only under our system of free opportunity and enterprise has a people been able to work and produce enough to relieve the chaos of a troubled world.

Don't keep our eagle buried in the glass case of a museum. Let him fly high. Let the eagle scream!

European Recovery Program

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. SEELY-BROWN. Mr. Speaker, I believe that we as a country in our own self-interest should give such aid as is possible within the limits of our own financial and economic capacity. I further believe that the administration of our European recovery program is of vital importance because if it is not well-handled our efforts abroad may have been utterly wasted and our own domestic economy severely strained.

In this connection, I am pleased to call the following article by Walter Lippmann to the attention of the membership of the House:

RELIEVING THE DEPARTMENT

(By Walter Lippmann)

Secretary Marshall and his successors will be among those who benefit the most from the refusal of Senator VANDENBERG and his committee to put the European Recovery Program under the Department of State. They will be relieved of a great burden.

The argument in favor of the original proposal was that since ERP is an engine of foreign policy, it must be subordinate to the Secretary of State. If that were a sound view, then every other department and agency of Government which acts outside the 3-mile limit should also be under the the direct control of the Secretary of State. Under this theory of government he would become in effect the prime minister; yet in the American system it is not the Secretary of State but the President who makes foreign policy and conducts foreign relations. The President can be, and has often been, his own Secretary of State. But the Secretary of State cannot be his own President.

Even when the President recognizes his own limitations, and selects, as Mr. Truman has, a man of great prestige and superior ability, it is impossible to delegate to the Secretary of State the conduct of foreign relations. They involve so many departments of Government so continually and so intricately that they cannot be controlled, or even coordinated, by the head of one of these departments.

When the Department of State attempts to do what only the President can do, it does not really take control of all the multifarious activities which enter into foreign relations. It becomes a kind of receptacle of those activities which have not been preempted and nailed down by some other department, as for example, propaganda; or are white elephants, as for example, the military government of occupied areas.

The most serious consequence of taking over so many ill-assorted operations has been that the Department has become an unwieldy bureaucracy. The unwieldiness of the machine causes the responsible men at the top to become so immersed in the details that the great decisions of high policy are really made in bits and pieces by subordinates down deep in the bureaus. Policy is not formed at the top by men who have time to consider the whole situation. They are too busy for that. They make policy in the main by settling disputes which come up to them from below.

The difficulties have been compounded by the practice which Mr. Byrnes adopted, and Mr. Marshall has continued, which is to treat the Secretary of State as a roving ambassador. No one can form and plan and really direct a global foreign policy—particularly one so vastly overextended as our own is today—if he is away from Washington attending international conferences or making speeches so much of the time. A consecutive, systematic, and thoroughly considered judgment cannot be arrived at by long distance telephone, from cables, and through occasional consultation.

It was never more necessary than it is now that this condition be corrected. On the one hand, the country has commitments all around the world which, if they are not to be beyond our resources and our power, require careful and consistent judgment and planning. On the other hand, the situation, as Mr. Churchill said the other day, is evolving rapidly to a point where things are coming to a head. If we are prepared, lucid, resolute, and inventive, it may be that events can be devoloped which can lead to a settlement of the war we have won and of that other war which all must dread.

Only men who are not too busy to think can hope to be prepared. They will be much too busy to think if from day to day, and at any hour, they are called upon to listen to the anguished entreaties of foreign ambassadors, to decide the disputes among the departments of the Government, to iron out the difficulties arising from agreements that prove to be unworkable, which the administration of the European recovery program will unavoidably demand. That would mean only that in assuming too much control of the Marshall plan, the Department of State would lose sight of, and would neglect, all the other things that need to be done if the grand purpose of the Marshall plan is to be achieved.

American Jews in World War II

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Samuel C. Kohs:

AMERICAN JEWS IN WORLD WAR II—THE RECORD AND HOW IT WAS COMPILED

(By Dr. Samuel C. Kohs)

(The epochal story of American Jewry's participation in World War II is told in full in the two-volume set of books—American

Jews in World War II—just published by Dial Press. This chapter on the record and how it was compiled is taken from the preface to volume II of this historic work, which is based on the material compiled over a period of more than 5 years by the National Jewish Welfare Board's Bureau of War Records, whose director was Dr. Kohs.—THE EDITOR.)

In the summer of 1941 half the world was at war, and war clouds were already gathering over the United States of America. It seemed probable that soon we, too, would be drawn into the conflict. The selective service law was in operation, and American Jews, like other Americans, were being drafted into the United States armed forces or were volunteering for military service.

Among American Jewish leaders it was readily recognized that one important project that must be carried out if war came would be that of compiling a record, as complete as possible, of the Jewish contribution to the war effort.

The National Jewish Welfare Board had officially represented the coordinated interests of American Jews in World War I and in the years of peace, and it was therefore the logical body to which this job in the approaching Second World War might be entrusted. It was the Jewish Welfare Board that by common consent undertook to set up an organization which would gather, assemble, classify, and interpret the facts of Jewish participation in World War II.

That organization, when established, was named the Bureau of War Records of the National Jewish Welfare Board. It was launched on October 9, 1941, barely two months before Pearl Harbor. It was sponsored at the outset by 21 national Jewish organizations and ultimately by 38.

Representatives of the sponsoring organizations made up an advisory committee of the bureau. Then a technical committee of eminent statisticians was named, to guide the bureau in its processes and to review its findings. Chairman of both committees was Dr. Louis I. Dublin, second vice president of the Metropolitan Life Insurance Co. and its chief statistician. A better choice to assure a sound and scientifically correct result could hardly have been made.

The bureau needed, first of all, to analyze the job that lay ahead of it, to assess the problems it would face.

The technical committee immediately entered on a preliminary inquiry into the nature and scope of the program before it. A conference with War and Navy Department officials soon disclosed that Jewish servicemen could not be identified as such by an examination of the official records. This outlined the first and major problem. The bureau would have to work directly through the communities themselves, and would have to develop with them the ways of measuring the extent of Jewish participation.

It would have to start almost from scratch. There were, for one thing, no reliable figures as to the number of Jews in the United States, or even in the larger cities in which the greater part of American Jews live. All that made it clear that the Bureau would have to operate on a decentralized plan, relying on the local communities, with their own leaders and local devices, to gather the much-needed basic information, such as the number of Jews in the service from each community and what proportion they formed of the local Jewish population. Local communities meant the Jewish groups, in the several States, in hundreds of counties and in over a thousand cities and towns.

The national office, located in New York, became the planning, promotional and supervisory organization. It set itself the tasks of:

1. Formulating procedures for organizing local war record committees.

2. Outlining techniques for gathering local information.

3. Establishing standard clerical forms—record cards, reports, letters of inquiry and the like.

4. Instructing local communities in setting up and operating local war records files.

5. Obtaining the authentications of all casualties (killed, wounded, missing, prisoners) and awards.

6. Obtaining regularly from local committees the statistics on the number in service and the local count of casualties and awards.

Though it soon became evident that the JWB Bureau of War Records could not hope to have a complete name-by-name record of Jews in the armed services, it urged every local community to keep a complete record of all such local servicemen—a task which was practicable except in New York and a few other large cities.

It was, all in all, a tremendous effort. More than 1,200 separate communities in the United States were involved. Each had its own war records committee or, in the case of the smallest communities, its JWB correspondent, working to gather the vital facts. They made up perhaps the greatest voluntary Jewish record gathering organization ever assembled.

The Bureau began at once establishing rosters, as complete as possible, of the following: Jews who died in the service, the wounded, those captured by the enemy, and those reported missing in action. These were the four official categories of casualties of the armed forces. As the war continued, the figures in each changed—and they were still changing, with new information continually coming in, up to the day this volume went to press.

The Bureau worked primarily from published Government lists of casualties and of awards, but these carried no indication of religion. Names of servicemen and of their nearest kin gave the first indication of possible Jewishness, but these had to be sent to the local communities for authentication of religious background. Often the family of the serviceman could not be found at the listed address, delaying the process of authentication. In this difficult job of authenticating cases, the Bureau received much help from the local committees which also furnished much information independently.

To fill in the picture of total Jewish participation in the armed services, the Bureau embarked on a series of special studies of two types: 1. Population studies in Jewish communities, to obtain analyses of sizable Jewish populations together with the numbers in the armed forces; 2. Studies of the contributions of special Jewish groups; namely, physicians, dentists, recent immigrants, farm families. It was also necessary to make an analysis of the distribution of Jews in uniform among the several branches of service.

The first of the population studies was made as early as August 1942; most of them, however, were actually made in 1944 and 1945, when the greater part of the Nation's armed forces were already mobilized; in all, 26 community studies were made. In most of these communities, these studies were inclusive of all Jews. In New York, Chicago, and Los Angeles, which have a very large proportion of the country's Jewish population, the Bureau used scientific sampling procedures to arrive at its results. In all cases, what was sought was: The percentage of the community's Jewish population in the service, compared with the percentage of the total local population in the service; and the percentage of the Jewish draft-eligible men in service, men between the ages of 18 and 44, compared with the percentage of all draft eligibles in service. The results of these population studies are summarized in table I. It should be emphasized that intercity comparisons cannot be made on the basis of this table because the studies were made at different times and local conditions also affect the situation for particular cities.

Table I shows that in 25 of the 26 cities, the percentage of Jews in the service was higher than in the general population. In most of these cases, as well as in the single case where the Jewish proportion was lower, the margin of differences was too small to be of any significance but in a few cases, the difference was too large to be simply a matter of chance. What stands out as important is the general tendency shown by these figures.

In like manner when the proportion in service of the total draft reservoir is considered, the studies show that the pereentage for the Jewish population was higher than for the general population in 23 of the 26 cities. Again, most of the differences are too small to warrant much emphasis, but the general tendency is again unmistakable that the Jewish participation in the armed forces was fully up to all expectations.

TABLE I.—*Jews in the armed forces: Statistical summary of 26 Jewish community population studies made by Jewish Welfare Board bureau of war records*

City	Year of survey	Percent of population in service		Percent of draft reservoir in service	
		Total	Jewish	Total	Jewish
Trenton, N. J.	1942	4.2	5.2	20.5	22.7
Lynn, Mass.	1943	8.4	9.3	37.9	38.5
Portland, Maine	1943	8.9	12.0	45.2	48.1
Stamford, Conn.	1943	9.4	10.3	42.6	44.3
Toledo, Ohio	1943	10.0	11.3	42.2	48.1
Allentown, Pa.	1944	8.4	10.5	33.6	42.0
Denver, Colo.	1944	8.5	11.8	40.4	50.7
Fort Wayne, Ind.	1944	8.2	13.1	38.3	54.1
Hammond, Ind.	1944	6.5	11.9	32.3	46.6
Los Angeles, Calif.[1]	1944	11.6	14.6	50.4	55.0
Madison, Wis.	1944	9.7	13.3	40.7	51.6
New York, N. Y., I[1]	1944	11.0	11.4	46.6	46.3
Oakland, Calif.	1944	7.9	10.1	35.7	41.5
Seattle, Wash.	1944	10.1	11.7	45.2	51.9
Spokane, Wash.	1944	10.0	12.2	49.5	53.5
Wilmington, Del.	1944	8.6	11.7	47.8	45.3
Youngstown, Ohio	1944	12.7	15.7	47.1	59.3
Beacon, N. Y.	1945	8.0	10.4	34.7	41.3
Boston, Mass.	1945	9.3	12.1	45.4	47.1
Chicago, Ill.[1]	1945	10.6	11.1	46.6	47.7
Dallas, Tex.	1945	9.3	11.2	39.6	48.0
El Paso, Tex.	1945	7.4	13.9	38.0	59.0
Galveston, Tex.	1945	11.6	10.6	46.7	46.6
Little Rock, Ark.	1945	8.5	12.4	39.1	55.6
New York, N. Y., II[1]	1945	12.0	12.8	47.2	52.0
Oklahoma City, Okla.	1945	9.0	12.5	39.3	51.4
Shreveport, La.	1945	13.0	13.8	54.6	59.3

[1] Sampling surveys.

On the basis of these population studies and other pertinent data, some of the statistical experts affiliated with the bureau's technical committee made estimates from time to time as to the number of Jews who were in the armed forces during World War II. Their final estimate, as of January 1, 1946, placed the probable minimum number who had answered the call to service in the armed forces at 550,000. In the absence of any reliable and definite figure as to the total number of Jews in the country and the age and sex characteristics of the Jewish population, several types of estimates were used which all yielded a figure of this order and which, therefore, the experts judged to be the most reasonable and valid figure.

TABLE II.—*Distribution of Jewish servicemen in armed forces by branches and activities as compiled by JWB bureau of war records*

Armed forces:	*Percent*
Army	80.59
Navy	16.46
Coast Guard	1.14
Marine Corps	1.81
Total	100.00
Army:	
Army Air Force	23.11
Army Ground Force	21.09
Army Service Force	36.39

Army activities:	*Percent*
Army Air Force: Flying personnel	4.67
Army Ground Force:	
Armored Force	2.28
Artillery	5.16
Cavalry	.40
Infantry	12.83
Paratroops	.42
Army Service Force:	
Adjutant General	0.85
Chemical Warfare	.68
Engineers	3.81
Finance	1.18
Medical, Dental	10.92
Military Police	1.51
Ordnance	2.60
Quartermaster	3.44
Signal Corps	4.52
Transportation	1.15
Navy activities:	
Officers:	
Line officers	9.38
Staff officers:	
Medical, etc	3.92
Supply	1.20
Engineers	.28
Other officers	2.67
Enlisted men:	
Aviation	1.45
Artificer, etc	3.64
Seamen	5.19
Specialist	5.20
Seabees	.76

At the time of writing, the JWB Bureau of War Records had a roster of more than 35,000 Jewish casualties of World War II. Included were 10,500 Jewish war dead, 8,000 of whom were killed in action, 18,000 wounded, 3,000 missing in action, 3,600 taken prisoners by the enemy.

TABLE III.—*Number of Jewish casualties and awards authenticated by JWB Bureau of War Records*

(Reflecting the status of the bureau's files up to July 1, 1946, except for deaths, which have been processed up to January 1947)

Number of casualties:	
Deaths in service:	
Combat	8,006
Noncombat	1,753
Unspecified	667
Total	10,426
Wounded in action	18,003
Missing in action	3,041
Captured by the enemy	3,687
Total casualties	35,157
Number of awards:	
Medal of Honor	1
Distinguished Service Cross	74
Navy Cross	37
Distinguished Service Medal	47
Legion of Merit	344
Silver Star	1,627
Distinguished Flying Cross	2,391
Soldier's Medal	222
Navy and Marine Corps Medal	30
Bronze Star	6,090
Air Medal	16,068
Total, without Purple Hearts	26,931
Estimated Purple Hearts (deaths in action and wounded in action)	26,009
Subtotal	52,940
Miscellaneous awards [1]	8,508
Total	61,448

[1] Principally Presidential unit citations, letters of commendation, and awards by foreign governments.

NOTE.—These statistics represent the number of casualties and awards, not the number of men involved. Awards of oak leaf clusters (Army) and gold stars (Navy) are included as additional awards of the same medal. Number of Jewish men receiving awards, 36,352.

The Bureau's files, also, contain records of just under 27,000 awards, exclusive of the Purple Heart, foreign awards and commendations, and unit citations. All men killed in action or wounded in action were automatically granted the Purple Heart, but the Bureau specifically recorded only those Purple Hearts which the servicemen's families reported as having been received. In the accompanying table III the number of Purple Hearts awarded Jewish servicemen was estimated on the basis of casualty statistics.

Some 20,000 of the 27,000 listed awards were granted for valor in combat (for example, the Medal of Honor, the Distinguished Service Cross, the Navy Cross). Six thousand were Bronze Stars, earned either in action or for service, and 643 were awards for meritorious service (i. e., Distinguished Service Medal, Legion of Merit) or for heroism not connected with combat (as the Soldier's Medal).

Impressive as these figures are, they are far from complete. As indicated earlier, the names of the men who suffered casualties or received awards were, for the most part, derived originally from official Government releases which themselves varied in adequacy, being most complete in the case of those killed in action and least complete with respect to awards. In addition, the JWB Bureau of War Records and its local committees were unable to authenticate the names of all the Jews who appeared in these lists. It is probable, therefore, that the count of the number of Jews killed in action, for which the record is fullest, is 15 to 20 percent less than the actual number and that the numbers listed for noncombat deaths and awards is only about half the true number.

This means that there were hundreds of Jewish war dead and thousands of the wounded or decorated heroes whose names do not appear in the lists assembled by the JWB Bureau of War Records.

Rationing of Grain to Distillers

EXTENSION OF REMARKS
OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper articles:

GOVERNMENT WITHOUT ETHICS—A PRIVATE CITIZEN CHALLENGES THE RISE OF A POTENTIAL DICTATORSHIP IN THE UNITED STATES

The recent arbitrary and discriminatory action of the Federal Government through Secretary of Agriculture Anderson in rationing grain to the distillers smacks strongly of police-state control methods. Worse than that, it shows absolute disregard for the integrity of Government itself.

When the distillers voluntarily agreed to shut down production of alcohol for a 60-day period, they were promised that "no effort will be made to extend the shut-down."

Then Secretary Anderson, using section 4b of the Taft anti-inflation law, disregarded the Government's promise—dictatorially interpreted the law as being retroactive—and arbitrarily forced a discriminatory and unfair ration system on the distillers.

The stated purpose of the Government was to save wheat, but a statistical analysis of the distilling industry's wheat consumption makes this stated purpose ridiculous.

The actual purpose would appear to be a combination of politics and an effort to achieve some form of prohibition through subterfuge.

There is nothing new in the tactics adopted. Dictators have used them for years—first to make a promise and later to break it, at will—and second, to achieve police-state control over the desired objective.

It is rather depressing to see such a spectacle in our own Government.

Of course, most of you who read this probably won't bother to do anything about it. Dictators know this and that is how they achieve their power.

Encroachment on the rights of the people is usually subtle—but gradually expands until the population wakes up and finds out it can happen here and they are powerless to do anything about it.

Today it discriminates against the liquor industry. Tomorrow it may discriminate against the paper industry. And the next day perhaps against your industry.

There is no stopping totalitarian methods once they are permitted to get a foothold. As Thomas Jefferson once pointed out: "Eternal vigilance is the price of liberty." That vigilance requires a revision of section 4b of the Taft anti-inflation law under which Secretary Anderson acquired his arbitrary powers. An extension of that law containing that section will be acted upon by the Congress within the next few days—and it is essential that it be amended to prevent further use of such dictatorial powers by Secretary Anderson.

I hold no brief for the liquor industry and I am not in any way connected with it—but I have a great respect for fair play, justice, and equality in government—and am American enough to believe that our Government "of the people, by the people, and for the people" should retain the high code of ethics, integrity, and honesty which has made us the greatest Nation in the world today.

TIME FOR COMMON SENSE—AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES

In the next few days the Congress will be asked to consider legislation to extend the shutdown of American distilleries. Since this involves an industry which pays annually more than two and a half billion dollars in taxes, and employs directly and indirectly more than two million American workers, we think it might be useful for you and for the public to have some of the facts about the recent voluntary 60-day shut-down.

Schenley entered into the voluntary agreement and has lived up to its obligations 100 percent.

Some American distillers did not shut down.

The Canadian distillers did not shut down.

The British distillers did not shut down.

No other country in the world closed its distilleries.

For the announced purpose of providing food for hungry people in Europe, the shutdown has been an absolute, costly, and utter failure.

The purpose of our Government was to save wheat. We believe that not only was there no saving of wheat, but that wheat was actually lost.

The distilling industry uses practically no wheat. The actual figure is less than one-thousandths of 1 percent of the total wheat crop.

This industry uses principally corn, some rye, and some barley malt. Most of this grain, if not so used, would ordinarily be fed to animals.

Normally, we use about 2 percent of the total corn crop.

It was estimated by the President's Food Committee that the 60-day shut-down would save approximately 10,000,000 bushels of grain, but actually little or nothing was saved because in the process of distilling we return to the farmer feeds for poultry, hogs, dairy cattle, and beef cattle which in the opinion of experts have an equal or greater feeding value than the grain we used.

the actual withdrawal of the British, order must be maintained in Palestine. It is not being maintained. Merely to place an embargo on the importation of munitions into Palestine, when the Mufti can draw arms from other Arab states, will certainly not tend to produce that order. Haganah is a force in Palestine which must be sharply differentiated from the terrorists. It is a band of Jewish men and women claiming no objective other than the defense of their lives, their hearths, and their homes. The conduct of the Arabs in Palestine is a threat to international peace and we should ask of our Government that it support a policy that, through the United Nations, those who are defending the decision of the United Nations be given the means with which to make their defense effective.

This is not merely a pro-Jewish position. This is a pro-American position and a pro-United Nations position. Nor must we forget our ultimate aim. That is, in the words of Dr. Weizmann, a state where Arabs do not dominate Jews and Jews do not dominate Arabs. There is a great basis of good will between right-thinking Arabs and right-thinking Jews in Palestine upon which the structure of two such states can be built.

This statement, I believe, raises a standard to which every right-thinking American, Jew, or Christian, and every right-thinking supporter of the United Nations can with confidence and high hope adhere.

JOSEPH M. PROSKAUER,
President, American Jewish Committee.
NEW YORK.

The third insertion is Sumner Welles' clear and incisive round-up of the current developments in Palestine as published in the New York Herald Tribune of Tuesday, January 27:

CHAOS IN PALESTINE—COST OF TIMID PROCRASTINATION

(By Sumner Welles)

Within the past 8 weeks, Palestine has become a shambles. Open warfare, carnage, assassination, and reprisals are the order of the day. The tally of the dead and injured is mounting hourly. To an increasingly callous public, Palestine seems to have already become just one more tragedy in a world that is filled with them.

There is all too little recognition in this country of the danger to American security and of the threat to the survival of the United Nations that are inherent in this drift toward chaos.

Our national effort is now directed toward the preservation of the independence of Italy, Greece, and Turkey as the surest means of preventing Russian domination of the Mediterranean. If large-scale hostilities break out in the eastern Mediterranean, which enable the Kremlin legitimately to claim that Russia must take armed action to safeguard her vital interests by restoring peace in a region adjacent to her frontiers, is it likely that our policy will be successful?

The Arab Higher Committee has informed the Secretary General of the United Nations that it will try to prevent the establishment of an independent Jewish state in Palestine by every means within its power. This is a flagrant violation of the solemn commitments into which the Arab States entered when they subscribed to the United Nations Charter. It is nothing more nor less than a declaration of war upon the United Nations.

The newspapers in Syria and in the Lebanon openly boast of the recent invasion of Palestine by troops equipped and trained in those two countries. One hundred and ten Egyptian officers have been granted 6 months' leave with full pay to command Arab volunteers in Syria. The Egyptian Government has appropriated $2,000,000 to help to arm the Arab forces fighting against partition. The Cairo press reports that arms and ammunition are being sent by friendly governments to Arab League headquarters for the use of these forces.

The Arab League would never have dared pursue this policy of defiance had the Arab states known from the outset that the United Nations was able and prepared to enforce its partition decision.

In the final days of the Assembly debate the United States suggested the establishment of an international volunteer constabulary to serve in Palestine. The proposal was obviously ill-advised. These volunteers could not have been adequately screened. The Soviet and American Governments would each have claimed that such a constabulary was a Trojan horse containing agents of the other. The suggestion was fortunately rejected.

When the partition resolution was finally adopted it included a mere appeal to both Jews and Arabs to create local militias. Such a recommendation, without any provision for United Nations control, was tantamount to an incitement to conflict.

Until now, the United Nations Palestine Commission, set up by the Assembly to supervise partition, has done nothing more effective than discuss how such militias could function or whether the Security Council should be asked to intervene.

The Security Council, notwithstanding the acts of aggression committed in Palestine, and notwithstanding its clear-cut obligations under article 39 of the Charter to take action "to maintain or restore international peace and security," continues to be silent. And in this case, since the Soviet Union officially supports partition, the veto is not the cause of inaction.

If the wave of anarchy in Palestine spreads further, human passions will soon be out of control.

The British Government persists in its stultifying policy of noncooperation. But the blame for what is going on should be laid primarily upon the United Nations for its timorous procrastination. It should also be laid upon the United States for its failure to assume leadership before the adjournment of the Assembly by insisting that adequate measures be taken to prevent this threat to the peace of the world, which could then already be clearly foreseen.

If the United Nations either will not or cannot enforce such decisions as its decision upon the partition of Palestine, it cannot survive.

I long since urged in this column that the measure that could best prevent the outbreak of a major war in the Near East, and at the same time avoid increased antagonism between the United States and the Soviet Union, was the dispatch by the Security Council to Palestine, in accordance with article 43 of the Charter, of a United Nations police force composed of small contingents from the regular military establishments of five or more of the intermediate or lesser powers.

A token force should be sent immediately to Jerusalem as a symbol of United Nations authority. This should be gradually increased to replace the British troops as they evacuate. There is no plan that has yet been suggested that can prevent rivalries between the major powers, keep the peace in Palestine, and restrain the ambitions of the Arab League.

If the whole of the Near East is not soon to be aflame in a devastating conflagration, if our own national policy is not to fail ignominiously, and if the United Nations is to preserve any semblance of authority, instant action by the Security Council is imperative.

My fourth insertion is a signed article by Victor H. Bernstein, the well-known foreign correspondent and author, as it appeared in PM of January 26:

WILL UNITED STATES LET BRITAIN THWART UN ON PALESTINE?

There are some simple facts about the Palestine situation which are so obviously unpleasant to contemplate that few people seem willing to contemplate them.

The first is that the United Kingdom, instead of being the "good member" of the UN that she professes to be, is—so far as Palestine is concerned—the organization's avowed enemy.

The second is that unless the Palestine Commission leaves Lake Success with an international force capable of enforcing its mandates, it won't be Palestine that will be partitioned, but the UN—partitioned and readied for history's waste basket.

The third is that the key to effective implementation of partition, and therefore the fate of UN as an effective working organization, lies primarily in the hands of the United States of America as UN's most influential and powerful member.

I'd like to discuss these three points briefly.

That the United Kingdom never wanted any part of the original UNSCOP proposal for partitioning Palestine is indisputable fact.

Nevertheless, the UN delegates approved a partition plan which required, to implementation, a certain minimum of cooperation from the UK. They did it because there seemed, at the moment, no practicable alternative available; they did it on the basis of the repeated promise that the British would do nothing to obstruct partition; they did it because they hoped that the UK, as a good member of UN, would drop her antagonism once partition was no longer a UN issue but a UN decision.

This last hope has now been shattered by the British, covertly in Palestine, overtly at Lake Success. The British say they are following a neutral policy in Palestine. Their statement is open to serious doubt, but even assuming that what they say is true, they obviously cannot be neutral as between anti-UN Arabs and pro-UN Jews and still claim to be acting the role of a good member of UN.

And at Lake Success, last Thursday, British spokesman, Sir Alexander Cadogan openly defied the UN by stating that his Government would not evacuate a Jewish seaport by February 1 as recommended in the partition plan.

Now I know that "defiance" is a harsh word. I know, too, that all actions of the General Assembly, including its Palestine partition plan, are by the very nature of the UN charter merely recommendations. But no amount of rationalization can change the fact that Britain, by refusing to open a seaport by February 1, has defied the expressed wishes of a more than two-thirds majority of the UN.

The importance of this overt defiance is that, while it may have been Britain's first since adoption of partition, the evidence is plain that it will not be her last. The Palestine Commission, UN's executive organ for partition, must henceforth reckon not only with British noncooperation, but with her actual enmity and obstructionism. To reckon otherwise is to court disaster.

Which brings us to the second point: The need for an international police force. Britain's refusal to evacuate a seaport and hinterland by February 1 enhances that need, if enhancing were necessary. For evacuation of some area by the British, very soon, was necessary not only for Jewish immigration, but for the open organization of the Jewish militia called for by the partition plan. The British will never legalize the Haganah on soil still occupied by British troops, and without the Haganah the Jews of Palestine are virtually defenseless.

The five members of the Commission are aware of these facts. They are also aware of the catastrophic effect upon their own

position that could result from the continuation of the United States embargo on arms to Jews. Could the commission seriously be expected to enforce partition against the wishes of Arabs, armed by the British, and supported only by the Jews who, sooner or later, will have no arms?

The Commission members are not fools. One can reasonably assume that they have no desire to become a laughingstock of the Arab world, nor have they any desire to subject the UN to what, in this case, would be the irretrievable shock of failure.

The Commission, indeed, has already made up its mind that an international police force is essential for implementation of partition. Indeed, I think the Commission members have made up their minds that, unless Arab resistance to partition stops, they will not go to Palestine at all unless they are guaranteed a force with which they can operate.

The Security Council will in due course be officially apprised of this feeling of the Commission. And in the Security Council, as the only body authorized to create such a force, the United States of America will have to disclose its position. Washington is committed to partition on paper; the world has the right to expect that it is also committed to partition in Palestine.

Meanwhile, it is essential to record that, until the United States rescinds its embargo on arms to the Jews of Palestine, this country's moral position is no better than that of the United Kingdom. At this stage, both countries are obstructing the recommendation of UN that the Jews shall have a free and independent state in Palestine.

VICTOR H. BERNSTEIN.

The Washington Post published last Saturday a devastating editorial exposing the inconsistencies of Anglo-American policies and the striking injustice of the British selling arms to the Arabs while we cut off supplies to the defenseless Jews:

PALESTINE CONTRASTS

Refusal of Iraq to ratify the new military alliance with Britain leaves a gap in Britain's armed alliances with the Arab world which may lead to further appeasement of the Iraqi. Perhaps they want more arms for use against the Jews in Palestine. Fawzi El Kawji, supreme field commander of both the "volunteer invaders and Arab forces inside Palestine," would then be the beneficiary. This gentleman hails from Iraq, though he is a renegade, and, in addition, is one of the old pro-Nazi gang who has been involved in every plot against Britain since 1936. He is working in cahoots with the Mufti—the scoundrel who, according to Mr. Churchill, was Britain's worst enemy. It is all the more surprising to note the tenderness that the British are displaying toward these firebrands.

We may grant that the job of keeping order in Palestine is difficult, but the difficulty has not been lessened by the arms policy that the British have been pursuing. On the contrary, the job has been made impossible. The Arabs have noted the British decision to keep out the UN mission till the eve of their own departure in May. But what must have been more interesting to them as a spur to Arab recalcitrance is the arms traffic that the British have recently developed with Palestine's neighbors. The troublemaking in Palestine comes from outside, and since the UN decision the British have actually been shipping arms to Egypt, Iraq, and Trans-Jordan, knowing full well that the arms would be used for the purpose of upsetting the UN decision. How, in these circumstances, could the British administration expect to keep order in Palestine?

The United States has been dragging its feet almost in step with the British. There is one way of restoring some semblance of order in Palestine, but on this way the Americans have turned their backs. This is to arm the Haganah, the Jewish defense militia. But as soon as the United Nations had recommended the plan of partition the United States slapped an embargo on all arms shipments to the Middle East. Here is a picture of contrasts: The British are arming the Arab extremists and at the same time trying to keep order in Palestine, while we are shutting off all supplies. To cap all, the State Department has just issued instructions to the American consul in Jerusalem to take away the passports of American citizens found among the Jewish defense forces. This was not done when Americans enlisted in the Allied armies prior to our entry into the war. Why the ban is put on Americans in Palestine who are fighting in defense of a United Nations decision to which this Government is a party is thus glaringly inconsistent with our traditional policy, let alone with our membership of the United Nations. Is it any wonder that the Arab extremists imagine they are getting aid and comfort from the chief props of the United Nations for defying the United Nations?

To be sure, the problem to be resolved depends upon the answer to the riddle of enforcement. It should have been faced squarely during the proceedings at Lake Success. Little Guatemala sought to give a lead by suggesting that an ad hoc force be raised among the noninterested powers in Palestine. That was done after the first war in respect of the Saar. Evidently the suggestion got no aid from either Britain or America. The next best thing is to bring up the matter before the Security Council. In the meantime, fairness alone, let alone any regard for the UN recommendation, demands a raising of the arms embargo by this country. The pusillanimity of the Anglo-American powers is bringing on the tragedy they contemplate, for it is an advertisement to the intransigent Arabs that the scuttling of the UN decision would not be displeasing to either London or Washington.

Federal Council of Churches Issues a Constructive Statement on the European Recovery Program

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following excerpts from a letter from Charles P. Taft, president of the Federal Council of Churches of Christ in America:

The European recovery program is wholeheartedly supported by the executive committee of the Federal Council of the Churches of Christ in America, "in the conviction that (this program) can be one of history's most momentous affirmations of faith in the curative power of freedom and in the creative capacity of free men."

The motives and objectives behind this program should be, in the judgment of the Federal Council, "above political partisanship," and "should transcend considerations of narrow self-interest."

The Federal Council believes that "the United States must be zealously on guard against imposing, or appearing to impose, conditions in the granting of foreign aid which would seem to threaten the political independence of the nations of Europe, or their right to choose their own way of life."

It is pointed out, however, that the United States, "has a right to expect that the nations participating in this program carry out their own expressed intention to work cooperatively, to maintain monetary stability, and to reduce trade barriers, in order to make the program effective."

The Federal Council is also of the opinion that if, in addition to voluntary controls, certain governmental controls should be required to assure a fair allocation of needed goods for foreign aid and domestic consumption, such controls should be adopted.

Sermon by Clark G. Kuebler, Ph. D., LL. D.

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. THOMPSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon delivered in Washington Cathedral on January 11, 1948, at a service for Members of the Eightieth Congress, by Clark G. Kuebler, Ph. D., LL. D., president of Ripon College:

World War II and our subsequent search for lasting peace have forced us to admit what we Americans are prone to forget; that, in the last analysis, ideas and ideals are all important. It is an incontrovertible fact that what a man thinks and believes, he is, and does. How can we fail to recognize that long before our enemies constituted a military threat they had certain ideas and ideals which made their machines of tyranny and aggression inevitable? And now we see more clearly every day that, even though no longer a military threat, those same ideas and ideals are not wholly dead. Indeed, if we would prevent their being revived, we must carry the fight from the battlefield to the arenas of the mind and the spirit.

In these postwar days our American ideas and ideals are being challenged as never before in the history of our Republic. Are we prepared for an adequate defense? Do we know what we think and believe?

The basic struggle, of which the war was only another phase, is one between freedom and tryranny, or between totalitarianism and democracy. This struggle, as old as the memory of man, is fundamentally one of the mind and the spirit, a conflict between two opposing philosophies of life, one of them emancipating and the other enslaving. And they always will be set against one another because tyranny in any guise leaves only the tyrant free, while he himself, as Plato pointed out, is the slave of his own caprices even as other men are his slaves. The unpleasant discovery that this struggle continues on even after our military victory has shocked many of us; and it has made some of us defeatist. How can we carry through to final victory? Is that victory assured?

As has been said, totalitarianism is not new. Regardless of when and where it has appeared and what guise it has worn, it has always been built upon two postulates. The first is the belief that reason is to be found in only a few, or in one man who heads the state. Under all totalitarian governments, the people are given no opportunity for critical thinking; indeed, they must make blind submission to an official, doctrinnaire ideology. Our republic was built on a diametrically opposite belief: That every man is capable of reasoning ultimately to the truth; and that, because he has the ability

We take out only the starch. We save all the protein and oil and add yeast. The resulting products are rich in protein, vitamins, amino acids, and other feed values.

We are convinced that the final result is this—if a farmer has 10 bushels of grain and sells us 2 bushels for distilling, and then feeds the 8 bushels which he kept and the residue which we return to him, he will get as much added weight in feeding his animals as he would have achieved if he had fed them the original 10 bushels.

We think he actually gets more.

Suffice it to say that the benefits of a balanced diet have been proved over and over again for both animals and human beings.

Our own Department of Agriculture, in numerous bulletins, has published many formulas for the use of distillers' feeds to balance animal diets.

We admit, frankly, that the exact percentage of feeding value which we return to the economy is debatable.

You may think that, instead of being more, it is even as much as 50 percent less. Let's assume that you sincerely believe that the Luckman plan saved 5,000,000 bushels of corn, or less than one-tenth of 1 percent of the total grain available.

But it wasn't corn the Government wanted to ship abroad. It was wheat.

We knew that our feeds would add weight to cattle, but the Government apparently was not interested in getting more meat. Now the Secretary of Agriculture tells the country that we are faced with a terrible meat shortage. It does get a little confusing, doesn't it, gentlemen?

In addition, we think they lost more wheat than they thought they saved.

When the farmer doesn't get our feed, do you honestly believe he is going to let his poultry and hogs and cattle starve?

And maybe this particular farmer hasn't any corn. Maybe he has wheat. So he feeds the wheat to the chickens and hogs and cattle—and it was wheat that we wanted in the first place to ship to Europe.

The government of every country in the world, except our own, has adopted the principle that distilling takes nothing away from the food economy. This is proved by the fact that none of these governments have shut down their distilleries. Surely they are not purposely taking food out of the mouths of starving people.

England is running at capacity; Canada is running at capacity; 11 countries which have submitted their needs under the Marshall plan have asked for grain for distilling and brewing.

Even assuming that the shut-down saved a few million dollars' worth of corn, let's see what it cost:

It completely dislocated an industry which pays to the Federal and State Governments more than two and one-half billion dollars a year in taxes.

It threw thousands of American workers out of work. We know because we alone kept more than 1,000 on full pay.

It increased the price of the neutral grain spirits now in storage in the United States more than 150 percent.

It opened the door wide for foreign distillers and foreign workers to take over the business of American distillers and the jobs of American workers.

We admit that these are strong statements, but we will prove every one of them right up to the hilt.

There is one other fact that ought to be clarified. The public was told that the stocks of whisky in the United States were adequate—that we have over 550,000,000 gallons of whisky. What we have, actually, is about 65,000,000 gallons of whisky in this country which is 4 years old or older. This is about 1 year's supply. The rest is green whisky not yet fit to drink. (Government figures show what is put away—not what is there after evaporation and outage.)

This is less aged whisky per capita than in any distilling country on the whole face of the globe.

Now you may well ask us why we agreed voluntarily to shut down when we knew all of these facts and had communicated them to the Luckman committee.

We assented because we were conscious of an obligation to the American people, who decided in 1933 that they would prefer to have a sound distilling industry with employment and taxes and Government regulation instead of bootleggers, gunmen, and rotgut. They put that in our Constitution.

So, when the call came to help hungry people, we wanted to contribute our share, heaped up and running over. We knew no grain would be saved, but when we were told that a great sacrifice on our part would be a tremendous psychological contribution for the purpose of securing assent from others to make comparable sacrifices, we agreed.

No other American industry was asked to make any comparable sacrifice.

No other country asked its distillers to make any sacrifice.

We think it is time for a little common sense.

We think this whole question of the shutdown of distilleries and the allocation of grain for restriction of production should be investigated by the Congress of the United States. Not in an hour, not in a day, but in a full-dress hearing with opportunity for all to be heard. Not just distillers, but the communities that are being ruined, the workers who are being thrown out of work and the farmers who have an interest in the feeding of their stock and the disposition of their products.

We believe that the public interest would be best served by full disclosure of all the facts in the full light of day.

A MESSAGE TO THE SENATE OF THE UNITED STATES

Today you will be asked to vote to give the Secretary of Agriculture another blank check to restrict the use of grain by the United States distilleries in the following 25 States: California, Colorado, Connecticut, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New York, Ohio, Oregon, Pennsylvania, South Dakota, Tennessee, Virginia, and Wisconsin.

The industry was shut down completely for 60 days October 25 to December 25. It is being restricted throughout January.

You are being asked to rush through an act to restrict it through February.

In November and December, when the United States distilleries were shut down, 1,109,000 bushels of United States corn were shipped into Canada. Since the Canadian tariff has just been reduced, we will probably get most of this back in the form of Canadian whisky.

In 1946 Canada imported practically no United States rye (8,591 bushels).

But in 1947 Canada's imports of United States rye were 1,433,356 bushels.

They imported 710,000 bushels of this, or almost exactly one-half, in the single month of November, when United States distilleries were shut down to save grain.

After the Canadian distillers had imported enough United States grain to run at capacity—and they are still running at capacity—rye was embargoed.

But they can still use all of the United States corn that they care to use while United States distillers are restricted.

Canada has suddenly become an enormous producer of corn pone and rye bread, or could it be corn and rye whisky?

If you want to know where the United States grain went that was alleged to have been saved by restriction on United States industry, read the following:

Exports of United States corn to Canada

	1946	1947
	Bushels	*Bushels*
August	255,338	816,687
September	63,418	542,046
October	23,095	592,476
November	261,745	573,658
December	379,246	730,611
Total year	2,378,858	8,085,768

Exports of United States rye to Canada

	1946	1947
	Bushels	*Bushels*
August	666	1,977
September	0	194,259
October	0	744,096
November	0	436,815
December	0	Embargo
Total year	666	1,433,356

The following are excerpts from the testimony of the Secretary of Agriculture, before the Senate Foreign Relations Committee on Tuesday, January 13, 1948:

"As far as the United States is concerned, our estimates have been made on the assumption that we would export annually to all countries of the world about 100,000,000 bushels of coarse grains, most of which would be corn. This amount would be small in relation to our total production of corn which might be expected to run about 3,000,000,000 bushels a year.

"The mere fact that the price has been high has tended to keep down the consumption of that corn to some degree, and therefore our corn picture is not extremely tight domestically, but the announcement of a large export of corn, or almost any export of corn at the present time to these European countries, would have a bad influence on our grain markets and upon our domestic costs.

"Our figure next year contemplates only the export of 300,000,000 bushels of wheat from all sources as against 450,000,000 or perhaps 500,000,000 this year. So that the probabilities are that if we started to subtract that from our total output, even if our production was only 1,300,000,000, and we took off that 300,000,000 bushels for export, we would have a billion bushels left, and there is not a possibility under heaven that the people of the United States could use 1,000,000,000 bushels of wheat.

"Therefore, as far as wheat, meat, and corn are concerned I see no possibility that any exports under this program would have any relationship to the need or lack of need for price controls or allocations on those commodities."

The following is an extract from letter of Acting Secretary of Agriculture to Senator BARKLEY, of Kentucky, January 21, 1948:

"As you know, grain continues to be in critically short supply, and its conservation is a matter of urgent necessity in order that the most essential domestic requirements be met first and in order that the United States be in a position to fulfill commitments made pursuant to our foreign policy."

Universal Military Training

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mr. MILLER of Connecticut. Mr. Speaker, I am referring to the Armed

Forces Committee petitions I have recently received, urging the immediate passage of H. R. 4278, better known as the universal military training bill.

Three of these petitions come from the following posts of the American Legion: Postal Employees Post, No. 139, of Hartford, Conn.; the Gray-Dickinson Post, No. 59, of Windsor, Conn.; the Robert E. Collins Post, No. 131, composed of employees of the Aetna Insurance Co.

I am also submitting a petition submitted by the American Legion Auxiliary of Gray-Dickinson Post, No. 59, of Windsor.

I would like to refer particularly to a similar petition signed by a few thousand of my constituents who are enrolled as citizen soldiers in the National Guard of Connecticut and in the National Guard of the United States. About half of these men are veterans and the rest are soldiering for the first time. All of them believe in universal military training.

I think it is of particular interest that we find practically every veteran organization expressing their approval of compulsory military training. Certainly we owe the youth of this country at least a minimum of military training. They are entitled to the opportunity to learn how best to protect themselves if we should ever be subjected to a military attack.

What Is Happening in Palestine?

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. KLEIN. Mr. Speaker, under consent, I am inserting in the CONGRESSIONAL RECORD editorial comment from several sources on the unhappy situation in Palestine, which I commend to the attention of the membership.

The first insertion is an editorial from the New York Post of January 22:

PEACE—AND PALESTINE

If we will not be honorable, let us at least be savagely merciful.

If we are determined to solve the problem of Palestine by completing Hitler's grisly work, let us do it, at least, with some of our vaunted efficiency.

We are wasting time, gentlemen in the White House, gentlemen of the Cabinet, gentlemen of the Senate, gentlemen of the armed forces.

At this rate, unless the pace is accelerated, it will take another 2 years for Hitler's pal, the Arab Grand Mufti, to murder the 700,000 Jews the Americans and British have rounded up, disarmed, and disowned.

We can solve the problem quickly, and we alone, for do not we alone possess that most efficient of all murder weapons, the atomic bomb?

One little raid, gentlemen, think of it, and all would be peace in Palestine.

One little bomb, and we would have made good our pledge to find a home for the Jews—a permanent home in Palestine—one good for all eternity.

We are making a good beginning.

Already we have brought peace to more than 900 Jews and Arabs in the short time which has elapsed since November 29—the date when the world's most powerful nations solemnly met and by majority agreement voted to give the Jews one-third of the national home promised them with equal solemnity after the First World War—remember?

Once upon a time we were a proud people, a courageous people, placing honor above hypocrisy, jealous of our pledges, zealous for our treaties. Once upon a time we were schocked, and angered into quick action by the contemptuous words of a foreign potentate who dared refer to a solemn treaty as just a scrap of paper.

And yet we have come to such low estate that we have made, thus far, a mere scrap of paper of the solemn undertaking to which we pledged ourselves at Lake Success last November 29.

We were silent when the British made it evident, in the infamous white paper, that the Balfour Declaration was just a scrap of paper.

Our own treaty of 1924, giving Great Britain our consent to carry out the League of Nations mandate over Palestine, imposed as the price of our consent the obligation to give us regular, satisfactory evidence that the terms of the mandate were being put into practice.

What became of that treaty?

It is gathering dust in the archives of the Department of State—where it has become, to us, just another scrap of paper.

Our silence has given consent to Arabian defiance to our United Nations pledge; consent to Great Britain's disarmament of Jews and her open steady sale and gift of arms to the Arabian guerrillas who war upon the Jews in anger at the United Nations; consent to the illegal imprisonment of Jews in British concentration camps; Jews whose only crime was an effort to reach the home awarded them first by the Balfour plan and now by the United Nations.

But we have not been content with silence.

We have taken positive action to make certain that the Arabs are armed and the Jews without weapons; we have embargoed shipment of arms to Palestine; we have denied the citizens' army called Haganah the right to buy weapons to defend their own and their fellows' homes; we have become an accessory to murder; not only the murder of Jews and Arabs, but the murder of honor, justice, decency, and mercy.

The custodians of our national honor are the President of the United States, the Secretary of State, our delegation to the United Nations; national secretaries of Cabinet rank, Members of the Congress, particularly the Senate which has treaty ratifying power.

If we are sufficiently aroused by November 1948 we can hold the guilty responsible, and, if we will, banish them from public life.

The next few weeks—the next few days—will be enough to prove who among them, if any, still believes in action to support our pledged word—and which among them is content with scraps of paper.

Mr. President and gentlemen, at this moment in history, you and only you can act. You can, if you will, lift our embargo so that Jews may at least fight to defend their homes, their country, their very lives. You can, if you will, arm the United Nations so that its decisions can be enforced.

But if you will not, then at least be merciful and efficient.

We repeat: If we are determined to see our pledges violated, and to see the problem of partition solved by murder, let us prove how advanced our science has become—how far we have come since Hitler.

The Arabs are doing well with rifles and bombs. The Nazis did better with starvation and crematoriums.

We can finish the job in a couple of hours with the atomic bomb.

If we will not bring life, then let us at least get on with the job of death. Let us quit torturing Jews—and democracy.

The second insertion is an open letter signed by Joseph M. Proskauer, president of the American Jewish Committee, which is a brilliant exposition of the position maintained by American Jews, whether or not they are members of any of the many Jewish organizations.

I particularly commend to the attention of Members the second and the closing paragraphs of Mr. Proskauer's letter, to which, I believe, every American Jew will fully subscribe, even those who are self-consciously anti-Zionist:

AMERICAN JEWISH COMMITTEE POSITION

Because of the conflicting accounts of the implications for Jewry of the partition of Palestine, I deem it important that there should be a clear statement of what I, as president of the American Jewish Committee, believe to be the philosophy and attitude of American Jewry.

We are told by the anti-Semite, through malice, and by some small sections of American Jewry, through confusion, that this partition has created a problem of possible inconsistency between our obligations as Americans and as Jews. There is no such problem. Five years ago our committee stated: "There can be no political identification of Jews outside of Palestine with whatever government may there be instituted." These words state an axiom and remain true today. The Jews of America suffer from no political schizophrenia. Politically we are not split personalities, and in faith and in conduct we shall continue to demonstrate what the death rolls of our Army on many a battlefield have attested, that we are bone of the bone and flesh of the flesh of America.

What should be the attitude of Jews toward this newly-to-be-created state? We have affirmed our sympathy with and our desire to cooperate with those Jews who wish to settle in Palestine. Now we find this embryo state already beset with the horrors of violence and bloodshed and its shores largely closed to that suffering remnant of downtrodden European Jewry which yearns to go there. In helping them we emphasize that nothing can be done which in any degree constitutes a violation of the laws or the executive action of the United States.

But we have a right to represent to our Government for its action a great fundamental truth. The United Nations Assembly did not merely decide a dispute between two peoples—it prescribed a course of international conduct; it decreed that partition was a measure that made for the peace of the world. The world must support that decree. The responsible Jews in Palestine are engaged in no struggle of aggression or of aggrandizement. If any hot-headed group is acting at variance with this position, that group is disavowed. But responsible Jewish leadership asks for nothing except that the mandate of the Assembly of the United Nations be executed. To enforce it requires policing of Palestine against the violence that has there been incited chiefly under the leadership of Arabs identified with Hitler.

It is vital not only to the Jews of Palestine but to the peace of the world that the dignity and integrity of a resolution of the Assembly of the United Nations be defended against such bloodthirsty attempts to thwart it as have appeared in Palestine during the last few weeks. To that end we urge on our State Department—first, that under the Security Council of the United Nations there must be created a sufficient constabulary to preserve peace and order in Palestine when the British withdraw and to make clear to the world that the decision of the United Nations is not to be treated as a scrap of paper.

Second, during this crucial interim between the decision of the Assembly and

to reason, he has a right to share in the working out of his destiny. If we should surrender our reasoning power to one man or to a small group, at that moment we would exchange freedom for slavery.

The second postulate on which totalitarianism has always rested is this: That an individual has his value only in terms of the state and has no worth himself. Democratic society, on the other hand, is built on the belief that every human being is of infinite value, a value which transcends government or social structure. For precisely that reason our Republic was founded on the strong conviction that it is the function of government to serve the individual and society and not vice versa. It is that idea, particularly, which is being challenged by so many who would make government an end in itself and the state all-powerful. To preserve our belief in the supreme worth of the individual we must keep alive the core of belief out of which it grew, i. e., the Judaeo-Christian tradition: Both Jews and Christians believe that man has a dignity independent of any state because he was made "in the image of God." And the Christianity which built this great cathedral teaches us that God sets such a high value upon man that "He gave His only begotten Son that whosoever believeth in Him should not perish but have everlasting life." If our synagogues, temples, and churches were to be destroyed, our freedom would have lost its final bulwark of defense. That truth the totalitarians of the modern world have made clear by their deliberate attack upon synagogue and church as their most formidable foe.

Unfortunately, we have been all too inclined in the past three decades either to give mere lip service to these ideas and ideals on which our civilization was built, or to consider them not too important, or, in some instances, actually to sneer at them as outmoded and false.

For roughly a hundred years, until World War I, the western world was smug and self-confident, assuming that, because of our great scientific and technological achievements, progress was automatic. In that period man put himself at the center of the universe saying, "Glory to man in the highest, for man is master of things." When the first war ended disappointingly in rumors of wars to come, in the spread of barbarous, totalitarian governments, in the growth of hatreds between nations, races, and classes, the pendulum swung to the opposite extreme, to an equally blind pessimism or cynicism. Typical of the negativism which prevailed between the two wars is the cryptic remark of Theodore Dreiser: "I can make no comment on my work or life that holds either interest or import for me. Nor can I imagine any explanation or interpretation of any life, my own included, that would be either true, or important if true. Life is to me too much of a welter and play of inscrutable forces to permit, in my case at least, any significant comment. I catch no meaning from all I have seen, and pass, quite as I came, confused and dismayed."

But during the last war the pendulum began to swing away from negativism to an honest search for meaning and purpose, toward a positive belief. Indeed, the following words of the prophet Amos are a most apt description of that almost pathetic eagerness for something to cling to: "Behold, the days come, saith the Lord God, that I will send a famine in the land, not a famine of bread, nor a thirst for water, but of hearing the words of the Lord."

Illustrative is the statement of Sir Philip Gibbs: "Already many minds are aghast at the disorder, and see no hope for humanity except in a revival of faith and a return to Judaeo-Christian ethics." Indeed, to read the significant writings of the last 5 years is to see a growing awareness that the one possibility for a just social order and a lasting peace is to be found in terms of the Christian ethic. But mere moralizing, at best, is not enough; it cannot stand up against a burning faith, even when that faith is an evil and a perverted one. In fact, it will be as ineffectual as an umbrella in a tornado? That was demonstrated in Nazi Germany.

To put it succinctly, the Christian ethic will have reality and vitality only as a product of the Christian religion. The ethics of Jesus, when divorced from a gospel of salvation through the cross, may move us for a day, but they soon become meaningless apart from God. The first point of a seven-point declaration signed by Roman Catholic, Anglican, Orthodox, Protestant, and Jewish leaders is a fundamental truth: "The organization of a just peace depends upon practical recognition of the fact that not only individuals but nations, states, and international society are subject to the sovereignty of God and to the moral law which comes from God."

Note the order: First, the Divine Person and then His law; relationship to God is more than legalism. And the process of creating a just social order and a lasting peace involves more than working out proper legislation, important though that is; indeed, it is a matter of redeeming mankind from sin or alienation from God. Apart from God, man has no hope.

The faith itself, then, is the answer to our searching. No longer can we hold to the specious logic of pseudo-liberalism that it does not matter what men believe. What a man thinks and believes, he is and he does.

When we allow ourselves to be natural, we sense a great, transcendental power in the universe, and ineffable mystery, with which we must be in harmony if we would be happy and at peace. In other words, we reach up and out for God. But not only do we reach out for God; God reaches out constantly to reveal Himself to us; in fact, the whole of early history is the record of the self-revelation of God to man, a revelation which culminated in the coming of our Lord Jesus Christ. That all-important event we celebrated recently in the Feast of the Nativity, Christmas.

Sometimes modern religion has concentrated so much on the voluntary self-humiliation of Jesus that we have remembered only the self-humiliation and have forgotten what is most significant: that it was God who humbled Himself. We must not lose sight of the authentic majesty, the awe-striking authority of Jesus who is called the Christ, indeed, the word Christ means in Greek the "anointed" or the "monarch." Although humble, gentle, and forgiving, our Blessed Lord never minimized His claims for Himself, the most extravagant the world has ever heard: "I and the Father are one. * * * Whosoever hath seen me hath seen the Father. * * * Heaven and earth shall pass away, but my words shall never pass away. * * * I am the Way, the Truth, and the Life. * * * Before Abraham was, I am."

If we minimize that teaching, we make our Lord merely a pale Nazarene prophet, a good man whose life ended in frustration and defeat; and our religion becomes sheer sentimentalism, politeness toward possibilities, a formulary on Sunday and a fiction the rest of the week. Such emasculated Christianity would never have called forth the allegiance of great men and women, changed the course of civilization, and converted nations.

Here and there one comes upon an alarming defeatism, a lack of faith in the cause of our great Republic. If we will have faith in God as He is revealed in His Son, if we will obey His law, if we will love and worship Him, we need have no fear, as our forefathers had no fear. Our hearts and our minds will be up, we will stoop to lift others, to help those who are down, to change the conditions of the depressed, to achieve understanding among nations, to deny despair, and to keep blazing the light of hope. If we will build our cause on that foundation, our cause will be just and we will have no fear, for God Himself will be our leader. In the difficult days which lie ahead, let us keep constantly in mind one of the greatest and most appropriate of all the texts in the Bible: "But they that wait upon the Lord shall renew their strength." If you and I will only have faith in Him, we, too, shall renew our strength and we will know no defeatism.

Letter From Commissioner of Department of Public Works in Massachusetts

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following letter I received from William H. Buracker, commissioner of the department of public works, Commonwealth of Massachusetts, concerning the unfair distribution of Federal funds to meet the cost of approved projects for the improvement of rivers and harbors and for flood control:

COMMONWEALTH OF MASSACHUSETTS,
DEPARTMENT OF PUBLIC WORKS,
Boston, January 26, 1948.

HON. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I am sending this letter to the Senators and Representatives from Massachusetts to call to your, and their, attention what seems to us here to be an unfair distribution of Federal funds to meet the cost of approved projects for the improvement of rivers and harbors and for flood control.

A recent publication of funds contained in the Federal budget for 1949 indicates that approximately $107,000,000 has been set up for new work on river and harbor improvement projects and approximately $440,000,000 for new work for flood control. Of the appropriations for river and harbor projects, no funds are allotted to Massachusetts although there are many projects which have already been approved by Congress, some of them nearly 10 years ago. It is true that many of these are small projects, but they are of great interest to the locality and of material assistance to the fishing industry. In all such cases the local interests are expected to make a substantial contribution which, on the average, is about one-third of the cost. A comparatively small allotment would thus satisfy a great many of our citizens.

For flood-control projects in Massachusetts, about $1,400,000 has been included for important protective work along the Connecticut River and additional appropriations for reservoir construction in Vermont and New Hampshire which are of considerable benefit to Massachusetts. No allotment has been made, however, for the construction of the flood-control reservoir at Barre Falls on the Ware River, which is of great interest to the manufacturing interests and of grave concern to the people who live in that valley.

The lives of the people who live in the valley, and their homes, are seriously endangered at times of flood conditions and engineering studies have disclosed that the requested reservoir is the only practicable solution to the problem. This reservoir has been approved by Congress, the design is well under way, it has been approved by all local interested parties, Federal, State, and civic, and no opposition to it has developed. We believe that it is particularly important that this reservoir should be built as soon as possible.

This letter is not a plea that more money be appropriated—the total amount available seems to be generous—but it is a plea that the Members of Congress from Massachusetts endeavor insofar as they can to get a more equitable distribution of available funds for projects which already have been approved and which are of great interest to many citizens of the State.

Very truly yours,

WILLIAM H. BURACKER,
Commissioner.

United States Budget (Congressional Record, Jan. 12, 1948)

Rivers and harbors (subtotal $107,350,000):	
Portland Harbor, Maine	$1,600,000
New Haven Harbor, Conn	1,500,000
Bridgeport Harbor, Conn	100,000
Total for New England	3,200,000
Flood control (subtotal $439,710,000):	
Union Village Reservoir, Vt.	1,500,000
Birch Hill Reservoir, Mass.	100,000
Blackwater Reservoir, N. H.	231,000
Franklin Falls Reservoir, N. H.	150,800
West Peterboro Reservoir, N. H.	600,000
Holyoke, Mass. (local protection)	755,000
Springdale, Mass. (local protection)	315,300
Chicopee, Mass. (local protection)	256,000
Norwich, Conn. (local protection)	320,000
Total for New England	4,228,100
Grand total, rivers and harbors and flood control	547,060,000

AUTHORIZED NEW WORK PROJECTS IN THE NEW ENGLAND DIVISION FOR WHICH NO FUNDS HAVE BEEN APPROPRIATED

Northeast Harbor, Maine; Channel between Isle au Haut and Kimball Island, Maine; Hendricks Harbor, Southport, Maine; Portland Harbor, Maine: (a) Anchorage, (b) channel, (c) ledge; Oguinquit-Perkins Cove, Maine; Newburyport Harbor, Mass.; Gloucester Harbor and Annisquam River, Mass.—Lobster Cove; Manchester Harbor, Mass.; Salem Harbor, Mass.; Marblehead Harbor, Mass.; Lynn Harbor, Mass.; Boston Harbor, Mass.: (a) Channel, (b) anchorage; Dorchester Bay and Neponset River, Mass.; Weymouth Fore River, Mass.: (a) River channel, (b) channel in Nantasket Gut; Cohasset Harbor, Mass.; Duxbury Harbor, Mass.; Plymouth Harbor, Mass.; Cape Cod Canal (Onset Bay), Mass.; Wellfleet Harbor, Mass.; Chatham (Stage) Harbor, Mass.; Harbor of Refuge at Nantucket, Mass.; Hyannis Harbor, Mass.; Menemsha Creek, Marthas Vineyard, Mass.; Westport River, Mass.; Fall River Harbor, Mass.; Providence River and Harbor, R. I.; Wickford Harbor, R. I.; Pawcatuck River, Rhode Island and Connecticut; Mystic River, Conn.; Connecticut River below Hartford, Conn.; Clinton Harbor, Conn.; Guilford Harbor, Conn.; Norwalk Harbor, Conn.; Stamford River, Conn.; Mianus River, Conn.; Greenwich Harbor, Conn.

PROJECTS FOR WHICH MAINTENANCE FUNDS ARE NEEDED

Penobscot River, Maine; Kennebec River, Maine; Portland Harbor, Maine; Boston Harbor, Mass.; Weymouth Fore River, Mass.; Cape Cod Canal, Mass.; Pollock Rip Shoals, Mass.; Cross Rip Shoals, Mass.; Point Judith Harbor of Refuge (breakwater) R. I.; New London Harbor, Conn.; Thames River, Conn.; Connecticut River below Hartford; New Haven Harbor, Conn. (breakwater); Housatonic River, Conn.; Mystic River, Mass.; Hingham Harbor, Mass.; Ipswich River, Mass.; Westport Harbor and Saugatuck River, Conn.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. BUTLER. Mr. Speaker, I desire to comment briefly on the proposed St. Lawrence seaway, and to call to the attention of the House a few of the reasons why I sincerely believe this proposed project would not be good for the United States of America.

I have the highest regard for those of my colleagues who appear to favor this project. It is not my purpose to question their good faith in the position they have taken. I admit that there are aspects when taken alone sound most favorable to the project. There is no Member of the Congress, for instance, that is more desirous of improving the military security of the Nation than I am. Neither is there one who would be more happy to cooperate with our good neighbor just north of our border, the Dominion of Canada. My remarks today are not to be interpreted as in any way hostile to our good neighbor. Neither are they to be regarded as even a question of the high character or good purpose of those who have taken a position in favor of the project in question.

However, I do feel that we should consider every important aspect of this proposal and assay, insofar as it is possible, the total effect the project will have on the future well-being of all of our citizens. Our own Nation, Mr. Speaker, and its welfare should have first place in the consideration of this and all other proposals. I would add further that the greatest service we can render our neighbors is first to keep the United States a strong and secure Nation. Secure, from a military standpoint, and at the same time an ever-growing stronger Nation from an economic standpoint. Certainly we cannot hope to maintain a secure military position unless the economy of the Nation remains healthy. It is our economic strength that makes possible the Military Establishment that we look to for protection.

There is little need for me here to even call attention to the details of this proposal. These details are, or should be, well known to every Member of Congress. It is rather my purpose to direct attention to some of the effects that I feel will come should the proposal be accepted.

First, let me point out that it would become an inland waterway that would enable oceangoing commerce to come and go direct from our inland cities, as far west as Chicago, Milwaukee, Duluth, and other inland lake ports directly out to sea, thus bypassing not only our cities and towns lying eastward, but our railroads and highway transportation as well. Also, this world commerce would move only a short distance through area under our flag, but it would move for the most part through an area of our good neighbor, Canada. While this is true, our country is called upon to provide the money for the development. Thus, American capital is to be raised for the purpose of developing a route of commerce for the development of another country.

Is it too much to ask, Mr. Speaker, where this money is coming from? The answer to this question is obvious. It will be the American taxpayer that will pay for the development. Among those taxpayers are the American railroads. There are also American warehousemen. There are tens of thousands of American working men. The men who work for the railroads and transportation companies, the men in the ports and those who service this huge and complicated transportation system that has been built up during the years. Yes, they are going to be asked to not only supply their share of the taxes for this project, but they are going to also sacrifice their equities in property, their jobs, and their opportunities for getting ahead in this land of ours. I feel, Mr. Speaker, that it is timely for some one to begin to talk about the interests of those who live and work in this country. In my opinion, this proposed seaway would affect directly or indirectly millions of our people to their very great disadvantage. This is not being said, Mr. Speaker, in the interests of those who earn their living in this large and intricate transportation system that we have now, alone. They number into legions. But business and industry generally all along the routes from Chicago eastward are indirectly affected if the sea-going commerce is to be transferred from the United States to Canada. I believe that this ocean-going commerce being channelled into another route would affect millions of our people. It would depreciate property values and force the entire transportation system, railroads, and trucks, to very materially reduce their capacity if they were not put out of business altogether.

Again, I wish to call attention to the very pertinent fact that for a period each year, and it is a fact right now, that water routes in that latitude are forced to close down almost entirely due to weather conditions. What is going to happen during those months? If our present transportation system should be reduced of necessity because of this seaway, would it be able to take back the load it is now able to carry when the winters come? We cannot scrap a large

part of our capacity for overland transportation during part of the year, which will be the case if this project is developed, and then simply turn it on again when the winter months come around. I fear, Mr. Speaker, that instead of strengthening our transportation system, either in peacetime or in war, if war should come, this project would greatly cripple our Nation.

It is argued that this proposed seaway would greatly reduce the cost of transportation and thus stimulate world trade. It is stated that travel by water is cheaper. There are no costly roads to build, rights-of-way to be bought and maintained, and other costs necessary to maintain overland transportation that the seaway will not have. Mr. Speaker, these are the same arguments that have been advanced time and time again on every inland waterway, or improvement for water commerce that has been advanced. In a sense that is true. But, do we ever stop to think why these differences maintain? Let me summarize just a few of the reasons:

Railroads have to purchase expensive rights-of-way.

They have to grade and maintain the rights-of-way.

They have to construct and maintain the roadbeds and the tracks.

They also pay heavy taxes to both Federal and State Governments.

In fact, I believe that the railroads are the largest taxpayers in most of our States and one of the largest taxpayers to the Federal Government. They are one of the very largest employers of labor in the Nation. In many cases the very Government that they so faithfully support and serve taxes them to develop waterway transportation to compete with them or put them out of business. I believe this seaway will be just that kind of a project. Our Government is being asked to appropriate millions of dollars. Dollars that will be a liability of all citizens including railroads, trucking companies, and millions of workers in the transportation industry, to develop a seaway that will take the commerce on which these very people depend for their livelihood out to sea and leave these same taxpayers without the means of making their living.

They say transportation costs would be reduced. Why would they not be reduced? If this Government will provide the money for the seaway to develop its channel and maintain it, of course, it can operate cheaper. But is it always best to do the thing that is cheapest? I say it is not. I am anxious to see high prices made lower, transportation costs reduced, but I want to see that done, Mr. Speaker, in a way that will not throw our entire economy out of gear, make millions idle, and at the expense of property values and business opportunities of our own citizens.

Let me return again to the effect this proposal will eventually have on our military position. Suppose it goes through. Suppose a few years from now we will see our present transportation reduced to the amount required to take care of only local commerce. Suppose then war should break. Would it not be easy to simply break just one point of this waterway by a well-timed bomb and create a bottleneck that would tie us up and make us all but helpless? I fear that it would.

It is argued that we need to provide such a seaway to stimulate foreign trade. Mr. Speaker, how badly do we need foreign trade? I say we need trade with other countries to the extent, and to the extent only, that we can make an exchange of goods whereby we give commodities that are not in short supply here for others that we need. Any other basis for commerce with other nations is not sound economy. Why should we trade articles that we do not need for other articles that are plentiful here and pay this huge cost of transportation? It helps, they say, but who does it help? I fear that the number of people benefited by that kind of commerce are few in number.

The difference in cost of our overland transportation system and the proposed seaway will not be as great as some may think. The boats have to be loaded, whether they are loaded in Duluth or in Boston, whether in Chicago or in New York, whether in Milwaukee or in Baltimore. The difference, Mr. Speaker, is largely the actual cost of moving it overland or by sea the actual distance from the Lake port to the seaboard. That is not great enough to justify the crippling effect such a program will have on our economy.

Mr. Speaker, the American railroads have had a very large and important part in the development of this country. Without them I question seriously whether we would have ever been able to establish and maintain this union of sovereign States as one Nation. It is to their everlasting credit the great role they have played in our national development. They served, and served well, both in peacetime and in war. Far better, Mr. Speaker, would it be to give them the credit that is due them and the millions of our citizens, living and dead, who make up that great transportation system, rather than to even toy with the idea of promoting a proposition that would mortgage their future to develop a seaway to take their substance, their hope, their opportunity to sea, even through the areas of our good neighbor, Canada.

Mr. Speaker, it is time for the emphasis of the Congress to be placed first for those projects which will promote the general welfare of the United States of America. Only by retaining and improving our position as a strong and virile Nation can we remain able to be a good neighbor to our friends in other lands. Only, also, can we be prepared to protect the interests of our citizens and provide them with opportunity in peace and security in war. Let us first "promote the general welfare, and make secure the blessings of liberty to ourselves and our posterity." Then, and only then, shall we be justified in appropriating our substance for the advancement of the commerce of the world.

Franklin D. Roosevelt—A Tribute by Walter Winchell

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. KLEIN. Mr. Speaker, tomorrow is the birthday of Franklin D. Roosevelt. For a decade we have honored this day by financial support of the national fight against infantile paralysis.

I can see a time in the near future, however, when the American people will observe January 30 as a memorial day for America's great democratic leader, just as we observe Washington's Birthday and Lincoln's Birthday.

Last Sunday night the vast radio audience of Walter Winchell heard, on the American Broadcasting System, this stirring tribute from Winchell to the man who led us to victory in the fight against depression and the war against aggression:

Sixty-six years ago this week a baby boy was born at Hyde Park, N. Y. He was born in a mansion, but his spirit descended straight from the cabin of Lincoln. They attacked Lincoln because he was born poor. They vilified Roosevelt because they said he was born with a gold spoon. But the real reason that both men were attacked was that they both believed in more food on the spoons of the common people, and because they both believed that America is a country where a square deal is even more important than a square meal. A man is not measured by the praise of his friend, nor the vilifications of his enemies. The unhurried centuries pronounce the verdict. And time knows no favorites. The great-grandchildren of the men who attacked Abraham Lincoln are taught the lessons of Lincoln's life in the public schools today. One hundred years from now, the descendants of the men who attacked F. D. R. will journey to Hyde Park, N. Y., to drop roses on his tomb, because the age in which they live is the age for which he fought. He died before his time because he was ahead of it.

Votes at $40 a Head

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport (Conn.) Telegram:

VOTES AT $40 A HEAD

When is a tax cut not a tax cut? When President Truman stands before the Congress of the United States in his role of High Tax Harry and makes what is actually a sordid appeal for votes at $40 per head. And this is not Republican propaganda, either. It is merely an explanation of what the President of the United States said when

he talked of many things, except the state of the Union.

For a year the President has been violently chastising the Republicans for even thinking of cutting individual income taxes in these days of inflation and enormous Government spending. Now from the President who vetoed two tax bills comes this offer, $40 a head, to be paid for by the addition of even higher taxes on corporations, a proposal outdoing even the most uneconomic of the New Deal "economists."

High Tax Harry has lived up fully to all the predictions made concerning his 1948 program. Last year was "not the time" for tax reduction, but with an election approaching, it is "the time" and on the President's own terms.

He proposes a ridiculous plan to lower individual taxes by the magic figure of $40 (which he arrived at because $25 wasn't enough and $50 was too much) to combat the inflationary spiral. But what he does actually, is to fly in the face of the country, even his own economic advisers. He abandons all economic common sense, to substitute one of the most inflationary contributions he could devise by passing on to the corporations the burden of absorbing the revenue loss of $3,200,000,000.

Again the corporations receive a body blow, because they appear to be making profits beyond all expectations—but are they? Mr. Truman only reads the last figure on a financial report. He seems to have no notion whatever as to where the profits themselves go. If he does, then he is not only ridiculous, but dishonest in telling the people that American business and industry can stand endless wage demands and higher taxes.

And on top of that he asks this same American business and industry to invest $50,000,000,000 in a 10-year plan of expansion. If ever there was a man who thinks money grows on trees it is High Tax Harry Truman.

There are good reasons for tax reduction at this time, but none came from Mr. Truman. His only idea on the $40 proposition is that it will stamp out poverty in our time and foster enduring peace in the world. Apparently his political advisers, who are not economists, did not tell him anything else to say.

This $40-a-vote tax reduction may have some appeal to the average citizen who is so taxed to death that even a little handout like this looks good to him, especially if he has four or five dependents. But let him compare this inflationary procedure with the Knutson proposal in the table prepared by the impartial, nonpolitical Associated Press and he will readily see what value High Tax Harry and all the raw-deal politicians in Washington place on him.

The hopes of everyone who expected the President to show himself at last as a man endowed with leadership have been dashed. He has tried to revive the New Deal, but he puts an appallingly low price on it, at $40 a head. It is no wonder that some Congressmen were unable to control themselves and exhibited their displeasure by ill-mannered laughter during his address.

Roll of Honor

EXTENSION OF REMARKS

OF

HON. EMORY H. PRICE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. PRICE of Florida. Mr. Speaker, under leave to revise and extend my own remarks in the RECORD, I include therein a speech I made in the House on June 20, 1946, which appears in the CONGRESSIONAL RECORD of that date on page 7248.

On April 27, 1946, there appeared in Labor, a weekly newspaper owned by 15 recognized standard railroad labor organizations, an article entitled "The Roll of Honor," and I quote the exact heading of this article which is as follows:

THE ROLL OF HONOR

Below, Labor prints the names of the 218 Members of the House who defied the powerful railroad lobby and signed the discharge petition presented by Congressman Matthew M. Neely, of West Virginia. The list includes 136 Democrats, 80 Republicans, 1 American Labor Party member, and 1 Progressive. Readers of Labor should not forget these lawmakers who came to the assistance of the railroad unions when they were fighting with their backs to the wall. (Republicans are printed in caps, Democrats in lower case, Prog. stands for Progressive, and A. L. for American Labor Party.)

Florida: PRICE.

The list of those signing the petition included the 217 other names from the various States.

This same paper, issue of June 29, 1946, carried another news article entitled "Railmen's Friends Put Over Crosser Bill; Powerful Pleas Are Made in House Debate," and I will quote several statements from this article as follows:

Every vote counted when the critical moment came.

The committee substitute was defeated 136 to 129, a margin of only 7 votes.

Effective blows for the latter measure were struck by many Congressmen.

Quotations were made that were taken from the following Members of Congress who spoke in favor of the Crosser amendments. Those mentioned were BECKWORTH, of Texas; FLOOD, of Pennsylvania; MAHON, of Texas; PRICE, of Florida; WHITE, of Idaho; and BRADLEY, of Pennsylvania.

Two full paragraphs were quoted from the speech I made on the floor at that time, but I wish to insert the full speech in the RECORD.

I wish to call the attention of railroad employees to the fact that they are excluded from the Taft-Hartley Act. In fact if all unions were conducted as the railway brotherhoods are, there would not have been a Taft-Hartley bill.

On page 2, line 6, from the bottom of the page, of the Taft-Hartley law, known as Public Law No. 101, Eightieth Congress, first session, you will find these words: "shall not include any person subject to the Railway Labor Act as amended from time to time."

Those in Congress who voted for the Crosser amendments, and for this provision in the Taft-Hartley bill, have proven their friendship to all railway employees.

The speech referred to follows:

Mr. PRICE of Florida. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in support of the Crosser amendment because of my personal knowledge of the working conditions of railroad employees.

At the time of my birth my father was an employee of a railroad and continued with them for about 20 years. As a small boy, and during the time I attended high school, I was well aware of the inadequacy of the pay as well as other conditions, by no means favorable, under which my father worked. In addition to my father's connection with the railroad, two of my uncles who lived in our home also worked with railroads and at different times two of my brothers were so employed. At present, one of my brothers is working for a railroad and has been so employed for about 30 years.

I also have a personal knowledge of the subject before us, for when I was about 15 years of age, during summer vacation from high school, I was employed by a railroad. I worked in the storeroom of a railroad shop as delivery boy, at the handsome wage of 12½ cents per hour, 10 hours per day, 6 days per week. The work I was called upon to perform would have caused a draft horse to balk.

When I finished high school, I secured what I thought was a real position in a railway yard office. On this job I worked 8 hours a day, 7 days a week, 365 days a year, and in leap year, for good measure, 366 days. I earned $133 per month, and straight time was paid for overtime, but I earned no overtime unless I doubled, which meant a 16-hour day. Of course, any time I took off was deducted from my pay. At that time no retirement benefits were provided for railroad employees, and no provisions were made for employees who became ill.

When I had been employed on this job for about 2 years, the case of a fellow employee caused me to stop and think. He had been with the company for about 25 years and received the same salary I did. He became ill and was forced to take time off. This time was deducted from his pay, and as he had a family to support, he began working when he should have been home in bed. After a few months he died. I decided to look for another job and in a few months left the employment of the railroad.

We all know that the working conditions of railroad employees have improved during the last few years, but there is still room for much improvement. The railroads now have a so-called retirement plan, but those who are really familiar with its provisions will tell you that it is no better than social security. Most railroads now give their employees a week's vacation, and some give even 2 weeks to employees who have been with the company for as long as 5 years. At the age of 65, employees are allowed to retire, provided they have 30 years' service.

I feel sure you will agree with me that a man who has worked for 30 years under the conditions I have just described to you is entitled to retirement regardless of age. I have known many men who have reached 65 years of age and completed 30 years of service and retired, but I can vouch for the fact that only a very few lived for more than 2 or 3 years after retiring. Why compel a man to work until he is practically dead before allowing him to receive the benefits for which he has toiled so long and for which he actually has paid his hard-earned money?

The employees of all the railroads in America deserve a rising vote of thanks from the entire population of the United States for the wonderful contribution they made to the war effort. These men and women actually performed miracles in the vital field of transportation at a time when they could easily have changed employment and increased their compensation, in many instances, twofold. Therefore, I am convinced that Congress owes this group of loyal citizens a fair and decent retirement program. I hope the Members of the House will show their appreciation by voting for the Crosser amendment and thus bestow upon the employees of the railroads of America a "well done, thou good and faithful servant."

Dr. Paul B. Magnuson, Chief Medical Director, Department of Medicine and Surgery, Veterans' Administration

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, Dr. Paul B. Magnuson was promoted on January 15 from Acting Assistant Medical Director, professional service, to Chief Medical Director, Department of Medicine and Surgery in the Veterans' Administration, by Maj. Gen. Carl R. Gray, Administrator of Veterans' Affairs. In my inspection of the Veterans' Administration hospitals last year, I found everywhere Dr. Magnuson's praises sung. In addition to many other accomplishments, he is given credit for the procurement for the Veterans' Administration of the very best outside medical and surgical consultants that the world knows. At the time of his promotion, Dr. Magnuson made the following statement:

The aims of the Department of Medicine and Surgery of the Veterans' Administration have not been changed since the Department was organized, and will not be changed so long as I am in charge. They are very simple—to bring the sick patient into contact with a good doctor. The patient is easy to find. The good doctor is not so easy to find. So, the primary consideration is to see that the patient is brought to a place where the doctor is available.

It has been found that the greatest available source of good doctors is in centers of population where there are medical schools, because a medical school is a self-perpetuating institution—older men train younger men and there are always younger men coming in. In order to keep good doctors in contact with sick patients, they must be provided with places to work and with the machinery, equipment, and assistants they need to supplement their skills. A hospital can be considered the same as a factory. The material corresponds to a sick individual who needs care and treatment. The goal of the factory is a good product, while the goal of the hospital is a well patient. The hospital building may be the best in the world, but as in the case of a factory, which cannot be staffed by the proper labor and management nothing can be produced which is worthwhile as a result of the building alone. I hope that the Congress will look upon the location of hospitals, not for the convenience of people in the locality, but with the welfare of veterans and the people of this country on their minds, and with an awareness of how their medical and hospital needs can best be cared for. There is no economy in taking over a building if it cannot be properly staffed. We have no authority to order doctors, nurses, dentists, technicians, laboratory people, pathologists, and others from here to there, unless they consent to such a move. The only way we can get them and keep them is to show them the advantages of working in a VA hospital. We do not want to staff our hospitals with people who are just looking for a job. People like this do not give the high type of service we demand. We want skilled workers who love their jobs and who turn out good work and in doing so develop a respect for skill in others. Only by carrying out this plan are we going to keep a high standard of medical treatment and service alive. Good young men with enthusiasm must come in to become good old men who will be in a position to serve the universities as teachers and scientists, as well as serving the veteran, and to maintain the standard of medical service he deserves. If this plan can be kept in effect in all our hospitals, we can get the kind of personnel we want, I believe, and there will be no worry about the care of veterans.

The education program and the research program and the treatment program are all tied up together. They cannot be separated if we want veterans to get good treatment. The one supplements and implements the other, and unless all three factors are present, we cannot keep our medical standards high.

I believe the American people are willing to pay for an honest program. I do not believe they are willing to pay for hospitals located where good medical service to veterans cannot be obtained.

This is my creed, and while I am here, it will be the creed of the Department of Medicine and Surgery, and I will use every means at my disposal to give top medical service to the veterans of this country, if the Congress will see fit to implement this program.

The Washington Star of January 25, 1948, published the following information concerning Dr. Magnuson:

VETERANS' MEDICAL OUTLOOK BRIGHTENS—NEW DIRECTOR OF VA AIMS TO SET THE COUNTRY AN EXAMPLE—WANTS HIS HOSPITALS TO BECOME THE CENTER OF PROGRESS

(By George Beveridge)

A 63-year-old Chicago surgeon is visualizing a daring plan to make a Government hospitalization program the center of medical progress in this country.

He is Dr. Paul B. Magnuson, whose selection 10 days ago as medical director of the Veterans' Administration gives reason for elation among the Nation's sick war veterans as well as its doctors.

A dry-humored, hard-driving medical man of the old school, Dr. Magnuson was one of the top-notch physicians lured away from lucrative private practice 2 years ago by his predecessor, Dr. Paul R. Hawley, to clean up the antiquated and politics-ridden VA medical program.

INSISTS ON HIGH QUALITY

Dr. Hawley's only inducement was a promise that there would be no limit on the quality of the medical program. If outside interference blocked that quality, he said he would quit VA—and it was taken for granted that the doctors he had attracted also would quit.

When the bluff, popular Dr. Hawley resigned this month to head a private hospitalization program, the consternation among VA doctors was no secret. But officials believe continuance of the program by Dr. Magnuson—with Dr. Hawley remaining as a special adviser to Veteran Administrator Gray—solves that problem.

While most veterans' organizations support VA medicine at the national level, the powerful grip veterans' groups in communities hold on hospitals is common knowledge around the agency.

Since the First World War they have pressured Congress for location of the institutions in their communities. Some have gone so far as to dictate hospital policies—even admission and treatment of patients—to old-guard managers.

Last fall Dr. Hawley took steps to loosen their hold. He issued an order—reiterated only a few weeks ago by Dr. Magnuson—directing doctors in no uncertain terms to dismiss from general medical hospitals all patients "except those who are really sick."

As a result, the startling amount of 40 percent of all patients at one institution, Hines Hospital, in Illinois, were dismissed within a few weeks. In addition, about 40 percent of all new applicants at these hospitals, after thorough examination, have been turned away.

The result in general medical hospitals now is that while patient loads have decreased slightly in the last 6 months, the load is composed of "those who are really sick." Last month, VA records show, there were 85,200 patients in all VA hospitals, compared with more than 89,000 last June.

The resident program of training young doctors while they are on duty serves a dual purpose—to increase standards of treatment and at the same time create specialists where frightening shortages exist. The psychiatrist training program in hospitals for the mentally ill probably is the best example of this.

It is this program which Dr. Magnuson feels can be the center of medical training and progress in this country.

The hospitals now are training about 2,000 young residents and "we have more applications than we can fill," Dr. Magnuson said.

VETERANS NOT GUINEA PIGS

Careful supervision of treatment and training—and the quality of young doctors now in training—leave no chance that veterans will serve as guinea pigs, Dr. Magnuson said. The consultants, all established specialists, are paid set fees for each trip to the hospital.

This training program also has been extended through State and county medical societies, so that private doctors as well can take advantage of courses in the latest medical developments.

The program is being hampered now by the location of some hospitals in isolated areas. Two prime examples of the part politics plays in this are the 750-bed hospital to be constructed here and a small 100-bed institution at Thomasville, Ga.

The Washington hospital involves the well-known Nevius tract in Arlington. This 25 acres of land was chosen after VA officials studied more than 100 sites in and near the city.

SITE CAUSES OBJECTION

Plans and drawings virtually were complete last summer when the House Appropriations Committee, at the instigation of Representative SMITH, Democrat, of Virginia, forbade use of the site. The Arlington County Board had objected on grounds that its use for a noncommercial project would rob the county of sizable revenues.

The 100-bed hospital at Thomasville was closed because VA could not get enough doctors to go there. Instead, it planned a 200-bed hospital at Tallahassee, Fla., about 35 miles away. On the objection of Representative Cox, Democrat, of Georgia, however, the appropriations group ordered VA to reopen the small hospital at the same time it barred use of the Nevius tract.

But the medical service faces other problems that are just beginning. Hospital service already has been cut down and huge backlogs have piled up in out-patient care, Dr. Magnuson said, because of inadequate funds.

Dr. Magnuson sums up his position this way:

"Adequate and fast treatment of World War II veterans in hospitals and clinics now will save millions of dollars that otherwise will have to be poured into hospitals later.

"The American people are paying for this program. They should know what it can do. Then, they must make up their minds whether they want to support it."

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. EDWARD J. ELSAESSER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. ELSAESSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo (N. Y.) Courier-Express of January 22, 1948:

SEAWAY CHIEF RESIGNS POST; TWO OTHERS QUIT

OGDENSBURG, January 22.—Charles McHenry, of Cape Vincent, resigned today as chairman of the St. Lawrence seaway committee of the Northern Federation of Chambers of Commerce, claiming his action was due to lack of cooperation on the part of federation officers.

McHenry submitted his resignation during a federation meeting here. He also read the resignations of committee members Clarence Hall, Cape Vincent, and William T. Field, Watertown.

The federation, strongly in favor of the proposed St. Lawrence seaway project, embraces various chambers of commerce throughout northern New York.

McHenry reported that he had never received payment for expenses incurred in making trips and sending out promotional mail in connection with the St. Lawrence project.

Hugh Burns of Ogdensburg, president of the federation, told members that cooperation among the federation, the Power Authority of New York State and the National St. Lawrence Association had been achieved. McHenry said part of his duties had been to bring about favorable public opinion on the St. Lawrence project.

Tax Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. LANE. Mr. Speaker, this is the open season on taxes.

The lines are beginning to form outside the internal-revenue offices, shuffling up to pay tribute to the high cost of Government. The Commonwealth of Massachusetts has fixed the dead line at March 1 and the Federal Government at March 15. These are for income taxes alone. Throughout the year, and by various others forms of taxation—some hidden and some direct—the average resident of these United States is separated from one-third of his earnings.

This is the season when father retires to the back room to grapple with the problem of making out his return. Chewing on his pencil and littering the floor with scraps of paper, he struggles manfully with this puzzle of the ages. After many sleepless nights he finally is ready to submit the reports on his personal income, hoping, in all the confusion, that he has come close to the truth. If he has not he will be plagued with a crazy-quilt nightmare of fines and a vision of himself being a tenant of a Federal penitentiary.

Yes, sir; for the next month and a half taxpayers will continue to be fair game for the collectors of internal revenue. And it is advisable for us, the victims, to offer ourselves for the sacrifice. It is less painful to get the job over with now rather than have the Internal Revenue agents gunning for us at some later date when we would have to pay extra.

So much for the gloomy side of the picture.

This being election year, we are considering various ways and means of reducing the tax load, which is pleasant news for all of us. Just who shall get the better break and what the new percentages shall be remains to be decided.

This year there is much sentiment to apply the community-property provisions to married couples in all of the 48 States. At present, some States permit a man and wife to divide their total income for tax purposes. This results in a smaller tax as compared with couples earning the same income in States which have no community-property law. To correct this injustice, the Congress is considering the application of the community-property principle to all husbands and wives in all States, in order to expand and create more and better-paid jobs. On the other hand, the Democrats are of the opinion that the corporations are making a healthy profit for themselves. The wage earners, at the bottom of the scale, need more tax relief in order to meet the higher cost of living. A third group, reflecting the Treasury Department's viewpoint, urges little, if any, tax reduction. This minority thinks that the Government, while the going is good, should apply all surplus revenue toward a reduction of the national debt.

However, most citizens are convinced that this is the year when they should get some relief from the crushing burden of taxes.

We all recognize that a gradual reduction of the national debt is necessary if we are to curb inflation. Since this debt reached its peak in February 1946 of $279,000,000,000, it has been cut down by $23,000,000,000. The point is that we want to keep on reducing the public debt and at the same time cut taxes for those most in need of such relief. I contend that this can and should be done.

The President has submitted a budget calling for an appropriation of nearly $40,000,000,000 to meet the costs of Government for the fiscal year 1949 which begins on July 1, 1948. Under revenues anticipated from present tax schedules, the Government will have a surplus of seven and one-half billions for 1948 and a surplus of four and four-fifths billions for 1949, to apply toward the retirement of the national debt.

The President has recommended a tax credit of $40 per capita. This would drop over 10,000,000 taxpayers with the lowest incomes from the rolls. It would result in a loss of three and one-fifth billion of revenue in a full year. To make up for this cost-of-living adjustment, he suggested an increase on corporate profits. Taxes on corporations have been greatly reduced since the war years. The excess-profits tax was repealed. So was the declared value capital stock tax and the corporation income tax. Many corporations are making higher profits than they ever before made in a stable peacetime economy. The President would like to reenact the excess-profits levy, with a few modifications. To yield the three and one-fifth billion needed to offset the $40 per capita reduction for individuals, he would drain excess-profits from the 22,000 largest ones out of a total of 360,000 taxable corporations. In this manner, he would also improve the competitive position of small business, as against monopolies.

There are many excellent points in the proposals of the President, but I submit that his tax-reduction program does not go far enough. A $40 cut for all is not of much help to any one of us. As one whose duty it is to keep in close contact with the people, I have a greater respect for their commonsense, than for the opinions of so-called experts in Government. A reduction in the national debt is curtailing the supply of money, thereby controlling one inflationary pressure. The mounting volume of production will ease the other inflationary pressure. In the meantime, however, millions of our people are being stretched to the breaking point between low incomes and advancing prices. They need relief and the only way they can get it is through a reduction of their taxes, and I mean a real reduction, not a token one. Otherwise, they as buyers, will be forced out of the market, and our whole economy will suffer through the drying up of purchasing power.

The House bill, percentagewise, provides for graduated reductions, favoring those with lower incomes. The catch is that it results in larger savings for those with higher incomes.

Based on the revenue to be derived from annual personal incomes of 50,000,000 Americans, which were estimated as being slightly under two hundred billion, this would require a slash of more than $3,000,000,000 from the President's budget. In the last quarter of 1947, however, this total income was running at a rate of two hundred and five billion. During 1948 it may reach at least two hundred and nine billion. Increased incomes for the Nation as a whole will mean larger potential tax reductions and larger revenues.

In fact, it is conservative to state that we should be able to cut taxes by $5,000,000,000 and make a sizeable payment on the national debt by a more efficient approach to the problems of national defense and European recovery.

All of us believe in helping Europe to recover from the dislocations of war and become self-supporting once again. We know that a sound Europe will help to promote world peace and the trade among nations upon which progress depends. Through the Marshall plan we are getting to the root of the matter, and there is ample evidence to prove that the Soviets know that we have trumped them in the field of economic diplomacy. American public opinion supports the broad objectives of the European recovery plan. We simply question its details. We are being asked to appropriate over

six and one-half billions to carry out this program until June 30, 1949, with more to be appropriated in the 3 years which follow.

Because this will put additional pressure on our economy, I suggest that our interests be considered as well as Europe's. We will help Europe. That is a foregone conclusion. But the six and one-half billions can be cut by one and one-half billion in order to give relief to American taxpayers by insisting on a businesslike administration of the Marshall plan.

Furthermore, the $11,000,000,000 outlay for national defense can be cut one and one-half billions, also to be applied toward tax relief, without jeopardizing our security. If there is one outstanding lesson we have learned from the recent war, it is the dominant role played by air power. Navies can only operate on the seas, armies on the land, but the expanding range of air power covers all. It will be tragic for us if we listen to those admirals and generals who insist on maintaining yesterday's establishment to fight tomorrow's war. Every American wants to get his dollar's worth in service for the money which is taken from him by his Government. Extravagant expenditures of our Army and Navy must be cut, and part of that cut must go toward making and keeping an Air Force second to none.

In the words of Secretary of the Army Kenneth C. Royall, and I quote:

> We must realize that there is a dollar limit on what this country can spend for national defense. There is an absolute limit beyond which we cannot go without endangering the economic security of the country.

As we exercise some restraint on the billions asked for European recovery and national defense, we shall be able to provide much-needed pay increases for our Federal employees. These worthy public servants have been left behind by advancing prices and by the wage increases granted throughout private industry. It occurs to me that they need help just as much as the European nations. We cannot risk a collapse of purchasing power at home while we try to bolster it abroad.

Under the plan which I propose we can also extend and liberalize our social insurance system. It must be broadened gradually so that it will include all. The obligation to provide a minimum of economic security is now firmly established as a function of Government. We must work to plug those loopholes which have been revealed by experience.

Higher tax exemptions will also be allowed for the blind and for those over 65 years of age.

I have tried to report to you on the tax situation with some recommendations of my own. We must economize on the budget consistent with the reasonable needs of Government. We must cut down the load for 50,000,000 income-tax payers, ranging from 30 percent or more for the little fellows and reducing it as we go up the ladder. At the same time it is advisable for us to apply several billion toward retirement of the public debt.

All this can be done on anticipated revenues and surpluses based on a personal income for the Nation at large running at a rate of two hundred billion per year. Figures for the first quarter of 1948 will, I predict, point toward an income greater than this estimate.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. EDWARD J. ELSAESSER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. ELSAESSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared January 10 and is translated from Le Soleil, of Quebec, the largest French language paper in Canada:

THANKS, MR. AIKEN

The project of a canal in the St. Lawrence has been the cause of the use of much ink, the saying and writing of many wise things and also silly ones. It is possible that this project may offer a lot of advantages to navigation; the certainty is that it would also consist—not solely perhaps, but also—in having the taxpayers of Canada and the United States pay for central electric power stations for the Province of Ontario and the State of New York.

Whatever the aim is, Senator AIKEN, of Vermont, who leads the battle in favor of the St. Lawrence seaway, has other projects in mind besides the possible advantages to navigation and power stations. He wishes 20,000,000 British people to establish themselves on the shores of the St. Lawrence. No more, no less.

Recently, over radio station WOR, New York, the Senator explained his project. He first spoke of the immigration and the establishment of 15 to 20 millions of British people "on the shores of the St. Lawrence." Someone, a geographer probably, seemed to believe that these people would reside in the United States while living on the shores of the St. Lawrence, and he asked the Senator if he would favor amendments to the immigration laws. Feeling a trap he answered that these people would establish themselves "on the shores of the St. Lawrence in Canada."

It is very kind of Senator AIKEN to think of populating Canada, and especially the Province of Quebec. On the other hand it would be very interesting to know if the Americans would justify the St. Lawrence seaway otherwise than by inviting 20,000,000 British people to establish themselves on the shores of the river.

Would Mr. AIKEN and his fellow countrymen deign to let us solve, ourselves, our immigration problems?

Is the Administration Shouting Communism Only To Play Dead Dog When Communists Are Uncovered?

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including the following article by Howard Rushmore appearing in the January 1948 issue of Plain Talk:

WHO ARE THE A-BOMB SPIES?

(By Howard Rushmore)

A professor of a private technical school in Brooklyn gathers his papers together, takes a subway to meet his wife who runs a small dress shop a few blocks away.

In the swanky area of Manhattan's Madison Avenue, a neat-looking blonde puts the diamonds away in her jewelry store and closes up for the evening. Nearby, a vice president of an important electrical manufacturing company is still at work.

Over on plushy West End Avenue, a well-to-do doctor gives a patient advice on stomach ulcers. At Pennsylvania Station, the daughter of a Wall Street millionaire arrives from Washington for a week-end rest from her Federal job.

Under ordinary circumstances, this would be a cross section of life in America—of people at work, at play, average people in our democratic society.

However, these persons, unmolested in the daily pursuit of liberty and happiness are members of the most dangerous spy ring in the history of the United States.

For 3 years they helped Stalin's ace agent attempt to steal the secret of our atom bomb. In some measure, they succeeded.

The professor, working for the Chicago division of the atomic project, was discovered by the FBI giving secret data in 1943 to a Russian undercover agent going under the name of Arthur Adams.

In the FBI files in Washington are complete records of the professor's activity in this line. This professor, whose initials are C. H., was never arrested.

His wife, M. H., used her dress shop as a "mail drop" for her husband and more than 100 other persons for 2 years. She was the recipient of atomic data from Oak Ridge and Los Alamos. Her telephone was tapped, her mail intercepted, her actions photographed by security agencies during the war years.

M. H. relayed the atomic data to the owner of the Madison Avenue jewelry store, a woman who was the only foreign-born contact on Adams' list of confederates. She, in turn, would visit Adams at the Peter Cooper Hotel, Thirty-ninth Street and Lexington Avenue.

This store owner would bring to the Soviet agent the various atomic data sent to the "mail drop" of M. H., which was in Brooklyn.

Adams would then pass the precious data to the Soviet Embassy via two methods. One was through the electric company's vice president, whose last name begins with B. The other was through the daughter of the millionaire whose initials are J. H.

The millionaire's daughter would take some of the documents stolen from Los Alamos, Chicago, and Oak Ridge in her overnight bag on her return trips to Washington.

The material then went by courier direct to the Soviet Embassy.

The business executive, whose firm made radar equipment for the Army and Navy during the war, would take atomic data in his briefcase and give it to a Russian official who used his Amtorg connections to visit the electrical company and pick up the contents of the briefcase.

On West End Avenue, the wealthy doctor would send code messages to Soviet Russia, giving details of Adams' progress.

This isn't cloak-and-dagger mystery stuff. These are facts, obtained by investigators who worked for 2 years trailing, photographing, and tapping telephone calls of Adams and his confederates.

There are many other members of this spy ring, none of whom, at this writing, has been arrested.

It is now common knowledge in inner press circles that J. Edgar Hoover, who used more than 200 of his best agents to track down

the facts, pleaded with the White House and the State Department to allow the arrest of members of the most dangerous spy ring in America's history.

Not even Adams was molested. While he served Stalin's cause here and had accounts in 12 New York banks ranging into six figures, the Soviet spy was employed at a Fifth Avenue Communist record shop at the salary of $75 a week. The initials of this concern, which provided Adams with a cover, are K. R.

No one knows where Adams is now. What is known is that he and his ring did obtain invaluable atomic data. What is known is that dozens of American citizens involved in espionage and guilty of treason, have never been arrested.

In Brooklyn, the professor teaches his science class—in Manhattan, the business executive figures up his income tax.

McKinley Day Address

EXTENSION OF REMARKS
OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me at Sedalia, Mo., on January 27, 1948:

Mr. Chairman, my fellow citizens, I feel vastly honored to be invited to address this 23d annual McKinley Day banquet in Pettis County. This is a great historic tradition you have in keeping green the memory of a truly great American and a great Republican. It pleases me to pay homage with you tonight to William McKinley.

It would not be difficult for me tonight to devote my entire remarks to a discussion of McKinley. Much could be said about him. What I shall say, however, will be more by way of background for comparative discussion and understanding of our present problems. I believe that is the practical approach and one of which a practical man like William McKinley would approve.

The average American today thinks of McKinley as a former President of the United States. He was a great President. But, his service to his country was not limited to his activities in the White House. Permit me to remind you tonight of the language on the beautiful memorial at McKinley's home town, Canton, Ohio; a memorial built by pennies voluntarily contributed by America's school children. The manner of the financing of that memorial, after the death of McKinley, was quite different from the manner of establishment and maintenance of a more recent one at Hyde Park at perpetual expense of the taxpayers, by a man honoring himself while alive and avoiding inheritance taxes. McKinley never gave thought or expressed fear that his countrymen might not revere his memory. He touched their hearts from kindergarten to maturity. The words on the memorial at Canton read, as follows:

"In memory of William McKinley. A good citizen, a brave soldier, wise executive, helper and leader of men, exemplar to his people of the virtues that build and conserve the state, society, and the home."

At 17 years of age McKinley became a soldier in the ranks of the Union Army. He participated in some of the bloodiest battles of the Civil War. He was mustered out a major. Following that service he studied and practiced law in Ohio. He was elected to Congress, to the House of Representatives, from his home District, and his constituents kept him there for 7 terms, meaning 14 consecutive years. In that time, through the processes of the rule of seniority in Congress and by virtue of his outstanding ability, he became chairman of the House Committee on Ways and Means, the committee which handles and originates all tax and tariff legislation.

In 1891 William McKinley left the United States House of Representatives to become the fortieth Governor of the State of Ohio and served for two terms. In 1896 he was elected President of the United States and was later reelected.

It is evident from these facts that the longest span of his public service was in Congress. It was there he rendered the service and established the record which made possible his later and wider fields of activity.

On the 29th of each January the Ohio delegation in the House of Representatives honors the memory of William McKinley by speeches commemorating his public service. The delegation gives each Member present on that day a red carnation. This was McKinley's favorite flower. It was his custom to pin one of these flowers on each caller at the White House. History records that it was not uncommon for disgruntled citizens to leave his presence wreathed in smiles by this homely and sincere act. I mention this because it indicates something of the character of this gentle and religious man, devoted to his invalid wife, his country, to the Republican Party, and, especially to God.

The Democratic Members of the House participate with the Republicans in speaking in memory of McKinley each year. He is honored by all Americans as one of the greatest Americans.

A SOUND DOLLAR AND THE GOLD STANDARD

There are many striking similarities and contrasts between these times in which we live and those of McKinley. The administration of McKinley saw America committed to the proposition of becoming a world power. Under McKinley, the Spanish-American War was fought to a successful conclusion. Our interests in the Pacific expanded to the Philippines and Hawaii. Our trade with foreign nations prospered under his protective and reciprocal trade policies. If there was any one thing, however, which sticks out above all others in McKinley's concept of the duty of government to the people, it was the preservation of a sound dollar. He defeated William Jennings Bryan, the Democratic nominee for President, who advocated eloquently the free, unlimited, and inflationary coinage of silver. Time has proved the wisdom of McKinley's political and economic philosophy. In these days when America is not starting but has arrived at the point of being a major world power, when we have fought to victory the greatest war in history, when the overwhelming forces of these events impress themselves with such impact upon our daily lives, our economy, and our Government, it would be well if we would take up the battle cry of McKinley for a sound dollar with a gold standard. I believe it was Vice President Marshall who said, "What the country needs is a good 5-cent cigar." To paraphrase his words, what the country needs now is a good 5-cent nickel.

McKinley, on September 6, 1901, was the victim of the bullet fired by an anarchist assassin at Buffalo, N. Y., where he had been attending a great exposition displaying the marvelous developments ushered in under his governmental policies and which created America's golden age, an age of sound money, full production, full employment, the full dinner pail, and no income taxes. He died September 14.

The anarchist of 1901 was the forerunner of the collectivist, the Socialist, the Communist of today. One is the head, the other the tail, of the same skunk which would destroy by stealth or by force, those men and institutions which have made and would keep America great. Beware and fear this creature. He is on every hand. He is in the minds of men. He is a disease, an omen; he is vermin. Yes, to use the words of the great poet, Edwin Markham:

"I fear the vermin that shall undermine
Senate and school and citadel and shrine.
I fear the worm of fraud, the fatted worm of ease,
And all the crawling progeny of these.
I fear the vermin that shall honeycomb the walls and towers
Of state in unsuspecting hours."

Yes; I fear but do not yield to him. The Republican Party, the party of McKinley, does not retreat in his presence. When Tom Clark, the Attorney General, last month made public a list of subversive Communist-front organizations which are the Trojan Horses of a foreign power, and 23 names of Members of Congress were found on their membership lists, there were no Republicans among them. It was not until a Republican Congress took office one short year ago this month that any genuine effort was made to find this vermin which for 14 years had been permitted to worm its slimy way into the foundations of this Republic. We are trying to get the Reds out of the Government and the Government out of the red. That is the most important job facing America today. It is the key to our future prosperity and security. I want to talk to you tonight, in this first month of the historic year of 1948, on this subject. I hope to point out to you why I believe that the Republican Party of McKinley is the only party which has the desire and the ability to put that key in the lock and open the door to a future for America, which will be a true heritage of the sacrifices of many men of many generations who believed in America and died for her.

THE DEFIANT THREAT OF COMMUNISM

To put it frankly and briefly, we are faced tonight as a Nation with an attack by enemy forces whose symbols are the hammer and sickle, the red flag and defiance of God. Our shores have been infiltrated by his advance shock troops who have established beachheads in our factories, in our Government, in our schools and colleges, in our labor unions, in our press and radio. He has frankly warned us for 100 years in the words of his creators, Karl Marx and Friedrich Engles, in an historic document as significant as the Mein Kampf of Hitler. This document, known as the "Manifesto," was issued in 1848 when communism first shook its rattles. Its concluding paragraph reads as follows:

"Communists scorn to hide their views and aims. They openly declare that their purpose can only be achieved by the forcible overthrow of the whole existing social order."

That original statement of Communist aims was restated not long ago by William Z. Foster, head of the American Communist Party, the tool of a foreign power, who in testifying before a congressional committee, said:

"The Communist Party advocates the overthrow of the capitalist system and the confiscation of the social necessities of life; that is, the basic industries and other industries for producing the means of livelihood for the people."

During the same hearing Foster was asked, "Do the Communists in this country advocate a world revolution?" His reply was, "Yes. We have only one flag. That's the red flag."

I could document this charge further, but anyone who reads the daily paper and listens to the radio is fully aware of the delicate international situation, of the troubles which beset us internally, of the threat to our peace

and security at home and abroad. I do not wish to be an alarmist. I tell you what you already know, but you will pardon me for doing it, in passing, I hope, for as your Representative I feel it my duty to outline it as the premise upon which to discuss the questions which will be debated and settled next November. Those questions are: What can we do about it? What individuals and what party hold the best hope for an intelligent and patriotic solution? Who got us in the fix we are in? Can we upon the basis of the record of the New Deal which has had control of the Presidency in this country since 1933, trust it to solve the problems which beset us now?

THE INDICTMENT

I emphatically reject any belief that the present administration is either willing or competent to save this country from the dangers of inflation, bankruptcy, and totalitarianism. I charge it with aiding and abetting these forces through ignorance, cowardice, crookedness, and lust for political office. If you will bear with me I will prove it. I will establish why it is necessary to elect a Republican President who will cooperate with the Republican Congress which has tried but has been considerably thwarted in its efforts to save America.

FOREIGN POLICY COLLAPSE

In the beginning, let us remember that in spite of all Government propaganda to the contrary, and $75,000,000 in tax money is misappropriated and spent annually by the President and his information specialists for propaganda for his policies, the New Deal headed by High-Tax Harry Truman, still has control of the Presidency and the 2,000,000 or so Presidential employees who must execute the laws of the land. It has been the responsibility of a New Deal administration since 1933, under the explicit provisions of the Constitution, to make the foreign policy of this country. That policy has been a complete failure and a flop from Yalta to London, from Panama to Palestine. It had every opportunity to succeed. It had the money and the power. It had the employees. During and for a good period after the war, up until the Truman administration injected domestic politics into the European relief emergency, it had bipartisan support. One man was elected four consecutive times as President on the basis that he was the only person in America smart enough to conceive and carry out this allegedly wonderful foreign policy. He insisted, together with his successor, Mr. Truman, that if we just didn't change horses in the middle of the stream, that when the war was won we would at the same time win a lasting peace for ourselves and the world.

I expressed the opinion then, in this very room before many of you, that so far as the record was available, I did not see any evidence of outstanding wisdom on the part of the leaders in Washington in dealing with foreign affairs which would cause me to believe them indispensable. Those of us who ventured any such thoughts were called names by the swear bund. We were called narrow-minded isolationists, Fascist sympathizers, unpatriotic bourbons, tories, reactionaries, red baiters, and provincial. They said we imagined a boogey man under the bed. Harry Hopkins said we were "just too damned dumb to understand." We were blown down when the Atlantic Charter was waved over us, promising freedom of speech, religion, freedom from fear and want to everybody everywhere in our time. There has never been less of it than now. We were silenced by loud breast beating accompanied by humanitarian promises to establish milk routes for the Hottentots, to send the United States Army engineers to build dams on the Ganges and the Nile, to make the Sahara Desert bloom like a rose garden, and give security to the Chinese coolie. Some of us ventured to suggest that when Uncle Sam quit sending his sons to die to save the thrones of kings who were in hock to Wall Street and quit furnishing band wagon and stopped paying the band, that we would find these policies would be more likely to lead to a Third World War. We pointed out that the Federal Government was saturated with Communists and New Dealers who spoke in foreign accents for alien ideas. You heard, saw, and believed. You voted accordingly. But, you were in a minority in the Nation.

We have since seen the tragedies of Tehran, Yalta, Cairo, and Potsdam. We have seen the father of the Atlantic Charter deny its paternity. We have seen where secret agreements in secret conferences, in which America sat at the table, turned over 125,000,000 people in the Balkans and elsewhere as slaves to Russia. The iron curtain was rung down around them. The robots of Hitler have a new master in the Kremlin instead of the Reichschancelory. Buchenwald still stands but the Red flag of the Soviet Union flies over it instead of the Swastika. The guards don't wear brown shirts now, but they carry American weapons. May God forgive us for apparently we know not what we do.

Now, I ask you in all seriousness, if these great statesmen of the administration were so smart and indispensable, how did they get taken in by the promise that Russia, denying freedom to its own people, would give it to others? Did Uncle Joe trade them out of their pants or did Uncle Joe have an adequate number of sympathizers doing his bidding in the American State Department from which your Republican Congress, by investigation, has ejected scores of Communist-card-bearing Reds in the past year? Or was it both? You pay your money and take your choice.

THE TRUMAN-MARSHALL PLAN

Although our foreign policy has failed to accomplish any of the objectives so highly advertised for it, the remedy now advanced is in the pattern of what has gone before—more money for hand-outs and more power to the administration to impose economic controls over America. The plan is specifically known as ERP, which is short for European recovery plan, popularly known as the Truman-Marshall plan. It is the forerunner of similar plans for China, South America, and so forth.

The goal of this plan is for this country to furnish $17,000,000,000 in the next 4 years to aid Europe and to fight a cold war with communism. These seventeen billions will be added to twenty-four our taxpayers have already given for similar purposes since VJ-day, plus two billions voluntarily supplied by individuals and charitable organizations in this country. Big names in the State Department and administration assure us that this is the final answer to the problem of how to make the world safe for democracy. The road is strewn with other final answers named World Wars I and II, UNRRA, the United Nations, Bretton Woods, the British loan, the Greek-Turk loan, International Bank, and so forth. While I am not unaware of the distress abroad and am not without humanitarian impulses and am not an isolationist, as my voting record will show, I tell you tonight, my friends, that the American Government is being played for a sucker by this scheme to wet-nurse the world and that the evidence is we will take the bait. If the administration has its way, we will wreck our economy and bleed America white while we rebuild Europe. Then, Uncle Joe is going to take over Europe, where he has an army and we have a corporal's guard, and the wrecked economy in America will enable him to make great progress right here.

I think the unfortunate policy which has been followed by the Administration in handling our foreign affairs has created a situation where we are going to be forced to use the power and prestige of this Government to stop the march of communism throughout Europe and the world. We fed this Frankenstein until he has grown out of control. But, let us put first things first. We must first purge our own Government of all Communists, New Dealers, and fellow travelers. We must stop the nonsense which granted aid to Greece and Turkey to fight communism and within a week of extending aid to Poland, Hungary, Czechoslovakia, Soviet satellites. We must repudiate the President who promulgates the Truman doctrine to fight communism by aiding free peoples to resist it, and at the same time says he sees no reason to stop exports of war materials to Russia, as he has the power to do.

TRUMAN FAVORS SENDING WAR MATERIALS TO RUSSIA

He granted export licenses to Russia for $113,700,000 worth of automobiles, farm machinery, machine tools, freight cars, locomotives, and steel in 1947, along with over 8,000,000 barrels of oil and aviation gasoline since the war. Apparently, the administration has learned nothing from New Deal appeasement of Japanese totalitarianism with scrap iron and oil prior to World War II. Apparently, it is not concerned with this inconsistency with the Truman doctrine. Apparently, its muddled thinking and confusion of purpose thinks it is all right for the taxpayers of this country to shell out in straight Government gifts from this country to Russia since VJ-day $177,347,782.04, with $16,080,000 of it handed out last year to add to $11,058,833,000 we gave Russia outright to help her win the war. All of this aid direct to Russia does not take into account the hundreds of millions of dollars we have given both during and since the war, especially since, to her own 11 satellite countries.

We must stop subsidizing socialistic and communistic experiments and governments abroad. We must stop subsidizing foreign politicians and black markets. We must stop paying blackmail to those who threaten to turn red if we don't give them greenbacks. While we are for relief for starving and freezing people abroad we must get an administration which will be for some relief for the American taxpayer, for the old-age pensioners in the United States of America, for our own needy school teachers, and other citizens who are being forced to the wall by the inflation brought on by extravagant foreign hand-outs to establish an international pump-priming WPA run by former OPA officials, Socialists, world planners, professional do-gooders, and international welfare workers. The Good Book has something to say about he who takes inadequate care of his own being, "worse than an infidel." We can never do the job that needs to be done by keeping in power an administration that was willing to kick God and prayer out of the United Nations in order to let Stalin in. It can never be done by the administration that cannot afford to bite the hand of the radical that puts Democrat votes in the ballot boxes.

TRUMAN-MARSHALL PLAN IN PRESENT FORM UNSOUND

At the risk of being tedious, I want to give a little detail about the so-called Truman-Marshall plan because it will be the big issue this year, and our judgment is no better than our information. On basis of information your Republican Congress has, it is going to whittle this plan down to life size and grant it for 1 year instead of 4, if at all. The plan is significant because it is the tip-off on how the administration plans to keep the boom going, and highlights its insincerity in face of its tongue-in-check proclamation about the need for lower prices. This plan is not only bad foreign policy in its present form, but it plays the Communist game by weakening our own economy. It

ignores the fact that Americans have, voluntarily, as individuals and collectively, through government aid, already done more than their share to help other peoples patch up their national wounds. It minimizes their need to do something for themselves and holds out the hope of a living standard higher than they are used to or are willing to achieve by their own efforts. It epitomizes the whole befuddled approach of the New Deal planners who seek to spread their WPA philosophy around the world. It is the conclusive proof and the vehicle by which they admittedly plan and seek to reestablish permanently over America for economic controls which the people repudiated in the 1946 election. It is the best evidence that the administration does not desire to give free enterprise a fighting chance to bring down the cost of living through natural operation of the law of supply and demand because it would perpetuate short supplies and promote inflation.

The $17,000,000,000 Truman-Marshall plan calls for the United States of America to give Europe annually 1,800,000 metric tons of steel which is in short supply at home, as every manufacturer and builder knows. This will cost us over a billion dollars. They are asking for $400,000,000 worth of steel-making equipment. It calls for export to Europe of $520,000,000 in timber when lumber is high and lumber products, including newsprint, scarce at home. It would give away $208,000,000 in coal-mining equipment. It would give away 26,000 freight cars when we have the biggest boxcar shortage in history. It would export $1,500,000,000 worth of petroleum and equipment at a time when we have a fuel shortage and are depleting our own reserves which some estimate will only last 12 more years at current rate of consumption. It would export vast amounts of electric-power equipment when the farmers of America are mostly still without electricity. It would send 22,000,000 tons of grain to Europe, a factor which would be reflected in the price of bread and meat at home. It calls for us to give to the foreigners 150,000 motortrucks at a cost of $210,000,000 when you can't buy one at home without difficulty. It would give them 256,000,000 tons of tobacco. Ladies, you think cotton dresses are high now, but they will be higher when we give away the 691,000,000 tons of cotton this plan calls for. Do you think butter is high? It will be higher if we give away, under this plan, the 562,000,000 tons of dairy products called for. There is even a little item of $408,000,000 we are supposed to spend for ocean-liner service to deliver all these things and others I could mention if time allowed, to their very doorsteps.

FOREIGN HIDDEN ASSETS IN THE UNITED STATES

Is it rude to ask if our foreign friends who sit on their hands with mouths open seeking this aid have scraped the bottom of their own financial barrels? Our Federal Reserve Board, which is in position to know, says that Europeans outside of Russia have over $18,000,000,000 in negotiable assets squirreled away in gold, United States stocks, bonds, Treasury certificates, and credits in this country. How about using some of it instead of asking our taxpayers always to foot the bill?

WE HAVE BEEN MORE THAN LIBERAL

I repeat, America has not been stingy in the past, but how much farther can she go? We have marked off approximately $22,000,000,000 in defaulted foreign loans and interest growing out of World War I. In 1946 we sent to foreign countries 17,300,000 tons of food supplies. Last year we sent out 19,200,000 tons of food costing $2,300,000,000. Included was a gift of 611,000,000 bushels of grain, much of which was made into Scotch whisky and other liquors and sold back to us at a clear profit. Our own distillers meanwhile were on an enforced holiday. It took 480,000 American boxcars to haul last year's food gifts to seaports for loading onto ships. That amounts to 9,219 trains of 52 cars each, carrying 90,000 pounds per car. If those 480,000 boxcars of food that we furnished last year had been put in one train, it would have been 3,861 miles long, or a distance greater than from Washington, D. C., to Paris. All of that aid is reflected on the price of things you buy at the grocery, just as is the cost of a $300,000,000,000 war which killed 300,000 Americans and wounded over a million.

In December, Congress voted emergency aid of almost half a billion dollars containing orders for supplies that would require 2,120 freight trains of 100 cars each. These supplies will supplement $158,367,229 worth of farm machinery we exported last year, 400,000 tons of fertilizer we exported last year, 400,000 new autos and 143,000,000 barrels of petroleum. It will provide 165,000,000 tons of coal to France, Italy, and Austria this winter while many foreign coal miners are on strike, and others piddle along on a 30- to 40-hour week. The bill actually provided money earmarked to enable these countries to pay their debts to other countries. It authorized our Government to supply foreigners with incentive goods, for coats and pressure cookers and what have you, to encourage them to go to work and produce to save themselves.

I did not vote for this nonsense for which the President called Congress into special session, but it passed. They said we had to pass it for a variety of alluring reasons. They said we must vote billions in foreign aid through human kindness, trembling fear, thankfulness, shame, duty, self-sacrifice, self-interest, necessity, to keep us out of war and stop communism and as an act of war to do our part in what they call a "cold war" to stop the Reds. The New Dealers say that Roosevelt at his secret conferences promised the world that we would have a postwar lend-lease program for them, that we owe it to them, that we have to do it to prevent a depression in America and that it will protect our investment in the war of which it must be considered a part. They say that our exports are such a small part of our production they won't be reflected in domestic prices. The figures I have given you nail that lie for what it is. We are exporting one-third of our wheat. In the past 6 months, the Government has bought 80,000,000 more bushels of wheat and flour for export than were shipped abroad in 10 years from 1933 to 1942. The cost of such a program hits you twice—first in high taxes and then in high prices.

Frankly, I am a bit tired of hearing this business that America owes so much to the world. My soul, do we owe them the shirts off our backs? I do not share the apparent international theory that the United States has sinned against other nations of the world by being more successful, prosperous, and fortunate than they and that our atonement for this sin must be to drag ourselves down to whatever low level up to which we can drag them so that we may all be equally well off. There will aways be a United States of America if we do not give it away.

I have been around most of the world. I have seen the pedestrian peasant of Europe and the downtrodden serfs of Africa and the Near East look up in envy, awe, and sometimes malice, as their native political overlords ride by in limousines furnished foreign potentates by Uncle Sam Santa Claus. They have been down and out for thousands of years, but to hear the administration in Washington you would think it was a recent thing and that you taxpayers are shirking your duty toward these unhappy underprivileged. Ah, they were not discovered by the New Deal brain trusters until they needed a war to cure a depression or until they needed an international WPA to keep the economic pump primed. These fugitives from the XYZ, the FEA, the WPA, the OPA, WPB, and so forth, are looking for new fields to conquer, new justifications for their retention on the public pay rolls. They are not disturbed by the fact that each individual American's share of the public debt is still $1,789; for a family of four it is over $7,000, and you are paying interest on it, in taxes, at 2 percent per year. They repeat the reassuring words of their patron saint from Hyde Park, who said, "We owe it to ourselves." They exalt in the President's message urging Congress to restore price controls and rationing as necessary to prevent further price rises due to the inflationary effects of additional foreign aid. They gloss over lethargy among the hand-out nations which haven't done a solitary thing toward wiping out trade barriers hampering recovery or cooperating to increase production and straighten out their worthless currencies. They are long on promises and short on performance. They say Europe's troubles are the dollar shortage, when actually the main obstacles to her recovery are the socialistic economic policies which thwart her production. If they would go to work and produce things to sell us, they would earn the dollars. Instead, they increase their pension, lower their taxes, subsidize food, family allowances, and nationalized industries running on a deficit, and add more of their people to their Government pay rolls and doles, all at our expense. These hemispheric welfare boys say you can buy peace, happiness, and prosperity like you buy baloney at the meat market. They ignore history, which has shown this very policy did buy our way into two world wars. They proceed on the theory that the more we give other people the better they will like us, but cannot explain why the more we do give them the less they do like us. That is why, fun though it is to play Santa Claus, increasing numbers of thinking citizens regard this whole scheme of the world democracy planners as "operation rat hole." A friend who has to be bought is not to be trusted. If we could have bought them, we would have them paid for by now.

"Neither a borrower nor a lender be,
For loan oft loses both itself and friend,
And borrowing dulls the edge of husbandry."

What we had better do is build our defenses, keep our powder dry, and help our real friends abroad, with due regard to our ability to help. That is the Republican position as distinguished from the position of the Pendergast wing of the Democratic Party, headed by Truman, favoring help to the foreigners with reckless abandon. The Moscow wing of the Democratic Party, headed by Wallace, favors such aid with reckless abandon be paid for by the United States but distributed by the United Nations, so Russia could exercise a veto over its distribution.

Upon this record of confusion, incompetence, and failure, I repeat with confidence the assertion that neither the Pendergast nor Moscow wings of the New Deal, if continued in office, can be expected to handle our foreign affairs in such a way as to preserve our peace and prosperity. But, I said awhile ago that not only were they unable to do so and unwilling, but that they aided and abetted, knowingly or unknowingly, those forces within our borders which add up to inflation, bankruptcy, and radicalism.

THE CAUSES AND CURE FOR INFLATION

It is intensely interesting that the President and his paid propagandists advance the theory that Republicans are responsible for high prices because they do not restore rationing and price controls when we have given him the other powers to fight inflation that he asked for. Our experience conclusively demonstrated in 1945 and 1946 that such controls retard rather than promote production, which is the cure for inflation. Price controls and rationing deal with the effects and not the causes of inflation.

A simple rule of either medicine or economics is that in order to prevent a thing you must control its cause. In medicine you cannot prevent an illness by misreading the thermometer that is recording the patient's temperature, nor by fixing it so that it cannot rise, nor by throwing it in the river.

Likewise, in economics, you cannot prevent inflation that has already taken place by falsifying the evidence recorded in the market places where people do business, nor by attempting to fix prices, nor by closing markets and tampering with the free exchange of goods and services. Prices are the thermometer of the inflation patient, not the causes of the disease. To fool with the thermometer, and to claim that it protects the health of the patient, is the lowest form of economic quackery and the foulest brand of political snake oil. Even if the quack loudly proclaims his love of the patient and concern about his welfare, it does not make his shenanigans any less futile. Curbing inflation requires the treatment of causes, not condemnation of effects. High prices are not the criminal. They are only his tracks and inflation is his name.

The New Deal wrecking crew in Washington has done all it can do to hamstring private enterprise in such a way as to build up a clamor for wartime controls in peacetime and to stimulate a boom and bust economy. It has thwarted Congress in its effort to cure the causes of inflation which are many. About some of these causes, such as the drouth and increased consumption, due to a larger population and national income, government can do little if anything. But, it is pertinent at this point to remember that it was Harry Truman who vetoed in 1946 the OPA extension bill which called for an orderly end to wartime controls. He, and not Congress, abruptly decontrolled commodities following public repudiation of price control and rationing with its shortages and blackmarkets in November 1946. It was Harry Truman who on October 16, 1947, denounced rationing and price controls in a White House press conference as "methods of a police state." But, this is an election year and he is looking for an issue. He thinks your memories are short. He hopes you have forgotten that in June 1946, 79 percent of the communities in America were short of bread. In the same month 58,000 butcher shops closed because they had no meat to sell. In September a majority of city people ate fish and poultry because there was no other meat, and horse meat was replacing beef, even in hospitals. He has reversed himself again. He is back in bed with the CIO-PAC and those other forces which demand economic controls over the businesses, the farms, the housewives of America as the price of election support. He cannot escape the responsibility for 15 years of power for his party by passing the buck to Republicans who have had control only of the national legislature for a year's time. We did not get in this fix overnight.

Do not be deceived by the antics of Henry Wallace, the Communist appeaser. He wants economic controls over you, too, in peacetime. The only place Henry and Harry disagree, aside from wanting the same job, is that Henry wants to unlock our doors from the outside and let the Reds in while Harry proposes to blow up the doors from the inside. Harry has gone far beyond Henry in his inflationary policies. Henry plowed 'em under and knocked them in the head to create scarcities and high prices, but he was a piker. Here is what Harry has done:

1. He has permitted his appointees, one living under the roof of his home, who are in position to know when the Government will take action which will stimulate the commodity market, to enrich themselves with loaded dice, gambling on the market in the miseries of the people.

2. He has gone into the market as he did January 20, 1947, at Kansas City, when the Government's Commodity Credit Corporation bought $40,000,000 worth of wheat in 1 day. That was 19,000,000 bushels, and it drove wheat up over a dollar a bushel. That has been reflected in the price of your groceries and he is still playing that game. The Government itself has by its huge purchases for export, been the chief cause for creating scarcities and high prices. It has consistently bought at above market prices. The administration bought 1,600,000,000 pounds of sugar at $1 per 100 pounds above the market price, the same day controls were taken off, just to make sure prices would rise when controls went off.

3. The President has not used the powers he has always had to stop deficit spending and creation of currency which has increased in volume and amount since the start of the New Deal, thus diluting its value. In 1933 the money in circulation was $43,715,000,000. Today it is approximately $172,165,640,996, by official estimate. It is for the most part, printing press money, issued to meet costs of unproductive Government spending. The administration has uniformly opposed all congressional attempts at economy, although we have succeeded in some cases.

4. The President has refused to permit income tax reduction in 1947. Wartime taxes still add to the cost of living, cut take-home pay, discourage production and business expansion. Since 1948 is an election year, he has come out with a plan of his own as we said he would when he vetoed income tax reduction in 1947, a plan to increase taxes on business, which will result in higher prices, and to distribute the loot among the voters at $40 per head.

5. The President has encouraged low productivity by labor with his administration of the wages and hours law, insisting that wage increases can be granted without increasing production costs and retail prices, keeping hundreds of thousands of people on the dole who should be made to get a job, and by condoning featherbedding union practices, business and labor monopolies.

6. The President has come out for the Truman-Marshall plan and against the high cost of living at the same time, which is like riding the same horse in two opposite directions at once. He has refused to restrict exports, to friend or foe.

7. The President has drawn men, women, and youth from farm and factory to work in the political machine in Washington and branch offices throughout the Nation when they ought to be in jobs producing goods and wealth. The cost of government has become so high that we pay more for it than we pay for food. Food costs have gone up 162 percent since 1939, which is bad, but cost of government has gone up 450 percent in the same time. Food cost the American people $47,520,000,000 in 1947, on the basis of official estimate. Government—Federal, State, and local—cost $54,300,000,000. The food bill was $330 per person in 1947. The bill for government, on a per-capita basis, was $371, or $41 more per individual than the food bill. The ERP will add $121.42 to every citizen's share of the cost of government, not to mention forthcoming aid plans for China and South America. Let us get worried about the high price of government as well as about the grocery bill. The New Deal has increased the national debt $253,000,000,000 in 15 years. The common man is now beginning to find out what that means. The Republican Congress in 1947 was able to reduce that debt, balance the budget, and cut expenses $3,000,000,000, but could have done better with cooperation from the White House. At least we reversed the trend.

8. The President fostered and supported the OPA which reduced production, hamstrung business and farms, created scarcities, and stimulated inflation.

9. The President has encouraged labor policies which result in strikes and crippling of production and has opposed all legislation to cure the causes of industrial unrest.

10. The President has, from the beginning of his public service, adhered to the Henry Wallace-New Deal theory that our Nation has reached the limit of industrial and economic development and nothing remains to be done except to divide the national wealth under an economy of scarcity. In this he has outdone Mr. Wallace by such programs as purchase of millions of potatoes which he has dumped and burned and by appointment of such individuals as "Soft-Soap" Charlie Luckman, head of the Lever Bros. soap combine, with head offices in London. Mr. Luckman, who is a soap salesman at a salary of $300,000 per year, was imported to sell some soft soap to the American people to persuade them voluntarily to do without meat and eggs, which OPA had previously forced them to do without. All of you know what happened to that program and why. What you may not know is that his zany program was financed by several thousand dollars misappropriated from funds set aside by Congress for Greece and Turkey and that during the 3 months' reign of "Soft-Soap" Charlie Luckman, of soap-opera fame, his campaign to save grain, soaps, fats, and oils increased by 150 percent the collective price of these commodities, to the great profit of his company. It cost the hatcherymen of this district thousands of dollars in thwarted production. The only egg saved was the rotten one he laid on the White House doorstep before Congress ran him out of the District of Columbia.

11. The Russian system cured inflation by abolishing their currency and issuing new, worth 10 cents on their old dollar, which they call the ruble. Under our system it is not done by one bold stroke but by easy stages which now has brought us 50-cent dollars, and they are still getting cheaper, cutting the value of every savings account, bond, and insurance policy. The administration has sold the dollar at a discount in international money markets in order to cheapen it in terms of other currencies and devalued the dollar 41 percent at one stroke, despite the fact we have record gold hoardings and are still paying every nation, including Russia, $35 per ounce for what gold they will sell us to bury in the ground—for what purpose no one has ever been able to figure out. The administration has abandoned the gold standard, adopted greenbackism and bimetallism and what they call a managed currency.

The administration has vetoed and blocked and hamstrung with poor administration, every congressional effort to bring order out of chaos. It has spent its time pardoning Kansas City election thieves and letting Mayor Curley, of Boston, out of the Federal pen in time to line up his mob for the next election. It has defended the chief law enforcement officer in western Missouri who, at Springfield, said, "The Constitution be damned." His administration has witnessed unprecedented scandals in the Army of which Truman is Commander in Chief. Undermining confidence in the dollar, in the Constitution, in the laws of the land, in the armed services, every attempt is being made to have us in the middle of the stream again on the eve of the next election. We had better get wise to this crisis or emergency technique which has been used so often to win elections since 1933. We are asked to lift the totalitarian yoke from the peoples of Europe by placing a similar yoke again upon our own necks. We are told that buying resistance to totalitarianism now is cheaper than fighting a war tomorrow. This road is now marked the "Truman trail." But, it is the same old road we have followed into two world wars and depressions. If we follow this road the toll will be high in dollars as well as blood, sweat, and tears. Are you ready to pay the price in dollars, goods, controls, restrictions on freedom, scarcities, high prices, eventually in lives? That question is one you must answer.

FOR A STRONG AND FREE AMERICA

In closing, I wish to keep the record clear. I am not unmindful of the threat to our liberties which is posed by communism. Republicans differ from the administration on how and where to fight it. We feel, for the most part, that the greatest thing we can do to strengthen our own national security is to have an economically strong and prosperous America. Our enemies count on an economic collapse here. Their henchmen recommend policies which will hasten it. They needle us to spend and spend. Some of those who find communism a ready-made excuse to restore New-Deal controls permanently upon your necks and who now denounce communism, were its closest bedfellows when we Republicans years ago were forecasting what is happening now. Moscow knows her friends and enemies. I was complimented by being attacked in the official Soviet newspaper, Izvestia, on November 28. My name is high on the purge list, comes the revolution. I have hit them where they plot. But, a guy with a cellar full of atom bombs doesn't go purple in the face because some Missouri Congressman calls his turn. Their hysteria and hair tearing in their kept press and at the United Nations, their devaluation of the ruble, spell fright, unpreparedness, and economic chaos behind the iron curtain. We yet have time to put our house in order. We yet have time to build our defenses and restore a sound dollar to put this false prosperity on a firm and lasting basis. But, time is wasting. It will continue to waste until we have a President in the White House who will cooperate with the Republican Congress in the national interest, who will not gamble in international power politics with your savings, your wages, and your life.

There is a passage in Ezekiel which reads:

"Then whosoever heareth the sound of the trumpet and taketh not warning, if the sword come and take him away, his blood shall be upon his own head."

My friends, the trumpet is already blowing. In honor of William McKinley and those who built America and the Republican Party, let us hear and heed that clarion call in 1948. Vote Republican and save what's left.

One Hundred Billion Dollars To Combat Russia

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, David Lawrence, writing in the United States News World Report, in a leading editorial for January 23, points out the possible cost of containing communism in Europe. He calls attention to the issues and the possibilities involved in the so-called Marshall plan. Under leave to extend my remarks, I am including the editorial in question:

ONE HUNDRED BILLION DOLLARS TO COMBAT RUSSIA

(By David Lawrence)

DANGERS TO DOMESTIC SECURITY IN UNLIMITED SPENDING FOR INTERNATIONAL AID AND MILITARY PREPARATIONS—PEOPLE HAVE RIGHT TO KNOW ALL THE FACTS IN HANDLING UNITED STATES RELATIONS WITH OTHER NATIONS—PROBLEM REQUIRES CAREFUL AND COURAGEOUS CONSIDERATION

The American people are being asked to spend about $20,000,000,000 a year for the next 5 years to prepare for or prevent World War III.

Few people in official quarters believe another world war will come within 5 years, though it appears to be conceded that Russia and the United States would be the principal adversaries.

President Truman's budget of forty billions for the coming fiscal year contains a provision for eleven billions for national defense and seven billions for international aid. This is to be stepped up on the defense side, so that by 1952 it is estimated that the appropriations for our armed services will be running at the rate of $18,000,000,000 a year.

All in all, we will be lucky to take care of international aid and the defense budget with an average of twenty billions a year.

Thus about $100,000,000,000 may be the cost in the next 5 years of preparing to fight Russia or scaring Russia so that she will not risk a war with the United States.

This means that our diplomacy has not succeeded in reaching an understanding with our principal opponent. Whether such an understanding is feasible with honor and without surrender of our principles is open to debate.

Inside Russia: Unfortunately, too little is known of just what goes on inside Russia and whether our policy of building up armaments to frighten Russia will or will not stimulate the building of a bigger war machine by Moscow. It could be that the Soviet leaders are already using the threat of a war to consolidate their internal position and cause the people to accept hardships they might not otherwise suffer.

Plainly inside the United States we already are following a parallel technique—dramatizing the possibility of Russian domination of the world to persuade Congress to adopt the Marshall plan along with a huge program of national defense.

We mistrust Russia and Russia mistrusts us.

Although we do not say officially, we regard the Russian Government and its oligarchy as similar in totalitarian behavior to Hitler's Nazi party and clique.

Apparently our Department of State, headed by a military man, is wedded to the idea that force alone speaks in this world and that a show of force is the best defense against potential aggression.

Meanwhile, what are the Russians thinking about all this? Maybe, as they view our $40,000,000,000 budgets and our enormous tax program and the recommendations for at least a partial return to wartime controls, they are impressed. But maybe also they are chuckling at this effort of the system of capitalism to survive without imposing the totalitarian disciplines and socialistic programs that represent to the Communist mind the only solution to the problem of organizing effectively a population of 150,000,000 persons.

A conflict of philosophies: Certainly America can prepare for a third world war and maybe frighten Russia, too, provided we can avoid internal collapse. The President in his Economic Report speaks frankly about a severe recession that may come unless he is given certain control powers over allocation of commodities, prices, and wages. This is a confession that all is not so well inside America.

Two conflicting philosophies are being debated. One school of though wants to help Europe by strengthening America so that we will have the sinews to fight the next war. It implies careful spending with respect to all items, including national defense and international aid. It implies prudence and caution in expending America's resources. It implies a building up of the industrial mechanism and encouragement to the managerial class by tax revision which shall provide equity money for the investor class to finance American industry. It argues that private enterprise has built the most powerful nation on earth and that private enterprise can preserve and even expand our industrial strength.

Another school of thought brushes aside the impact of unlimited spending on the domestic economy and, in a kind of hysterical approval of anything and everything asked by the Department of State or the armed services, gives little heed to the cries of danger with respect to the effect of huge drains on our resources.

Unfortunately, an objective view of the hazards we face is beclouded by the jockeying for political advantage. Yet as between a bipartisan effort that shrinks from facing facts and realities and an independent examination of the issues to bring out all the facts and let the people decide, there is no question as to which is better.

To put it another way, a bipartisan approval of our foreign policy and our national defense program is eminently desirable, but this can happen only if there is frankness and candor and a bit of practicality on the part of those who urge so glibly the spending of billions on a program which is itself full of vagaries and unbusinesslike appraisals.

Secretary of State Marshall did not help matters by his blunt, soldierly ultimatum to a congressional committee that it must, in effect, appropriate all the money asked by the administration for international purposes or else it had better vote none. He didn't, of course, mean this literally but it illustrates the rigid military mind in action. It reveals a finality and inflexibility which cannot bring cooperation between the executive and legislative branches of our Government. It actually breeds partisanship.

There is a great need for more facts and certainly for a plan whereby both parties participate in the handling of the funds. To insist that, while a separate governmental agency can be created to administer the European-aid program, what is spent and where must be determined only as a consideration of foreign policy, is to ask for a blank check and a right to spend wherever and whenever the inner councils of an already oversecretive Department of State may dictate.

Domestic security: The problem of spending $7,000,000,000 on international aid is not just a little matter for Messrs. Truman and Marshall to handle. It isn't foreign policy alone that is affected but domestic security as well. Those who are beginning to cry "too little, too late" may unwittingly be thinking too much about Europe and too little about America.

This is a great and rich country but its resources are not inexhaustible. Also its managerial class cannot be expected to survive if the profit-and-loss system is to be undermined by a system of Government control and redistribution of income that begins to approximate the state socialism of Britain.

The countries of Europe can be helped to their feet by money, but they cannot keep standing if they do not provide the incentives to their people to work and produce.

Freedom versus State control: What is going on in the world is a war between two idealogies. One respects individual initiative and stimulates individual production and thrift. The other relies wholly on the State and makes the Government master of the people.

In the end, after a cycle of internal depressions and maladjustments, that school of thought will win out which believes in the dignity of the individual and resents the encroachments on human liberty and freedom which inevitably come with "planned economy" and state socialism. In the interim, however, the casualties are high and some nations, as witness Britain and France and Italy, become impoverished and weak.

What must ensue is a world-wide recognition of the futility of such dangerous philosophies as something-for-nothing and more-pay-for-less-work and let-the-Government-do-it. Adoption of these slogans cannot but

bring chaos to America and the whole world. We must instead place our faith in a system of free competition in which neither public nor private monopolies are the rule, a system of individual freedom and honest negotiation between economic groups with an alert public opinion to check abuses.

But, most of all, we must put our faith in men of courage in Congress. They must reflect the point of view of the American people, which at the moment cautions its representatives not to follow hysteria and emotion but to think things through and insist on facts and safeguards and, above all, upon economy in expenditures with respect to those social luxuries offered us at the very time when even more sacrifices must be made if we are to keep solvent in a bankrupt world.

Palestine

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial on Palestine by Rabbi Harry Halpren, which appeared in a recent issue of the Bulletin of East Midwood Jewish Center, of Brooklyn, N. Y.:

Jews have made the front page again. An accident in the loading of a ship's cargo in Jersey City has revealed the fact that explosives were being shipped to the Jews of Palestine. An FBI investigation is under way to determine the identity of the criminal who is responsible for shipping this deadly material. We need to soberly appraise the situation in order that we may clearly understand what is involved here.

Since the UN decision of November 29 to partition Palestine and to establish a Jewish State in one part, a small but belligerent and noisy fraction of the surrounding Arab countries, instigated by the Mufti and his henchmen, have attacked Jewish settlements and Jewish traffic. Murder and looting have been used to resist the decision of the UN General Assembly.

On December 5, after these unwarranted attacks upon Jews had already begun, the United States placed an embargo upon the shipment of all arms to the Middle East. This was in pursuance of a so-called policy of neutrality. But what does neutrality mean?

Among the definitions of the word "neutral" are these: "Neither positive nor negative," "one who takes no part in a contest between others." In the light of these definitions let us examine the facts.

After the report of the Anglo-American Commission of Inquiry, the British declared that they could not undertake a solution of the Palestine problem alone. The implication was that if our Government cooperated, then Britain would be willing to proceed. This was the first step. Then the case was laid before the UN and after its decision the British declared that they would have no share in its implementation at all. This was the second step. But now we have seen Britain take the final step, viz, an active sabotage of the partition plan.

These are harsh words but the facts will substantiate them. For the mandatory power has refused to withdraw the English-trained Arab Legion of Transjordania from Palestine where, instead of keeping order, it has helped attack Jews. Furthermore, the English have refused to open a port for the landing of refugees and arms, have arrested the defense forces of Haganah while leaving attacking Arabs unmolested, and have permitted Arabs to hold up trains, carrying mail and freight. But the most damnable element in the situation is Britain's determination not to permit the UN representatives to come to Palestine more than 2 weeks before British troops evacuate the country. Thus practically no time will be allowed to establish a stable government in the country.

Our Government knows all these facts. Where, then, is the neutrality in our action. Can a bystander who sees a law-abiding citizen being robbed by a criminal refuse to interfere on the ground that he is a neutral? We Jews are obeying the UN decision while the Arabs are trying to nullify it. Is it neutrality to stand aside? Does this mean taking no part in the contest? Is not doing nothing equivalent to lending active aid to Arab gangsters? We were neutral when German Messerschmidts and Italian Capronis were bombing the defenseless citizens of the Spanish Republic. Haven't we learned our lesson yet?

Neutrality doesn't mean standing aside and complacently contemplating injustice. What we ask from the United States and from other countries is not neutrality but justice, not inactivity, but aid in bringing to fruition the hope and plan of the United Nations.

Mr. Speaker, I wish to make it clear that no one is seeking that an American Army be sent to Palestine to preserve peace.

We do demand, however, that the Jews in Palestine be given the right to arm themselves in self-defense.

We also say that the United Nations must be given a police force large enough and strong enough to enforce its mandates. In anticipation of the inevitable war which Hitler was determined to force upon us, we shipped arms and ammunition to those countries which later became our allies.

Today American arms are going to Greece and China so that those countries can preserve themselves against Communist attacks. We must give the Jews in Palestine the power to defend themselves against the Arab hordes. The first step in that direction should be the lifting of the embargo against arms to the Jews of Palestine. All we are asking is that they have the right to purchase them.

Resolution of the Steuben Society of America

EXTENSION OF REMARKS
OF
HON. ROBERT NODAR, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. NODAR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a resolution adopted by the Steuben Society of America, at New York, N. Y.:

Whereas it is our belief that a better understanding by our citizens of the operations and conduct of business by our Federal elected representatives is essential to the well-being of this Nation; and

Whereas our modern form of communication, namely, radio and television, can make this possible by bringing into the homes of citizens the debates and discussions concerning matters of paramount interest to them; and

Whereas we believe that the present method of publishing the daily record of congressional operations is not such as will promote the interest of the average citizen in the workings of his government: Now, therefore, be it

Resolved, That Congress authorize the erection of a broadcasting station in Washington, D. C., for the purpose of broadcasting the discussions and debates of Congress in congressional session assembled, directly to the people of the United States of America as a method of political education, and that any and all steps necessary to effectuate this purpose be taken to establish exclusively the proper wave length; and be it further

Resolved, That Congress at all times control the use of this station for the broadcasting of congressional debates and sessions only.

Nation's Defense Demands Great Lakes Seaway

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. O'KONSKI. Mr. Speaker, I cannot understand eastern objections to the completion of the Great Lakes-St. Lawrence seaway. I predict that these selfish eastern interests will be the first to regret their actions in the event of war. They shall pay and pay bitterly for their delaying tactics and obstructionist methods.

In modern war as recently shown, seacoasts have been specially chosen for attack overseas where docking facilities have been wrecked or obliterated. Responsible American Army and Navy leaders declare that robot bombs may eventually be perfected to a shooting range that will smash war industries in our own seaboard cities. No matter how rapidly comes the improvement in the atomic bomb in splitting other atoms than those of uranium, and no matter how rapidly comes the advance in other offensive weapons, time and distance are always relative. The midcontinent will be relatively less exposed to raids and actual invasion alike and relatively safer than the seaboard in any future conflict. Because of the comparatively more sheltered position of the Great Lakes area, the Government must be enabled to locate vital industries, arsenals, and shipyards in this region.

There are other military factors to consider. The distance from New York to Liverpool is 3,200 nautical miles, all exposed to submarines. One-third of the 2,647 miles from Quebec to Liverpool is in the protected waters of the St. Lawrence River. Had the seaway been completed before the last World War, one-third of the dangerous and submarine-infested Atlantic course would have been eliminated by assembling convoys in the Lakes or in the protected waters of the St. Lawrence and many of our doomed merchant vessels and their crews could

have been saved from destruction. When the seaway is completed, in any future hostilities, Great Lakes shipyards—protected from enemy submarines, will have easy access to the ocean while being close to the steel plants where girders, hulls, and engines for new vessels are being made. Since shipbuilding is closely related to preparedness, Great Lakes shipbuilders must have a way for their completed vessels to proceed directly to tidewater on the Atlantic.

The United States after entering the war, built more than 50,000,000 tons of shipping. Although the Great Lakes region of the Middle West has the greatest supply of skilled workmen in the world, due to lack of a direct outlet to the sea only 2 percent of this construction was completed in Great Lakes yards. Submarines were successfully built at Manitowoc, escort vessels and sea-going tugs at Milwaukee. Since the St. Lawrence seaway had not been completed, it was necessary to give these vessels their sea trials on the Lakes. On being taken to Chicago, their superstructures and masts were removed. Then they were floated, with the aid of pontoons, down the Illinois waterway to the Mississippi and thence to New Orleans where they were again put together at a cost to the taxpayers of the country for extra work in taking apart and reassembling of $100,000 per vessel. Had the St. Lawrence project been completed before the war, these vessels could have proceeded directly and promptly out to the Atlantic, fully equipped and ready for transport service or fighting as the case might be.

During the last war the country has gone far in the direction of depleting valuable reserves of high-grade iron ore. Vast quantities of iron in the form of hulls of ill-fated vessels, lie irrecoverably lost on the ocean bottom. For the United States too rapidly to diminish its high-grade iron-ore reserves, is to yield its leadership in world affairs to the nation which conserves them. According to the United States Bureau of Mines, Minnesota's Mesabi Range, which produces half of our high-grade iron ore, will last only 17 years longer at the present rate of mining. It is imperative that access be had to high-grade South American ores, for the maintaining of a prosperous Midwest United States as well as for defense. In order to prevent future wars or to survive them, it will be imperative for the Midwest United States to have direct access to the sea for bringing into the Great Lakes region fresh supplies of numerous other high-grade natural resources.

Have you gentlemen of the East forgotten how in 1944 and 1945 our railroad lines were glutted from west to east? Have you gentlemen forgotten how difficult it was to get troops from west to east and from east to west because of heavy freight on the railroad lines? Have you gentlemen forgotten how many millions of servicemen were deprived of seeing their loved ones because rail transportation was glutted from west to east with freight? Much of that freight could have safely and economically been transported on the Great Lakes seaway in ocean freighters. Much room thus could have been available for our service men and women on the rails. Gentlemen of the East, do not let your selfishness blind you to our Nation's defense. Break down your prejudices. Think in national security lines—not selfish and greedy sectional lines. Which is more important? Boston and New York and Baltimore, or the Nation as a whole?

You men of the East are willing to give another $20,000,000,000 to Europe. Are you gentlemen so selfish as to deny $500,000,000 for the defense of America?

The Taxation of Cooperatives

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. MASON. Mr. Speaker, as a result of 3 weeks of public hearings before the Ways and Means Committee on the question, "To tax or not to tax co-ops," the committee learned that there are co-ops and co-ops—good and bad co-ops, producer and consumer co-ops. Committee members are convinced that good co-ops have a definite and legitimate place in our American system of economy, but that bad co-ops have no legitimate place because they tend to undermine and destroy our American way of life.

Mr. Speaker, in attempting to classify co-ops one should do it on the basis of co-op objectives. Farmers' marketing co-ops have as their objective the securing of better prices for their patrons' products through cooperative marketing activities—a proper, legitimate function under our American system of economy. This function closely parallels the collective-bargaining functions of organized labor, and is therefore a logical part of our American way of doing business. The bad co-op, on the other hand, has an entirely different objective. It is best expressed by quoting the words of Mr. Charles D. Egley, manager, Farmers Union Livestock Commission, St. Paul, Minn., and State representative of the Minnesota co-ops. Mr. Egley says:

> The profit system concentrates wealth in the hands of the few; it exploits the masses; robs them of their purchasing power; as a result of which they cannot buy back what they produce. * * * To solve this problem it is, therefore, our opinion that we must get rid of the profit system, and replace it with the cooperative system. Then business would be operated at cost for use and service to all the people, not to the few.

Mr. Speaker, production for use not for profit is a socialistic program.

After canvassing members of the Ways and Means Committee, I am convinced that:

First. No legitimate co-op has any reason to fear that punitive or harmful tax legislation will be passed by the Congress.

Second. Excessive surpluses kept by the co-ops and plowed back into the business, or retained for expansion purposes, should be and will be taxed just as surpluses in all forms of proprietary business are taxed.

Third. There is neither a probability nor a possibility that any part of a co-op's earnings paid out in cash as patronage refunds will be made the subject of taxation.

This clarification and assurance, of course, will not satisfy the followers of Mr. Egley.

Mr. Speaker, the following excellent editorial from the Chicago Tribune on the subject The Taxes of Cooperatives presents a clear-cut analysis of the problem and the situation that confronts this Congress in connection with this problem. I recommend it to my colleagues for thoughtful consideration:

THE TAXES OF COOPERATIVES

It is not true that co-ops pay no income taxes. It is true that in almost every instance they pay less taxes than an individual or a corporation for profit would pay on the same earnings. Not only the tax laws, but the regulations of the Treasury Department are rigged in their favor.

There are two forms of co-ops. The exempt co-op is so called because it has complete exemption from taxation on earnings distributed to members in stock dividends or kept in reserves if the reserves are reasonable. Such a co-op is subject to some restrictions, and a great many co-ops prefer to organize without taking advantage of the exemption.

They get virtually the same exemption, however, through the administrative rulings of the Bureau of Internal Revenue that the exempt co-ops get by statute. Their legal theory, and the theory of their political sponsors, is that co-ops do not have profits, but only earnings. They are privileged to distribute these earnings, without paying taxes on them, to members in proportion to the business that the members do with them. The theory is that a patronage dividend is merely a deferred saving on the member's business.

The fallacy here is that the co-ops need not hand the actual cash over to their members. They can give them credit for a patronage dividend on their books and keep the money to expand the business. A general corporation can also keep its profits in the business for expansion, but it must first pay a corporate income tax on the money.

Farmer cooperatives of the country ended their recent session in Congress by denouncing the Republicans and electing a close political ally of Governor Dewey as their national president. Their new president is H. H. Rathbun, who in recent months was caught speculating in the New York butter market with the purpose of rigging the price of milk sold by the members of the co-op that he heads. He lost a good many thousands of dollars of his members' money in his gambling, but Mr. Dewey's attorney general gave him a pass on the criminal aspects of the case.

The co-op bosses are mad at the Republicans because some Republican Members of Congress have recently conducted investigations of the income-tax advantages that co-ops enjoy over the private businesses with which they compete. This question of tax favoritism is a sore one with the co-ops. Anyone who raises it is certain to be met by their propagandists with a deluge of figures.

The fact remains that complete or partial exemption from income taxes is probably the most potent cause of the expansion of cooperatives in the last two decades. Alone among corporations, the co-ops have been able to use their earnings to expand their capital without paying taxes on the new money they put into their business.

Co-op members are supposed to pay income tax on their patronage dividends, even if they get them in the form of book credit, instead

of cash. It is doubtful whether many of them do, however. There is no provision for entering such dividends on the income-tax form for farmers.

Largely by means of this device of allotting members paper credits and keeping the actual cash, co-ops have expanded rapidly. It is with what are really untaxed profits that they have purchased oil refineries, packing houses, creameries, and a host of other enterprises. Any private businessman, given the same privilege of plowing his profits back into his business without paying taxes on them, would outstrip his taxpaying competitors, too.

People who believe in economic freedom cannot reasonably object to the organization of cooperatives, so long as no one is required to join them. The tax exemption and the tax dodging techniques that co-ops have been permitted to use through the connivance of revenue officials, however, are not only unsound but dishonest. Co-ops should pay taxes on the same scale, and under the same rules that bind other corporations.

They Want To Pay More

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. ENGLE of California. Mr. Speaker, it is very seldom indeed that people offer to pay taxes or to pay more for anything. But that is exactly what occurred when the Government employees at the Bureau of Reclamation city near Redding, Calif., offered voluntarily to contribute to the school maintenance funds because they are living on Federal property which does not pay real-estate taxes. The injustice of requiring local government to provide schools, police protection, and other benefits to people living on Federal property has been pointed out many times. I have a bill pending to help correct the situation, which I hope the Public Lands Committee acts on this year. However, it is gratifying when Federal employees step forward voluntarily to assume a fair share of the responsibility of local government. It is one of the finest indications of good citizenship which I have seen. I wish to make a part of the RECORD an editorial commenting on the matter in the Record Searchlight, of Redding, Calif., under date of December 31, 1947:

You could knock us down with a grammar school report card.

Government employees at Toyon, the Bureau of Reclamation's city, feel they aren't paying enough taxes for support of their school, so they are voluntarily contributing to the school's maintenance fund. They are living on Federal property and thus do not pay real-estate taxes, they point out.

About $19 out of every $20 the school spends comes from State funds, and the Bureau employees, through the sales tax, pay their share of the $19 just like anybody else. But the Bureau people want to contribute their full share of the remaining $1, too.

That is a remarkable demonstration of citizenship. Where else, we'd like to know, do people offer to pay taxes when they are not legally required to? Next time you hear someone use the word "bureaucrat" as a derisive term, remember the Reclamation bureaucrats at Toyon.

Real Peace Only Way To Achieve Substantial Cut in United States Budget

EXTENSION OF REMARKS
OF
HON. JOHN E. LYLE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. LYLE. Mr. Speaker, strong, sound and courageous thinking will permit the United States to meet its unprecedented obligations at home and abroad.

The following exceptionally sound editorial from the Corpus Christi Caller, a Texas newspaper, which I am inserting, will be stimulating and helpful to all Members:

Although it has been freely predicted that President Truman's budget for Federal operations during the year beginning July 1, would call for larger expenditures than during the current year, the total—just short of $40,000,000,000—is nevertheless shocking. The sad thing about it is, there is very little a so-called economy-minded Republican Congress can do or will do about reducing the total in an election year. To be sure there will be some cuts, but they likely will be nowhere near what the people would like to see. The pressure groups and fear of another war will work against drastic reductions.

More impressive than the figures in the President's message, is the repeat lesson that war does not pay. Seventy-nine percent of the proposed expenditures during the next fiscal year "directly reflect the costs of war, the effect of war, and efforts to prevent a future war," to use the President's own words. The largest single budget item is $11,000,000,000 for the Army, Navy, and Air Force. The next largest item is for international affairs—$7,000,000,000, including $4,000,000,000 for a start on the Marshall plan. Other expenses stemming from the nations' inability to live together in peace include $6,000,000,000 for veterans' programs, $5,250,000,000 for interest on the war-swollen national debt, and $660,000,000 for atomic energy development.

To put it another way, 28 cents of each tax dollar under the President's proposal will go to support the Army, Air Force, and Navy; 18 cents for international affairs; 15 cents for veterans' benefits and pensions; 13 cents for interest on the national debt.

That does not leave much of the tax dollar for general governmental expenses, social welfare, and the various domestic improvement programs. Yet, with the possible exception of the Marshall plan request, it is likely that the largest comparative cuts will be applied to the domestic section of the budget.

Congress also may ignore the President's plea for no reduction in personal income taxes without upping corporation taxes to compensate for losses in total revenue. This would upset the President's budget, especially the debt retirement phase which is commendable.

Should there be a business slump before the end of this calendar year, tax revenues will fall. With the tax cut promised by the Republicans there would be little or nothing left to apply to retirement of the national debt—our $5,000,000,000 a year national luxury. Congress should do nothing to prevent fulfillment of the President's plan to reduce the debt by $10,000,000,000 to $246,000,000,000 by July 1949. If anything the Republicans should go the President several billion better in this department.

Likely to be lost amid the big figures is the President's proposal that a one-half of 1 percent pay-roll tax be added to present pay-roll taxes to pay for the beginning of a compulsory national health program on which there is yet no agreement in Congress. The additional levy is not likely to bring cheers from wage earners whose weekly deducts already are the subject of considerable grousing.

The President asked for a reduction in the cost of the so-called general Government operations, but the total of these operations only involve 3 cents of each tax dollar. He likely will be accommodated, perhaps at the expense of some vital service such as reducing the number of income-tax agents which in turn results in uncollected taxes. That is what happened last year.

There will be howls over the President's request that the farm parity-price formula be revised downward and that more money be made available for soil-conservation bonuses. But to the housewife who is paying record high prices for foods, curtailment of the farm price-support program will make sense. Many find it hard to understand why the Federal Government should pay for overproduction. The budget proposed the use of 2 cents of each tax dollar to aid farming, while education and research were down for 1 cent and aids to business down for a half cent of each tax dollar.

Shocking as it may be, the President has presented Congress a well-reasoned document. We do not necessarily agree with the final result. It is for Congress to say whether the people agree with the President's reasoning. Certainly these should be substantial cuts in some of the President's figures and all nonessential expenses eliminated.

But the lesson the huge budget carries is clear. Until there is real world peace and world prosperity, the United States is going to continue to have budgets too large for the average individual to afford and all but too large to understand.

Nebraska Has 82 Soil-Conservation Districts, Including 97 Percent of the Farms of the State

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. CURTIS. Mr. Speaker, I wish to extend my remarks by including a statement adopted by the soil-conservation district supervisors of the State of Nebraska at their annual meeting in Lincoln on January 7 and 8, 1948. The statement is as follows:

To the Members of the Congress of the United States:

We, the supervisors of the soil conservation districts of the State of Nebraska, being subdivisions of the State and the agency charged under the laws of the State of Nebraska with local guidance of the action program of conservation on the land, respectfully submit for your consideration the following recommendations:

We urge that the conservation districts of the various States be delegated by the Federal Government with the same responsibilities they have under State laws so that there will be no misinterpretations of functions.

We wish to call to your attention that the number of soil-conservation districts in the

United States has increased from 826 to 2,000 in the past 5 years and now covers most of the agricultural areas of our states. Of these districts there are 82 in Nebraska, including 97 percent of the farms of the State. The land owners of the Nebraska districts are deeply interested in the program but are not receiving this technical service nearly as fast as they desire, consequently we urge that an adequate appropriation be made to the Soil Conservation Service to staff the various districts with technical help so that a high standard of work may be maintained and carried on more rapidly.

We, the members of the Nebraska State Association of Soil Conservation Districts, wish to go on record as being ready and willing to fully assume all responsibilities properly delegated to us by State and Federal law.

We favor a national land use policy based on sound principles.

Give America a Chance

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. O'HARA. Mr. Speaker, this Congress is called upon to donate $17,000,000,000 to Europe. I do not argue that matter at this time. However, it does seem to be proper to call attention to the fact that we can do something for America at the same time. There is pending in the Senate and in the House bills which would authorize the construction of the St. Lawrence seaway and power project. This project is of far-reaching importance to the American people. It has been pending in Congress for a long time. On some other occasion I shall discuss the proposal in detail. However, at this time I want to say that in my opinion it will benefit the American people in every State in the Union. The proposal will increase the existing channels in the Great Lakes and St. Lawrence Basin from a depth of 14 feet to a depth of 27 feet, and thus develop a great ocean coastal line in the interior of the North American Continent. Something like 15 States are affected by this project, including the State of Minnesota. My farmers and my industrial plants are all vitally interested in having the pending legislation passed. They want it because it places the Midwest on the Atlantic Ocean and gives to some forty or fifty million people the advantages that come to all ports of the world that enjoy ocean commerce. The project has been demonstrated to be easily developed without too great cost and will contribute to the welfare of every man and woman who benefits from low-freight costs in combating the high cost of living.

My purpose, Mr. Speaker, at this time, is to call attention to the fact that while we are helping Europe, we had better do something for the farmers and the industries and the businessmen of our country. I speak with particular reference to the people of Minnesota and adjoining States. I am prompted at this time to say that one of the outstanding advocates of the St. Lawrence project for many years was the Honorable William A. Pittenger, of Duluth, Minn., whose loyalty to this cause has never been questioned. In Congress and out of Congress he has always insisted that the landlocked empire of the Midwest, containing some 40,000,000 people was entitled to favorable consideration on the St. Lawrence seaway and power project. I am convinced that his position on this matter is correct. It will help not only the Midwest but every man and woman on the North American Continent.

This project will come up for action, we hope, in the present session of Congress. It should be a bipartisan measure because the entire American Continent will be benefited. I have just received an interesting booklet written by Tom Ireland, of Cleveland, Ohio, entitled "The Great Lakes-St. Lawrence Seaway and Power Project." Mr. Ireland gives some interesting facts regarding this project. In pointing out its many vast benefits to our people, he speaks of New England, and says:

> The New England States with their 8,000,000 people, their high cost of living, and their dwindling industries would be benefited by the seaway. New England is primarily an industrial region with 80 percent of its food supply brought to it from beyond its own borders. Not only do the raw materials for its industries come from remote regions but its manufactured products must necessarily find their principal markets at great distances from the point of their origin. Low cost of transportation, therefore, is one of the most vital requirements for the recovery and for the future prosperity of New England.

Mr. Ireland's contributions to the arguments in favor of the seaway are helpful, and they indicate the immense benefit that this seaway would confer upon the United States and Canada as well.

In this connection, Mr. Speaker, I want to pay tribute to another great Duluthian, the Honorable Julius H. Barnes of Duluth and New York City. In civic life he has made a great record as an advocate of the St. Lawrence seaway. Mr. Barnes, who comes from Duluth, Minn., like Mr. Pittenger, has done everything he could do to secure favorable consideration of this important legislation. I commend Mr. Barnes to my colleagues as one of America's outstanding citizens, who supports a project such as the seaway from an unselfish and civic standpoint. I hope that every Member of Congress will take occasion to read his testimony before the Senate and House committees. Mr. Barnes knows his subject, and America would be happier, more prosperous, and its resources would contribute to the welfare of the common man in greater degree if we caught his vision of the great benefits of this pending legislation. Mr. Barnes appeared before a subcommittee of the Senate in June 1947 in connection with Senate Joint Resolution 111, and I quote from his testimony as follows:

SEAWAY WOULD HAVE SAVED LIVES IN WORLD WAR II

> You heard the testimony this morning of two competent witnesses of high standing; that we would have fought this last World War II to better advantage. We lost some 500 ships by submarines, 400 of them along our Atlantic coast, exposed for the long route, mostly with valuable cargoes of oil. The Standard Oil Co. lost 96 tankers off our coast to submarines. Admiral Raeder, of the German Navy, is on record that it was like a picnic to pick off our ships on the long sea route across the Gulf and up the Atlantic before they could even start across the Atlantic.
>
> If we had done that with an open St. Lawrence, we would have shortened the mileage distance 500 miles to their destination from leaving the ocean shore, and we would have saved our loss of a considerable part of 500 ships sunk by submarines and the 6,000 sailors who were lost. But more than that, we would have saved men lost in the Army ashore, waiting for those valuable cargoes and supplies and the ships that could not bring them. We would have fought this war to a different conclusion and at an earlier date.
>
> I think the men who voted in 1934 against that treaty must carry a weight on their souls when they start to think it through, and the men who will vote against it now, against confirming this, in view of the expressed judgment of such Joint Chiefs of Staff as Nimitz and Eisenhower—that is what they said a year ago—will hardly dare vote against the confirmation of this today, when urged by such authorities as that, and by General Marshall, as necessary and desirable for the national security.

I hope, Mr. Speaker, that this Nation will not face the possibilities of World War III, but if that unfortunate catastrophe should occur, then we had better take the advice of Mr. Barnes and develop the St. Lawrence seaway and power project at once.

An Emergency Plan for Relieving the Acute Shortage in Rental Housing

EXTENSION OF REMARKS

OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. DEVITT. Mr. Speaker, housing is one of the most pressing problems facing the country. We are especially in need of rental housing in America. Our veterans cannot afford to pay the exorbitant prices asked for many of the cracker box toy houses now being built, and it is economically unwise for many of them to do so.

A new slant, and a refreshing one, on the rental housing picture is furnished to us by Housing Expediter Tighe E. Woods. He offered a proposal before the Joint Housing Committee on January 21, which, in my judgment, has much merit and is deserving of the study and consideration of the Members of the Congress. I enclose Mr. Woods' statement, as follows:

In the evolution of this agency through 1946 and 1947, the Housing Expediter has had two primary functions:

1. To do everything possible to relieve the present acute housing shortage.

2. To administer the provisions of the Housing and Rent Act of 1947 with the ultimate goal of eliminating the necessity for rent control.

Although the functions were administered concurrently for only a short period in 1947, they are nevertheless closely related, since the production of sufficient dwelling units to satisfy the demand for rental accommodations is a basic step in eliminating the need for rent control.

It is generally agreed that in spite of the volume of new housing accommodations that have come on the market in the last year, the housing problem is still acute. This fact is admitted by the Joint Congressional Committee on Housing and is reported over and over again in the minutes of the some 660 rent advisory boards.

In examining the splendid record of housing production in the past 2 years, one significant fact stands out: the Nation did not produce sufficient rental housing in the entire United States to satisfy the need of even one large city. Although the President stated last January that the emphasis in 1947 would be on rental housing, over 85 percent of the dwelling units built were for sale—not for rent—and veterans are still forced to buy in order to obtain shelter. Our statisticians have estimated that approximately 50,000 new rental units went on the market throughout the country in 1947. The housing bureau of the city of Los Angeles estimated the immediate critical need for that city alone was 123,000 units. In 1925 by contrast of 937,000 dwelling units put under construction, 208,000 were multiple dwelling or rental units. The record in 1927 was still better with 257,000 multiple dwelling units put under construction out of a total of 810,000 starts.

In my opinion, the principal reasons for the present serious lag in new rental construction are:

1. The reluctance of large private investors to construct large multiple unit rental properties at present high construction costs which require rental rates too high to be considered stable over the life of the mortgage.

2. The inability of tenants to pay the high rents made necessary by the present construction costs of apartment buildings.

I am convinced that it is mere wishful thinking to say that the cost of labor and the price of materials in the construction field can be brought down by voluntary agreements. Experts state that the cost of construction will stay at its present high level for the next 5 years. In addition to the current high costs of building materials, it must be remembered that when considering the building industry, you are dealing with thousands of small businessmen whose only industry-wide characteristic is rugged individualism. You are also confronted with hundreds of individual building codes deliberately designed to protect these small entrepreneurs. Any analysis will show that even during the war when patriotism was a compelling reason to cut red tape, only minor changes were made in the building codes of our major cities and these changes, for the most part, were of a temporary nature designed to last merely for the duration of the war.

It is true that education and research, spearheaded by the Federal Government, will eventually bring the present unit cost of housing construction down, but what faces us now is the acute emergency situation.

The building of single family homes, as you know, uses a proportionately larger amount of materials and manpower than would the construction of an equivalent number of multiple-dwelling units. During the next year when the full impact of the Marshall plan begins to be felt, and already acute material supply situation in key products that go into the building of a home will undoubtedly be aggravated. To cite one example, producers of certain iron products, such as soil pipe and furnaces, are already hard pressed for the iron to make their products. Each individual house erected has to have its own heating plant. It is not difficult to see the saving in metal alone effected through the erection of a 500-unit multiple-family structure with one heating plant as against the heating equipment necessary for 500 individual houses.

Another point—one that should not be taken too lightly—is the fact that the success of the present single-family housing boom, while very popular with the home builders and real estate industry, is a false boom built upon the desperation of veterans who, desirous of a place to live, must take whatever shelter is available at any price. The program is popular with builders and the real estate brokers because easy financing permits them to build a house, sell it, and get out with very little personal risk. It is unpopular with veterans because it ties them down to a debt that may run 20 to 25 years, at a time when their future plans are indefinite and in the formative stage. However, too many veterans have no alternative but to buy in order to get shelter.

On a recent inspection trip to Baltimore, where we have had an unusual number of complaints from veterans who purchased homes of inferior construction, I asked this question of 10 veterans: "If you had the choice, would you have preferred to buy or rent?" All 10 answered they would prefer to rent.

These facts add up to the conclusion that the acute housing shortage will not be overcome by more homes for sale at inflated prices, or more liberal Government underwriting of mortgages, or more generous GI loans, but by the creation of thousands of multiple-family accommodations at rentals which the vast majority of the American people can afford to pay.

There is a definite and well-known relationship between reasonable unit rental and normal per-room cost of construction. Large investors in rental housing use this guide to determine safety of investment.

My plan proposes briefly to allow the "water" to be squeezed out of the investment by means known as accelerated depreciation. For example, if the relationship between normal safe rentals and present-day building costs as compared with normal building costs is 30 percent, the 30 percent figure would be approved by the Housing Expediter, certifying to the Treasury Department that this 30 percent is eligible for a certificate of necessity so that the owner can recover the "water" in 5 years.

I have worked out, with a representative of a large insurance company, a detailed statement of how this plan would operate on a project of 164 apartments ranging in size from 4½ to 6 rooms at rentals of $20 per room or less per month, with construction cost of buildings and land not to exceed $2,000 per room. This insurance company stated that if this type of financing were made available by the Government, they have several million dollars of building plans in the blueprint stage which would immediately become realities.

Although local participation is not completely necessary for the success of this plan, it is desirable. Local municipalities which will reap the benefits of this plan will undoubtedly offer incentives of their own. One common community incentive is a 5-year exemption from taxes due to increased assessment on these projects. In other words, for a 5-year period the owner pays taxes only on the assessment levied prior to the erection of the project. The local taxing body would lose no revenue and could possibly gain even during the 5-year moratorium as it is a well-established custom to let unpaid taxes on vacant properties accumulate until such time as the property is improved. Under a plan such as this no owner of a large-scale rental project could afford to let unpaid taxes accumulate.

The advantages of this plan, in my opinion, are as follows:

1. It will bring large private investors into the rental market and will relieve the Government from earmarking any more large sums of money to guarantee real-estate loans.

2. The system is liquid enough so that it can be used in any rental range. For example, one community may need a lot of 4- and 5-room apartments at $12.50 and $15 per room, whereas another has serious demand for apartments at $20 per room. Local determinations would be made in all cases by the Housing Expediter based on his knowledge of local rental conditions.

3. The safety of the investment will draw enough private capital so that the shortage of housing accommodations can be definitely relieved within 2 years, and thus eliminate the need for Federal rent control beyond March 1, 1950.

4. The accelerated depreciation theory was used by the Government during the war for encouraging the construction of war plants and is therefore not a new concept to the Treasury Department.

5. Construction on large multiple-family projects built not by the Government but by private capital saves on material and manpower by the use of mass production methods.

6. The most important consideration of all is that this plan meets the real demand for rental housing as voiced by our 14,000,000 veterans of World War II.

Veterans' Subsistence Payments and Maximum Earning Ceilings Must Be Raised

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. HOLIFIELD. Mr. Speaker, the plight of many of our veterans who are participating in the GI bill and vocational program is very bad.

The inflationary advance in subsistence costs has resulted in a sharply lowered standard of living for these veterans and their families.

Two corrective measures must be taken immediately by Congress:

First. The subsistence payments must be raised to compensate for the increased cost of living.

Second. The maximum earning ceiling for total allowable income must be raised at least 40 percent.

I hope that the Republican leadership will allow these matters priority on the legislative calendar.

GOP Tax Bill Puts Cart Before the Horse

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks on tax-relief legislation, I submit herewith an editorial appearing in the January 26, 1948, issue of the New York Times:

THE ORDER OF BUSINESS

In discussions of the related problems of taxation and the budget there has been too much emphasis on what for want of a better word we would call functionalism. There has been so much learned discourse on the question of whether such and such a tax program is inflationary or anti-inflationary that some have lost sight of the fact that taxes, while they have been reduced modestly from their peak levels of wartime, are still fantastically high by any previous peacetime standard. These persons seem to have forgotten that the burden of proof is not on those who advocate the reduction of taxes from this war-created plateau, but on those who would maintain them at present levels.

Whatever may be said for the importance of the inflation argument in pure theory, moreover, as a practical matter it has lost most of whatever force it possessed a year ago at this time, for the fact has become increasingly clear that the inflation argument, so far as Congress and the administration are concerned, has deteriorated to the point where today it is simply an argument of political convenience. So long as the administration could maintain even the pretense that it was opposing Republican tax-relief programs because it sincerely regarded them as inflationary, there was at least something to be said for the argument. But this pretense can hardly be taken seriously in the case of an administration which has now apparently decided to compete on a catch-as-catch-can basis for the tax-relief vote, regardless of inflationary consequences.

But to say this is by no means to say that the decision of the House Republican Steering Committee to drive ahead for enactment of the full Knutson tax-reduction bill at this time is either enlightened party policy or sound fiscal doctrine. In its unmodified form the Knutson measure calls for tax relief at the rate of $5,600,000,000 annually. Since it is proposed to make it retroactive to January 1 of this year, that would mean a loss in revenues for the 18 months, January 1, 1948–June 30, 1949, of $8,400,000,000. From what sources would this relief be derived? The President, in his budget message of January 12, foresaw a surplus for the fiscal year 1947–48 of $7,500,000,000 and one of $4,800,000,000 for 1948–49. But of the $7,500,000,000, $1,600,000,000 had been realized during the first half of 1947–48, so that to get a surplus figure for the period January 1, 1948–June 30, 1949, this amount would have to be deducted.

That would leave, as the figure to work with, $10,700,000,000. If revenues were reduced by the full amount of the Knutson bill and if the Truman budget figures be accepted at their face value, the substantial reduction in the public debt which the sponsors of this measure tell us would be possible comes down to $2,300,000,0000. That doesn't even equal the figure to which the Senate made a firm commitment when, in advocating the first Knutson bill a year ago, it pledged itself, 82–0, to reduce the debt by $2,600,000,000. On an annual basis it is only $1,700,000,000. If we are able to reduce the debt by only $1,700,000,000 a year in this period of unprecedented peacetime production and income, what, it may be asked, can we hope to do in less extraordinary times?

True, congressional staff experts are quoted as predicting Government revenues considerably higher than the President's estimate. But in view of the difficulty of foretelling events of this kind 18 months in the future, caution plainly dictates going along with the lower estimate. Again, Republican leaders maintain that expenditures can be reduced by $3,000,000,000. This may prove to be the case. But those who recall the events of last year, when similar claims turned out to have been vastly exaggerated, will perhaps be forgiven if they prefer to wait and see what the legislative budget reveals. The Reorganization Act of 1946 contemplates that such a budget shall have been completed by February 15. Last year, it may be remembered, it failed to materialize at all, because the House and Senate were unable to agree on a ceiling figure for expenditures. Moreover, it would be legislating tax reduction in the dark to rush the Knutson measure through before we know what our commitments are going to be under the Marshall plan, and Senator TAFT has gone on record to the effect that the latter probably will not come to a vote before May.

In thus putting the cart before the horse on tax legislation the Republicans are repeating their ill-advised course of 1947. It is a course which not only makes them vulnerable to criticism by the political opposition, but which is calculated to alienate the support of those who are genuinely sympathetic to the idea of tax reduction, assuming it is conservative in concept and brought forward at the proper time.

National Defense

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks made by me at the proceedings of the Twenty-second Women's Patriotic Conference on National Defense, January 15–17, 1948:

Madam President and members of the Women's Patriotic Conference, I have taken as my subject before you this afternoon the subject that I think is uppermost in your minds, at least the subject that I understand you came here to discuss and talk about. That subject is National Defense.

Before I go further with my remarks I would like to say that there are two kinds of national defense, and in my mind they are equally important. There is the physical and the practical side and there is the mental and spiritual side. We must never forget that.

War, it seems to me, when it takes on world aspects, is always primarily a war of ideologies. The last world war—because although we divided between World War I and World War II, it was really fundamentally the same war—was a war of ideologies.

First of all, I would like to talk to you about the physical side of national defense. As a woman (a Congresswoman and, worse yet, a woman politician) I am constantly being asked what is the woman's point of view on this, that, or the other subject.

That always reminds me of the story of the gentleman who was asked to address a large gathering, and the topic assigned to him was the buffalo and the American way of life. He was a little nonplussed by this, so he decided to dismiss the subject very briefly. He got up and said, "There are no buffalo; there is no American way of life."

Well, I would like to say that there is no woman's point of view.

Women are citizens. They are individualists, and they agree together even less than men. That is one reason why they are more interesting and why they are so valuable politically speaking.

I need hardly tell you women who are assembled here today representing so many—in fact, almost all—of our great patriotic organizations that you are certainly just as interested in the affairs of these organizations as any of the men who belong to them could possibly be.

I dare say that, as a matter of fact, women are even more interested when it comes to veterans' affairs, and I think it is a very great tribute to the women of our Nation that the present chairman of the Veterans' Committee in the House of Representatives is a woman, the Honorable EDITH NOURSE ROGERS. I think it is heartily appropriate that she has been given this very high office. She has been well named "The veterans' angel," and she is exactly that. She works all of the time for the veterans, for their best interests, and for their dependents.

As women, we quite naturally have a strong urge to do the same kind of work. The mere fact that we cannot bear arms makes it all the more our duty and our right to see that all veterans shall be given their just dues, and that, above all, they will never be forgotten. It is very easy to forget, and some of us are a little too prone to do it.

After every war we bow our heads and we pray again that those who died in the conflict may not have died in vain and that their sacrifice will be the last sacrifice that will be needed to assure the peace of the World. But, human nature being as it is, we have a very real responsibility to see that our heroes have not laid down their lives in vain. We, the living, must be on the alert to keep our country strong; we must, all of us, be alive and diligent in working for national defense, both physical and spiritual.

I believe that we are now in a very difficult position. For the first time in our country's history we are being asked to do more than our resources warrant our being able to do. For that reason it seems to me that we must stop for a moment and take stock and decide what things come first, what things are the most important in our country's history today.

I submit to you that, as women and Americans, we must put the peace of our country and of the world as our first objective. There is nothing more unattractive to me than women who will, at best, do nothing but knit and roll bandages, urging the world on into bigger and better wars. Let us use our energy to urge the world to the first lasting peace.

To attain that peace we must have adequate, nay, we must have a powerful, program for national defense. The possibilities of another war are too frightful to contemplate. All the scientists have warned us that it means probably the end of civilization as we know it.

National defense today means more than armies and navies; it means air force, atomic weapons, and the knowledge of germ warfare, which probably is the most horrible weapon of all. It also means the planning of complete mobilization of the entire population because, remember, the next war, if it should come, will be a war of popula-

tions against populations. The civilians will not be spared.

I am sure that you have read the warnings of Admiral Nimitz and of General Arnold. General Arnold made it very emphatic that no one could win the next war, and it is a good thing for us to remember that. I question very much if anyone won the last war, but the next one will certainly be far worse.

The greatest thing that we have done in the last year was done during the first session of the Eightieth Congress, and that was the creation of an over-all office of defense and the appointment of a secretary of national defense. This is, by all odds, the most important position in the capital and is only second in importance to the President of the United States himself.

It will now be possible to coordinate all our resources for national defense, civil, military, and scientific, and it would be well at this time to let our friends and our enemies all over the world know what a tremendous step we have taken to strengthen our country and to put her in the position of being invincible so that we may maintain the peace of the world.

We hear a great deal about how much more we must do, and I have no doubt that experts who tell us this know whereof they speak. But I would like to point out to you ladies here today that we are already doing a great deal. The regular appropriations for the Army and Navy today total $9,953,000,000, or close to 10 billion. This means that it now costs us $27,200,000 per day to finance the Army and the Navy.

For that sum it seems to me that we should have the most powerful armed force in the world. You know, there is a great deal in administration; money alone will not do the job; men alone will not do the job. There has to be coordination; there has got to be, above all, loyal and true administration.

You have great influence; you represent many groups of patriotic men and women all over the country. There can be nothing more valuable than for you to explain to those in your immediate circles and in your own communities that our country, though rich and powerful, does not have unlimited resources [applause], that we cannot support the whole world and maintain our own strength. We must not be foolishly sentimental and fall into a trap.

Remember, Lenin said, "The way to destroy the United States is to make her bleed herself white." We are in a fair way to do that very thing. No one can destroy us from without, but our own thoughtless stupidity can destroy us.

If we destroy ourselves, all hope for the survival of freedom and liberty will perish from the earth. If we remain strong and keep our defenses high, we can maintain the peace of the world, and in peace only the war-torn peoples of the world will be able to rebuild their shattered economies, readjust their own civilizations and their own economies. And let us remember that we cannot force our ideology on the world any more than any other nation can force its ideology on us. [Applause.] We must be true to ourselves; we must keep our heritage, and we must allow others to do the same, if we truly believe in freedom and not if we are merely paying it lip service.

Let us, therefore, resolve to put first things first and let the first thing be a free America. She cannot be free unless she is strong; she cannot be strong without adequate national defense.

It is my hope that you will leave your meetings and your deliberations with a definite plan as to how to keep our country free and how to keep our defenses high.

These are only the physical defenses. Now what of the other defense? What of the mental and the spiritual defense, because that is, after all, the most important. If we are fighting a war for ideologies, what kind of an ideology are we going to support? We talk a lot of freedom, but we have already lost some of our freedoms and some of the most basic ones.

We talk a lot about national socialism, and we do not stop to realize that national socialism has made inroads all over the world, that it has already engulfed the whole of Europe, whether they be weak Socialist republics, whether they be dictatorships, or whether they be Communists, satellites behind the iron curtain.

And then we forget that that same ideology is slowly creeping into our country. Oh, it is very easy to tell an out-and-out Communist; anyone can do that. But there are others; there are more insidious movements. There are people who say, "Oh, no, I am not a Communist; I represent democracy in its truest form." Nevertheless, those very same people may be working toward the national Socialist or Communist ideology and taking away the future by backing that very thing.

There is one, for instance, that is not heard of very much, and that is the Fabian Society. I would like to read to you, if you have not already heard it, the telegram that was sent by Bernard Shaw to a meeting in London in 1946, in which he stated that they had succeeded in creating a great Fabian state in Russia and that their next ambition was to bring the United States into line also.

Now, a very few people pay attention to these little groups. They are small, and they are not very noisy; you do not hear as much about them. But there are people all through our country who are working to undermine our fundamental ideology, and they are as much a menace and a danger as the people who are arming against us.

Physical armament is possible to resist; it is easy to resist. But there is an insidiousness about the other kind of undermining that is very hard to detect. Now is the time for us to be on our guard, because the harm is already beginning to be done. They are beginning to wear away those great foundations of free government for which we stand; they are beginning to undermine that Constitution which is the fundamental of our liberty.

Yes, the words are still as true today as when Benjamin Franklin told the woman outside of the hall in Philadelphia, "You will have a republic if you can keep it." We are the ones who have got to keep it. You who represent the patriotic women of America have a great task before you; you have the task also of seeing that this Republic of ours is kept as a Republic and that we will not come to that awful pass that I saw described the other day by an Englishman in a book on the late war in which he said—I will admit that he was more cynical than I am, but I think there is a possibility of this happening—"For St. George has slain the dragon, only to find that it is the dragon's features which confront him when he looks into the glass."

We do not want that to happen here; we do not want to slay the dragon of totalitarianism and of national socialism abroad and find the dragon's features looking at us when we look into our mirrors here.

Therefore, we have come to this great hour of decision. We must take sides, and we must take them wholeheartedly. There must be no pussyfooting; there must be no truck with the opposition at home or with the enemy abroad.

It is true in our personal life and it is true in our national life and it is true in our spiritual life that:

"Once to every man and Nation comes the moment to decide,
In the strife of Truth with Falsehood, for the good or evil side.
Some great cause, God's new Messiah, offering each the bloom or blight,
Parts the goats upon the left hand and the sheep upon the right.
And the choice goes by forever twixt that darkness and that light."

Remember that; the choice goes by forever. The moment to make the choice is here. You are the ones who can do so much to influence that choice. You who are the wives and, above all, the mothers of America can do more to see that this Republic stands in the face of all her enemies at home and abroad.

I say to you, therefore, go forth with courage. This is a fight that is worth fighting; this is a fight that is worth winning.

An Independent Oil Refiner Speaks

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FALLS CITY, NEBR., *January 17, 1948.*

Mr. MAX BALL,
Director, Oil and Gas Division,
Department of the Interior,
Washington, D. C.

DEAR MR. BALL: We note your recent statement to the press in which you are quoted as saying that all production, refining, and transportation facilities in the petroleum industry are now at maximum capacity, and that it will be several years before supply can possibly catch up with demand.

We do not agree with your statement that production, refining, and transportation facilities are being utilized at maximum capacity, and it is our opinion that there is a tendency on the part of Government agencies to consider the statements put out by a few major oil companies as covering the entire industry and a further inclination to ignore the independent segment of the industry as being of no consequence in the over-all picture. From various news dispatches it appears that the independent part of this industry is being mainly overlooked and has few representatives on the various councils and committees which have been appointed to investigate current shortages.

It is our opinion that there is enough idle production, refining, and transportation facilities to supply the current shortage of petroleum products if placed in operation as they should be, and until such time as these idle facilities are operating we see no basis for trying to convince the public that rationing, price fixing, and other interferences will do anything but further aggravate an already critical and serious situation.

To our knowledge there are independent refineries in Nebraska, Kansas, Oklahoma, Illinois, Wisconsin, Michigan, Kentucky, and Tennessee which are either shut down or running at a small fraction of capacity due to major oil companies interfering with the crude supply of these independents. These plants could be running if the current crude-oil supplies were equitably distributed and the excess crude-oil production, which is now going to major company storage over and above major company requirements, released

to these independents. If you are interested, we will be glad to give you the names and capacities of these shut-down and partially shut-down independent refineries, one of which we own and which has a capacity of 3,000 barrels per day and has been shut down for 2 years, mainly due to arbitrary freight-rate fixing by the railroads.

So long as current crude-oil production is considerably above crude-oil runs to refineries, and the excess is going into storage, this excess should be made available to independent refineries. The main reason for this situation is the fact that major pipe-line companies are monopolizing the crude supply over and above their current refining capacity, either putting it in storage or leaving it in the ground rather than sell oil to these independent refineries, and due to their pipe-line systems and monopolistic procedure of posting prices, subsidizing producers, influencing State regulatory bodies, and other similar practices, the major crude-oil purchasing companies have brought about a situation where independent refiners can no longer obtain crude oil in an open market.

According to Bureau of Mines figures, current crude oil production exceeds current refining capacity by a considerable amount. Therefore, crude oil production is not the bottleneck in this shortage. Refining capacity, as above stated, is not being fully utilized and transportation facilities are certainly not at capacity. Idle tank cars are standing in railroad yards, pipe-line terminals, and are being used on cross-hauls which are unnecessary. Pipe-line capacities are not fully utilized due to the policy of pipe-line companies operating as private carriers for themselves and major company friends. Additional tankers could have been made available 2 years ago, and can still be made available by the Government. Railroads are doing nothing to expedite efficient use of tank cars. Three or four tank-car companies, who control most of the tank cars, and who are affiliated with major oil companies, insist on using these cars in their own service or allied service.

The railroad freight-rate structure covering the transportation of petroleum products is a labyrinth of ancient and obsolete freight-rate structures, based on what the traffic will bear, and a railroader's idea of how the oil industry should be run, and the best proof of their inefficiency is the fact that they are still hauling empty tank cars the same distance as loaded tank cars under a policy based on the fact that to avoid contamination each shipper must have his own cars and any other brand will contaminate. Therefore, a tank car shipped from Oklahoma to New England is hauled empty back to Oklahoma rather than loaded out by a New England refiner and fully utilized.

So long as the above conditions exist in the petroleum industry it appears that a realistic effort should be made first to utilize fully existing facilities and allow the independent end of this industry to operate, and before further rationing, and otherwise convincing the public that petroleum products cannot be made available, an honest effort should be made to supply the public with the petroleum products they are entitled to by eliminating some of the above inefficiencies. It is also obvious that some of the refined oil being exported could be used to good advantage in the United States.

Before assuming an attitude that nothing can be done to improve the current petroleum shortage, it is our opinion the Government should use its influence to eliminate some of the inefficiencies which can be attributed partly to present Government regulations and State regulations of crude-oil production, including policies of the Interior Department regarding the lease and sale from Government lands, the poor regulation of the pipe lines and railroads by the ICC, with consequent gross inefficiency, and the failure of the Justice Department to investigate and eliminate the monopolistic practices existing in the industry. If these Government agencies would give more thought to a national policy of supplying the public and spend less time talking about rationing and price fixing, there would be more oil available for everyone, including the Government itself.

So long as our small company and others like us in this industry are being run out of business daily due to a combination of factors beyond our control, we cannot agree with statements which are being made by your department regarding current shortages. We realize that this is a problem with no easy solution, but we suggest that you appoint more independent oil men to your various committees in order to get a true cross-section opinion of this great industry.

Respectfully yours,

MID STATES REFINING CO.,
R. D. SWAN, *President*.

Veterans' Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. TWYMAN. Mr. Speaker, I submit herewith for insertion in the RECORD some pertinent comments on veterans' legislation contained in veteran Commentator George E. Reedy's daily morning broadcast. I listen daily to George Reedy's analysis of the news, as he has a keen ability to analyze the maze of legislation pending before the Congress, and to comment comprehensively on the issues which are of the greatest import to the American people:

It's taken a long time but action finally seems assured on two of the most important veterans' bills before Congress. They are legislative attempts to carry out one of the basic promises made to the American soldier during the war.

It was the promise that a grateful Government would try to make up for the years he was missing out of civilian life. He was told that a real effort would be made to give him an education and a start on a permanent career.

This was to be done under the famous GI bill of rights. That measure provided a number of things. Included among the provisions were sections to help the veteran through college or through a period of apprentice training.

The veteran going to school was to receive his tuition and educational expenses from the Government. In addition, he was to get a subsistence allowance for his food and clothing, $65 a month if he were single, and $90 a month if married.

The veteran who wanted to learn a trade through an apprenticeship program was given just subsistence allowance. However, it was in addition to the wages he was to receive from his temporary employer.

In the case of the on-the-job trainee, some abuses were possible. It was easy for a man to get a job at a good salary and qualify for the extra allowance by claiming he was an apprentice. So a ceiling was put on the total amount of his income.

A single veteran was held to $175 a month, and a married veteran to $200. At the time that law was passed, such figures were not too bad. The cost of living had not yet begun to soar into the stratosphere.

Since then, however, the devil of inflation has become a reality. Veterans found they could neither go to college nor enter an apprentice program. They simply couldn't live on the amount of money they could get.

Last session the Senate passed bills to partially remedy both situations. They provided for higher allowances to veterans going to school and higher income ceilings for ex GI's who were trying to learn a trade through on-the-job training.

Both bills ran into baffling resistance in the House. They were snarled in a log jam, to which no one seemed to have the key. Now thanks to the efforts of Representative LEO ALLEN, of Illinois, that jam seems to be broken.

ALLEN has led a successful movement to bring the bills up under special rules. They cannot be tampered with one way or the other. A straight out vote will be required, a vote that practically guarantees their passage.

The crying need at the moment is speed—speed before the second semester begins at most colleges. It is probably true that many a veteran will have to drop out of school unless these measures are passed—and passed in a hurry.

These are bills upon which a legislator can vote with good conscience. They do not represent the string of special bonuses, which have so aptly been described in the past as organized raids on the Treasury.

The Government does owe the veteran every possible chance to make up for what he lost while he was fighting for his country. One way is to assure him the education and training that may mean the difference between a lifetime career and just drifting from job to job.

Farm Production and Prices Are the Basis of National Prosperity

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. ROBERTSON. Mr. Speaker, our present situation in regard to the production of farm products is entirely the result of misinformation emanating from Washington, both as to the facts in regard to production and our ability to consume.

I think many of the Members of Congress and the American public have been led to believe that we are feeding the world. Let me briefly set out a few facts.

Our total exports of all agricultural products during the year 1947 will approximate $3,100,000,000. Our imports will approximate $2,600,000,000. If we recognize the fact that imports are listed in terms of foreign currencies, we should add on approximately 30 percent to the value of our imports to give them a comparable value to like exports. With this adjustment our imports in 1947 exceed the value of our exports. In other words, on a quantity basis we find ourselves actually importing more than we are exporting.

It is true that we are exporting large quantities of wheat but we are also importing millions of pounds of sugar, fats, and oils, both of which are highly concentrated foods.

I think it might be of interest to Members of Congress to know that in the 5-year period 1922–26 before we ever heard of farm surpluses, our total exports of agricultural products averaged $1,950,000,000 per year. If the exports in 1922–26 are adjusted to present values their export value would be $3,300,000,000 or in terms of physical quantity more than our exports in 1947. At that time no one had ever heard of rationing and price control. Since then we have had an increase of about 20,000,000 people. Our present record of exports and imports indicates to me that we are misleading the rest of the world with the promise that we are going to feed them as the result of WPA loans.

In fact I feel that this Congress should take such steps as will reassure the American farmer that we are going to protect his price. Unless this sort of a program is given to American agriculture, we may find our own Nation confronted with a food shortage. We cannot expect maximum farm production with a shortage of farm labor, farm machinery, fertilizer, and propaganda warning him of the specter of low farm prices.

In my opinion the Nation cannot afford to reduce either its farm production or permit the farm products to sell below parity. In the first instance, 70 percent of all consumer goods consists of food, tobacco, beverage, and clothing. If we are to have a foundation for full employment we must have these farm raw materials flowing through our economy in their present volume.

In terms of income we also need our present production. In this connection I would like to briefly comment upon a very important ratio which has been pointed out to Members of Congress by Carl H. Wilken, economic analyst for the Raw Materials National Council, of Sioux City, Iowa. Mr. Wilken points out that for the past 25 years each $1 of gross farm income has translated into approximately $7 of national income in spite of prosperity, depression, war, or reconversion back to peacetime production.

To carry on our present national budget, to meet the charge of our national debt while at the same time maintaining full employment, the United States must have at least $200,000,000,000 of national income. To have $200,000,000,000 of national income we must first create approximately $29,000,000,000 of gross farm income. To reduce either our production or to permit farm prices to go below parity will force the Nation into national bankruptcy.

In checking the seven times turn of gross farm income, I feel that it reveals the paradox which has prevented the human race from distinguishing between the real cost of living and the price of things. With the seven times turn of gross farm income in existence the real cost of living or food costs on the basis of income generated does not change. For example, the percentage of national income being spent for food today is much the same as the average in the period 1930–39 even though the consumer at the present time is receiving approximately 20 percent more food than prewar.

The age-old fear of food prices is again being heard because the public does not realize that the cost of living cannot be reduced by a change in price levels. A lower farm price will force a reduction in wages and salaries in direct proportion to the drop in gross farm income and national income as the result of the trade turn of farm income.

When this reduction comes, the submarginal group in the lower strata of income will find themselves among the unemployed and we will again have soup lines. If we wish to reduce the cost of living, then we must stop this foolish cry of surplus and high food costs and concentrate on an increase in the per man production of goods, the only way in which the cost of living can be reduced.

Gambling for Peace

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Advance, of Elizabeth City, N. C., for January 26, 1948:

GAMBLING FOR PEACE

American aid to Europe is a gamble, whether it is given through a Marshall plan, a Herter plan, or somebody else's plan. But that does not mean that the chance must be taken blindly, with no notion of whether we shall win or lose until the results are in.

Three factors ought to be considered by the gambler who isn't willing to depend on sheer luck. There are the mathematical odds against your doing what you set out to do, as in dice. There are past performance and present condition, as in horse racing. There are the strength and intentions and idiosyncracies of your opponent, which, considered with the mathematical odds, is what makes some people better poker players than others.

In the case of European aid, the first consideration can be ruled out. There is no mathematical formula for predicting success or failure.

The second factor is highly important. The present condition of the 16 nations is obviously bad, but the past performance of most of them is excellent. History gives us every reason to believe that, if they are aided and strengthened, there will be more liberty, prosperity, security, and happiness for all the world than if they are left in their present plight.

As for the third consideration, we are playing an opponent who is strong, clever, and tricky. He is out to win. We have played him long enough to know that he does a lot of bluffing. But we are still not quite sure when he is betting from bluff and when from strength.

There is another gamble, of course, that we might take. We could pull out of the European game, let our opponent rake in his winnings, and start a game of our own. That would mean putting our country almost on a wartime footing, resuming selective service to build up our armed forces and strengthening our national defense against possible attack. The chances are it would take more money even to buy chips for this game than it would to win the pot in Europe.

There is a third possibility. We could refuse to sit in on either game. And we could still wind up losing not only our money, but our freedom.

Those are the three choices. Only foolish friends and bitter enemies could advise us to take the third chance by telling us that our opponent is going to cash in his chips and get out of the game. We have known that opponent long enough to know that he won't take his winnings and get out until the cards against him are so strong that he runs the risk of losing everything by staying in.

Of the other choices, most Americans seem to prefer the gamble in Europe. The stakes are lower, and the chances of winning seem better. But right now the American kibitzers are arguing whether we should simply cover our opponent's bet or raise it.

Well, our cards look good, and right now we have more blue chips than our opponent. If he's bluffing, a good strong raise might make him decide to turn his cards face down and bow out. If he isn't, we look to have the strength to go on raising as long as he does.

The Meat Situation

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. HOEVEN. Mr. Speaker, there is much idle talk regarding the return of meat rationing, allocation of livestock, and price control. This type of propaganda is only creating unrest among the growers, producers, and feeders of livestock, a condition which certainly is not going to help meat production. This propaganda is also forcing much meat into storage lockers and deep freezers, the ultimate result being an unfair distribution of meat which, of course, will augment the cry for the return of controls.

Under leave to extend my remarks, I include a splendid letter received by me this morning from Mr. D. H. Cunningham, secretary of the Sioux City Live Stock Exchange. Mr. Cunningham knows his subject thoroughly and the information which he sets out in his letter relating to the meat situation is most enlightening and informative. I feel sure that all Members of Congress will be glad to have the information contained in Mr. Cunningham's letter.

SIOUX CITY LIVE STOCK EXCHANGE,
Sioux City, Iowa, January 26, 1948.

HON. CHARLES B. HOEVEN,
Eighth District of Iowa,
House of Representatives,
Washington, D. C.

DEAR CHARLIE: There is a very definite feeling of unrest among the growers, producers, and feeders of livestock in regard to the proposed meat rationing, or any proposed allocation of livestock, or fixation of prices. Any talk of this sort naturally causes considerable apprehension upon the part of producers and growers, and rightly so, for I think if you were in their position and were feeding a high priced commodity like corn,

you would sort of be on the anxious seat yourself all of the time.

It does not take very much of this sort of talk and propaganda to disturb the equilibrium of the livestock industry. I believe that perhaps we here at Sioux City are closer to a great number of livestock producers than any other market in the country, especially in view of the fact that we talk to practically all of the customers over five States via radio. This close contact enables us to gauge very closely the feelings of the producers and farmers and feeders, and briefly, here is the situation in a nutshell.

While these men did not take kindly at all to price fixations and OPA regulations during wartimes, yet they abided by them because they were a genuinely patriotic set of American citizens, and this was an added incentive to them to do their duty as they saw it. On the other hand, this did not blind them to the fact that these regulations were cumbersome, were ill regulated, and did not work to the advantage of either the grower or the consumer. Finally, they saw the machinery of it break down practically entirely, and they witnessed probably the greatest debacle that has ever occurred in the enforcement of a regulation in the history of a country, save the complete collapse of prohibition. A lot of things happened, and they did not leave a good taste on the livestock man's palate.

Right now he is trying to produce and feed not only the citizenry of our own country, but the people of a lot of other countries not so fortunate as our own. Trying to do it with feed crops that are scarce and high, and I want to go on record as saying right here and now that he is not making the margin of profit that a good many of these people think he is making. There is much talk about high-priced cattle, and about all the instances that you hear cited are the ones of cattle selling at $35 to $40 per hundredweight, and these are held up as being the true value of cattle that are being sold. Here are some facts that might interest you a bit. In November 1947 the selling price for all slaughter cattle on the Sioux City market was approximately $22.50 per hundredweight. In December 1947 it was approximately $23.50 per hundredweight. This includes steers and yearlings and heifers, cows, bulls, and in fact everything that went for slaughter, and while some of it was perhaps not good to choice, yet it was all red meat that would sustain and nourish a human being. This is a far cry from the prices that you hear talked about.

To sum up the situation in a few words, one can say this, that while this meat may be a little short right now, look out for what will happen if any rationing or price fixation were put on. To use the old expression, "You aint seen nothin' yet."

Right now there are a few fellows that are on the anxious seat relative to keeping their brood sows, and some of these sows are being moved at the present time. We are getting a lot of cattle that should not come right now. I am inclined to believe that if this proposed power is given to any department or individual in the United States that we will see the worst meat shortage we have ever seen, and what you saw in black markets during the war will be peanuts compared to what you will see happen if these powers are ever invoked in peacetimes. I believe that the whole trouble is that the people who are advocating this do not know what the sentiment is, and most certainly they are entirely in the dark regarding production and feeding costs. What the consumer is paying now for meat would look pretty reasonable compared to what he will pay for it in the dark channels if this thing goes into effect.

Very sincerely yours,

D. H. CUNNINGHAM, *Secretary,*
Sioux City Live Stock Exchange.

The Crucial Year

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a short article by Millard D. Brown entitled "The Crucial Year." It contains facts of importance, and I believe will be of interest to all Members of the House:

THE CRUCIAL YEAR

(By Millard D. Brown)

The crisis in our country's inflationary spiral will be reached in the year 1948. The actions taken by Congress on the so-called Marshall plan, and the huge expenses of our National Government, will precipitate a financial collapse or a gradual return to a healthy economy.

There is no doubt in the minds of many Americans that the Communists have encouraged the countries of Europe to take full advantage of the so-called Marshall plan. They believe this will be an aid in their campaign to have the United States spend itself into an inflationary spiral which will end in a financial collapse from which we will not recover for many years.

In 1924 Lenin remarked, "We shall force the United States of America to spend itself to destruction."

The Marshall plan called for each European country to present an inventory of their potentials as well as their needs. Have these 16 countries listed their potentials as well as their needs?

If so, is it not possible that each country may be able to swap some of their potentials with other European countries to help supply their own needs? The Ruhr and northern France produce coal; the Scandinavian countries, iron ore; France, Belgium, Italy, textiles; Italy, olive oil. Each country has some products the others do not produce.

We should require first the effective use of the resources of these nations, before we are called upon for assistance.

Our dollar is not impregnable. Its serious involvement would mean a break-down of other currencies, which would be very favorable to communism.

America produces only about 12 percent of the world's food. We, therefore, cannot feed the whole world, nor can we remain prosperous by giving our goods away. By exporting our food, we make further shortages in our markets which will force higher prices for food, higher wages, and higher prices on all other services.

Reports received from friends who have visited France and Italy during the past summer indicate that neither of these countries are short of food. It is true that there has been little food offered in these countries at the official-control prices. Farmers are selling only for hard money, or in the black markets.

The troubles abroad are due principally to the monetary policy of these countries. If their money is properly valued many of their ills will be cured. Two reforms of the International Monetary Fund should be made: first, remove the compulsion to control exchange rates; second, give the fund power to impose conditions on borrowing governments. Why not utilize the agencies set up by the United Nations?

The price that Mr. Truman places on his program for European aid is too great. Such spending may well mean the break-down of our own economy.

We have our own internal complications. We have a heavy and burdensome Government debt, and a tremendous Government budget. We have a tax rate that must be reduced. It is already drying up the sources for our new capital requirements.

If, after due consideration, Congress decides that some aid should be given to these 16 governments, then the Congress should require that these nations correct their fundamentally unsound financial, political, and economic policies, as the first requirement to qualify for such aid. No loans or aid should be given to those countries where the production facilities are owned and controlled by government.

We gain no respect by a failure to be firm and businesslike about the use of the assets of our people by other countries. Purchased good will can never be permanent.

In the interests of all countries which may be concerned, as well as our United States, there should be no commitments for longer than 1 year at a time.

The second most important matter for congressional action is our own governmental expenditures. A yearly budget of thirty to forty billions dollars, in time of peace, is alarming and senseless.

As the President shows no disposition to cooperate with Congress in a reduction of the running expenses of the executive departments, or the elimination of overlapping or useless services, it would seem that Congress must arbitrarily reduce all requests for appropriations at least 30 to 40 percent.

It is evident that in no other way can there be a return to economy in our Government, and a reduction of our colossal debt burden.

The above is a summary of the views of many people, the great majority of whom are citizens of the United States. A few of those consulted are citizens of European countries.

No one of those to whom I talked advocated giving aid unconditionally. Each one emphasized that the United States of America must remain financially and economically strong, if individual freedom and private enterprise are to continue in this world.

Money

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop from the Washington Times-Herald of January 29, 1948:

MONEY

(By Frank C. Waldrop)

Russia revalues the ruble, France revalues the franc. Truman unhorses Marriner Eccles as Chairman of the Federal Reserve Bank Board.

What do these things mean? Is there any connection? What's next? And does it matter to your take-home pay each week?

Well, a 5-foot shelf of books couldn't answer all the questions those questions raise. In all the world nothing ever invented by man is so unfathomable in its behavior as money. Nothing is so much sought and thought about as money. Yet how little does anybody really know about what to expect from it, next.

Take the case of Russia. The people of that unhappy country are being governed by the

worst gang of liars, fakers, and crooks in the history of modern times.

Not even the Nazis were such frauds.

The Nazis did claim they had a government that would rule for 1,000 years, and they did say that Hitler was infallible. But at least they had the shred of sense to admit that Hitler's alleged infallibility sprang from his personal intuition that was supposed to be superior to knowledge or wisdom. Just sheer old-fashioned hokum.

The Communists, however, claim to know everything about everything. Rule 1 in their book is that communism is a system of governing that is absolutely perfect, never makes a false judgment and operates strictly on the basis of impersonal, scientific reasoning power.

If that were so the Russian money system would have been able to go through the war without a change. If that were so, the Reds would have established the ruble the way Roosevelt once claimed he would establish the dollar, so that it would buy the same amount of wheat, year after year, generation after generation, time without change.

Such a money of unchanging purchase power is the ideal of all civilization, always has been and always should be. An absolutely stable money would bring more blessings to man than all the inventions of all the laboratories of science since time began.

Therefore, if communism were a real science in human relations and government, the stability of money under communism would be the first proof.

Yet we all know how the Red monetary system blew up with a bang just a short time ago and every poor Russian sucker who had a ruble hid in his shoe, if he had a shoe, had to turn it in at the rate of one ruble back for each 10 rubles he had owned before.

There has been hell to pay within the closed shop of the Communist high command ever since, too. Only a day or so ago the boss economist of the party was fired with loud denunciations because he had the idiocy to say that capitalism might be able to adjust itself to world needs.

That is the worst heresy any Communist can utter, because it conflicts with the prime article of faith that communism is the only system which can deal with the world properly and that the very vice of capitalism is its inability to solve its problems.

Over in France we see the contradictions of neither communism nor capitalism when confronted with the mysteries of money. France has long been pausing half in and half out of communism, unable to make up its mind.

Premier Schuman's revaluation of the franc was an effort to revive capitalism in that it was intended to be a sort of shot of benzedrine to France's feeble capacity to compete in the world's export business.

But, at least, Schuman didn't claim his little try is the end product of any absolutely infallible science of government. It's just his shot in the dark to find a money system that will maybe pull France a little bit along the road back.

Over here we claim to be a capitalistic nation, meaning one in which risk and venture are the rule. You put your money behind an idea. If it works, you make a profit. If it loses, you go broke. That's capitalism.

Marriner Eccles is a capitalist. For a long time he believed it important to enlarge the supply of money circulating around the country in order to encourage risk and venture.

But in recent years he has been fighting a relentless war to encourage risk and venture by contracting the money supply, or bring it into balance with the goods and services available.

There is no use here trying to run through all the features of the struggle. The sum of it all is that Mr. Truman has now called in a new man for the job.

The Chairman of the Federal Reserve Bank Board traditionally is supposed to reflect the ambitions of the administration in power, as to banking policy. What will the new man do and what will be the effect on the world? Nobody could possibly guess with any certainty.

In 1929 the gold reserves of banks in Europe and India suddenly began to disappear. For no explainable reason people decided they had rather have those pieces of metal than anybody's goods, services, or paper money.

Stocks were dumped. Business staggered. And within a brief space of time the whole world found itself in an era of monetary wars, followed by shooting wars. Gold was seized by governments and money became nothing but "managed" purchasing tickets of increasingly doubtful real value.

That all began nearly 20 years ago. Could it be that now, at long last, these upheavals of the moment signify the money of the world is about to undergo another revolution and again emerge as something that can be exchanged for gold on a free-will basis?

Customarily, such a change has been a sign of peace and plenty. So let's cross our fingers and hope. If the world turns again to money freely redeemable in gold by anybody, any time, any place, we may be able to forget the atom bomb for awhile and instead just learn all over again the ancient pleasures of trade.

A Program for Agriculture

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "A Program for American Agriculture," which I delivered at the annual banquet of the Minnesota Farm Bureau Federation, at St. Paul, on January 21.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The United States faces many complicated problems in this confused and changing world. Before this year is over, we Americans must make decisions, in Congress and at the polls, which may affect for many generations our liberties and our very lives. We can make those decisions intelligently only if from our press and radio, and above all, from the parties and candidates seeking our suffrage, we are given an honest and truthful picture of the facts and issues involved and their positions on them. It is only by knowing the truth that we can remain free.

Because that has been and always will be the keystone of my political philosophy, I hope you will forgive a personal note at the beginning of this talk. I have a yardstick which I apply to the best of my ability to all proposals which come before Congress. That yardstick is: Will this proposal in the long run expand or contract the sum total of freedoms and opportunities enjoyed by all Americans as individuals?

In applying that yardstick during my service in the Senate, I have many times had to oppose the demands of particular economic groups because I could not reconcile their desires with the long-time welfare of all the people. One of the greatest satisfactions to me in public service has been the number of such groups and their members who have accepted and agreed with the principle I have sought to apply, even when they disagreed with my reasoning and conclusions on a specific issue.

A PROGRAM FOR AMERICAN AGRICULTURE

I should like tonight to discuss with you my ideas as to the kind of agricultural program Congress should enact to replace the law which expires at the end of this year.

More and more of the major issues coming before Congress are primarily economic in their nature, and political only to the extent that one or the other proposed solution has greater or lesser political appeal to the economic groups most directly involved. Price control, subsidies, tariffs, minimum wage and labor relations are this type of issue. And the farm program is primarily an economic issue.

Unless these economic issues are solved on the basis of the economic principles and forces which have made our own free economy so tremendously productive, rather than on superficial and economically unsound political premises, America is headed for serious difficulties. We have only to look at what is happening across the Atlantic to see the results of attempts to solve economic issues on the basis of political expediency.

FARM PROGRAM AN ECONOMIC ISSUE

I have found it necessary, in my work on labor relations, minimum wage, and other such issues, to formulate with some definiteness, the principles and yardsticks which we must apply to these economic issues if we are to solve them in ways that will preserve the tremendous productivity of a free system and yet curb adequately the weaknesses and injustices to which it is subject. Because these principles have largely guided my thinking on the farm program also, I would like to review them briefly with you.

The maximum of freedom and opportunity for all people must be the constant goal of political liberals. By freedom, I mean freedom for the individual, for all individuals. There is no other kind. Freedom means nothing in relation to groups or organizations. Those who want us to provide one kind of freedom for employers and a different kind for employees, or vice versa, for instance, have not even grasped the meaning of freedom.

By freedom, I also mean both political and economic freedom. The two are inseparable. Economic freedom is the individual's right to choose his own occupation, to spend his own earnings as he pleases, to own property, and use it as he pleases, subject only to the rules protecting the rights of his fellowmen.

Whoever can dictate to an individual how and where he may earn his livelihood, controls his bread and butter, and almost inevitably can dictate also his political beliefs. The assumption that there is some fundamental conflict between human rights and property rights is one of the false premises which the modern enemies of freedom are trying constantly to implant. Property rights are human rights and the two go hand in hand in a free society. Freedom of the press, for instance, would be meaningless if no one could own or use a printing press. And how closely our independence as individuals is tied in with our right to own and control our homes and farms. There are abuses of both kinds of rights, which it is the task of society to curb by redefining rights and obligations in law. But to place one right paramount to the other is to take the first step toward destruction of freedom.

This inseparability of economic and political freedom is not surprising when we recall the historical development of a free political system, which we loosely call democracy. It was the pressure of the individual's

growing economic freedom which forced governments in the Western World to grant more and more political rights and freedoms to people. And a free economic system, in turn, was demanded by the industrial revolution.

Stated simply, the industrial revolution was the discovery and application of the fact that men could multiply their production manyfold if each specialized in the occupation for which he was best fitted. In other words, it was the division of labor. Families or communities were no longer virtually self-sufficient, each producing all it needed and used of the essentials of subsistence. Instead, one man made shoes, another built houses, and a third produced grain and meat. Then all exchanged their various products.

As men specialized, some of them invented machines which again increased their productivity manyfold. It took capital to build the machines and factories and to pay the workers, and capital became a vital tool for production.

FREE AND FAIR MARKET ESSENTIAL

As factories developed and the initiative and inventive genius of millions of people was finally released, the full fruits of the industrial revolution began to be realized. Floods of goods in undreamed of quantities were produced. But to make the division of labor work, men had to be able to exchange freely their wares, whether they consisted of skills and labor, cloth, shoes, wheat, or the capital to invest in plants and machinery. A free and fair market was essential to make the industrial revolution and the free economy it demanded function efficiently.

A free and fair market requires a stable medium of exchange. It requires that legal and binding contracts may be made over large areas. It requires that both skills and products may move freely over large areas, so that supply may balance demand. It requires stable governments, under which the rules of conduct and the law of the market are not subject to constant and arbitrary change at the whim of some absolute monarch or feudal lord.

It was that constant pressure of the free market for a stable government of laws instead of men that led the people of one nation after another from the thirteenth century until the twentieth to constantly demand more rights and freedoms for individuals, to limit more and more the former absolute power of governments.

From the fourteenth through the nineteenth century, in the western world at least, the rights and freedoms, both political and economic, of individual men and women were expanding steadily. There were ups and downs, of course, but the general trend is clear. And at the same time, the individual's security, both political and economic, likewise was steadily increasing throughout our world.

True, neither our political nor our economic security was perfect. We had corrupt governments, and civil rights were abrogated many times. We had depressions. Businessmen went broke, and workers at times had difficulty finding jobs. Some owners of great wealth became arrogant, mistook liberty for license, and society had to curb their abuses of economic power. But compared to any other period in history, people generally enjoyed unprecedented security, and with it more freedom than ever before, during the nineteenth century.

Mankind had tapped the greatest resource on earth, the initiative and enterprise, the creative energy if you please, of millions and millions of individuals, simply by freeing them from petty and arbitrary restraints and providing the incentives which a free economy offers to achievement. Freedom and security grew hand in hand.

But along toward 1900 many men, some of them well-meaning individuals and others simply greedy for power began to lecture us so vehemently about the faults and weaknesses of a free system, that they, and many of us, tended to forget the enormous benefits it had brought to all people.

Sometimes by force, but more often by promises of greater economic security for certain groups in return for power to interfere with the free market, such leaders were granted power to control and regulate the market in one nation after another. The result since 1900 has been not only a steady curtailment of freedom throughout the world, even to its blotting out in many places, but also growing insecurity and starvation for millions and one great war after another.

Where and how did we go awry? Fundamentally, I believe our mistake grew out of a failure to understand the essential of a free society and a free economy, which is a free and fair market; for labor, for products, for capital.

I have used the term "free and fair market" deliberately. A free market obviously is one in which buyer and seller are free of arbitrary and petty restraints to reach their own bargain. I would define a fair market as one in which supply and demand function freely over a reasonable period as the dominant factors in determining price.

A market dominated by one supplier or by a group of suppliers who have combined to arbitrarily limit supply to demand is technically a free market, but certainly not a fair one. That is why free society must be constantly on guard against monopolies. Monopoly always tends to keep production low and costs high, thereby defeating the prime purpose of the industrial revolution and a free economy.

PRICE FIXING DESTROYS A FREE MARKET

Likewise, a market in which the seller is constantly forced by circumstances to make a bad bargain, with the bargaining power lopsided, may be a free market, but is not a fair market. Supply and demand do not operate freely to determine price.

Examples of the latter will immediately occur to you. Farmers short of working capital used to be compelled by circumstances to sell their crops immediately after harvest. Their necessity created a buyers' market, in which supply and demand, measured over the whole crop year, operated hardly at all in fixing the price.

The solution of this problem is not for the Government to step in and fix prices of farm products or guarantee a certain price. Price fixing or guaranties may be necessary in time of war or national crisis on a strictly temporary basis. But over the long pull, price fixing will destroy a free and fair market and result in disaster, as we found with our Federal Farm Board experiment.

Farm producer cooperatives, which multiply manyfold the bargaining power of the individual farmer in the market are one solution. A loan program which is flexible enough to relieve the farmer of financial necessity to sell at harvest time, assure adequate national supplies, and yet avoid unmanageable surpluses, is another possible answer.

A free economy is dynamic, constantly changing as the inventive genius of individuals, freed of arbitrary restraints and spurred by incentives, develops new industries, new techniques, and new products. And as these inevitable changes create dangerous concentrations of economic power or destroy the reasonable balance of bargaining power between buyer and seller, the laws which govern the market place must be changed to keep the market free and fair.

Those extreme conservatives who contended that any change in the rules of the market was a step toward the destruction of free enterprise were just as wrong in their understanding as are some of our modern radicals who believe that government can destroy a free market and yet preserve the great productivity for which it is responsible.

There are two ways in which we can solve the complicated problems which constantly arise in a free economy as this or that group acquires too great economic or political power and can rig the market, or when new techniques or pressures have weakened either the freedom or the fairness of the market.

GOVERNMENT BUREAUCRATS CANNOT SOLVE PRODUCTION PROBLEMS

One way is simply to state the problem in very general terms and delegate to some Government bureau the power to solve it by telling individuals what they must and cannot do. At the moment this always appears to be the easier way, because often these problems are very difficult and it is easier to let some bureaucrat solve them than to think them through ourselves. But this is the road to absolute government. It is a path that leads away from freedom. It is, at best, a modern version of the absolute power vested in medieval government; first cousin to the twentieth-century dictatorships. However far we may travel that path, we move away from freedom with each step and must eventually retrace them.

Whenever government is granted or seizes the power to tell individuals what they may produce, how much they may produce, and at what price they must sell their services or products, it holds the power of life and death over all enterprise. The individual's economic freedom and his incentives to produce are limited or destroyed. The mainsprings which make a free economy so tremendously productive are weakened and the next step by the state is usually a resort to force to compel necessary production.

The other way of solving the problems which arise whenever our economic system gets out of balance is to readjust it by redefining in laws, explicit and applying equally to all, the rights and obligations of individuals and organizations in the market place. This is much the more difficult way of doing the job, but all history demonstrates that it is the only way which in the end will safeguard our freedoms and preserve the enormous benefits which all of us derive from a free economy.

I believe these economic and political principles to be absolutely essential to the preservation of the free society. Yet I realize as I know you do that nowhere in our society are these principles fully realized. Probably the perfect free and fair market does not exist and never will exist as long as men and women are human beings and not angels.

The network of special privileges, immunities, and subsidies that clog the market in our own society, the freest on earth, cannot be wiped out overnight. And the United States is part of a world which is still far from free. To require farmers to sell their products on a free world market while buying on a protected domestic market violates the principle of justice which is also essential to freedom. But I am convinced that it is only by applying these economic and political principles to the greatest possible degree that we can continue the great progress that has marked our history.

In times of grave national crisis, like war, the national safety overrides all other considerations. It becomes necessary, as it was in World War II, for Government to have and at times exercise totalitarian power. But when we take such measures, we must be on guard constantly lest these powers granted to preserve freedom are perpetuated to its destruction.

Against the background of these principles, let me outline my thinking on the main points in an agricultural program.

COOPERATIVES ARE ESSENTIAL TO FARMER

First, about farm cooperatives, both producer and consumer types. I believe cooperatives are essential to give farmers reason-

able equality of bargaining power in the market place. In that respect, they are in much the same position as labor unions and are so considered in the Clayton Act.

Just as a single employee in a plant employing hundreds or thousands cannot bargain on equal terms with the employer buying his services, so the farmer dealing as a single individual with a huge market hundreds of miles from his home is in a poor bargaining position, at the mercy of monopolistic buying practices. Both the worker and the farmer need the additional bargaining power that organization and collective action gives them. In addition, co-ops have strengthened competition and thereby increased the freedom as well as the fairness of the market.

TAXATION OF COOPERATIVES

Like all other Members of Congress, I have lately received many letters and petitions urging that the net savings of cooperatives be taxed on the same basis as corporation profits. I shall state my position to you exactly as I have stated it to the business groups which have made this proposal.

I can see no justification, in law or logic, for taxing the net savings of cooperatives which are paid out in patronage dividends annually. They are not profits of the cooperative, because the co-op neither keeps them nor does it pay them to owners as dividends on their investment. The co-op is merely an agent of its patrons, and such savings distributed as patronage dividends show up in the patron's own tax statement as either increasing his gross earnings or decreasing his costs, depending on the type of transaction. Consequently, I would oppose any proposal to tax such savings.

I have been informed, and believe it is true, that some co-ops do not distribute savings annually to patrons, but keep them in the business year after year, using them as working and expansion capital, and every 5 or 10 years simply issue additional stock certificates to the patrons to discharge their liability to them.

That is an entirely different picture. Not only does it give such co-ops an unfair competitive advantage over corporations which must either pay a 38-percent income tax on profits used as expansion capital or go into the open market for such capital, but such nondistributed savings of co-ops will not show up in the tax liability of the patrons except at long intervals as capital gains, subject only to a 25-percent tax.

Therefore I believe that all co-ops should, as a condition to having their savings exempt from Federal corporation income taxes, be required to distribute such savings annually to their patrons as patronage dividends.

SUPPORT FOR AGRICULTURAL RESEARCH

Second, I believe there should be continuing and increased emphasis on agricultural research, both by your own farm organizations, and by the Federal and State Governments and our land-grant colleges. This should go hand in hand with intensified work and expenditures to control and eradicate pests and plant and animal diseases.

Modern research into plant and animal diseases, to discover new farm crops and products and to discover new uses for old products, is by its nature a fairly expensive job, beyond the financial capacity of any individual farmer. Some of it can be done by your own organizations and co-ops, as it is being done in the dairy and poultry field, for instance. But Government should bear its share of the burden for agriculture, just as it does for industry in its expenditures for basic and applied research at colleges and through many bureaus.

Such expenditures are just as essential to my mind as those for national defense research. The bumper wheat crop this year, for instance, which is playing a major role in our foreign policy, would not have been possible without the research which developed new rust-resistant varieties.

CONTINUATION OF SOIL CONSERVATION SERVICE

Third, we should continue the Federal Soil Conservation Service, perhaps with a closer tie-in to the Extension Service and county agents, but as a Federal service. If anything, the educational and experimental phases of this work should be expanded, because so far our soil, the greatest of all our natural resources, is being depleted faster than we are rebuilding it.

When payments to farmers for soil-conservation practices were inaugurated in the 1930's, they served two purposes. By offering cash incentives to farmers, and farmers needed cash badly then, they intensified tremendously the education of farm people as to the need and value of soil conservation, a job long overdue. And such payments also offered an emergency method of assuring the transfer of acreage from surplus crops to soil-building crops.

Probably in times of such grave emergency, this subsidy approach is justified as a temporary expedient. But in the long run subsidies tend to undermine freedom and they certainly corrupt the economy. I cannot in my own mind justify payments to farmers today for using good soil-conservation practices. There are sounder methods of dealing with surpluses and if there is any farmer today who does not know the need and value of soil conservation, he has a county agent near him who can and will give him the information.

The Commerce Department offers many services to industry which are designed to help them increase production and lower costs. But while the Government might advise a businessman to carry adequate fire insurance on his plant to protect his capital investment, I do not believe it would or should offer to pay the insurance premiums for him. And payments to farmers for following good soil-conservation and farming practices strike me as just as unsound.

MODERNIZE PARITY FORMULA

Fourth, Congress should rewrite the parity formula to make it reflect the realities of current farm production costs, including the cost of labor on the farm. Exactly what changes should be made is not yet settled in my mind, but I am very sure the formula needs revising. It is too high on wheat, for instance, where mechanization has reduced production costs, and too low on dairy products, where labor costs have increased heavily.

Personally, I like the suggestion of J. Seneca Jones, your secretary, that the parity formula not be tied to any specific set of years, but be based on the 10 years immediately preceding the one for which the calculation is made. Our free economy changes price relationships too rapidly for any fixed period to reflect accurately for very long a fair relationship between prices of farm products and other goods.

PROPOSE FLEXIBLE PRICE-SUPPORT PROGRAM

Fifth, I would like to see Congress, in place of the Steagall amendment and the present Commodity Credit Corporation loan program, adopt a loan or price-support program which is flexible enough to relieve the farmer of the financial necessity of selling at harvest time, assure adequate national supplies and at the same time avoid unmanageable surpluses by keeping in effect the price pressure which the law of supply and demand exerts on production when supplies begin to pile up.

Perhaps I can best get across my idea by using wheat as an illustration. With our present and probable future population, a safe carry-over of wheat on July 1 probably should be around 200,000,000 bushels. If our carry-over in a given year were within 25,000,000 bushels of that figure, then the price-support or loan program for that crop year would automatically be 70 percent of parity. If the carry-over was between two hundred and twenty-five and two hundred and seventy-five million bushels, the support would be at 60 percent of parity and if it was 275,000,000 bushels or more, the support would be at only 50 percent of parity.

But if the carry-over dropped to from one hundred and twenty-five to one hundred and seventy-five million bushels, the support price would increase to 80 percent of parity and if it dropped below 125,000,000 bushels, the support price would be 90 percent of parity.

The figures I have used might be too high or too low, but I believe the principle, which is to vary the price-support level in inverse ratio to the carry-over, is a sound method of achieving the proper objectives in any support program; namely, giving the farmer reasonable protection against the vicissitudes of weather and the harvest period market depression, and yet using the price stimulus and pressure of a free market both to assure adequate national supplies and to avoid the kind of unmanageable surpluses which wrecked the Federal Farm Board experiment.

Although it would require considerable work and study, I cannot see any unsurmountable obstacle to writing such a formula directly into law for all of our basic farm crops. That is the way it should be done, rather than delegating discretion to some executive department.

While I am on this subject, I should add that I am opposed to production quotas and limitations, whether imposed directly by the Government or voted by a majority of producers and then enforced by the Government's police and tax powers. That sort of procedure smacks too much of the typical monopoly practice of arbitrarily limiting production and supply to demand at a fixed price in order to keep prices and profits high. I oppose and have opposed such controls, whether for agriculture, industry or labor.

In a free economy, the task of adjusting production and supply to demand belongs to the price mechanism of a free and fair market, and whenever government attempts to take it over, we inevitably move toward a controlled and away from a free economy.

OPPOSE GOVERNMENT CONTROL OF PRICES AND PRODUCTION

Sixth and finally, I am unalterably opposed to any Government control of prices in peacetime. The same goes for Government power to allocate or ration products, whether general or selective.

My major reason for opposition to government controls is clear from this discussion. I oppose such controls because they destroy economic freedom for the individual, and economic freedom is just as vital as political freedom.

There is no way to write directly into the law a fair price for the millions of products of all kinds bought and sold daily in the United States. The power to fix a fair price must therefore be delegated to some bureau, with only the most general kind of standards to guide the fixing. The result is that some Government official, and the actual work usually is done by some minor clerk, decides what is a fair price, and does it arbitrarily. That sort of power is totalitarian, because that clerk's decision may mean economic life or death for any enterprise.

There is a secondary reason for my opposition to Government control over prices and uses of products which, while not based on principle, is almost as persuasive. That reason is that Government controls simply will not work.

The main reason for high prices today is that our supply of goods, even though our production is tremendous, has not caught up to a war-swollen domestic demand plus a huge export demand. Government controls inevitably slow down production, because they not only remove or weaken the

price incentive to produce, but they tend to strangle the producer in a net of regulations and directives that inevitably divert manpower and effort from the job of producing. And as lower production reduces available supply in the face of growing demand, inevitably a greater and greater proportion of what is produced will tend to flow into a free or black market.

Not only do controls promote scarcity by slowing production at the very time it should be stepped up, but controls have never in history actually succeeded in holding prices rigid. No government can repeal the law of supply and demand as long as any freedom exists.

During the war, when our people were cooperating 100 percent in trying to make controls work because we were unanimous in our determination to win the war, the cost of living index increased steadily and prices rose in spite of an OPA that cost us $90,000,000 a year.

Have we so soon forgotten what happened in 1946 after the war ended and that unanimity of support for controls vanished? The President himself finally liquidated what was left of OPA in order to get meat and butter and milk and other products back on the shelves of our stores.

Yet in the face of that experience, the President today is again demanding from Congress the power to fix prices and allocate and ration scarce materials. In that respect, at least, President Truman and the Communist followers of Henry Wallace are in complete accord.

The Communist wing of the CIO-PAC fought the liquidation of OPA in 1946. They have never ceased demanding reinstatement of controls. Even if others refuse to see it, they know well that bureaucratic control of our economy is the first big step toward stagnation, privation, and dictation for America. That step will never be taken with my vote. It is very significant that those now advocating controls, want only "selective" controls. They do not want all prices controlled, including wages. Apparently it is a case of wanting only the other fellow, not themselves, controlled.

While I am on this subject, I should like to ask the fear-mongers who are trying to use this inflation bugaboo to scare us into liquidating our own freedom a question. Why, if the United States is in the grip of a runaway inflation with our money on the way to becoming worthless, is nearly the whole world clamoring to get American dollars?

I think I know the answer. All these nations want American dollars because they will buy more than any other currency in the world. And our dollars will buy more because we produce more. If that set of facts adds up to a runaway inflation, then I don't know the meaning of the word.

Granted that we have high prices, some of them too high. They are not excessive when we consider that average per capita income has more than doubled since prewar, while average prices have increased less than 70 percent. If production had doubled, prices would have remained stable. But production has increased over-all only about 20 percent, so prices had to increase.

The main difficulty is that income increases have been very uneven. Those groups which are squeezed the hardest because their incomes have increased the least are the white-collar workers and those on fixed annuities, and the only solution for them is to increase their incomes. But to strangle the production goose that lays the golden eggs with Government controls certainly won't do that.

Food prices are always the horrible example when the fear mongers talk about the inflation bogey. Dollar butter and 90-cent bacon and 70-cent beef are always mentioned. The farmer is cast for the role of profiteer villain in this inflation drama.

Of course the facts are that while farm income is high and a few grain farmers have made large profits, per capita farm income is still far below per capita urban income. And the farmer works twice as many hours per week to earn that income as does his brother in the city.

FARM PRODUCTION 40 PERCENT ABOVE PREWAR

The farmer is the one producer in our society whose productivity has shot up almost miraculously during and since the war. Total farm production today is about 40 percent above prewar, with 2,000,000 fewer people on farms. No other industry can come anywhere near matching that record of productivity.

Farmers are at last receiving somewhere near the reward they are entitled to for their work and production. Far too many of us, in our comparisons of food prices, use as a yardstick the depression days when farmers toiled 12 and 14 hours a day and were lucky if they realized 10 or 15 cents an hour for their labor. Those conditions spelled economic trouble for the Nation just as surely as did sweatshops in industry. We must never permit them to return again.

Not only eternal vigilance, but eternal effort, is the price of freedom. Each generation must meet the test, sometimes in the fire of battle, sometimes in a rededication to principle and rejection of those leaders who, seeking power, promise all things to all men. Let us resolve that our generation will overcome the great challenge to freedom that divides our world today.

Pennsylvania Goals Conference

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me in introducing Hon. Clinton P. Anderson, Secretary of Agriculture, at a dinner meeting of the Annual Pennsylvania Goals Conference, Production and Marketing Administration, United States Department of Agriculture, at Harrisburg, Pa., on January 12, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Miss Nina Hirshner, the charming young lady who has just introduced me to you in her capacity as Miss Agriculture, of Pennsylvania, and thus as the official hostess of this dinner, has the distinction not only of having been presented at the White House and in turn of having presented to the White House some good nourishing food in the form of Pennsylvania potatoes, but also of having won from Senators and Representatives from such States as Idaho and Maine the acknowledgment—grudging, perhaps, but acknowledgment nevertheless—that Pennsylvania potatoes are mighty good potatoes. In Washington officialdom, where sectional prides burn fiercely, that is quite a remarkable accomplishment.

It was a great pleasure for me last year to take this young lady to the White House in an effort to dramatize Pennsylvania agriculture and particularly Pennsylvania's delicious potatoes—and those she brought with her were truly delicious. We arranged to have them served in both the House and Senate restaurants, drowned in good Pennsylvania butter, and we convinced Congress that day, and the Washington press corps, too, that baked potatoes and Idaho potatoes have been synonymous all these years only because a lot of Americans hadn't heard about or tasted Pennsylvania baked potatoes.

I am pleased that Miss Hershner's presence here tonight as Miss Agriculture, of Pennsylvania provides me the opportunity to hark back to that event in Washington last year because it fits in closely with the few remarks I am going to make before I present our honor guest, Secretary Anderson.

Whenever the subject of agricultural planning, or the price-support program happen to arise in Washington, or in the newspaper columns, or in some political speeches, the subject of potatoes comes up, too. It is unfortunate but nevertheless true, that in the minds of a great many people, including some in influential positions who should certainly know better, the price-support program is regarded only as some dark plot designed to destroy potatoes. Little of the theory or operation of this program is known, except as it occasionally involves the loss of some potatoes in Alabama or elsewhere, in which case the news pictures always bring it to the public attention with accompanying widespread public indignation over the entire price-support program.

Although I understand Secretary Anderson is to speak primarily on the agricultural aspects of the Marshall plan, I hope he will take a little time to discuss the need for a continuing agricultural price-support program beyond its scheduled termination date at the end of this year. I am happy that President Truman cited this need in his state of the Union message just a few days ago.

The facts on the price-support program, on the remarkable success of this program in giving America record food production all through the war years and through these years of world-wide starvation, are readily available but unfortunately seldom publicized. You gentlemen who represent the farmers in your home counties know how the program works; but do the nonfarmers in your counties? Do the newspaper editors?

Much of the criticism of the program, particularly the uninformed or political criticism, seems to be based on the belief that this is some uneconomic and fantastic boondoggle dreamed up by the bureaucrats to benefit the farmer at the expense of everybody else. The Joint Congressional Committee on the Economic Report, which is headed by Senator TAFT, and of which I am a member, recently published a report by our staff of economists which pointed out that, far from being responsible for the great rise in the consumer's food bills, the price-support program has actually acted to keep prices of food to the consumer from going even higher than they have. The staff of our committee which made the report was appointed, of course, by the committee chairman.

The exact words of the report are these:

"The effect of Government support levels has been to reduce market risks of farmers and thereby encourage maximum production. The result has been record levels of food production, which in turn have done much toward keeping consumer prices from going even higher."

It points out something which you well know and which all Americans should know—although many do not—and that is that, other than guaranteeing the farmer against disastrous price collapse, the price support program has been largely inoperative because nearly all the supportable foods have been selling on the open market at prices tremendously higher than support level.

I was greatly disappointed a few months ago that Governor Duff let loose a blast at the price-support program, blaming it for present high food prices to consumers. As I said at that time, I have a high regard for the Governor and I am sure that he must have been misinformed on the facts when

he made that speech, for I cannot believe he would deliberately mislead an audience, even in a political speech to a partisan audience.

The newspapers in Pennsylvania featured the Governor's remarks on the so-called potato fiasco of last year, but insofar as I could learn, none of them took the trouble to find out what happened in Pennsylvania, where we had a 31,000,000-bushel potato harvest, representing a simply tremendous surplus. Yet this crop was saved from disaster, disaster to the farmers of Pennsylvania, that is, by Government support for only a fraction of this huge crop.

One of the most effective and dramatic sales campaigns in the history of agriculture was conducted by you men and the groups and individuals who cooperated with you in merchandising Pennsylvania potatoes. That campaign saved the Treasury of the United States, I am informed, about $1,500,000, and very, very few Pennsylvania potatoes were dumped or wasted.

When I spoke to you in Gettysburg at your goals conference in October of 1946, I compared the price-support program to the carry-back, carry-forward provisions of the excess profits tax and to the generous postwar amortization provisions of the tax laws affecting industrial expansion during the war. So far, I have heard no agitation from groups aroused mistakenly over the price-support program in similarly demanding repeal of these wartime tax guarantees to industry, which have cost the Government billions as against the millions spent in keeping our wartime pledges to the farmer that if he kept up his back-breaking labors to give all-out food production, he would not be allowed to sink in economic disaster from any sudden collapse in demand.

What's fair is fair. You men know these facts. I tell them to you only because I do not think the farmers and their representatives have been sufficiently active in getting these facts across to their nonfarmer neighbors and to their newspapers, and some of their public officials, and have allowed this program to be unfairly attacked without protest.

With continuation of price supports for agriculture, the day will eventually come when farm surpluses might again become a real problem—this time to the Government and to the taxpayers instead of just to the individual farmer, as it used to be when his only recourse often was bankruptcy. This brings up another subject close to my heart, and that is research in the use of agricultural products for industrial and other uses. Two years ago it was my privilege to sponsor legislation setting aside January 5 as George Washington Carver Day in honor of a great American who did perhaps more than any other in dramatizing agricultural research. I want to say tonight that although Dr. Carver lived far from Pennsylvania, we in this State have benefitted much from his efforts. It is a tribute to the decency of Pennsylvanians that Carver Day is always a big event in the State, and I hope it continues to be observed as it has been, in our schools and elsewhere.

And now I am pleased to give way here tonight to my good friend, Clint Anderson, the Secretary of Agriculture. We served together for some years in the House of Representatives, where the future Secretary was considered not only an outstanding Congressman, but a regular fellow. As Secretary of Agriculture during one of the gravest periods of world-wide agricultural crisis in history, he is doing a bang-up job and still remains a regular fellow.

We have had the Secretary before our Joint Economic Committee at various times, where the effort was often made by some members to put him on the spot and preferably to make him yell "Uncle." But the Secretary knows his oats, and his barley, and wheat, and rye, too, and he was one of the best witnesses we have had.

Secretary Anderson believes in facts—in having them and in sticking to them. And here he is to give them to you.

Address by Hon. Edward Martin Before the Union League of Kanawha County, W. Va.

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the distinguished Senator from Pennsylvania [Mr. MARTIN] at a luncheon meeting of the Union League of Kanawha County, W. Va., and the Kanawha County Women's Republican Club, at Charleston, W. Va., on January 26, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From the earliest days of its history the mountain State of West Virginia has produced loyal American patriots who valued freedom and independence above everything else.

The spirit of liberty has guided the growth and progress of your State to great heights.

In my own Commonwealth of Pennsylvania we are proud of our West Virginia neighbor as a State of sturdy, bedrock, courageous Americanism.

You have so much to be proud of—your diversified industry, your agriculture, your vast timber wealth, your great resources of coal, and your oil and gas production.

You are strong in spiritual and cultural attainments. You have built splendid centers of education and strongholds of religion.

During all my active life I have enjoyed my professional, political, and business connections with your State. The warm welcome I have always received from your people has been most gratifying.

Therefore, when I was invited by your distinguished United States Senator, my good friend CHAPMAN REVERCOMB, to address this meeting, I accepted with sincere pleasure.

West Virginia is indeed fortunate to be represented in the United States Senate by a man of such outstanding ability and such loyal patriotism. CHAPMAN REVERCOMB is not only a great Senator but he is also a real American. I am happy today to express my deep respect and high regard for his service to the people of West Virginia and to the Nation.

I would like to talk this afternoon about our national administration. I want to discuss with you the high cost of government and its relation to high prices. I would like to analyze the zigzag reasoning upon which President Truman based his recent message to Congress—the one that he delivered personally—and with a straight face called it a message on the state of the Union.

He had not gone far into his text when it became clear that it was actually a message on the state of Harry Truman's hope for reelection. Certainly it was a message embracing all the elements of political expediency. Perhaps it was a message on the jittery state of the White House occupant since Henry Wallace announced his proposal to lead the American people into the promised land of unlimited luxury provided by a benevolent government.

The message proved that Harry S. Truman has traveled a long way in the wrong direction since he took the oath of office. He had built up a splendid reputation as chairman of the War Contracts Investigating Committee. Under his direction the committee ripped vigorously into graft, inefficiency, and waste and the reckless New Deal wartime expenditures.

Many Americans—and I was among them—were very much encouraged when Harry Truman became the Chief Executive of our Nation. We believed that out of the sound Jeffersonian principles of the old line Democratic Party some semblance of sanity would return to the Government. We hoped and prayed that the ideals on which our Republic was established would be restored. We had reason to hope that the arrogant army of bureaucrats would be deprived of the power they had abused so long. We thought that the time-honored virtues of hard work, thrift, economy, and sacrifice would be strengthened as foundation stones of American stability.

Well, you know what has happened to Harry Truman. You know now that the New Deal has taken him over—lock, stock, and barrel. The New Deal philosophy became his philosophy. All thought of putting our national house in order went out of the window. And the more you think about the strange transformation of Harry S. Truman the more you realize how important it is to the future of America to put a Republican President in the White House at the next election.

The full flowering of that transformation was disclosed in the state of the Union message. It was given the coldest reception ever accorded a Presidential message. Republicans, as well as many Democrats, were stunned into silence by its fantastic, muddle-minded proposals to spend, spend, and spend.

One of the quietest Members of the Senate made this comment:

"It has a hook with Presidential bait for every fish in the sea."

It was a long message—5,500 words. As the President stepped into the rostrum of the House to deliver it, there was nothing unusual about his appearance. He wore a quiet gray suit and carried the message in a loose-leaf notebook.

Ladies and gentlemen, he would have been more appropriately dressed if he had worn long white whiskers, a red costume trimmed with white fur, and shiny high boots. He should have carried his message in a bulging sack over his back and he should have arrived on a sleigh drawn by eight reindeer.

That day, January 7, 1948, was bigger than any December 25 of any year. Mr. Truman was playing Santa Claus. He had glittering Government gifts for everybody. He had splendid presents to fill your stockings and my stockings and the stockings of most of the world's 2,000,000,000 people.

Of course, those generous gifts would cost money—a great deal of money. No one seems to know just how much the total would be. But one thing we can be sure of—although Mr. Truman did not mention it. We can be sure that the cost—every last dollar of it—will come out of the earnings and the savings of the American people. You know, and I know, and the President of the United States knows that the Government has no other source of income.

Various estimates have been made of the annual cost of the gifts so generously offered by Mr. Truman. Bear in mind that many of these proposed expenditures are not included in the President's $40,000,000,000 budget. One estimate places the additional cost at $35,000,000,000 for a single year. The rock-bottom figure that has been suggested is $17,000,000,000 a year above the budget.

In other words, the President, in this election year, proposes an expenditure of $40,000,000,000 for what he considers essential cost of government; and, in addition, he would spend from seventeen to thirty-five billions for new benefits, new functions, and increased services. Of course, that would mean a vastly expanded army of bureaucrats on the Government pay roll preaching the glories of New Deal generosity.

Mr. Truman did not mention the point that the Government has nothing whatever to give that is not paid for by the toil and sweat of the people. In many years of public life I have warned repeatedly against the politician who seeks your support by promising to spend your own money. That warning is more timely today and more important than ever. President Truman's state of the Union message must be viewed in that light. His words concealed their real meaning. They were designed to give the impression that all would receive and that some other fellow would pay.

Let us now consider that portion of the message dealing with tax reduction.

You will recall that the Republican Party in 1946 promised peacetime relief from the crushing burden of wartime taxes. On that promise the Republican Party scored a landslide victory and won control of both Houses of Congress.

But the Republican tax reduction bills, supported by many Democratic Members of Congress, were twice vetoed by a politically minded President because they were not labeled "Truman" tax reductions.

Now he comes forward with a sleight-of-hand trick of political magic—very slick but very deceptive. He would cut taxes for the lower-income groups by a $40 reduction for each taxpayer and each of his dependents. That would relieve 10,000,000 people from paying any Federal income tax.

But he did not stop there. This tax reduction will not cut into the Government revenues, he told the American people, because every tax dollar you save will be loaded on the backs of the corporations. He forgot to tell the people that the corporations are owned by the people.

Yes, ladies and gentleman, that was the kind of hocus-pocus you were expected to swallow. Mr. and Mrs. Small American Taxpayer, you will get out from under, you were told, in effect, and we will soak the corporations.

That is the formula Mr. Truman offered to help you meet the high prices and to fight inflation. Let us see what actually happens. I am sure the ladies present will be especially interested because they manage the family budget.

Under the Truman plan your taxes are cut $40 or $80 or more depending upon the number of your dependents. That amount is added to the tax load carried by the corporations that produce the things you buy. One is a big meat-packing concern that packages the bacon for your table. Another makes shoes for your family. The third produces the automobile you drive. A fourth makes your clothing and a fifth turns out the sheets and pillow cases for your home.

But there is one important fact that you must not overlook. Mr. Truman forgot to tell you that when those corporations pay their taxes they are merely turning over to the Government the money they collect from you. Corporations do not pay taxes, they merely collect them.

Bear in mind that you—the consumer—pay all the taxes in increased prices for goods. Increased taxes mean higher prices and more inflation.

That is bad enough, but there is another angle that hits you in the pocketbook. Every dollar of taxes added to the cost of goods at the factory spirals upward before it reaches the consumer.

The businessman figures profits in percentages of the total cost, including the taxes, so that higher taxes result in a higher dollar mark-up by the manufacturer, the wholesaler, and the retail storekeeper.

Let us trace that alleged $40 tax benefit that you would receive. It is taken from your tax bill and then spread among the corporations. The corporations add it to their cost-of-production figures. When they sell to the wholesale dealer, let us say they take a 10-percent mark-up, making the price to the wholesaler $44. The wholesaler, in turn, adds his 10 percent which now makes the $40 cost the retailer $48.40. He, in turn, takes a 33⅓ percent mark-up based upon his cost and the original $40 is now $64.50. There is the $64 answer to the $40 question. So, Mr. Consumer, you thought Mr. Truman was giving you $40. Actually you are paying $64.50.

That is why I say the Truman tax-reduction plan is nothing more than a slick vote-getting scheme—a false promise that means raw, unadulterated inflation—combined with political trickery of the worst order.

I wish every man and woman in this land who has been foolishly taken in by the President's phoney tax-reduction scheme could be told what it really means. I regret that some of our labor leaders and so-called liberals have endorsed the Truman proposal to give everybody a $40 tax reduction and then take it back with an added load of higher prices. They are being duped by tactics like those of the old-fashioned snake-oil medicine man.

It is a shameful thing that a President of the United States—who should know better, who must know better—tries to peddle such nostrums to the American people.

Surely the Democratic administration knows that hidden taxes represent about 26 percent of the cost of everything we buy today. Surely they are aware that taxes are added to their prices by the manufacturer, the wholesaler, and the retailer in the process of getting the goods to you—the consumer.

Are butter and eggs high? Does clothing cost too much? Is the price of building a home clear out of sight? Just remember, if it were not for the taxes that are studded all through those things like nuts in a fruit cake, their prices would be at least one-fourth lower than they are today.

Mr. Truman should do something about that situation and he should begin right now.

The first step should be to cooperate with Congress in slashing the cost of government by eliminating waste, reckless extravagance, duplication of services, and excessive pay rolls.

It has been a long time since public officials who believe in economy have occupied high places in Washington. It is time to restore that type of leadership to the highest office in our Government.

One of the great dangers to the American people is too much government. Too few people realize that a $40,000,000,000 budget is more than twice all the profits made by American industry in the year 1947. That is an alarming situation, one in which every real American cannot fail to be deeply concerned. It threatens the solvency of our Nation now struggling under the most crushing burden of national debt the world has ever known.

Never in our history has there been a time when the need for economy in government was more vital. But the Truman administration offers not the slightest suggestion of economy. On the contrary it presents a program of unlimited spending in foreign commitments, in ever increasing and ever expanding domestic functions and bigger and more expensive pay rolls—with no end in sight.

There is an end, however, that is inescapable. Such a course of extravagance must inevitably lead to the bottom of the barrel of our resources. The United States is a rich and powerful Nation—but in recent years we have seen other great and powerful nations go broke.

Let us take warning from the lessons of history. Let us make our demand for government at lower cost so strong and so vigorous that it cannot be ignored or denied.

America must remain solvent if freedom is to survive. America must be solvent if we are to exert leadership in the world for peace, liberty and justice. Each of us, as individuals, and as Republicans, can help. But first we must unselfishly put the "me" in economy. We can all be soldiers in the fight to safeguard the future of America.

Even in the early years of the New Deal administration, the Nation was getting along on budgets of five or six billion dollars. We thought it was pretty high then but today it takes $5,500,000,000 a year to pay the interest on the public debt alone.

Now the Truman administration tells us that we had better become accustomed to thirty-eight and forty and forty-five billion dollar budgets. They are telling us that this is normal peacetime spending. To my mind that kind of philosophy of spending is just as poisonous and just as dangerous as stepping into a nest of rattlesnakes.

They are telling us that our budgets are going to climb higher into the stratosphere. They say we must sacrifice in blood, sweat and tears to pay the bills.

Not the Washington bureaucracy's blood, sweat, tears, and sacrifice—but yours and mine.

I would like to suggest to Mr. Truman, with all the respect due to the President of the United States, that he apply a little of that blood, sweat, tears, and sacrifice to the swollen bureaucracy that finds no difficulty in spending forty to forty-five billion dollars of the people's money in a peacetime year.

I would like to suggest that he carve fatty chunks out of the hide of the overloaded administration which surrounds him. He must not worry if the process should cause him some tears and if he should draw a little blood and sweat from the hide of the bureaucracy in the process. Millions upon millions of his countrymen would rejoice. The burden of taxation, direct and indirect, would be lighter. Prices would come down. Business and labor would be encouraged. Both would move ahead with renewed vigor.

That kind of endeavor I can recommend for any President of the United States.

If Mr. Truman does not feel up to it, and his State of the Union message clearly indicates that he does not, then we must look to November's election for relief. With a Republican President and your Senator CHAPMAN REVERCOMB and other men like him in Congress cooperating, we will take this administration's expensive playthings away from it and reduce the family budget.

The time is ripe and overripe for a change in order that we may save what is left.

I would like to suggest some of the things that I believe should be done to make our Republic greater and stronger:

First. The economy of plenty must be the policy of every American. That means increased production at lower unit cost to make available to the people more of the commodities they wish to buy at prices they can afford to pay.

Second. Drastic reductions in Government spending would remove one of the greatest causes of inflation. All public works not immediately essential should be postponed until such time as they are needed to expand employment.

Third. Taxes should be reduced in a manner that will stimulate expansion of productive enterprise.

Fourth. We should restore the integrity of the dollar by stopping immediately the further issuance of printing press money. The American dollar must be a sound dollar.

Fifth. We must adopt a program of regular payments to reduce the public debt.

Sixth. We should encourage individual savings and the investment of a larger share of commercial profits in plant improvement and equipment for better methods of production.

Seventh. There must be better management-labor cooperation to check the mounting price spiral. This calls for a determined effort by management to hold the price line. It calls for labor to hold the line against another and another round of wage increases. One cannot succeed without the other. It calls, in short, for the finest kind of Americanism on both sides of the industrial street.

Eighth. We should not damage our domestic economy and increase the cost of living by exporting basic materials that are in short supply.

Ninth. Government competition in the food markets should be ended. We should curb those excessive price supports and subsidies which are economically unsound. The people pay for these supports and subsidies with higher taxes at one end and higher prices at the other.

Tenth. We must put the Golden Rule into our business practice. There is plenty of work, business and opportunity for all in America if we play the game on the level.

The suggestions I have outlined have an important bearing on the future welfare and progress of our Republic. They can be achieved only by united, determined and unceasing effort to rebuild and strengthen the spirit of America.

We need more of the spirit of our ancestors—the spirit of patriotism, courage, industry, thrift, sacrifice, and love of God. We need a reawakening in America—great mobilization of right thinking, hard working God-fearing men and women standing together in love of our country and our Flag.

Loyalty and fidelity to the ideals and principles enunciated by the founding fathers will preserve our freedom, our independence and will safeguard our foremost place among the nations of the earth.

Let us not take for granted or hold too lightly the precious gift of being an American. In this world there is no more proud heritage. In every corner of the earth today there are millions of people, decent hard working people, who would crawl halfway around the globe on their hands and knees for the privilege of being American citizens.

I wonder if our young people—and many older ones—fully appreciate the true meaning of the American way of life and the American system of free government. Our schools should teach that lesson and it should be expounded from our pulpits.

That would make a better America—and better Americans of us all.

American Stability and World Peace

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "American Stability and World Peace," which I delivered at the annual meeting of the Pennsylvania Dress Manufacturers' Association, in New York City, on January 3, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The growth of the dress manufacturing industry in eastern Pennsylvania in recent years has been most gratifying to all of us who are interested in the continued preeminence of Pennsylvania as an industrial State. Heavy industry has always had its headquarters in Pennsylvania almost from the beginning of our colonial history. Pennsylvania steel and Pennsylvania coal are the two great pillars supporting our entire economy in the United States. From these two giant industries, hundreds and hundreds of related industries have received their initial impetus and are now titans in their own right. It took a depression to teach us in Pennsylvania a lesson we are not going to forget, and that is that complete reliance on one or on a few primary industries brings with it acute danger at the moment of dislocation or even mild recession in the fortunes of those few industries.

We learned the need of diversification, and throughout Pennsylvania communities large and small have been putting to good use that lesson we learned in our State in the early thirties.

The textile industry has always been an important one to Pennsylvania, particularly in and around my own native city of Philadelphia. In the last 10 years or so, however, we have seen a notable trend on the part of the dress-manufacturing industry elsewhere to come into Pennsylvania, into the smaller communities, to set up new plants which in many cases have been the first and only instances of industrial diversification some of those towns have known.

We in Pennsylvania appreciate this invasion, if I can call it that, of our hard-coal areas and of other regions of Pennsylvania by plants such as yours. You have brought wealth into our State in the form of employment and employment opportunities, and I know it is appreciated all down the line. I trust that you are meeting with the utmost in cooperation from officials on the local, county, and State levels in Pennsylvania in trying to help you make your business problems easier. I know labor appreciates the new opportunities your industry has provided in our State, and I understand that you, in turn, have found labor in Pennsylvania to be cooperative, reasonable, skilled and alert, and enterprising and anxious to see your business prosper so that labor in turn can prosper.

My good friend Jim Costello, who is the impartial referee in your contract adjustment cases with the ILGWU, tells me that labor-management relations in your industry are on a splendid basis of true cooperation and mutual respect, and that is good news indeed. The health and welfare fund set up for your employees with centers already established in Allentown, Harrisburg, and Wilkes-Barre is, I believe, a reflection of truly enlightened free enterprise at work in a free America.

All of which is to say that I want you to know that we in Pennsylvania look forward to your industry becoming an increasingly important part of the community.

We have just completed the greatest boom year in our Nation's history. And as we enter 1948, everyone, I am sure, looks forward with hope that this new year will see a continuation of our high level of economy. On the other hand, however, business has been so good in this past year that, conditioned as we have become to the economic cycle of boom and bust in America, there is now a widespread feeling in the hearts of many that we are on the brink of a possible collapse. We all pray that such a collapse will not occur. The economists and industrial leaders generally reassure us that 1948 in all probability will be an exceptionally good year for business. Industrial expansion is continuing; as a matter of fact, our entire economy is still an expanding one. Nevertheless, there is almost universal recognition of the fact that there are aspects of our booming economy which justify some real misgivings.

Simply stated, we are in an inflation and everybody knows it now. A year ago, even a few months ago, there was great resistance to any acknowledgement of the existence of serious inflationary factors in our economy. At this time a year ago, optimism was transcendent and there were few, if any, expressions of alarm or disquiet.

Optimism is still present and justly so. In the past year the United States has known for the first time the achievement of an employment goal of sixty million jobs. We have vast purchasing power—vast potential purchasing power, that is—in the hands of our people. Wages and income are at records we never before considered possible. We have a vast productive machine and it is turning out goods at an amazing and almost incomprehensible rate. We have a huge backlog of unfilled consumer demand at home and we have an unfilled export market which is staggering in its volume, assuming, that is, that any purchasing power will exist abroad to buy our goods.

All of these factors lend support to our hopes for a high level of prosperity in America, not just for 1948 but for years to come. And yet as we start 1948—still riding the crest of this boom—I think we all have a feeling that our economy needs some shoring-up, some better foundations if collapse is to be averted, and this glorious edifice of American economic well-being not turn into a house of cards.

I do not have to dwell on the disastrous consequences of economic collapse in speaking before a group like this. Your own industry is peculiarly sensitive to the ripples of the economic tide, either for good or for ill. Inflation, I know, is already a serious problem to you; a sudden deflation would be calamitous.

During investigations in which I participated this past summer and fall as a member of the eastern subcommittee of the Joint Congressional Committee on the Economic Report, on an assignment from the Congress to seek out some of the basic factors responsible for the steadily soaring price level on the eastern seaboard, we heard abundant evidence from businessmen of the continued shrinkage of mass purchasing power as a result, primarily, of upward food prices and of the prices of other primary necessities. Department store executives, although conceding increasing sales volumes in dollars—and higher profits—nevertheless acknowledged serious concern over a declining sales volume in units. They discovered significant buyer resistance on many items heretofore considered necessary items, and the explanation for this resistance was almost unanimous—other items considered of more primary necessity to the family were siphoning off a disproportionate share of the consumer purchasing power.

Food was the dominant item in this category. Housing was another. Overspending on these items—overspending based more on compulsion than on extravagance—meant underspending on other consumer needs.

Business has not yet felt the full impact of this unbalance, but business has seen sufficient signs of future danger to be worried about it, and well it might. If allowed to continue unchecked, the trend can be disastrous.

I have no intention or desire to stand before you tonight and deliver a professorial lecture on elementary economics. Although we Members of Congress are always suspected

of attempting to pose as experts on every subject which happens to brush against our coat sleeves in legislation passing across our desk, I do not pretend to be an economic oracle. If I did, all that would be necessary to make me feel foolish would be to recall the violent disagreements taking place among the experts who spend their entire lives in continual study of all the factors involved in our economic situation.

Furthermore, I would not presume to try to convince you gentlemen, who every day must risk your investments on your own individual interpretations of the economic facts of life, that I know more about your business and business generally than you do.

Nevertheless, as a Member of the United States Senate, where almost daily we must face problems which vitally affect you and all business and all of us as citizens of this democracy and of the world, I have the responsibility of informing myself as thoroughly as possible on the great issues of the day so that my actions and my votes in the Senate will be based insofar as possible on reason and knowledge rather than on prejudice and hunch.

When you extend me the courtesy of listening to me expound some of my views, I think the least I owe in return is honesty in the presentation of my opinions on those things on which my views and my votes are important to you as constituents and as Americans.

That is why I feel I must intrude a degree of pessimism into this otherwise pleasant occasion.

In the past year I have noted a rather alarming retreat on the part of many Americans, including some in influential positions, into a lost past which I firmly believe can never be recaptured. We hear again the nostalgic talk of the good old days of isolationism and of economic anarchy of the 1920's.

The basis for this nostalgia is understandable, even if we cannot approve it. After all, the upheavals which have occurred in America and in the world in the last 20 years have constituted a series of shocks, one after another, which could not have left us in anything but a somewhat nervous condition. Our entire economic outlook in the United States was completely revolutionized in those 20 years and many who can remember their comparative freedom from any variety of interference from Government in their business affairs still look back with uncompromising longing for those old days. Internationally, those 20 years saw the complete destruction of a peace which we had thought was permanently won and the resurgence across civilization of forces which we could hardly imagine could exist in this twentieth century—bestial, depraved, savage forces which, for a time, threatened to engulf all humanity. Then came the most terrible war mankind has known, climaxing, in the discovery of atomic energy, the age-long search of man for the power with which to destroy his fellow men, himself, and his world.

Again we had peace—and high hopes. And now those hopes have been cruelly bruised by national hatreds and nationalistic ambitions once again on the march.

When a man is hit often enough on the head with a baseball bat, he may develop immunity to the blows—and become senseless and spiritless—or he may try to escape the blows by ducking. If he is always frustrated in his attempts to duck—if he still gets bashed in the head with that ball bat despite every effort to dodge—he must eventually go insane. We in America, and peoples everywhere, for that matter, have been experiencing such a constant series of blows for those 20 years just past—and some among us have become so used to them they no longer pay any attention to them—they are insensible to the shocks—while others are engaging in violent evasive action which fails to succeed. The great majority, however, not only here but throughout the world, I believe, are still seeking a way to curb those blows rather than helplessly sustain them or continue unsuccessfully to try to dodge them.

As a Nation of people who have invented the most amazing machines, in a world of people who have harnessed science to mankind's needs, we as a people and civilization generally have still failed to solve the primary human problem of living together in peace and in mutual assistance and friendship. All the terrible blows and shocks which fall upon us result from this failure to make good on the first and primary teachings of every religion mankind has known.

Our economic dangers here in our own America arise from that same failure, too.

This inflation in which we are now adrift did not suddenly develop from the whim of any one man or the manipulations of any small group of men in industry or in Government. It has been a mushrooming thing, arising primarily out of the selfishness and the greed of each and every American who attempted to profit at the expense of his fellows—to get whatever the traffic would bear.

Of course a lot of Americans got hurt by this, and for them there has been widespread sympathy, I might say universal sympathy, but when it comes to taking concrete steps to get at the core of this problem, each wants the other fellow to make the first sacrifice. Obviously, in that type of psychology—waiting for the other fellow to be the first repentant sinner—none will repent and none will make peace with his soul and his conscience.

Are we, then, to let this inflation run its course to the bitter end? We all in America say that such delay would be disastrous. Most of us in America realize our obligations in this respect are not confined to our own people and our own prosperity but to the entire world—for we know that the United States—a strong and solidly prosperous United States—is the sole and only hope at this moment in world affairs for the achievement of a decent peace and an enduring peace in a world where freedom might still continue to exist. Our help abroad is sorely needed, desperately needed. Yet it must be recognized if our own people at home are to suffer hardship and great denial through inflation and bust, the rush back to isolationism will be dramatic and swift and heartbreaking.

Already in my mail in the Senate I am receiving hundreds of communications from Pennsylvanians pinched by the high prices they must pay for food and other necessities who insist I vote against the Marshall plan or any form of aid to foreigners abroad because they have been led mistakenly to believe that the inflation at home is solely the result of our foreign-aid program. As we get into the Marshall plan debates in the Congress soon, this opposition will increase—unless we find means of curbing inflation.

I am finding also in my mail widespread opposition to the admission into the United States of even a pitifully few of the victims of Hitler brutality and of Communist regimentation and much of this opposition stems also from economic insecurity among large elements of the population at home. They are so convinced of the inevitability of depression in America that they fear—now, today, in the midst of this great boom and of continued labor shortages in America—they fear that any displaced persons admitted to this country threaten their own job security.

Yet we know we must help Europe regain her economic health; we know that in decency and in fairness and in justice and also because we want and need many of the brave souls in displaced-persons camps, that we must do our share in the world-wide problem of resettlement of the victims of totalitarian brutality. We know we must do these things not only because they are right and proper and just and decent things to do but also because we know that America's own future safety in a world of atomic bombs, and the safety of America's own brand of political freedom and decency, demand the existence of a world in which freedom and decency can survive unchallenged. Such a world cannot exist if we in rich and prosperous and well-fed America sit idly by while starvation and misery and desperation seize whole populations abroad.

So what do we do about it? To go back to that illustration of the hapless fellow being smashed on the head with a ball bat, I maintain that we must look into the facts objectively, study the curve of that swinging bat, analyze the force and the direction and the strategy behind it, and then boldly seize the club itself and wrest it away from our tormentor—in this case an unbridled economic force which now has us at its mercy.

We know what we must do abroad if we are to win a decent and peaceful world. It means sacrifices by us here, yes; it means resolute action and courageous action. It means the calling back into the fabric of our national thinking and values some of the spirit of brotherhood and sacrifice and religion which carried this country and all of our people triumphantly through the horrors of World War II.

It means guaranteeing American strength by guaranteeing the strength of our American economy—the economy which must bear the initial burden for world recovery. At present levels of production and income, we can bear that load now a thousand times easier than we could bear the financial burden of World War II or of any future war. In a depressed America, the load represented by the Marshall plan might well be impossible to sustain.

Without the Marshall plan, I am convinced we would be thrown at some future date into circumstances which might well lead to war—a war neither we nor civilization could afford. With the Marshall plan, we still face dangers; but no course, no bold instance of national and international initiative such as this plan reflects, was ever free of some dangers. The greater danger lies in inaction and in despair.

If we are to have a strong America as the best guaranty of a stable world, we must seize upon the inequities in our own economic situation; we must see to it that America's mass of good citizens enjoy decent standards of living, at decent wages enabling them to buy their needs at decent prices. Next spring we face a certain meat shortage in America. Are we to allow it to be rationed entirely by price—with the average worker priced out of the market? Would that make for labor peace in America? Would coal be mined if the miners were unable to afford meat?

Further wage raises by themselves would not solve the problem, and I sincerely believe the responsible leaders of labor all realize this. But wage raises—or at least, wage demands and strikes—are bound to occur if prices are not brought more in line with economic necessity.

What we must achieve in America now, in the midst of this inflation, as the only successful means of curbing this inflation and of assuring continuation of our prosperity, is sufficient purchasing power—actual purchasing power, that is—in the hands of our people to enable them to maintain decent standards. If our working people have money to spend on the things they help to produce, we all benefit and prosperity is assured.

This can come only through lower prices for necessities and through raising of the incomes of those in our lowest economic levels. With this spreading of purchasing power, in the presence of continued shortages of many strategic and necessary items, we must have

machinery to assure equitable distribution of those supplies which do exist. This does not mean a return to OPA.

It means, however, a return to economic sanity, to a measure of economic restraint, to some of that great and noble spirit which enveloped every real American during those terrible days of war—days when a fellow American was a friend, a brother, a comrade, a neighbor—and not just a sucker to be taken for all the traffic would bear.

Citation of Hon. Edward Martin, of Pennsylvania, by Veterans of Foreign Wars, and Statement by Senator Martin to Communist War Veterans

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. COOPER. Mr. President, on January 27, 1948, in Statuary Hall of the United States Capitol, at a ceremony presided over by Hon. J. H. McVey, attended by Hon. JAMES E. VAN ZANDT, past national commander, and in the presence of a full color guard, the Department of the District of Columbia, Veterans of Foreign Wars of the United States, presented to the distinguished junior Senator from Pennsylvania [Mr. MARTIN] a citation for outstanding achievement and patriotic service to his country.

On the same occasion, Hon. Charles M. Sullivan, chairman of Un-American Activities Committee of the Veterans of Foreign Wars, praised the members of the Committee on Un-American Activities of the House of Representatives, honor guests at the ceremony, and pledged to them the full and continued support of the Veterans of Foreign Wars.

In presenting the citation, Hon. Albert M. Armstrong, department commander, reviewed the distinguished military and civil career of our colleague, the Senator from Pennsylvania [Mr. MARTIN], and emphasized particularly his loyalty to the institutions and governmental system of the United States. He recalled the speech made by the Senator from Pennsylvania on May 9, 1947, to a group of Communists, attending an alleged veterans' national convention of the Communist Party, in which he strongly rebuked them for their disloyalty to this country, and declared his own opposition and the opposition of the patriotic veterans organizations of the United States, and of all patriotic veterans, to communism.

I am happy to call to the attention of this body that a great veterans' organization, the Veterans of Foreign Wars of the United States, has again recognized the achievements and patriotism of our colleague, the Senator from Pennsylvania, outstanding military and civil leader, and that the organization, with other patriotic veterans, is engaged in an unrelenting fight against communism, and in the fight to preserve the institutions and governmental system of our Nation.

I ask unanimous consent to have printed in the Appendix of the RECORD the citation given the Senator from Pennsylvania by the Veterans of Foreign Wars, and the statement made by the Senator from Pennsylvania to Communist war veterans on May 9, 1947.

There being no objection, the citation and statement were ordered to be printed in the RECORD, as follows:

GREETINGS AND SALUTATIONS

To the UNITED STATES SENATOR OF THE STATE OF PENNSYLVANIA, HON. EDWARD MARTIN:

Whereas, in true accordance with the established principles and high ideals exemplified throughout your military and civilian career, you, fearless of condemnation, did express your sincere sentiments in an address to a delegation of Pennsylvania Communists attending that party's veterans' national convention, such address appearing in the CONGRESSIONAL RECORD of Friday, May 9, 1947, Eightieth Congress, first session, of which portion is quoted:

"First let me make clear that I respect the veteran and all that his uniform stands for. But when you come here, representing the Communist Party, you have no right to claim the respect and treatment due to veterans. No one can be faithful to American ideals and accept the teachings of communism.

"I will not now, nor at any future time, discuss the welfare of our veterans with men who uphold your communistic philosophy, even though you have worn the American uniform. Anything I have to say on that subject will be said to the officers and members of recognized veterans' organizations, or to other patriotic unaffiliated veterans. And if I want advice about veterans' needs, I shall go to those same groups. They recognize the great gulf between American freedom and communistic dictatorship. They do not straddle. They stand foursquare on the side of individual liberty and rights of freemen. You are on the other side.

"The Russian people can have the form of government they want. We are not trying to force our system on them. I will fight with all my power any effort to foist their system on this country whether it comes from you or anybody else.

"I have had over 40 years of service in the armed forces of my country, I love its uniform and its flag. I respect that uniform even when worn by a Communist, but I have no respect for the philosophy you have accepted."

Whereas we fully appreciate the manner in which you exercise the true spirit of democracy by being one of our kind of folks, in witness of which you have said: "share the same concerns, the same fears, and the same high aspirations for our country's future. This devotion has been shaped by our kind of folks having worn our country's uniform in battle"; and

Whereas your outstanding military record throughout the 44 years of service, with which we are conversant, has brought you the distinction of advancement through the military ranks from private during the Philippine Insurrection, 1898, to commanding general of the Twenty-eighth Division, World War II in 1942; and

Whereas not being satisfied to rest upon your military laurels but desirous of serving your people, you as a civilian were inaugurated Governor of the State of Pennsylvania on January 19, 1942, and were elected to the United States Senate on November 5, 1946, and

Whereas your membership in the Hawkins Home Post, No. 927, Washington, Pennsylvania, of our beloved organization, makes us justly proud to claim you as a comrade, one in harmony with our spirit of comradeship and in full accord with the ideals for which we stand: Therefore be it

Resolved, That in appreciation of outstanding achievements, the expressed determination further to serve God, country, and fellow man—and in commendation for patriotic service and accomplishments we, the officers and members of the Department of the District of Columbia, Veterans of Foreign Wars of the United States, do herewith present to you this citation.

Given under my hand and seal this 27th day of January 1948.

ALBERT M. ARMSTRONG,
Department Commander.
MARTHA J. REYNOLDS,
Department President of the Ladies Auxiliary.

Attest:

CLYDE W. KEIRN,
Department Adjutant.

STATEMENT OF SENATOR MARTIN, OF PENNSYLVANIA, TO COMMUNIST WAR VETERANS

I have left a busy Senate floor to see you, because you are Pennsylvanians. I have listened to you. Now I want to tell you what I have got to say.

First let me make clear that I respect the veteran and all that his uniform stands for. But when you come here, representing the Communist Party, you have no right to claim the respect and treatment due to veterans. No one can be faithful to American ideals and accept the teachings of communism.

I will not now, nor at any future time, discuss the welfare of our veterans with men who uphold your communistic philosophy, even though you have worn the American uniform. Anything I have to say on that subject will be said to the officers and members of recognized veterans organizations, or to other patriotic unaffiliated veterans. And if I want advice about veterans' needs, I shall go to those same groups. They recognize the great gulf between American freedom and communistic dictatorship. They do not straddle. They stand foursquare on the side of individual liberty and the rights of freemen. You are on the other side.

The Russian people can have the form of government they want. We are not trying to force our system on them. I will fight with all my power any effort to foist their system on this country whether it comes from you or anybody else.

I have had over 40 years of service in the armed forces of my country. I love its uniform and its flag. I respect that uniform even when worn by a Communist, but I have no respect for the philosophy you have accepted.

Some of you, I believe, were willing to fight under my country's flag solely because Russia was fighting the same enemy.

As late as June 21, 1941, your party and its members in this country were denouncing Americans who opposed the Nazis as imperialistic and war mongers. At that late date you Communists could find nothing wrong with Adolf Hitler or the things he stood for. I remember well your slogan, "The Yanks are not coming."

The next day, June 22, 1941, the Nazis invaded Soviet Russia. On that day, and not until that day, was your party's hate for the unspeakable Nazi regime born. On that day, and not until that day, did you suddenly decide that fighting the Nazis was a holy cause and the highest form of democracy. Your slogan of the day before was dead.

That is one reason why I don't respect you.

I have some sympathy for those of you who have been misled while in the service or since. It is not too late for you to wake up.

It is inconceivable to me how you can follow the teachings of a nation whose basic

principles are violently opposed to everything America's uniform symbolizes.

You men stand here, veterans of the American armed services, but preaching alien communism. You are secure in your right to preach it and to criticize our country only because of this Nation's Constitution.

That is Americanism in action.

Is there any doubt what would happen if men like you convened in Moscow, in Russian uniform, to criticize the Soviet Government? Suppose for an instant you were able to get inside the walls of the Kremlin and to stand before the men who make Russia's laws. Suppose you were to tell them that you don't like the Soviet Union—to attack its leaders—and to say that America's form of government was better than Russia's.

You know what would happen.

The lucky ones among you would be those who faced a firing squad and died quickly. The others of you would go in chains to the slave camps, to toil and starve till you died the slow, hard way.

That is Soviet communism in action.

Yet, you have the colossal effrontery to tell the American Congress how you want things run.

There is a place for those of you who prefer to live under communism. I suggest that you go there and stay there.

If I can help to speed your departure, call on me.

I understand you are returning to your convention this afternoon to carry back my views. To assist you, I have made copies of my stand which you can present to your convention.

The Chicago Subway

EXTENSION OF REMARKS
OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. LUCAS. Mr. President, a few days ago Maj. Gen. Philip B. Fleming, Administrator of the Federal Works Agency, delivered an address before the Chicago Association of Commerce and Industry, during the course of which he directed certain remarks to Mayor Kennelly, of Chicago, concerning a transaction in connection with FWA assistance in the construction of the Chicago subway. The address was delivered at the annual meeting of the association, held on January 21. I ask unanimous consent to incorporate General Fleming's thought-provoking address in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mayor Kennelly, members, and guests of the Chicago Association of Commerce and Industry:

I have some business to transact here today, very pleasant and important business, with Mayor Kennelly, and it seems to me very fitting indeed that our transaction should take place on this occasion before this audience.

Annual meetings are always a good time to take stock, to look back and see what the years have brought, to look forward and try to see some of the things that lie ahead.

This association brings to bear on today's problems a long perspective—44 years, I believe. That is about the length of time that Chicago and its citizens have been subway conscious. The subway has been a familiar concept for four decades, but during much of that time it appeared unattainable.

Forty years take us back to the time of Daniel H. Burnham, the Chicago plan, and Burnham's oft-repeated injunction to those who help to mold a city's destiny:

"Make no little plans," Burnham said, "they have no magic to stir men's blood and probably will not be realized. Make big plans; aim high in hope and work. * * * Remember that our sons and grandsons are going to do things that would stagger us. * * *"

He was right on both counts, and I think the city of Chicago has provided a dynamic demonstration. Didn't Burnham call it "the unchanging genius of this place"?

That spirit was strong 11 years ago when Mayor Edward J. Kelly came forward with the fundamentals for a practical solution of Chicago's transportation problems. I am not going to detail the various steps between that proposal and October 25, 1938, which is the date of the subway grant agreement with the Public Works Administration for construction of Chicago's initial system of subways.

The major terms of that agreement are worth reviewing here today for several reasons, not all of them financial by any means. As you will recall, the Grant agreement dealt with many aspects of transportation, it was scrutinized closely by many civic groups as well as officials. And the very fact of its acceptance proved again that Chicago had lost none of her vision or determination. On the contrary.

Consider these major requirements and the responsibilities which they imposed:

1. The subway was to be built in accordance with engineering plans agreed upon by the Federal Government and the city.

2. The city agreed to do its utmost to bring about unification of its transit system and in so doing to create a new corporation which would forward this development satisfactorily.

3. The city agreed that the work was to be carried out under the supervision of both the city's and the Government's engineers.

4. The city agreed to prepare a comprehensive plan for the extension of the initial system of subways and further agreed that as soon as means were available it would first provide for the extension of both terminals of the Dearborn Street subway westward to Halstead Street and the removal or demolition of the elevated railway structure in Lake Street and Wabash Avenue in the Loop.

5. The construction of the Congress Street superhighway.

I do not propose to enlarge on the intricate and difficult problems which were implicit in such a far-reaching agreement. But I would like to discuss just one of the important matters covered by the agreement. On October 1, 1947, the Chicago Transit Authority, created through the cooperation of State and city representatives, acquired title to the properties of the surface and elevated lines. Thus, after many years of endeavor, the city finally achieved the unification of its local transportation facilities and, incidentally, fulfilled one of the major requirements of the Grant agreement. The State, the city, the Federal court, and the many others who have worked for unification deserve commendation for this accomplishment. We in the Federal Works Agency appreciate the privilege of having played a role in this worthy undertaking. With unification, other objectives of the Grant agreement will be fulfilled. The termination of the long-continued receivership and bankruptcy proceedings of the local transportation companies, the extension of universal transfer privileges to the users of the local transportation facilities, and the coordination, improvement, and modernization of the local transportation facilities can reasonably be expected through unification.

The State Street subway has been in operation since 1943, and I understand that the Dearborn Street subway should be completed in 1949. The comprehensive plan for the extension of the subways has been prepared and approved.

The fact that you have met those problems and the way in which you met them offers further proof of this great city's civic resourcefulness and determination. For I think we all know how much skill, patience, and cooperation were needed.

In other words, Chicago has carried out both the letter and the spirit of its agreement. That is, of course, the formal basis of my transaction with Mayor Kennelly. But I am going to tax his patience and yours a little further, for I do not believe that the money involved is the most important part of our transaction—not even when the sum is nearly $5,300,000 and the estimated total cost of this initial subway project comes to more than $64,000,000.

Behind the financial assistance which the PWA and the FWA have extended lies a long record of cooperation that has never been excelled to my knowledge, and I have seen many fine examples of teamwork between Federal, State, and local officials.

It is no exaggeration to say that such teamwork made possible and practical the subway program which is now going forward. Just what do I mean by that fulsome statement? Let me be quite specific.

Not so many years ago most engineers felt that subways were not practical for Chicago because of the character of the subsoil. But about the same time—back in the early thirties—Chicago had launched a great sanitation project. This undertaking called for construction of the two largest sewage treatment plants in the world, in addition to miles of sewers much the same in size and character as the tunnels which would house a subway.

The sanitary district requested and received a loan and a grant from PWA for the construction of such facilities. It is interesting to note that this occurred in 1933 at a time when the sanitary district was unable to obtain funds through private sources. Its bonds were selling on the open market much below par. The Goverment purchased the district's bonds at par upon a 4 percent interest basis and later was able to dispose of such bonds at a profit. Here then is an excellent example of appropriate relationship between the Federal Government and local and State governments.

In carrying out this project the sanitary district's engineering organizations worked closely with Government engineers under the able direction of PWA's project engineer, Joshua D'Esposito. The knowledge and know-how which they gained and shared were indispensable to the construction of a subway system. Without this know-how and the friendly, cooperative working relationships that were then established, the completion of the subway system undoubtedly would have been more difficult.

Yes, that earlier experience in teamwork made a great contribution to our engineering knowledge.

I would like to take another leaf from Daniel H. Burnham's book and discuss the human side of these plans and projects. Burnham saw in his dreams the finest commercial city in the world standing here on the shores of Lake Michigan—and that meant the finest city in which to work and live.

Today the lives and welfare of your citizens, no less than the growth and progress of your commerce and industry, are dependent on the adequacy of the transportation that is available. To a very large degree that means motor transport.

Let me digress a moment here. Some of you may well ask, "How does the Federal Works Agency fit in this picture?" Well, in the first place, when the Federal Works Agency was established it was assigned the task of gradually terminating PWA. Secondly, the function of the Federal Works Agency is to act as the main civilian construction arm of the Federal Government and to work with States and cities in the solution of common problems. That is, our operations are in the field, not in Washington. Our activities are concerned with highways, with public buildings, and with community facilities of all descriptions. We are not exclusively concerned with any one type of construction; rather we are concerned with the integrated growth of local communities, including many phases of urban development, if I may use that term. We act as a part of a team, and I say it with pride, as part of a team of top construction people representing the Federal Government, States, and localities interested in a cooperative solution of local problems. I think I can repeat that this very occasion testifies to an excellent example, not of bureaucracy from Washington, but of a cooperative effort on the part of many governmental jurisdictions. As I am sure you know, the Government contributes to both the Congress Street Superhighway and the Northwest Superhighway. The city is now buying rights-of-way on Congress Street. I believe the Federal Government's help on these two highways will come to about $20,000,000, as currently appropriated.

You know, too, that this money is channelled through the Public Roads Administration of the FWA. But once more I want to say that these financial transactions do not begin to measure the real contribution which we are making. Nor do they indicate the fine cooperation that is taking place between the Federal Works Agency and highway officials of Chicago, Cook County, and the State of Illinois.

At this point I want to mention another component of the Federal Works Agency—the Bureau of Community Facilities. BCF should be well known to some of you, at least, as a result of its advance planning program and because it administered war community facilities and services under the Lanham Act. BCF has advanced interest-free funds to cities, counties, and States to prepare plans and specifications for needed and useful public works—water supply and sewers, schools, highways, and the like. Some 400 of these advance planning projects were approved for counties and municipalities in the State of Illinois, for which nearly $3,350,000 of Federal funds was made available—to plan projects with a total estimated cost of about $236,000,000.

No more funds are currently available for additional planning, but bills which would restore this opportunity are pending in Congress.

The Public Buildings Administration is the third member of the Federal Works team and the largest manager of Federal property in urban areas. Federal offices and court buildings as well as the post offices are constructed and maintained by PBA in the localities and much else in addition. PBA is associated with many cities on their civic center plans. They are now actively engaged in cooperating with the Chicago Planning Commission in connection with the planning and location of future Federal buildings.

From this thumb-nail sketch of the Federal Works Agency, it should be clear that we have more than mere money to offer urban communities. As we are a construction agency, we like to look on ourselves as giving out construction services.

In this connection I want to underline one very important role which I think we are especially well fitted for—that is in working with cities to formulate plans and programs for urban redevelpoment. In the past, the Public Roads Administration has worked closely with the highway commissions of State governments and their staffs. PRA helped the States build their modern highway systems. Recently Congress has authorized an extension of this function to include urban highways and at present, again in partnership with the State governments, a new chapter is being written. It could well be called City-State-Federal teamwork on highway building.

It goes without saying that express highways, like the West Side and Northwest superhighway, are of the utmost importance in urban redevelopment. They will act as boundary insulators and traffic expediters serving many urban redevelopment areas of the future. Meanwhile they will provide probably substantial relief from the traffic problems which exist in this and every other city. More than any other single element, highways are the backbone of an urban community and the underlying basic consideration in the over-all city or metropolitan plan.

That is why not only highway planners but housing planners, urban redevelopers, and city planners must more and more join hands. Their technical and administrative resources combined offer more than the sum of their separate parts. Surely, since urban redevelopment is a team proposition, local, State, and Federal officials and private groups are going to be associated as never before.

As these programs are advanced, the Federal Works Agency stands ready to help. We have a considerable reservoir of knowledge and experience for you to draw upon. The importance of this cooperation has been well stated in the Second Annual Report of the Council of Economic Advisors to the President last month. I quote:

"The application of some Government resources at all levels to the preparatory stages of urban redevelopment would have an extraordinary leverage effect upon opportunities for the private employment of men, money, and materials. Just as the hard surface road accelerated the automobile industry, and the automobile industry in turn touched so many points in our growth after the First World War, so an appropriate exercise of public initiative in urban redevelopment could serve to touch off varied economic developments of almost incalculable proportions."

Mayor Kennelly, I might say that I don't often have this pleasant a task to perform, and I do want to assure you that there is enough more where this came from to cover the balance of our commitment to the city.

In the meantime, let this advance payment carry with it my heartiest congratulations on a great undertaking, well conceived and ably executed.

Editorial Tribute to the Late Josephus Daniels From the New York Times

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the RECORD a tribute to the late Josephus Daniels, which appeared in the New York Times on January 16, 1948. Mr. Daniels was always opposed to imperialism in any form. He preached against it in the columns of his paper, and as Ambassador to Mexico he tried to undo, in his short tenure, the damage which had been done in the hundred years preceding. He was a truly great American.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOSEPHUS DANIELS

Americans whose adult memories go back to the First World War will find it hard to believe that Josephus Daniels was in his eighty-sixth year when death came to him yesterday. Their picture of him was formed when he was President Wilson's Secretary of the Navy, and this picture stuck—a shrewd, kindly man with smiling wrinkles about the eyes, wearing a wrinkled suit, a flowing bow tie, and a slouch hat; a man out of an older and more rural America who was entirely at home in this new America. His critics poked fun at him and some denounced him because he took beer and wine out of the fighting ships, because he changed "port" and "starboard" to "left" and "right," and because he was concerned about the common sailor. But when war came, in 1917, the Daniels Navy was found to be in grand fighting trim. He was similarly assailed in 1933, when President Roosevelt sent him as Ambassador to Mexico, but he made warm friends down there and was a principal architect of the existing firm structure of good over-the-border relations.

He called himself a sort of "managing editor of the Navy," and was at heart a newspaper man all his working life. He first smelled ink when he was twelve, and by getting up early, working late, and publishing the truth as he saw it, he made the Raleigh News and Observer not only a power but a property. Like his friend the late William Jennings Bryan, he was a prohibitionist. His deep religious faith gave him serenity.

His life spanned part of a civil war and two great world conflicts. It linked the present with the best qualities of the past. He was a distinguished statesman and a notable editor, but above all he was a homespun, lovable, profoundly sincere American, of a type we greatly need today and can't always seem to find.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the St. Lawrence seaway, appearing in today's New York Times. I ask that it be printed in the RECORD for the reason that, in my opinion, it is a very fair editorial and expresses extremely well some of the feelings I have on this difficult subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ST. LAWRENCE SEAWAY

The Senate has now embarked upon debate of a subject which has engendered more controversial heat, display of sectional self-interest, and contradictory supporting evidence than almost any other congressional issue that can be recalled. President Truman, as did his predecessor, has appealed for support of the St. Lawrence seaway and power project on the grounds that it will "strengthen and expand our industry, our agriculture, our domestic commerce, and our

foreign trade." He also argues for it on the basis that it will develop the largest potential hydroelectric power site in the Nation. He contends that the project is vitally essential to national defense.

A vigorous attempt was made in 1941 to undertake the seaway and hydroelectric program as a war measure. We opposed it editorially at that time, when it was advocated by the late President Roosevelt as an urgent defense measure, on the ground that it could not be finished in time to be useful in the war, and that it would mean diversion of sorely needed manpower and materials. We believe time has proved the correctness of this position.

Today, we believe, this important matter should be decided on the basis of the broadest national considerations. It should not be decided, for instance, on the grounds of what is good or bad for New York City. Nor can the argument be properly grounded on the interests alone of certain of the Great Lakes ports. Mayor O'Dwyer, whose office naturally requires that he devote his concentrated attention to advocating what will preserve and enhance the welfare of his own city, is making an active fight against the seaway. He fears that it will wreck New York's position as a port, and would endanger the prospects of financing the great harbor improvements we hope to begin here soon. The mayor will be pardoned for seeing the seaway with one eye only. But Congress cannot and should not be swayed by sectional considerations. It must look to the larger future and the greatest good of the greatest number.

It is necessary to distinguish, within the maze of controversy, the important fact that these are really two projects, and not one. The seaway, which would provide passage through locks to Great Lakes ports of ocean-going vessels for about 7 months of the year, is one of these. The power project is the other, and it should be divorced completely from the seaway in deciding the issue whether either is to be built. Whatever view is accepted as to advisability of the power development, it can proceed on the St. Lawrence without the seaway, and should be decided on its merits alone.

While the seaway is an idea that has long gripped the imagination, it must be noted that there are reputable people of proved good judgment who are opposed to it, and that they back their opinion with plausible arguments. The Port of New York Authority has pointed to the questionable figures on construction cost, toll revenues, traffic, economies to shipping, and the absence of consideration given to the costly necessity for deepening and improving Lakes ports and channels for deep-draft vessels. Some high Army and Navy officers have noted the weaknesses of arguments that the seaway is "vital" to our defense. It can, indeed, be logically argued with some force that the seaway would be a net addition to our defense problems. The Senate committee minority report makes some very impressive points in this respect.

There is, finally, the question—in the face of large and necessary outlays to assist recovery abroad, our huge war-inherited national debt, and the urgent desirability of certain other costly improvements—whether the seaway and power projects warrant priority. As the Senate minority report said, "The basic problem resolves itself down to this: It is not simply a question of whether a project is useful. It is, in the last analysis, a question whether it is more useful than some other project." One of these other projects is the building of a sea-level Panama Canal, or contriving some other means of making that essential sea passage less vulnerable. President Truman himself has stated this need, and it means an expenditure of perhaps two and a half billion dollars. Can we undertake a St. Lawrence and a Panama program simultaneously? Which comes first? There is also the demand of Missouri Basin States that the Federal Government spend nearly two and a half billion dollars in flood control, soil conservation, a navigation and electric power development in their area.

To state the arguments against and the questions involved in the St. Lawrence developments, and the alternative demands of our Federal resources, is not necessarily to endorse those arguments. But certainly they are substantial enough to compel both friends and foes of the St. Lawrence improvement to put the highest national interests in control of their vote, forgetting political and selfish sectional advantages.

The Old Master

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. BYRD. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the Daily Advance, Lynchburg, Va., of January 16, 1948, making reference to the speech in Lynchburg, Va., made by former Postmaster General James A. Farley.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE OLD MASTER

In addressing the annual meeting of the Lynchburg Chamber of Commerce James A. Farley, former Postmaster General and chairman of the Democratic National Committee, exhibited succinctly and suavely, with keen intelligence and wit, the qualities that brought him to his former prestige in the Democratic Party, in political circles generally, in the Government, and to the continuing high place he holds with all who know him and know very much about him.

Because of his friendship with the late Senator Carter Glass, and what he said of him in his address, Mr. Farley spoke to a Lynchburg audience, and by radio to a State audience, as if he were a citizen of Lynchburg and many of his listeners must have felt this and warmly accepted him.

In his support of the Marshall plan, fully recognizing the place and responsibility of the United States in the world, and in his remarks in general upon the vital matters affecting the present and future of this country, Mr. Farley spoke with a statesman's grasp of affairs and point of view. Especially in his plea for nonpartisanship in foreign policy did he exhibit those qualities that made one of the most astute politicians of his time rise at need above politics to hold the respect of the opposition and proclaim himself first an American of exceptional loyalty and devotion to the national welfare.

In his references to Mr. Wallace and his third party, Mr. Farley showed how, without malice, the most penetrating and devastating comment can be made.

The Farley address established a high level for the annual chamber of commerce programs, and obtaining him for this meeting is something meriting the thanks of this community. "Big Jim," the old master of Democratic politics, distinguished American, has further established himself as an honorary citizen of this community.

More Post Offices, More Money for Postmen

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the Home News, Bronx and Manhattan, New York City, entitled "We Want More Post Offices; Postmen Need More Money," appearing under date of January 27.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR A BETTER BRONX—WE WANT MORE POST OFFICES; POSTMEN NEED MORE MONEY

For a better Bronx would belie its own name were it to minimize the borough's need for the 15 post-office projects Postmaster Goldman hopes to wring from a slash-the-budget GOP Congress.

These would be a boon to populous neighborhoods now underserved. The Parkchester and Jerome Avenue-Fordham Road areas, slated for new branches, are prime examples.

For thousands of Bronxites, the Goldman scheme holds promise of stations nearer their homes, shorter waits, and expedited mail pick-ups and deliveries.

But greater is the need and more urgent the want of underpaid clerks and carriers on whose loyal labors the efficiency of present or augmented facilities must mainly depend.

For them, a substantial salary rise is not a mere matter of convenience. It is a matter of feeding the children, as postal spokesmen declared at Senate hearings on the Chavez-Langer bill for a $1,000 yearly boost.

President Truman is keeping in abeyance the question of pay increases for Federal personnel. He would rather have effective anti-inflation laws.

But the plight of post-office workers is exceptional. Their basic scale, starting at $2,100, reaches a puny $3,100 top after 10 years. From 1925 to 1945, they had no raise. Since then, there have been two belated $400 boosts, but 2 years of worst inflation have elapsed since the second.

All uptown Congressmen back the Chavez-Langer measure. We commend them. We are glad to see conservative Bronx Republican Representative POTTS standing with Democratic colleagues for the $1,000 raise, instead of for an $800 proposal.

GOP axmen who aim to chop billions off the Truman budget, will be extra allergic to a pay-lift outlay not even in the budget listing. They may frown upon both the $1,000 and $800 plans.

We'll expect Potts and Washington Heights liberal Republican Representative JAVITS to help set them right. The postal army marches on its stomach. Its stomach mustn't be empty. Its faithful "couriers" are deterred by "neither snow nor rain," but this doesn't mean it can be left out in the cold.

The Bronx could sooner forgive Congress for withholding new post offices than for neglecting post office workers.

SQUEEZE ON SURFACE

The Home News supports Bronx Councilmen's demands for investigation of Surface Transportation Corp. inadequacies both under normal conditions and in snow. Perhaps no bus service in New York draws as much complaint.

Talk of canceling the 50-year borough-wide franchise granted in 1940 to the parent

Third Avenue Transit System is premature, we admit. It may also be reckless, unless Third Avenue Transit's Bronx operations are ascertainably a financial good thing which the company would hate to lose, and unless some other big outfit could and would undertake to replace Surface at the same 5-cent fare. In Queens and Staten Island, the city of New York itself had to take over from franchised firms.

Orchard Beach service was terrible in the summer of 1946. The Bronx protested, the Public Service Commission intervened, and the summer of 1947 saw a healthy change. For years, Surface refused free transfer to the Fordham-City Island route from the Castle Hill Avenue and Boston Road lines. But it gave in when the city threatened to oust it from the lucrative Highbridge route.

Our Pacific Possessions

EXTENSION OF REMARKS
OF
HON. GUY CORDON
OF OREGON
IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. CORDON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Pacific Possessions" from the New York Times of Sunday, January 4, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR PACIFIC POSSESSIONS

Among the measures Congress will have to deal with in its new session is a concurrent resolution for establishment of a Joint Committee of Senate and House to undertake a thorough study of the trusteed islands of the Pacific and make recommendations for their governance. We believe that this resolution should be acted upon favorably and promptly. The sooner the committee is appointed and sets to work the better. The question of the former mandates and of our other Pacific islands is one that calls for quick and intelligent solution.

The three former groups of islands that Japan held under mandate from the League of Nations—the Carolines, Marianas, and Marshalls—and which the United Nations turned over to the United States, are now governed by the Navy Department, as are Guam and Samoa. The latter have been governed by the Navy, as was to be expected and as was inevitable, and the trusteed islands also are being governed first from the viewpoint of national security, with the welfare of the island peoples secondary. That is an unnecessary and unsatisfactory arrangement.

The time is propitious for a revaluation of our attitude toward our "colonials" and for the formulation of policies that will make the United States a leader in wise and humane treatment of dependent peoples, instead of one of the laggards in this field, as we now are. With the Pacific islands no longer holding the strategic position that they did when Japan was a big and aggressive power, our military leaders are understood to be willing to relinquish the responsibility to some civilian authority. Organic acts have been drawn, with Navy Department collaboration, for the transfer of Guam and Samoa to such an agency, and a similar act for administration of the trusteed islands has been drawn by the State Department. This is piecemeal solution, however, of a problem that is integrated and should be considered as a whole. The joint committee proposed by Senator CORDON, of Oregon, would be authorized to take this broader view.

As Senator CORDON said, in proposing his resolution for establishment of the joint committee, Congress has done little thinking in the past about the offshore possessions of the United States. There has been a awakened interest, especially in the Pacific, the last 2 years. Such House leaders as Representatives CRAWFORD, POULSON, and GRANT have set their colleagues to studying maps and histories of that great ocean. Several Representatives saw Army or Navy service in that theater. The drives for statehood for Hawaii and Alaska have stimulated further interest. Senator VANDENBERG has put United States adherence to the South Pacific Commission on the "must" list of legislation for the coming session. A study by a joint committee next year should encourage Congress to do some intelligent planning of its own.

The President's Budget

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. LUCAS. Mr. President, in yesterday's Star there is a very important editorial under the caption of "Not 'phony'." It deals with a statement recently made by the distinguished Senator from New Hampshire [Mr. BRIDGES] with respect to the President's "phony" budget. I hope that all Senators will read this editorial, especially the Senator from New Hampshire. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

I also ask unanimous consent to incorporate in the RECORD another editorial upon the same subject, found in the Washington Post of this date. It should be enlightening to my good friend the Senator from New Hampshire.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star]

NOT PHONY

Senator BRIDGES is on highly vulnerable ground in accusing the President of having submitted phony budgetary figures on the European recovery program.

The accusation is based on the fact that the President, in his budget message to Congress, has asked for an appropriation of $6,800,000,000 for the first 15 months of the ERP, but has estimated that the program's actual expenditures will amount to only $4,500,000,000 through June 30, 1949. Mr. BRIDGES is making a great to-do over this. He sees something slick and underhanded in it, and he suggests that he is going to do his best to cut the appropriation down to the estimated expenditures.

In taking this position, however, Mr. BRIDGES is either playing politics or betraying a degree of budgetary confusion that does not become him as chairman of the Senate Appropriations Committee. To begin with, far from resorting to anything underhanded, the President has made a special point of explaining in his budget message why the requested appropriation is larger than the expenditures estimate. The explanation is simply this: (1) Under the ERP, the Government will have to place orders for goods far in advance of delivery; (2) payments for the goods will lag months behind the deliveries; (3) but though the actual expenditures in the fiscal year thus will be less than the appropriation, the appropriation must be had before the Government can place the orders.

In other words, although ERP expenditures in fiscal 1949 may be $2,300,000,000 less than the $6,800,000,000 appropriation sought by the President, that does not mean that the appropriation should be cut. If $6,800,000,000 is really needed for the first 15 months of European recovery, then that sum should be appropriated, though spokesmen for the Harriman committee apparently believe that this total forward obligating authority could be perhaps $1,000,000,000 less. In any case, with an adequate extra margin, the Government would be legally incapable of incurring the obligations it will assume in placing orders for the project—orders for things like machinery which may take several months to build and deliver and for which payment may not be made until late in fiscal 1950. To do as Mr. BRIDGES suggests, to appropriate no more than the estimate of actual expenditures through June 30, 1949, would be to undermine the ERP by placing it on a too-little-too-late basis. More than that, such a course would run counter to a sound, time-tried budgetary practice applied repeatedly in the past to large-scale procurement programs involving foreign shipments, such as Army operations, lend-lease, and UNRRA.

The President's budgetary set-up for European recovery thus is not only not phony; it is not even novel. Mr. BRIDGES may be able to make a loud political noise by arguing otherwise, but, like a drum, the issue he has raised seems altogether empty.

[From the Washington Post of January 30, 1948]

PHONY ECONOMY

Senator BRIDGES' charge that the President had sent a phony budget on the European recovery program to Congress is utterly unfounded. It may indicate nothing worse than that the Senator had failed to read the President's explanation of the discrepancy between the $6,800,000,000 appropriation requested for the first 15 months of ERP and the $4,500,000,000 budget cost of the program for the same period. The explanation is simple: the gap between requested appropriations and estimated expenditures would permit the recovery administration to ship and to place an additional $2,300,000,000 of orders during the fiscal year 1948–49 for which payment would not be made until the following fiscal year. That would enable officials in charge of the program to arrange, as the President explains, for more economical and systematic placement of orders.

The actual cost of the ERP would not be affected in any way by cutting down the amount of the initial appropriation, unless one assumes that the larger appropriation would be an encouragement to wasteful commitments. As a matter of fact, the danger that Marshall plan funds might be wasted would be decidedly increased if the ERP were hampered in carrying out its program by congressional restrictions on spending. Such a policy would impair the chances of success of the Marshall plan and be phony economy.

Nevertheless, it might be shrewd politics to reduce the size of the initial $6,800,000,000 appropriation (provided, of course, the sum voted was adequate to cover actual outlays during the 15-month period) as a concession to congressional reluctance to vote at this time for the spending of so large a sum. But the ERP not only has to have sufficient funds to pay its bills when they fall due, it must also be in a position to make deliveries of goods for which payment will not be required during the 15-month period.

Most of the $2,300,000,000 difference between estimated actual outlays and the $6,800,000,000 requested by the President will, in fact, be needed to meet payments on goods shipped during the 15-month period, but not paid for until the following fiscal year. Consequently, although it is not necessary for Congress to appropriate immediately the full sum requested for ERP, it is necessary for Congress to authorize the spending of most, if not all, the additional $2,300,000,000 requested. Otherwise the ERP would be severely hampered in carrying out its program because of inability to enter into contracts calling for future payment.

Under the circumstances, the $6,800,000,000 figure that Secretary Marshall regards as an irreducible minimum with which to start the program cannot be substantially reduced without jeopardy to the entire program. The most that can be done is to cut the initial appropriation to the amount required to cover actual outlays for the first 15 months. That would leave it up to Congress to review the program later on and vote the additional appropriations required to cover authorized obligations incurred in excess of the initial appropriation, as well as funds for the continuance of the program.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "St. Lawrence Ascension," published in the Boston Herald of January 28, 1948. The editorial deals with the St. Lawrence seaway.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE ASCENSION

The St. Lawrence seaway and power perennial sticks its head out again, this time from Senate soil with the sunshine of a Truman instead of a Roosevelt political blessing. Its appearance has the customary and timeworn generalities of great engineering enterprise and rich natural resources and benefit to the whole United States that have met their match in specific objections from shipping and railroads and labor unions and commerce groups over the Nation as well as in directly affected New England.

Our own area remembers too acutely the vision and eventual nightmare that was Quoddy to take much stock in another walking dream aimed to harness not merely the tides but to bring a Middle West doorstep to the Atlantic Ocean. The waterway would be no year-round "sunny pleasure dome," but have the 5 months' obstacle of "caves of ice." This St. Lawrence balloon has been up again and again. The current Truman enthusiasm is nothing but a New Deal Sir Echo in backing the political instead of the practical.

Over its battered years, the St. Lawrence project has been successively a navigation imperative, a power blessing, a defense thanwhich, an unemployment (that didn't take place) panacea. Now, apparently, it is a chance to spend maybe a billion dollars for a part-time service on a theoretical self-liquidating basis, without benefit of precedent in tolls of engineering traffic survey. Somehow the raw mixture does not mellow with age.

Specifically, the waterway's proposed 24-foot draft does not accommodate ocean-going vessels. Ocean ships, too, are not designed in hull, engine, or steering gear for operation in swift current, narrow channels at low speeds. Picture, as an extreme, of course, the *Queen Mary* trying to negotiate the Cape Cod Canal. The railroads, with lines to established coast ports, would lose some of their pay load freight, and then have the physical burden tossed back in the tough going of winter months.

Canals now exist along the proposed system. Their improvement for practical purpose would be a matter of millions, not billions. And from the defense angle, the Great Lakes area—probably the sole beneficiary from the project—once proposed as a haven for wartime shipping, is now more susceptible to attack by air than the seaboard areas, west or east. One bomb on the dams of the project and the Great Lakes-ocean link would fall apart.

The St. Lawrence proposal, in its persistence, assumes the guise of a policy of attrition. In the endurance test, only flood control and soil erosion pleas have been missing in the cycle of arguments that the public power proponents customarily run. Rather than the interests blocking forward progress of a Nation's welfare, a small segment of the Nation seems determined that subsidized navigation and power shall be foisted on the taxpayers for the benefit of a few. We should do more than take air out of the balloon. It should be punctured for keeps.

Program of Baltimore Youth Advisory Board

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. O'CONOR. Mr. President, there has been wide general interest displayed, and, I am confident, much helpful awareness of youthful problems aroused among the younger people of our State, by the program initiated by the Baltimore Youth Advisory Board in paying public tribute to an outstanding boy and girl each month.

Announcement has just been made that the awards currently are being presented to William J. Riggin, 15, son of Harry R. Riggin, and Alverta Jones, 18, daughter of John E. Jones, a post-office employee, both of whom have been cited for outstanding excellence in accomplishments and deportment.

An account of the awards was published in the Baltimore Sun of Sunday, and I ask unanimous consent to have it inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AWARD HONORS HELPFULNESS—BOY AND GIRL OF MONTH HAVE AIDED YOUNGER CHILDREN

Selected for their services to others, a south Baltimore boy who hopes his home workshop will lead to a career in cabinet making and a northwest Baltimore Negro girl who plans to be a social-service worker are the boy and girl of the month for December.

The selection of William J. Riggin, 15, of 125 East Cross Street, and Alverta Jones, 18, of 1116 Whitelock Street, was announced yesterday by N. Ellsworth Bunce, adviser to the Baltimore Youth Advisory Board, sponsor of the monthly awards.

Will, as the boy is known at the Southern Police Boys' Club, where he is a self-appointed assistant to patrolman William Mitchell, shop instructor, is a serious youth, shy and quiet.

HELPS SMALLER BOYS IN SHOP

He spends most of his spare time helping the smaller boys in the club's shop, or making tables, chairs, and wooden toys in his own shop at home.

He was nominated as a superior representative of nearly 3,000 members of the city's four police boys' clubs, whose toy-making during the fall months brought a happy Christmas to several hundred worthy but poor children, who would otherwise have been without toys at Christmas.

He was recommended to the three judges—Thomas J. S. Waxter, director of the department of public welfare; Wallace Reidt, of the Criminal justice commission; and Mr. Bruce—by Patrolman William Armstrong, director of the Southern Boys' Club, and his principal, John N. Schwatka, of Southern Junior-Senior High School.

TO ENTER MORGAN COLLEGE

The girl of the month, who has been active in her Y. W. C. A. Teen Club, which recommended her, begins her studies for a social-service career early next month at Morgan College. By special arrangement, Alverta will enter Morgan a few days before her graduation from Douglass High School.

At Douglass, where she is a better-than-average student, Alverta has played the 'cello in the Dunbar-Douglass interschool orchestra for the last 3 years.

For her age, she has already had a broad social-service experience.

HELPER IN KINDERGARTEN

Besides her Y-Teen Club work, she has served as a helper in a kindergarten conducted by the Society of Friends, and as instructor in the Bible school of the Union Baptist Church, Druid Hill Avenue and Dolphin Street.

She was a delegate to the Y. W. and Y. M. C. A. high-school conference at Morristown, N. J., in 1946, and won a scholarship offered by the Society of Friends to attend the Institute of International Relations high-school conference at Northeast, Md., last August.

"I like working with others, especially with the younger children," Alverta says. She hopes to get her master's degree in sociology when she finishes at Morgan College, and to qualify as a Y secretary.

FATHER IS POST OFFICE CLERK

Her father, John E. Jones, is a clerk in the parcel-post department of the post office here.

The toys Will took a lead in making for the needy and crippled children included wooden "Black Marias"—police patrol wagons—pull toys, fire engines and trucks for boys, and small jewel boxes of highly polished cherry wood for girls.

During the summer, Will plays second base for the Baltimore Tigers' sand lot baseball team, and helps his father, Harry R. Riggin, with general painting and repair work. He attends Lee Street Baptist Church.

WELL EQUIPPED HOME WORKSHOP

He has equipped his home workshop with a table saw, a jigsaw, a sander, and hand tools.

Will's grades at Southern Junior High School are all above average, but his best record is in his specialty, the manual-training course.

Begun last spring, the Youth Advisory Board awards are made to draw public attention to "youth excellency" as opposed to juvenile delinquency.

Winners of the monthly awards become candidates for the titles Boy and Girl of the Year and for trophies donated by the Sunpapers. Selection of the annual awards will be announced at the Youth Advisory Board's annual city-wide student convention in April.

Continuation of Rent Control

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made today before a subcommittee of the Senate Committee on Banking and Currency, considering Senate bill 1741, to continue rent control.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

First of all, I want to express to the chairman of this subcommittee, Senator CAIN, of Washington, my appreciation for the pledge he has made to be disinterested and objective in his approach to the subject of continuing rent control despite his expressed general opposition to the theory and practice of rent control.

I am sure previous witnesses have already convinced the entire subcommittee that the housing situation in the United States is still desperate and that rent control must be continued. Nearly all of the members of the subcommittee, as I recall, have already gone on record in appreciation of the need for an extension, and so I know it is unnecessary for me to duplicate this ground by calling up a battery of statistics to prove what we all see every day in our contacts with our citizens.

Of course there is the opposition of some of the organized segments of the real estate industry to any further continuation of rent control—sentiment for the murder and burial next month of rent control—but I think this opposition can be considered largely pro forma and irresponsible. From the very start of rent control in 1942, this element contended without any let-up that rent control was unnecessary, even in war.

I am appearing before you today primarily in behalf of my own bill, S. 1741, which up to a few weeks ago was the only rent control extension bill pending before the Senate. Beginning this month, several new bills were introduced, all of which vary either in basic philosophy or in detail, or both, from my bill. I want to make clear to the subcommittee that although I would of course be pleased to see my bill made the vehicle for extending rent control, nevertheless, my main interest is, first, to see that rent control is extended, and second, to have rent control materially strengthened in line with the anti-inflation recommendation of President Truman, made in his message to the Special Session of Congress in November and reiterated by him in his State of the Union message earlier this month.

When I introduced my bill last July, shortly after the enactment of the Housing and Rent Act of 1947, which took effect July 1, and under which rent control is now administered, I did not have the benefit of experience under the Housing and Rent Act of 1947 because the act was so new. Thus, in attempting to amend and strengthen that act, as well as to provide for its extension beyond the coming February 29, I had to depend to a large extent, in drafting my bill, on my own estimate and on the estimates of various individuals whom I consulted as to how the Housing and Rent Act of 1947, which was then so new, would actually work in practice.

It has been a source of some surprise and of great satisfaction on my part that the bill I submitted at that time has stood up so well in relation to developments which have occurred since I introduced it.

There have been, however, some developments which could not very readily have been foreseen in July of 1947, but which today obviously cry for remedial action and, as a result, I will, as I go along, recommend some changes in my bill to bring it up to date and to meet new situations unforeseen as we began our experience under the so-called Wolcott Act.

These changes will, I believe, improve the bill, but will not materially change any of the fundamentally important aspects of it. As I said, experience under the Wolcott Act since July 1 has more than justified the basic approaches which my bill contained from the start.

The members of the subcommittee, I presume, are already familiar with the main points of my bill, and I will merely cite them now for the purpose of refreshing your memories.

First, and most important, I think, it would halt the present chaos in regard to evictions. This is the No. 1 necessity for adequate rent control. I will develop this matter later in my presentation, but right now I want to say that we cannot consider rent control effective in preventing widespread hardship and dislocation as long as tenants throughout the country can be thrown out of their accommodations almost over night.

The second important feature of my bill, in order of importance, is recontrol of new rental construction and of new conversions and of the so-called voluntary-lease accommodations and of nearly all other types of accommodations which were decontrolled under the Wolcott Act.

The third important change from the present act made under my bill is the restoration to the Housing Expediter of all of the enforcement powers including criminal sanctions and triple-damage civil actions, which that office held and used up until the time the Wolcott Act took effect last July 1.

A fourth important provision of the bill is the reestablishment of jurisdiction within the emergency court of appeals on all litigation involving rent control. As you know, the present act and, I think, most of the other bills to extend the act, leave jurisdiction in any State or Federal court, so that practically every State court in the Nation is suddenly put in charge of a complex type of litigation with which it has had no previous experience, whereas the emergency court of appeals, all through the war and up until last July 1, accumulated a massive historical experience on such matters.

THE VOLUNTARY LEASES

The matter which seems most to be bothering the members of the subcommittee according to press reports of interviews with you gentlemen, and of statements some of you have made so far in the hearings, is what to do with landlords and tenants involved in these voluntary leases in order to be fair to them now that rent control is about to be extended, in complete contradiction of the express statement on the part of Congress last year that rent control definitely would end on February 29, 1948.

As the Housing Expediter testified here the other day, there are only about three choices in solving this dilemma. One would be to raise everybody's rent 15 percent. That method would be designed to make up to the one million or more tenants who signed rent increase leases under the Wolcott Act the fact that, had they not signed such leases, they would not have been better off. They signed, in many cases, because they faced the threat that otherwise they would have no protection against rent increases come next March 1. I sympathized with the dilemma many of these one million or more tenants faced in deciding to sign such leases.

However, the great bulk of the tenants of America either refused to sign such leases or were not even extended the opportunity to do so because their landlords perhaps figured it was better to wait until rent control ended and there were no ceilings on rent rather than to tie themselves up all through 1948 on a set rental schedule. Those tenants who refused to sign such leases when they were proffered to them ran the risk of having their rents raised substantially more than 15 percent after March 1. The suggestion that these tenants now have their rents raised 15 percent or so would thus force them to do what they had declined voluntarily to do. Any formula to increase all rents by a flat percentage would be a discrimination against those landlords who had voluntarily agreed to give their tenants long leases at an increase less than 15 percent. They may have thought they were being very decent in asking the tenant to agree to less than 15 percent in such a lease, but if the suggestion now being made is written into the act raising all rents by 15 percent, these particular landlords would be justified in feeling that their decency had boomeranged against them.

There are better arguments than that, however, against raising all rents 15 percent. The most important single argument against it is that such a step would be a terrific blow to our hopes for curbing this galloping inflation and restoring a semblance of economic sanity in this country before we let inflation push us off the cliff onto the rocks of depression.

The second choice in meeting the problems arising out of these voluntary leases is to leave them in effect unchanged. This is the choice taken in my bill. This provision in my bill is based on the assumption that the tenants who signed these leases actually did receive something for their money—they received primarily a guarantee of security in their tenancy throughout 1948 which other tenants do not have and will not have even if rent control is continued and eviction controls restored. That is because these leases are iron-bound. The tenant cannot be evicted for any reason other than violation of the terms of the lease. Sale of the dwelling he occupies cannot lead to his eviction at any time during 1948 or however long the lease extends beyond next January 1. These tenants, I repeat, are therefore, safe in their tenancy and no tenant who has not signed such a voluntary lease has that same guaranteed security. Even if full eviction controls, such as proposed in my bill, are written into the law, it will still be possible for many tenants during 1948 to lose possession of their homes. Thus the tenants who did sign leases actually did get something for their money. For that reason, I do not think we must punish all of the other renters of America by raising their rents 15 percent in order to be fair to those who, for one reason or another, voluntarily entered into rent-increase leases during 1947. I was against the provision of the Wolcott Act which authorized the 15-percent increase leases, and I was against the flat statement written into the bill that rent control would end February 29, 1948, because I was sure rent control would not end and could not end so quickly, and that by writing into the law the provision it now contains, the Congress was merely scaring a lot of Americans into raising their own rent voluntarily.

The third choice in dealing with these leases would be to invalidate them—roll all rents back to what they were before those leases took effect. This step, I believe, would be unconstitutional, and I don't want an unconstitutional bill enacted. Equally important, it would be unfair to those landlords who negotiated leases in order to improve the property and obtained tenant consent to the leases on that basis. This is not to say that I do not have full sympathy for those who signed the leases I am referring to under various types of coercion and intimidation. I tried to help them last year when this whole difficulty could have been avoided. I repeat that although they may have been forced to sign such leases in order to achieve a sense of security in their accommodations, they do have that security, and so the money they are paying is not a total loss.

Those were the three choices which occurred to the Housing Expediter when he testified here recently on how the voluntary lease dilemma could be resolved in a rent extension bill. His suggested method, incidentally, was the same one which is contained in my bill—that is, allowing all such leases to continue until their termination date without raising everyone else's rent.

Now, gentlemen, the fact remains that Congress made a blunder—a bad blunder—in promising flatly last June that all rent control would end next March 1. The Senator from Delaware [Mr. BUCK], who was chairman of this subcommittee last year, told me in an exchange on the floor of the Senate last June that rent control would be extended if the need for it were proved this year, but he insisted the need would not exist and that insofar as he was concerned, the bill we passed last June would be the last rent control bill. A majority of other Members of the House and Senate took the same view.

They were wrong. They underestimated the need. They miscalculated. On the basis of a judgment which turned out to be faulty, of a calculation on their part which turned out to be over-optimistic and unrealistic, over a million tenants and their landlords proceeded on the theory that rent control would definitely end a few weeks from now, and those tenants and their landlords proceeded to negotiate iron-bound leases protecting the tenants against that eventuality, and, at the same time, granting the landlord an immediate rent increase. And now there is this feeling among some Members of Congress that extension of rent control now would, in some way, be unfair to this group of tenants and landlords.

Gentlemen, it might be unfair to most of the tenants so affected and to some of the landlords—landlords now collecting a higher rent than they might otherwise be getting—but the unfairness arising in this situation is due entirely to the miscalculations—the mistakes—of the Congress which voted last June for the individual provisions of the Wolcott Act, which caused this present difficulty. We should not force all the millions of tenants in America to suffer for that mistake.

We should, I believe, recognize the extreme and far-reaching effects of our actions in this body and should be conscious at all times of the responsibilities we have to the Nation and to the people of the Nation. That responsibility was forgotten, I am afraid, in the drafting and enactment of this phase of the Wolcott Act. If any Government agency or minor bureaucrat were to be guilty of an error in judgment of the magnitude of this one when it was made by the Congress last June, the screams emanating out of the Congress in the direction of that hapless soul would be piercing enough to hound the poor fellow to Timbuctoo, where he would be forced forevermore to hide in shame for his sins.

In all fairness, then, the Congress should admit its mistake and proceed expeditiously to remedy it. Because the whole philosophy of the Wolcott Act now in operation was that rent control was sure to expire this coming month, the act was in outline and in specific detail a rent-decontrol act.

The fallacy of decontrol so soon is now obvious. Rather than patch up a bad law as you might retread an old tire for a few more miles of duty when you are still on a long trip, we should go back and correct the fundamental weaknesses of this act and restore rent control, insofar as possible, to what it was prior to last July 1.

It is not possible to restore it completely to its old form in view of the irreparable damage already done through such provisions as widespread decontrol and the 15-percent leases. But we must get back as closely as possible to the previous act, which was designed to run as long as the need for it existed, whereas the Wolcott Act was expressly designed as nothing more than an 8-month stopgap.

Now, to be specific, in connection with the changes provided in my bill:

1. Eviction controls: The present act, for the first time, sets up definite standards governing evictions by law. Previously, the authority to regulate eviction rested with rent-control officials who, in turn, set standards which, on the whole, operated fairly. The OPA, and later the Housing Expediter, set uniform policies and provided, among other things, for stipulated waiting periods before a tenant could be evicted. These waiting periods were designed to prevent those who could afford to buy homes from evicting the occupants overnight when, in hundreds and hundreds of instances, there was just no place for the occupant to move.

These waiting periods undoubtedly caused a certain amount of inconvenience and perhaps even hardships to families who had purchased homes because they could find no other way in which to obtain shelter, and then had to wait to get into them, but the inconvenience was at least overcome by the fact that these same purchasers were often protected in their old quarters until they could move into their new ones. Even though there was a high turn-over in real estate during the period in which these waiting periods on evictions were in effect, it was mild compared to the experience since last July when tenants became subject to eviction on almost no notice at all. A prospective purchaser, who might otherwise have kept up the search for a vacant dwelling, knowing he would have to wait as long as 6 months to get the occupant out of a property he bought, now has to wait at most only about 30 days to get into his new house, and the inclination then is to go ahead and buy.

I am certainly no opponent of real estate sale of tenant-occupied properties, but I do think that in view of the continuing shortage of available rental housing—and the tremendously inflated costs of new homes—it is cruel and un-American to allow Americans to be pushed around and deprived of any security whatever in their occupancy of a home. Many cities have attempted to meet this problem by setting up local eviction controls but, as has already been testified here by representatives of some of the cities, it appears likely that many of these local ordinances will be found to conflict with State constitutions or State laws.

Some of the proposed rent-control bills before you would specify definite waiting periods prior to eviction. My bill refrains from writing into law inflexible standards which may become onerous or impractical in particular areas or situations, and instead, it restores the power to the Housing Expediter to establish what standards the day-to-day conditions warrant. As housing supply becomes more nearly in line with demand, these rules can be relaxed. If written into law, however, they could not be relaxed or strengthened, either way, except by law. A few months after the Congress enacts this new rent legislation, the Eightieth Congress will be drawing to a close and it will be next January before any changes could take place in rent laws. On the other hand, if he had the necessary authority, the Housing Expediter could, and should, revise regulations according to developing conditions.

The present eviction control standards, besides their general inadequacy, work hardships on landlords as well as on tenants. Under a law setting up a narrow range of fixed reasons for evictions, the landlord finds himself bound in without any recourse. To give a simple illustration: under OPA, and until last July 1, a property owner could obtain possession of his property for members of his immediate family—a veteran son, for instance, just back from the service; a daughter who might marry. Under the present act, however, with its definitely stated eviction causes, the landlord can evict a tenant on possession grounds only if the landlord himself is to occupy the premises. This is much too strict a standard and allows no leeway for circumstances or cases. Now, rather than patch up this inadequacy by amending the law to set down additional standards for eviction, the sensible thing to do is to restore to the proper officials, the Housing Expediter's Office, the authority to set standards according to conditions, rather than according to the theories of this Member of Congress or that.

The worst feature of present eviction controls, or lack of them, is that no one today knows what is occurring in this country in regard to evictions under the present act. The Joint Committee on Housing has no reliable information on it. The Housing Expediter has no way of finding out, for no one has to inform him of any eviction actions. This committee of Congress perhaps could have found it out if it had put its staff to work on the assignment, as I had requested it to do last November in urging that hearings be held during the special session of Congress on rent control extension.

I pointed out, in a letter to Chairman TOBEY November 16, that since the decontrol features of the Wolcott Act were based on the thoroughly mistaken expectation that rent control could end by March 1, 1948, that the hearings should develop whether there was any justification for the relaxations in controls which were legislated in the Wolcott Act. Those relaxations which could not be justified in terms of results, should, I said then, be corrected in a new bill.

As for eviction controls, I asked that the committee determine through its hearings and the efforts of its staff whether elimination of Federal controls has, in any way whatsoever, contributed anything to the alleviation of the housing shortage—which is, of course, our fundamental concern. I asked, also, that a complete picture be obtained by this committee of the extent of hardship which has been visited upon tenants as a result of the elimination of eviction controls and the fact that masses of our people can be and have been thrown out on the street on 30 days' notice or less.

I do not know whether the committee is in possession of any factual information on this matter. I sincerely think that unless proof is available that these hardships on the part of many Americans are making it possible in some way for more housing to be built, that we must end those hardships by restoring controls.

We know the hardships are occurring. We don't know whether they have been worth it in terms of additional housing. There is no evidence that it has been worth it. Therefore, I say, in the absence of any evidence, that it is in the public interest for tenants to be subject to 30-day dispossession of their homes in this period of acute housing shortages, let's protect the tenants.

The original real-estate industry has a novel argument against this; one which perhaps has not been brought to the attention

of the committee, but which certainly has been brought to the attention of real-estate brokers. It is this:

"The larger part of the housing market for years has been persons who bought existing homes for their own occupancy. If this is shut off by legislation, wouldn't the business of realtors be most seriously affected?"

Now, of course, no responsible person proposes that all tenants be frozen indefinitely in occupancy. It is a very brazen distortion of fact to say that the reestablishment of waiting periods in evictions would seriously affect the real-estate broker. All during the war, and up to last July, brokers made sales and commissions on sales involving tenant-occupied properties. The brokers will continue to sell tenant-occupied homes under my bill and will continue to make their fees. The difference is, however, that the tenant would have a breathing spell in which to find new quarters. Is that too much for him to ask for?

By restoring the old Federal controls over evictions, as my bill provides, he would end this travesty in which no one knows what is going on in such a fundamental field as housing. There are no over-all statistics. There is no central information. To evict a tenant under the present act, the landlord goes to the justice of the peace or to his local courts and gets a writ, and that's about all there is to it. The newspapers may mention the fact. No one keeps count. Numerous cases have been called to my attention of landlords suddenly deciding to occupy quarters they had rented out and often this decision came soon after the tenant had refused to sign a 15-percent rent-increase lease or had perhaps complained to health officials or rent officials over the maintenance of the property.

2. Recontrol of dwellings decontrolled under the Wolcott Act: The major argument for decontrol of various types of housing last June, including new construction and new conversions, along with units which had not been rented during the prior two years, was that this would give a tremendous impetus to new construction and to conversions and would coax out of hiding a lot of housing kept off the market because of owner indignation over rent control. Now undoubtedly this has taken place to a degree. The big question mark is how effective it has been, and what kind of housing and at what prices has it brought onto the rental market. There is, unfortunately, no way of really knowing. The Bureau of Labor Statistics would probably be best able to report on this, but BLS took a heavy budget cut last year in the name of government economy, and one of the phases of its work to suffer was the collection of housing and rent statistics in many cities.

We do know that the construction industry has boomed steadily upward, as it has ever since the war ended and as it was doing under rent control up to last July 1, but do we know how much of this property is for rent and at what prices? I have seen new homes advertised for veteran tenancy—new homes and thus not subject to rent control—on such terms as $150 a month on a 5-year lease. This, mind you, for conventional six-room houses.

On the other hand—and this is very significant, gentlemen—much if not most of the large-scale multiple family rental housing now being built is being built under a form of rent control imposed by FHA. You have probably heard testimony on this from FHA officials. On all loans of $200,000 or more, FHA retains the controlling voice in the corporation involved and sets a rent based on a fair return of about 6½ percent on investment. The average rentals set under this formula are somewhere around $82 a month, including all utilities. This is certainly not low and takes into account present-day construction costs, but at the same time it is far below rents I understand are charged in new developments not subject to any controls. My bill, incidentally, provides that rents set on new construction and conversions take into account present construction costs.

It was freely predicted during the hearings here a year ago that decontrol of conversions would bring forth a flood of new units on the market, provided by home owners who would convert their upstairs space into investment property. Does anyone know that this occurred? Are there any figures available?

All I have heard in this connection is complaints from tenants that newly converted quarters they now occupy are being rented to them for as much as $115 a month for the upstairs of a house which was formerly a single-family home renting for say $55 a month. I don't know how widespread this sort of thing has been and, I'm afraid, neither does the committee nor does the Housing Expediter who, prior to last July, could have given us day-by-day statistics on what was happening.

The real inequity in this matter of turning loose new construction and conversions is one directed at the owners of older property, who are still under somewhat rigid controls. They write me with understandable indignation over the fact that while their rents have been held down, a new property next door, one which might perhaps be described as junk or of cracker-box construction, was renting at astronomical figures with no hindrance from the rent-control authorities. They ask if that is fair.

I don't think it is fair. I say the way to correct this inequity is not to turn all rents loose, as some propose, but rather to control all residential rents in the same area in substantially the same fashion. Of course, rents on new construction must of necessity be somewhat higher than the rent for a similar home built before OPA's demise let loose the terrific inflation in construction costs.

3. Enforcement powers: The Housing Expediter has already, I am sure, outlined in sufficient and convincing detail the ridiculous inadequacy of the enforcement powers the Congress left with him in writing the Wolcott Act. I think there can be no disagreement over the fact that Federal laws should either be enforced or repealed.

For example, here we have an act which says tenants can be evicted for certain reasons, but there is no machinery whatsoever to follow up eviction cases in the local courts to see that they are legal under the act. If the majority of Congress insists on allowing the present unjust and cruel eviction provisions to stand, it should, at the very least, provide the Federal Expediter with the power to enforce this law, inadequate as the law is.

But if we are going to write a good law this time, then we should restore the old enforcement powers, not only as they affect evictions but also rent overcharges, bonuses, and other illegal practices. At present the tenant can sue his landlord for a rent overcharge, but if you gentlemen are receiving the kind of mail I am from constituents, you will know that many tenants are actually living in a state of terror over prospective eviction, since, for an unscrupulous landlord, eviction is now comparatively so easy to engineer. The decent landlords are not overcharging and charging a bonus and trying to get away with illegal practices, and the decent landlord is the one who would not stoop to trickery to get a tenant out. I emphasize this because the chairman of the subcommittee, I understand, has questioned the accuracy of any statement that many tenants are living in terror of their landlords under this act.

Such tenants do not sue their landlords for overcharges unless and until they have given up all hope of staying in the dwelling. That kind of protection against violations of the law is farcical.

You have already heard testimony on how overcharge damage suits plummeted down to an extremely low volume per month after this present act went into effect last July. Now that could mean that those landlords who tried to flaunt OPA in the days when there was effective enforcement have suddenly turned into law-abiding citizens, now that all enforcement has virtually been repealed. But I don't think it indicates that at all.

4. Reestablishment of exclusive jurisdiction of the Emergency Court of Appeals: This is an attempt to restore some of the continuity to the judicial aspects of rent control. The Wolcott Act, as you know, lodged jurisdiction on appeals from administrative rulings with those courts "which historically have had such jurisdiction." It leaves matters up in the air. Previously the Emergency Court of Appeals had gained extensive experience in reviewing the reasonableness and legality of agency rulings on rent matters, and from all I can gather, was regarded as fair in its conduct. Now sundry courts throughout the land, with little or no experience in these matters, are suddenly made experts on this very complex subject of rent regulations, and the lack of uniformity in decisions which develop from such a situation is obvious.

There is room in rent-control administration for area differences, but there is no room in effective Federal control for vast differences of opinion among courts all over the Nation as to the legal aspects of rent control. I think the landlord, particularly, would benefit from having a court experienced in this matter enjoy the jurisdiction over it.

These are the major changes in my bill from the present act. Much of the machinery for carrying out these changes comes under grants of administrative discretion. I think such discretion is necessary to a fair and equitable operation of rent control. I think some of the bills to strengthen some of the features of rent control provide too little discretion and set up too rigid requirements in regard to recontrol and rollbacks.

APPROPRIATIONS

My bill provides for continuation of present machinery for the granting of so-called hardship rent increases in individual adjustment cases. These powers, by themselves, are meaningless unless the Housing Expediter has the funds to administer them promptly and fairly. When Congress cut the appropriation for the Housing Expediter last year, it did a disservice, I feel, to all landlords who are entitled to rent increases and have to wait unduly long for processing of their applications. This is the wrong kind of economy. I know that this matter is not properly before this committee, but I think the committee in its report should stress the importance of providing sufficient funds so that all individual cases can be handled expeditiously.

I have found an alarming lack of knowledge on the part of many small property owners of their perfectly legal right to seek—and in most cases—obtain rent increases commensurate generally with the increases in their net operating costs. I think the real-estate industry, as an industry, has failed this segment of the industry, by not making them aware of their rights. The bigger operators, I am sure, are perfectly aware of their opportunities to seek adjustments and seem to be making good use of them.

If all the landlords entitled to individual adjustments were to apply for them, as they should, the work load on the Housing Expediter's staff will be great and additional funds no doubt will be needed. They should be granted.

FURTHER PROPOSALS

My bill provides only a 1-year extension for rent control. At the time I submitted

my bill last July, it was right after the Congress had flatly stated rent control was to have only an 8-month life until March 1, and would end abruptly then. When I introduced my bill, it seemed optimistic on my part to ask even for as much as a year's extension beyond March 1. Now, however, nearly all of the bills before you, including those from members of the majority party, specify an extension of at least until June 30 of 1949, and in some instances for as much as 2½ years. I think everyone is convinced by now that not only can rent control not end next month, but it probably cannot end next year. I would suggest, then, that my bill be amended to provide for the termination date no sooner than June 1949, and later, if the committee will consider it.

I think it would be highly proper to put into the bill, too, standards on the composition and activities of local rent advisory boards. My bill makes clear that the recommendations of these boards must be substantiated in the judgment of the Expediter if they are to be approved. I have the feeling the committee may try to tie down the Expediter quite narrowly on this, and I urge caution in the setting up of any straight and narrow requirements which may be found to be impractical at a time when the Congress will not be in session to correct the situation.

CONCLUSION

We are again experiencing a last-minute rush to save rent control from a premature demise. We had the same experience last June. So far, the House has not even scheduled hearings on the matter, although rent control is to end in less than 30 days. In the last-minute rush last year, we passed a bad bill, a bill based on a grievous error of judgment that it would be possible to end rent control this soon.

The committee has a mighty difficult job and wants, I am sure, to be fair. The simplest method of eliminating many of the present complaints against rent control would be merely to authorize blanket across-the-board increases. But it would, however, be one of the greatest contributions we could make to further inflation.

Rents cannot be considered an isolated part of the economy. General rent raises will cause further inflation and the landlord will again suffer a squeeze. The only way to be really fair to all landlords as well as to tenants is to go after this inflation and halt it. The committee must consider rent control as one part of an over-all attack on the cost of living, on an inflation which is hurting the landlord, particularly, because his income is generally static while living costs rise.

It has come to my attention that there is now pending in the House District Committee a bill by Representative O'HARA, a high-ranking majority member of that committee, providing for an extension of rent control in the District of Columbia—as is—for another year beyond March 31. I suspect that Mr. O'HARA's bill reflects the attitude of the majority party leadership, since the leadership and the Congress last year extended rent control in the District of Columbia without change while completely changing the entire concept of rent control for the remainder of this country.

Hence, Members of Congress living in the District of Columbia were not subject to the 15 percent "voluntary" increases arranged for the tenants in other parts of the country. Hence, too, eviction controls have remained strong in the District while being abandoned elsewhere. Hence, too, enforcement of rent control is strong here while practically nonexistent elsewhere. Hence, Members of Congress are well protected and will probably continue to be well protected as tenants for another year.

If we do not provide substantially similar protection for America's tenants elsewhere, then the Congress will be justifiably subject to the most vigorous criticism.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement regarding the St. Lawrence seaway prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WHAT A VOTE AGAINST THE ST. LAWRENCE SEAWAY MEANS

I have spoken in the Senate on the many advantages of the St. Lawrence waterway and power project to America—its great importance for our present generation and for all the generations that are to come. I should like now to present some thoughts as to what a vote against the St. Lawrence seaway means.

I respect, of course, the judgment of every Member of the Senate who casts his vote in accordance with his conscience, whether it be for or against the seaway. However, I do feel that those Members who are opposed to the seaway should be fully informed of the grave implications of their action, if they are not yet so advised.

ANTISEAWAY VOTE HURTS NATIONAL DEFENSE

On the basis of national defense, a vote against the seaway is a blow struck against the national defense, according to the statement of the Joint Chiefs of Staff and according to the testimony presented to the committee by Secretary of State George C. Marshall, as well as the views submitted by every leading miltary authority consulted by the committee and of men who wrote to the committee—General Eisenhower, Admiral Leahy, General Eaker, and others. (This is with the lone exception of two military men who testified against the seaway but who, according to their own open admission, had not read fully the voluminous background of the seaway.)

From the standpoint of an American interested in the development of the natural resources of his own land, a vote against the seaway (for which the appropriations in any one year would be around $70,000,000) is ridiculously inconsistent with American expenditure of over $15,000,000,000 since the end of the war for foreign purposes, exclusive of military aid and occupation costs.

From the standpoint of any American, a vote against the seaway is a capitulation to fear, to fancy, to folly, to frustration, to the most narrow and provincial selfish interests of a few.

From the standpoint of any of the other sections of the country requiring appropriations for their own internal improvements, a vote against the seaway is a dangerous precedent against future action calculated to sustain whole regions of our economy to develop wealth and economic health.

ANTISEAWAY VOTE VIOLATES BUSINESS OPINION

From the standpoint of American business, a vote against the seaway is a vote against expansion of the American free enterprise system, and it is a vote against the overwhelming support of the seaway by American business, expressed in every poll of business opinion (as well as of public opinion).

ANTISEAWAY VOTE IGNORES POLITICAL LEADERS

From the standpoint of a member of the Republican Party, if a Republican votes against the seaway, he ignores the judgment of the outstanding leaders of the Republican Party of today and yesterday—former President Herbert Hoover, Presidents Harding and Coolidge, Presidential candidates Harold Stassen and Thomas Dewey, Charles Evans Hughes, Henry L. Stimson.

From the standpoint of the Democratic Party, if a Democrat votes against the seaway, he recklessly sets aside the judgment of President Truman (who recently again endorsed the seaway in a special letter to the Senate) as well as the judgment of the late President Franklin D. Roosevelt and of former Secretaries of State James Byrnes, Cordell Hull, Dean Acheson, and countless others.

ANTISEAWAY VOTE HURTS AGRICULTURE

From the standpoint of American agriculture, a vote against the seaway is a vote which spurns the judgment of the National Grange, the American Farm Bureau Federation, the National Cooperative Milk Producers Federation, and countless other agricultural organizations which have endorsed the seaway as vital to agriculture for relatively inexpensive transportation of foods.

From the standpoint of American labor, including railway labor, a vote against the seaway is a vote against future jobs which will be created not only during the construction of the seaway but far more important, which will develop from the building of this great highway of commerce to fill the needs of a growing nation.

ANTISEAWAY VOTE HURTS NEW ENGLAND, MIDWEST

From the standpoint of New England, a vote against the seaway and power project is a vote against the needs of the people of New England which is already desperately short of power and is already suffering from a loss of production and employment as a result of this power deficit. (The seaway and power project are, of course, an interrelated unit which must be developed together.)

From the standpoint of the Middle West, a vote against the seaway is a vote which denies the Middle West access to deep draft oceanic shipping and which denies the Middle West the opportunity for the use of Labrador ores which will be absolutely indispensable if the Middle West industry is to be maintained after the expected early depletion of the Mesabi Range.

From the standpoint of engineering, a vote against the seaway is a vote against a project which has been described as an engineer's dream because with the small amount of improvements required for the short distance of 119 miles, a great artery over 2,300 miles long will be opened up and one of the great power projects in the world will be developed.

From the standpoint of an economy-minded citizen, a vote against the seaway will inevitably mean a terrific drain on the Federal Treasury because billions of dollars will be required in Federal funds for the development of plants which could use low-grade ores once the Mesabi range is depleted.

CONCLUSION

The Great Lakes-St. Lawrence waterway will sooner or later definitely be enacted. Future generations will hold us to account if it is not enacted in the Eightieth Congress.

Opponents will stand accused before history of lack of wisdom, lack of foresight. The Senators and Congressmen who supported the Panama Canal have obviously been vindicated. The Senators and Congressmen who support the Great Lakes seaway need no vindication whatsoever now, because of the tremendous wealth of evidence which supports their patriotic stand, but history will doubly confirm the justice of their action.

I pray that we of the Eightieth Congress be adequate to our responsibility.

American Aid to the Peoples of the World

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Friday, January 30 (legislative day of Monday, January 26), 1948

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent that there be printed in the Appendix to the RECORD the testimony of Mr. Walter White, secretary of the National Association for the Advancement of Colored People, on the European recovery plan before the Senate Committee on Foreign Relations, January 27, 1948.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I appear today to voice support of the basic principles of American aid to the war-ravaged peoples of the world. Such aid should be given in human kindness to the fullest extent of our capacity to do so. I make this statement at the instruction of the board of directors of the National Association for the Advancement of Colored People, speaking on behalf of the 1,627 branches, youth councils, and college chapters of the association and its biracial membership of more than one-half million Americans.

Whatever aid is voted by the Congress should be given without political or other strings. We should neither ourselves use nor permit to be used for political purposes the aid we give.

The European recovery or Marshall plan admittedly is a stopgap and temporary program. It is unfortunate that it has become embroiled in both national and international politics. Already its original motivation, rooted in the traditional generosity of the American people to aid others in times of distress, has been largely obscured by the real or alleged purposes attributed to the plan. But it is the hope of the NAACP membership and, I am certain, of countless other Americans that as far as is humanly possible unworthy motives and political implications will be speedily and permanently eliminated. We believe that this can be done, and I shall quite briefly lay before the committee certain suggestions for its consideration. I should like to preface these suggestions with the observation that unless the United States and all other nations which are able to do so cooperate in feeding and helping to rehabilitate war-devastated areas of the earth the physical suffering and the obliteration of hope all over the earth will almost inevitably lead us into another war whose consequences, in the light of the splitting of the atom and of a germ warfare, are too frightening to contemplate.

During the war I traveled as a war correspondent in both the European and Pacific theaters of operation. I was, thereby, enabled to see not only the physical destruction of bombing and shelling but the even more tragic harm done to the bodies and aspirations of human beings of every race, creed, color, or political orientation. I was convinced as never before that mankind's concentration on devising ever more devastating weapons of war was leading us to a situation which imperiled the entire world. Unless we can find speedily some means of eliminating war and of providing security to human beings everywhere there is little hope for civilization.

Let me repeat that we urge that the Congress vote the full sum requested for the program. It will be a strain upon our resources but, with proper safeguards, our economy can stand that strain. We urge extension of aid not only to the countries of Europe, but to the needy in Asia, Africa, and the Caribbean. In this connection, there is almost as much physical suffering as a result of the abysmal failure of a rubber-raising experiment by the United States Government in Haiti as in some of the worse spots in Europe. I want to remind the United States Senate that hunger is as painful to brown, yellow, and black stomachs as it is to white ones.

In this connection I would like to ask consideration of expansion of the recovery program to ask every other nation to give whatever surplus of food, machinery, or technical skill it possesses to aid those less fortunate than themselves. No other nation is as fortunate in being able to give aid as is the United States. But Russia, some of the countries of South America, and even some of the countries of Europe, can give assistance to others or will be able to do so in the future when American aid enables them to reestablish production and a more stable economy.

The facilities, both present and future, of the United Nations as a world organization should be enlisted in the distribution of aid and the implementation of the recovery plan.

We do not know what controls should be established in the distribution of aid, but certainly safeguards are necessary to insure first, the equitable distribution based upon need; second, the prevention of use of assistance for political purposes by ourselves or any other nation; and, third, to prevent the kind of misuse of American materials which has occasionally been true. A distinguished and reliable diplomat told me recently that American cigars and cigarettes were sold at the current black-market prices at a dinner party given by the high officials of a certain European country. I, myself, saw another nation enjoy the gratitude of the starving people of a European country during the war when American food was distributed without mention of the fact that the food was given by America.

Several of the European nations which are to benefit from this relief plan, if it is voted by the Congress, receive much of their economic strength from colonies in Africa, the Caribbean, the Pacific, and Asia. Some of these European countries have made it clear, now that the war is over, that they contemplate no fundamental change of the status of their colonials. In aiding these white nations of Europe to rehabilitate themselves, we of the United States have a moral obligation to require that these countries adopt programs under which people currently subject to their rule shall speedily be given the right of self-determination and the chance for freedom which these nations ask for themselves. It would be utter folly for the United States to help white Europe to rehabilitate that part of the world and permit it to continue to deny freedom and opportunity to colonial peoples. It would be folly because we have already seen in Indonesia, Asia, and Africa that the myth of white superiority has been destroyed forever. Nothing will speed World War III more than attempts to reestablish white supremacy. Any effort to do this will speed revolt among the hundreds of millions of brown, yellow, and black people who are determined to have freedom also.

Closely tied in with this is the necessity of assuring equitable treatment of Americans, particularly of minorities, here at home. A dozen European recovery programs cannot overcome the danger to the good name of the United States which is daily being done by the continuation of discrimination based on race, creed, color or national origin. Within the last month the United States Army has found it necessary to send a directive to all of its personnel reminding them that race and religious prejudice in the United States is doing more than any other thing to lower the prestige of the United States abroad and to cast doubt upon the integrity of our intentions.

Finally, the foreign aid we give is going to keep in short supply most commodities in domestic consumption. Already the current prices for many foodstuffs and other commodities are in excess of the black market prices of the days of price controls and rationing. The steadily rising spiral of inflation which is already taxing to the bursting point the budgets of small-wage earners and others will inevitably be accentuated by the European recovery plan. It is absolutely imperative, therefore, that a comprehensive system of controls be formulated and enacted now by the Congress. This should be a comprehensive one which takes into consideration the viewpoints and needs of every element of the American people—management, labor, the white-collar class and especially minorities who are limited by bigotry in earning a decent living.

We endorse the recovery program and pledge our aid to its fulfillment. But we believe its chances of success in helping less fortunate peoples of the earth to reachieve a normal way of life can be fulfilled only if we throw about the aid we give the broad understanding, the unselfishness, and the determination to help all those in need irrespective of race, creed, place of residence and political belief. By so doing we shall demonstrate that the free society of which we boast can be made a reality and thus demonstrate its superiority above all others.

Mahatma Gandhi's Kind of Power

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. HAYS. Mr. Speaker, I listened with appreciation to the appropriate comment by the gentleman from New York [Mr. KEATING] on the tragic death of Mahatma Gandhi. Whatever differences we of the west might have had with the distinguished leader of millions of people in the Orient we all admired his steadfast devotion to the ideals of peace and his advocacy of the settlement through nonviolent methods of the controversies of his country. The following comment by the Christian Science Monitor appeared prior to Gandhi's death and is, therefore, all the more significant. The Monitor editorial was entitled "Two Sorts of Power," and under leave previously granted I include this interesting tribute to the methods adopted by the fallen leader:

TWO SORTS OF POWER

Looking back on Mahatma Gandhi's fast, one is struck with its significance in a world bristling with arms. Here is the challenging evidence of a power totally different in kind from the brute material force which is still the court of last appeal for sovereign states unrestrained by world law.

There is no guaranteeing the permanence of the concessions and pledges he has won from all parties. Yet the fact remains that a nation has moved in the direction of peace because one man appeared ready to stake his life on men's innate response to an unselfish ideal.

The International Racket

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. REED of New York. Mr. Speaker, I realize that for me to attempt to defend our Republic against its ruthless destroyers, the internationalists, interventionists and Communists, is like a lone voice crying in the wilderness.

Through the communistic-ridden State Department, aided and abetted by the group I have just mentioned, equipped as they are with the most powerful tax-supported propaganda agency in the world, the truth relating to the activities of the Truman administration here and abroad is submerged and obscured by a flood of false propaganda relating to our domestic and foreign affairs.

Once the sovereign citizens of our Nation know the truth, the whole truth, and nothing but the truth, there will be a house-cleaning in this Government which in thoroughness will far exceed that of the purification of the Augean stables by Hercules, and it will not be a mythical cleansing of our bureaucratic government either.

It has already been demonstrated that the corrosive influence operating day and night to weaken the foundations of our free Government cannot be removed in a day as was alleged to have been done by Hercules when he directed a river through the Augean stables.

Yet much can be done on November next, this year, 1948.

Now, then, I may not be able to get the truth to the country at large through the medium of this and other speeches, but the citizens I have the honor to represent will be given the facts so far as I am able to ascertain them. I can say this, however, that once they have the facts in their possession with reference to any issue upon which their mature judgment may be brought to bear, either on foreign or domestic issues, their conclusion as to what should be done with reference to the issues will be sound.

I know that one of the burning issues right now is shortages and inflation, which means of course a steady advance in price of food, shelter, clothing, and practically everything grown or manufactured in this country.

What has been the cause of the ever increasing inflation and shortages?

Increase in currency.

Devaluation of the dollar.

Deficit financing from the very first of the Roosevelt administration.

Exports of goods to foreign countries paid for by our taxpayers.

How have the internationalists and interventionists contributed to our shortages?

This group has insisted on one world and the sharing of our taxpayers' money and their savings among nations. The result of this has been that billions and billions of dollars of our taxpayers' money have been poured into foreign countries with no other purpose than to share the wealth with the people of the world. Neither accounting nor control has been required of those nations which have been the recipients of the New Deal largess.

The program of the internationalists in our own Government has been to send billions of dollars abroad as loans, gifts, and credits, which will never be repaid except as a few of our industries will profit from the sale of their products abroad at premium prices paid for with our taxpayers' money. Articles sorely needed here, which cannot be obtained by our taxpayers except in some instances at a premium price in a gray market, are shipped in vast volume abroad whether needed there or not.

The latest scheme of the internationalists is to put the entire world, except our own taxpayers, on a permanent annual allowance of our dollars to the extent of from two to six billion dollars a year. Another proposal published in Lloyd's Bank Review, London, October 1946, from the pen of a Princeton professor, is that an international employment stabilization fund be created to prevent mass unemployment. This fund of from thirty to forty billion dollars to lend at critical times to the most suitable applicants, however poor credit risks they might be, to the extent necessary to get its funds into operation.

Do I need to tell our taxpayers that this capital of thirty to forty billion dollars to carry out this international scheme would be largely furnished by them? Then along with this proposal comes one from another source that would have 10 percent of the total output of this country be set aside as a contribution to world rehabilitation for a period of 10 years. This, too, at our taxpayers' expense.

There are many other grandiose plans to make taxpaying slaves of our people by these inflationary schemes, one of them being the Marshall plan. A very ingenious scheme has been hatched to create the expenditure of $17,000,000,000 abroad. It is a program to dismantle productive industrial facilities in Germany in the American, English, and French zones of occupation to create shortages of food and other necessities until the industries now being dismantled can be rebuilt outside of these zones with our taxpayers' money. In the meantime our taxpayers will be kept short of oil, building material, food, and other necessities which could be supplied from the industries now being torn down by the short-sighted program of the English, the French, and our own internationalists. I am not referring to the dismantling of war industries.

On December 27, 1947, Herbert Hoover warned:

> At a time when the world is crying and even dying from lack of industrial production, we apparently pursue the policy of destruction of the gigantic production equipment in the western zone of Germany. It means less essential goods to all Europe, greater delay in recovery of the world, and larger drains on the American taxpayer.
>
> I can only repeat a statement—

Continued Mr. Hoover—

> in my report of 10 months ago: "The removal and destruction of plants, except arms plants, should stop. * * * We can keep Germany in economic chains but it will also keep Europe in rags."

What are some of the German plants now being dismantled?

They are plants necessary for the production of the very articles of food and necessities, including nitrates, pipes for conveying fuel oil, and other factories, numbering almost 918.

This whole plan of destruction of plants in the British, American, and French zones is contrary to the advice of our leading American economists.

Furthermore, the plan is neither approved by the Hoover mission nor by most of the Senators and Representatives who have visited Europe with an open mind to study the subject of aid for reconstruction.

The following table taken from a publication by Common Cause, Inc., gives a list of war plants and surplus industrial plants in the three zones, as follows:

	United States zone	British zone	French zone
Total number	186	496	236
War plants	104	198	36
Surplus plants	82	298	200

Among other things the Herter committee report shows that the urgent needs of the 16 nations participating in the Paris Conference would mean raising the minimum steel deficit in the United States from 1,600,000 net tons to 5,000,000 net tons, a staggering deficit to impose on the consumers of steel in the United States, so runs the report.

These industries in the three zones in Germany which are being rapidly dismantled will place the burden of furnishing the products upon our taxpayers, which would ordinarily be produced by the plants now being dismantled. This means that our people must suffer a further shortage of steel cars to haul our grain, less fuel oil to heat our homes, lack of industrial equipment, fewer farm implements and parts, and practically no nitrates for our own farmers.

I mention the latter because the foreign plant destruction program calls for the dismantling of Europe's biggest nitrogen fertilizer plant, at Oppau. The nitrogen deficit in Europe will be supplied from this country. The cost of all this destruction and dismantling of nonwar plants in Germany will be paid for by our taxpayers. The shortages of the articles of prime necessity here which might have been produced abroad will be drawn upon for export to Germany. Here again our taxpayers will pay the bill as well as suffer further shortages not for 1 year but for years to come.

I have caused a factual survey to be made touching the present shortage of steel in the United States. Here it is in question and answer form:

1. Question. What was the prewar production of steel?

Answer. In 1939, a prewar year, the United States produced 52,800,000 tons of steel.

2. Question. What is the present production of steel?

Answer. The present rate of steel production in the United States is estimated at 88,000,000 tons.

3. Question. What are the prospects for increased production of steel?

Answer. The reported production objective for steel in the United States is 92,000,000 tons for 1952.

4. Question. Is steel allocated?

Answer. No. Pursuant to Public Law 395 (80th Congress), however, the Steel Industry Committee met on January 8, 1948, and decided on a policy of steel allocation. A program of allocation, therefore, is now in the making.

5. Question. How much steel was exported?

Answer. Three and eight-tenths percent of all steel produced in the United States was exported in 1936. Seven and seven-tenths percent in 1937. Nine and nine-tenths percent in 1946. Ten and si :-tenths percent was exported during the first 5 months of 1947.

6. Question. To what countries have steel exports been sent?

Answer. For the first 5 months of 1947, 6 percent of available steel exports was sent to Africa; 3.5 percent to Russia and eastern Europe; 10.5 percent to Asia; 13.5 percent to Canada and Mexico; 23.5 percent to western Europe; and 43 percent to Latin America.

7. Question. Is there a black market in steel?

Answer. (a) On September 2, 1947, "World Report" made the following comment on the United States domestic steel shortage:

"Europeans have a hard time trying to reconcile American Steel exports with American Government policy. Allies of the United States in World War II note that one out of four shiploads of steel for Europe in 1946 went to former neutrals, Eire, Switzerland, Spain, Portugal, the Azores and Sweden. None of these suffered any appreciable damage in the war.

"The countries of western Europe, now at work on the Marshall plan, are wondering if the United States will continue to allow 13.5 percent of its steel shipments to Europe to go to the countries behind the iron curtain, where Russia is trying to organize a rival plan.

"Nearly all of the European countries in Russia's sphere of influence have imported steel from the United States in recent months. Although the amounts usually have been small, they have been showing a tendency in some cases to increase rapidly.

"Largest buyer in the Soviet group, except for Russia herself, is Finland, whose steel imports from the United States jumped from $104,716 in April, to $757,000 in May, to $818,270 in June. It is probable that a large proportion of such imports eventually find their way into Russia as reparations in the form of manufactured goods.

"Albania, whose government outdoes all others in vilifying the United States received an average of only $2,500 worth of steel from the United States during the first quarter of 1947. In April Albania stepped that up to $33,000; in May to $70,000.

"Tiny Albania actually bought more steel from the United States in May than Greece did, although the United States is supporting Greece in the dispute between the two countries.

"Yugoslavia, principal opponent of United States policy in the Balkans, also has regularly been buying American steel."

(b) On September 12, 1947, Senator EDWARD MARTIN, chairman of Senate Steel Subcommittee To Study Problems of Small Business, said the following:

"This committee has uncovered a definite gray market in steel. Some industry witnesses who appeared before us early in our hearings twisted and squirmed in an effort to avoid admitting the existence of this gray market. It did them no good. Why they tried the head-in-sand technique of the ostrich I do not know. I do know, however, that we have sound estimates of well above 2,000,000 tons of steel which have been diverted into the gray market this year. I do know that many small fabricators of steel products have been pushed through the wringer by the pressure of the gray-market operators.

"We have had men before the committee who testified under oath they were paying an average of $280 to $300 per ton for steel. We had testimony of some cases on the Pacific coast where the price paid was as high as $600 a ton. These prices are outrageous as compared to a legitimate mill price of $75 to $90 at that time. Our staff has examined the books of companies substantiating these facts. It is a vicious condition.

* * * * *

"In exploring the dislocation of steel distribution, we have found these things:

"1. The gray market in which many legitimate manufacturers have been subjected to exorbitant prices and commissions or victimized by swindlers posing as steel brokers.

"2. Diversion of steel into other than normal channels by firms which obtained steel on the historical quota basis; steel sales under priorities where the steel was not used for priority purposes; barter deals in which mills accepted scrap in trade for finished steel which was sold on the gray market.

"3. Established users of steel, even those with priorities, unable to obtain their basic quotas from their normal suppliers. The crack down on newcomers into the manufacturing field who had no historical quota of steel and who have been forced either to go out of the market or to pay gray-market prices. At the same time some others, without historical quotas, were supplied.

"4. Expansion of integrated operations by some of the large steel companies which has contributed to loss of supply for small manufacturers and erecting concerns. Steel mills have withdrawn distribution from certain areas, ruthlessly leaving former customers high and dry. In many cases, historical quotas have been totally ignored."

(c) On the same day, before the same subcommittee, Benjamin F. Fairless, president, United States Steel Corp., said:

"The question of gray markets has been raised. In the light of the facts submitted to this committee, it is obvious that some tonnage of steel products has been sold in the gray market.

"While we do not know the amount of steel moving in these channels, we deplore the fact that any steel should be sold at exorbitant prices or used for other than regular fabricating purposes.

"From my knowledge of the industry, there appear to be two ways in which steel in this category can originate. First, from warehouses which have sold steel in bulk instead of performing their normal function of selling in small quantities to numerous customers. Second, certain fabricators receiving steel from regular sources for normal fabricating purposes may have found it more profitable to resell that steel in the form they received it rather than actually to fabricate it into their own finished products."

How steel production has shifted

[In thousands of tons of ingots and castings]

	1939 production	Present rate	1952 objective
NORTH AMERICA			
United States	52,800	85,000	92,000
Canada	1,509	3,000	3,500

Western Europe	23.5
North America	13.5
Asia	10.5
Africa and Oceania	6.0
Russia and eastern Europe	3.5

Source: World Report, Sept. 2, 1947.

This disclosure is only more evidence of the stupidity of the Truman policy, domestic and foreign.

We are short 12,000,000 homes in which to house our veterans and our workers.

The great hue and cry of the international propagandists is "more dollars for the nations of the earth." It is not a case of "hands across the sea." Now it is "hand-outs overseas or else."

There is another international racket in which certain of our American exporting industrialists are participating at the cost of our taxpayers. A leading industrialist, however, who is more interested in our flag and our Government than he is in any foreign socialistic-controlled government or any communistic regimes abroad, now steps forward

and exposes the foreign export rackets. I here insert The Export Trade Fallacy, by C. M. Burgess, president, Burgess-Norton Manufacturing Co.:

THE EXPORT TRADE FALLACY

Most everyone of importance states that the United States must have a large export business if a depression is to be avoided. This statement comes from sources, who on many other subjects have widely divergent opinions but on the subject of the necessity of export business seem to have conspired to mislead the public. The public—the man on the street, the farmer, and the laborer—believe these statements because they hear or read of nothing in dispute of the cry for more export business. The subject should be viewed in the light of reality and in consideration of present and probable future world conditions.

Export business at the expense of the taxpayers, whether industrial, farm, or natural products, is not essential to this country. In fact, in view of past experience, present, and probable future domestic and world conditions, export business in any large volume on a credit basis, as advocated by its proponents, would be very detrimental to the United States at any time.

We are advised by the Department of Commerce that for the past 12 months our exports have been about 17 percent of our production, largely on a credit basis, and proponents of export business urge an increase in that figure. In 1939–1940, goods exported amounted to 9 percent, all on a cash basis. These were good normal years of business, profits, taxes, wages, and employment. A dollar was worth $1.10. Now we have 17 percent export business, doubled and tripled taxes, necessarily inflated wages, and a 50-cent dollar, with no prospect of any improvement. In 1939–1940, we were paid by the other countries for everything we exported and we in turn paid these countries for our imports. In 1946 and 1947, the taxpayers of the United States furnished the money with which the foreign countries paid for our exports, and we continue to pay those same nations for our imports. We furnish the money for the "round trip." This would not be too bad if those countries would pay back the loans and gifts made them. This, as you know, they have not done and do not intend to do—even if they were able to do so. This will in a very few years bankrupt the United States and it will financially ruin us much sooner than will any reduction in our export business. In order for any foreign country to repay our loan to them, that country must send to us more goods than we send to them. The profit made on the sale of such goods to us could then be used to pay off the loan we made to that country. To be able to sell any considerable amount of goods to us, the foreign country must undersell the cost of similar goods as made in the United States. This the foreign country could do—if it would go to work. However, in that case, our own producers of similar goods would soon find themselves restricted as to domestic sales on account of imported low-cost goods, and our wages and standard of living would be greatly reduced, unless we again put high tariffs on all competitive imported goods. We have only two alternatives:

1. Furnish the money with which our exports are purchased and go broke, or

2. Stop the foreign loans and gifts, invoke protective tariffs, and get out of the export and import business.

If we follow the latter course, we will have prosperity, our own debt reduction instead of increase, and continued high standards of living for an indefinite time.

Crack-brained economists, certain isolated industries who would selfishly benefit from huge export business, and foreign government agents will not agree to this. Their propaganda working 24 hours per day in newspapers, magazines, and radio has sold the American public a fear complex—a fear that a reduction in exports will mean unemployment and depression. This propagandizing of "fear" into the minds of the American people reached its present climax when on September 3, British Foreign Minister Bevin in England called upon the United States to divide its twenty-two billions in gold, for which we paid money. Failure to do this, he said, would curtail our export trade and cause us to experience an economic depression. It was nothing more or less than the beginnings of a recipient of charity from us for over 30 years. England, the ruined, bankrupt country, begs haughtily but in panic for alms. If it would do the world and the United States any good, I would say give it to them. But it will only go the way of all former gifts and the records show that only a small percentage of those previous loans and gifts ever came back to us. England exists today only by reason of the United States military and financial assistance. Do you go on helping a person when that person makes no effort to help himself? I don't. Better divide the gold among the American taxpayers, or use it to build roads and schools and public housing.

Our own Government, still controlled by the New Deal element, attempts to influence the farmers to be in favor of foreign gift loans—by stating that a decrease in the export of grain and meat will cause farm prices to go down. The farmers want prices to go down, just so long as they can sell all of their farm products. Loss of export business will not curtail farm sales as seriously as will a consumers' strike. We already have evidence of consumers' strikes against high food prices. If lower prices for farm products result from decreased exports, then consumer costs will be less and the economic condition of the country will improve, resulting in less cost of operation of a farm. The farmer will suffer temporarily—but the general public will gain permanently. Ask any farmer if he would not rather feed cattle with lower priced grain and obtain a correspondingly lower price for his beef cattle or milk, and he will say, "Yes."

President Truman was quoted in his press conference August 22 as discouraging any tax reductions in 1948 or 1949. He said we will need any surplus to finance the Marshall plan for the economic recovery of Europe. The operation of this plan, at a cost to the United States of fifty to seventy-five billion dollars over 5 years, will ruin this country—or will at least reduce us to the standards of England and France, and make of us a second or third rate power while Russia advances to the top position. This money will be dissipated in foreign countries with no beneficial results to the United States. This same amount of money, kept in the pockets of the American taxpayers, by reason of tax reductions, will buy goods made in America, build badly needed roads, schools, houses, and provide for an adequate defense—at the same time maintaining a high rate of employment and our accustomed standard of living, and continued prosperity for many years in the future.

Ordinary common sense, not embellished with the theoretical mathematics of those who care not for the continued system of the American way of life, clearly indicates that we can well afford to give up our export business and keep our money at home. This should be our plan until we can be paid for our exports—with the other country's money, not with our own money.

Such raw materials as we must import (and they are few), and such goods as foreign countries must have from us, will continue to be purchased and sold—for cash—on a protective tariff basis. This would give us all the export business we need. Nothing other than a war will prevent or stop such necessary trading. All nations will be glad to get our dollars, and if they have to have something from us which they cannot do without, they will pay us cash for it.

Who are the proponents of this so-called free world trade? It should be called for free—from the viewpoint of the foreign buyers, as we are giving the money from our taxpayers' pockets with which to pay. * * * They are * * * New Dealers, left-wingers, poor Democrats, misguided teachers and professors, culturalists, One Worlders, and all the un-American element who want to divide our wealth with the world, because "it is the thing to do." Assisting them are the foreign propaganda agencies whose countries are jealous of our position and desire to bring us to their level. Ask any one of these people if they would like to live as the average peasant or working slave of Europe or Asia lives—give up his car, his home, exist on black bread and potatoes, and he'll say—"no, of course not!" Yet that is what will happen in this country if the theories expounded by these people and supported by such statesmen as Senator SCOTT LUCAS, of Illinois, were to go into effect. Senator LUCAS in an address to the American Legion, Department of Illinois Convention in Chicago, August 18, said that he advocates a pooling of all the food of the world's production and an even distribution to all the peoples of the world. Think a minute what that would mean. It would mean that we in this country would have about one-fourth as much food as we now have. Should we starve in order to feed others who may in 10 years or less wage war against us? Europe and Asia created the conditions that exist there today. Why should we lie in the same gutters with them?

Herbert Hoover in an address in New York on September 22, stated that the principal reason for the high cost of living in this country was because of the large volume of food which we are exporting to Europe. Just another reason why the reduction of food exports would be beneficial to this country.

Then we have certain big business interests tied in with big international banking interests who are so short-sightedly selfish that they want to have a flow of money credits going around and around, so that a few dollars will stick to their fingers as this money and these credits pass through their particular businesses.

Next we have the Communist type, the true radical, who hopes to wreck this country to where a dictatorship is necessary and believes that he will then be one of the small-fry dictators. Or the true Communist, agent of Russia, who will do anything to make it easy for Russia to take us over when we are no longer a strong Nation.

Who will suffer first and most because of the activities of the above elements? The American farmer, laboring man, small business owner, home owner. That means you.

We want tax reductions and debt reductions—not increases in either. We want prosperity and continued high standards of living. We want peace in and for this Nation, but want this country to win the next war, if and when there is one. We can't have all this if we continue to concern ourselves more with Europe than we do with the United States. It is about time the citizens of the United States began to look after their own country. Our ancestors fought for it. We should keep it for our children—not give it away to others.

It will be recalled that for several years prior to Pearl Harbor our internationalists and interventionists and war profiteers furnished more than 10,000,000 tons of scrap iron to assist Japan in her preparation to assault and demoralize our Navy. Now the same group are conducting the same warlike program to build up war machines in Europe. Tito, the dictator, has received his portion of steel

and now brags of his well-equipped war machine. All of the satellite countries of Russia have each been allotted their quota of steel. Our oil, as was the case of Japan, is being shipped abroad.

The irony of all this is that our taxpayers pay for these exports, then if war comes our boys will be killed by the steel tanks and other deadly equipment our taxpayers have furnished and paid for by the "sweat of their brow."

Veterans' Allowances

EXTENSION OF REMARKS
OF

HON. DEAN P. TAYLOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. TAYLOR. Mr. Speaker, on Tuesday next it is the intention of the Republican leadership to bring to the House floor, under suspension of the rules, legislation designed to increase GI students' allowances, and legislation to raise limits on total income of GI's now taking advantage of on-the-job training.

There is a desperate need for passage of this legislation. In my congressional district are two universities and one vocational school. Thousands of veterans are enrolled in these schools, and thousands more are enrolled in on-the-job training projects. I have learned at firsthand the financial difficulties that these veterans are encountering, and I am convinced that unless this Congress does something to relieve the situation immediately, the purpose of the GI bill will in part be thwarted.

At Champlain University, Plattsburg, N. Y., and Rensselaer Polytechnic Institute, Troy, the records indicate that the veteran is not wasting his time. He takes seriously the advantage given him to secure an education.

In surprising numbers the GI has reached and maintained the high scholastic standing required by these universities, but to meet the financial requirements to complete his education, is for him an insolvable problem.

When Congress passed the GI bill, butter was not $1.08 per pound; clothing costs were at least visible; and the price of family necessities in general were within striking distance. The increased cost of living just as quickly affects the student and trainee as it does people in other walks of life, and Congress must be cognizant of that fact.

I fear that sometimes we overlook the fact that students and trainees do not enjoy increased wages to combat increased prices. Unfortunately these GI's find themselves always "in the middle" of wage and price conflicts.

In addition, we Members must keep in mind the fact that many, many veterans attending college and taking training today are at the same time raising families. Existing allowances under the GI bill necessitates short cuts in living by these families in order to get by. They are compelled to forego the essentials and the necessities in order both to live and to get an education. Who will deny the fact that above all, veteran family life should be protected as well as encouraged. As officials and as individuals we should do everything possible to help these veterans and their families enjoy the heritages of happiness and good health now. Drudgery and additional sacrifices, if they must someday be encountered, should at least for them be assignments for life's later years.

Tuesday each Member of the House can meet the obligation Congress assumed when it guaranteed our veterans an opportunity for training and education. If, as I believe it will appear, the situation necessitates our increasing the benefits under the GI bill, let us on Tuesday meet that situation, and let us meet it to an extent that will adequately meet the demands.

Musicians Used $1,500,000 Welfare Fund for Free Concerts

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the communication that I have received from Mr. James C. Petrillo, president, American Federation of Musicians, enclosing a reprint of an unsolicited newspaper article describing how the American Federation of Musicians invested more than $1,500,000 of their employment fund in the public interest during 1947:

AMERICAN FEDERATION OF MUSICIANS,
New York, N. Y., January 29, 1948.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN LANE: We musicians do so little tooting of our own horns that we are unjustly accused of blowing them.

Therefore, in the interest of informed opinion and fair play, I invite your attention to the enclosure. It is a reprint of an unsolicited newspaper article describing how the American Federation of Musicians invested more than $1,500,000 of our employment fund in the public interest during 1947.

Sincerely yours,

JAMES C. PETRILLO, *President.*

MUSICIANS USED $1,500,000 WELFARE FUND FOR FREE CONCERTS—RECORD AND RADIO ROYALTIES PROVIDED 11,000 RECITALS IN 514 TOWNS AND CITIES

The American Federation of Musicians yesterday opened the books of its 1947 welfare fund—now banned by a clause in the Taft-Hartley law which forbids such funds—in an effort to prove its sincerity in its current battle with the recording and broadcasting companies. It was this fund, made up of millions of dollars received from recording and transcription, which James C. Petrillo, the union's president, said last week must be restored before any arrangement could be made for resumption of recording by the musicians.

During 1947, the union disclosed, it used $1,500,000—nearly all of the money received from recording and transcription in the previous year—to provide more than 11,000 free concerts, dances, and other musical services in 514 communities in the United States and Canada, more than half of them for veterans. The musicians who participated were union members and were paid union scales, the money coming from the union's welfare fund, and in some cases from cosponsors, such as civic organizations, service clubs, newspapers, and universities.

Regardless of whether the union is right or wrong in its refusal to continue recording music, the program of musical events provides an interesting insight into its policy to provide more employment for musicians and to advance American musical culture. Considering the number of teen-age dances (2,437) and similar events which it gave, the union appears to have interpreted culture in a liberal sense.

From royalties paid by recording and transcription—from a quarter of a cent on 35-cent records, 1 cent on $1 records, up to 5 cents on $2 records—the federation sponsored a wide variety of free musical services.

THIRTY THOUSAND MUSICIANS HELPED

National records of the union, audited by the Boston accounting firm of Lybrand, Ross Brothers, and Montgomery, show that the federation footed the bill for the services of more than 30,000 of its members. Local cosponsors, among them the Red Cross, the YWCA, the National Guard, the American Legion, city and State departments, port authorities, junior leagues, schools, universities, churches, and newspapers, provided additional necessary outlays.

Locals of the union promoted and furnished music for teen-age dances in most of the major cities, with the blessing of mayors, police chiefs, and juvenile court judges; 42 were given in Newark, N. J.; 40, in Cincinnati; 33, in Minneapolis; and so on for a total of 2,437 in the country.

This jazz diet was supplemented by symphonic concerts of semiclassical music, while in many of the hospitals and welfare institutions of children chamber music proved highly popular.

Fan mail—and the Federation needed hay-baling equipment to handle the volume—was particularly full of gusto when it came in from the youthful audiences. From the Toledo, Ohio, Child Study Institute one girl wrote the conductor of a string orchestra: "It was one concert that I enjoyed without getting bored." A boy, festooning his letter with crayon drawings of horns, said, "It was the first string orchestra I ever heard, and I liked it very much."

High on the priority list of the union came music for veterans' hospitals. The 2,317 performances by symphony, band, and chamber music groups were primarily for enjoyment. But the medical directors' letters indicated that the music often had real therapeutic value. In one instance, a young soldier who had been a concert pianist was pulled out of his apathy when the visiting symphony conductor persuaded him to come forward and play the Warsaw Concerto with the orchestra. His cure began at that point, the medical director wrote.

In the Los Angeles area, a Music for the Wounded program was set up, with broad community backing, and the $63,000 allocated to that local by the federation was augmented by benefit concerts, so that still more musical service could be made available for the veterans. On this phase of the program Gen. Dwight D. Eisenhower wrote to the vice president of the Los Angeles local, expressing thanks to the artists who had participated, adding, "Music is of great recreational value to the sick and wounded in our hospitals, and it is my earnest hope that the success of this year's concert in the Hollywood Bowl will assure a continuation of your splendid program."

PROGRAM FILLS A GAP

A yard-long work sheet detailing the activities of the musicians' union in Detroit showed that in general they provided music where otherwise there would have been none: Seventy-one piece symphony orchestra concerts in the State fair grounds; nightly band concerts during August in Belle Isle Park; 17-piece gypsy string music for veterans' hospitals; Christmas party music for underprivileged children; a concert by a 40-piece symphonic band, and 4 performances by 10-piece dance orchestras.

A break-down of the figures indicates that half the funds went for popular music, and half for music commonly called serious or highbrow.

The largest musicians' local in the country, in New York City, featured groups of strolling players, who visited veterans' hospitals in the metropolitan area, playing and singing request numbers at the patients' bedsides. Nearly 60 percent of the local's allocation of $91,000 (to which the local added $10,000 for overhead expenses) was spent in this and other types of musical entertainment for veterans.

NEW YORK PROGRAM

The New York program furnished employment, at one time or another for some 5,000 of local 802's 25,000 members. One hundred symphony players performed at a memorial concert in honor of the late Mayor F. H. La Guardia, playing under the baton of Alexander Smallens, the mayor's favorites: Wagner's Siegfried Funeral March; Bach's choral prelude, Come Sweet Death, and the adagio movement of his Toccata in C major; and Beethoven's Fifth Symphony.

In Philadelphia the union revived the 20-year dormant tradition of outdoor concerts in the Labor Plaza, which is equipped with an admirable shell for band and symphony performances. A symphonic band was used to bridge the gap between lowbrow and highbrow music; how successfully, is indicated by the fact that summer audiences exceeded 175,000.

In many other communities the federation's funds had a pump-priming effect on the musical life of the community. One major and several minor symphony orchestras were revived. In one instance the union's allocation of $10,000 for free symphony performances resulted in the raising of an additional $120,000 budget for the orchestra by other musically interested groups in the city.

The federation has paid particular attention to smaller communities and rural areas. In general the allocation of funds was $10.43 a member. For the large locals in New York, Chicago, and Los Angeles this figure held only for the first 5,000 on the roster; beyond that number only $2 a head was granted. Account was taken of the fact that the larger centers already have much free music.

A Balcony for the White House

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harold L. Ickes:

MAN TO MAN

(By Harold L. Ickes)

During the approximately two years and nine months of his accidental occupancy of the White House, President Truman has spent more than $650,000 of taxpayers' money on the Presidential mansion and grounds—since he became President on April 12, 1945, up to January 8, 1948. Moreover, he still has a balance of $477,120.24 under Public Law 334, which he can spend at his pleasure and which seems to be burning his pocket.

These figures do not include Mr. Truman's salary or his allowances for travel and entertainment. Mr. Truman does not have to tell how he spends this money unless he wants to. He does not even have to spend it wisely. He is like the spendthrift son who has been given a too-generous allowance by an indulgent father.

The American taxpayer is not of a kidney to be troubled by the small matter of supporting a President in a manner in which he is trying to become accustomed. However, in these days, when the business of keeping a roof over his own head calls for the Houdini touch, surely it can be taken as no reflection on his generosity if, confronted with the figures which I have mentioned, he raises his voice, as this taxpayer hereby does, to ask Mr. Truman "how come?" and "what for?" Do they do things that way in Independence, Mo.?

The White House is a roomy mansion, mellowed by time and hallowed by the great, with intervals in between. Mr. Truman, his endowments, genius, sagacity (or their opposites) notwithstanding, is a Federal worker. He, unlike other civil employees of the Government, is supplied with living quarters—the secluded and beautiful old house fronting on Pennsylvania Avenue. At least twice since he moved in he has given the impression of thinking that he owns it. He appears to be looking forward to living there for a long time to come.

Of course, the people happen to own the White House, and they may decide in November upon a new tenant who might question the good taste of Mr. Truman's proposed bubble-gum balcony. If Mr. Truman wants to be certain that his brief occupancy of the White House may become a living memory, he might carve his initials on one or more of the big trees on the lawn. I do not approve of carving one's initials on trees any more than I do of defacing public monuments, but this would be a lesser evil.

The White House, of course, like any other old house, sometimes needs repairs and replacements. The Truman couple, for the most part, live there alone, now that George E. Allen is no longer about. When two nice people, both on the other side of middle life, had to spend considerably more than half a million dollars in 2 years and 9 months—approximately $20,000 a month—to keep the house in repair and themselves comfortable, a hard-pressed taxpayer might be excused for wondering whether the house has been the scene of some American Legion parties or if the Trumans use Chanel No. 5 in the swimming pool. Certainly no act of God can be held responsible, since neither fire, tempest, flood, nor quake has befallen it.

Where has it all gone, Mr. President? Could it be that the piano in the East Room has needed a layer of solid gold? We taxpayers do not want to be petty about such things; and reading your budget message, we can see that $650,000 is just peanuts to you. But consider that little item of an iron balcony for your study that the Commission on Fine Arts has unanimously found would disfigure the White House. You say that you want it for privacy, and we want to protect you against Peeping Toms. But it was on the south portico, it is recorded, that President Woodrow Wilson proposed marriage. He did not seem to think that there was a lack of privacy. And he lived there for eight long years, Mr. Truman. Have you the right to disfigure the beautiful south facade when your tenancy may end in a few months?

This taxpayer has a suggestion to make. It occurs to me that there must be an oversupply of rather fine second-hand palaces in Europe, what with all of the kings who have been going out of business. Why not bring one over, say from the Balkans? Set it up in Lafayette Park, complete with moats, terraces, promenades—and especially balconies.

Mr. Truman could still use the old White House with which he seems to be so dissatisfied, for servants' quarters. A defunct royal house might be glad to throw in a supply of discarded liveries and gilded military trappings. Then, when a President of Brazil or some other of our sister republics, comes avisiting, Mr. Truman and his refurbished entourage could just plain knock his eye out.

It must be the Scot in me, but it is the economy that appeals. With planetary reconstruction ahead, someone has to think of these things.

Housing in Massachusetts

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. CLASON. Mr. Speaker, in Massachusetts, there are approximately 600,000 veterans; 50,000 of these veterans are in desperate need of housing. It is estimated that 350,000 new residential units will be needed in my State alone in the next 10 years. The demand centers particularly on housing for "low income" groups of veterans and nonveterans. Next to the high cost-of-living prices the No. 1 domestic problem today is "housing."

While I sympathize particularly with the veterans population, I believe that the National Government should attack this problem now for the benefit of our entire population. It is for that reason that I have given my support in public utterances to the Taft-Ellender-Wagner bill.

It is the result of several years of study by Congressional committees and was reported out favorably by the Senate Banking and Currency Committee last year. It will take care—or, at least, attempt to take care—of the housing needs of all income levels and represents the best thinking on the subject today.

I am glad to inform Congress that our people are doing something about the matter. The Massachusetts Legislature has given thought to the need for State action on housing, and for the lower income group in particular, since 1911. In more recent years it has enacted laws authorizing the establishment of local housing authorities empowered to undertake low-rent housing, war housing, and veterans' housing projects, permitting savings banks and domestic life-insurance companies to build and operate rental-housing projects, providing for limited dividend and nonprofit veterans' housing projects, allowing the creation of both public and private urban redevelopment corporations, and authorizing cities and towns to build housing for rent and sale to veterans. Presently, the Massachusetts Legislature is considering legislation providing for annual contributions by the State, pat-

terned after the public housing provisions of the Taft-Ellender-Wagner bill.

Nevertheless, except where the Federal Government has entered the picture with its broader tax base and greater ability to carry the load, these State laws have resulted in very little housing. Private enterprise just isn't willing—and possibly it cannot be blamed—to build for the average person, veteran or nonveteran, even with the tax and other incentives offered by the State. The cities and towns are extremely reluctant, except in a few scattered cases, to increase their already burdensome tax rates. With Federal annual contributions made available by the TEW bill, however, and the private financing incentives provided by the other provisions of the TEW bill, Massachusetts could lick the housing shortage. What is needed is something that will not just waste money on a temporary expedient but will prevent recurring shortages and emergencies. What is needed are the long-range provisions of the TEW bill. A recent report by a special recess commission of the Massachusetts Legislature shows that Massachusetts needs over 350,000 new dwellings in the next 10 years.

While discussing this subject, I would like to call to your attention an article entitled "New Housing Program in New England." The authors are Harold Robinson and John I. Robinson, two well-known attorneys who probably know more about the housing problems of New England than any other persons. For 7 years Harold Robinson was regional counsel for New England for the United States Housing Authority and other Government agencies. John I. Robinson is chairman of the Springfield Housing Authority.

Today there is activity in the New England States on housing laws. These lawyers have set forth some interesting facts on existing laws and activities in Connecticut, Massachusetts, and New Hampshire. After reading their article, I am sure you will be convinced that the several States are working hard on this problem, but they alone cannot do the job. Congress must aid them through the Taft-Ellender-Wagner bill or some other advantageous measure.

The Robinson article appeared in the Daily Bond Buyer, of December 1, 1947, and is as follows:

NEW HOUSING PROGRAM IN NEW ENGLAND

(By Harold Robinson and John I. Robinson)

Three New England States, Connecticut, Massachusetts, and New Hampshire, recently enacted legislation which will involve the borrowing and expenditure by public bodies of large sums of money for the construction of permanent homes for veterans.[1] These differ from the laws concerned with veterans' housing adopted in many States outside of New England in 1946 and 1947 in two respects: they entail permanent, as distinguished from temporary, housing and will mean the issuance of short-term notes and long-term definitive bonds backed by State guarantees or a pledge of State annual contributions. In the latter respect, they should be of considerable interest to investment houses and purchasers of housing authority issues.

[1] See New England Spends for Housing, the New England Townsman, September 1947, by the authors.

In Connecticut, the amount of bonds that may be issued is $15,000,000; in Massachusetts, a theoretically possible but inconceivable $120,000,000; and in New Hampshire, $7,000,000. In anticipation of the issuance of definitive bonds, New Hampshire housing authorities may sell short-term temporary notes.

The basic philosophy behind each program is the same: the recognition of the need for some form of subsidy if housing is to be provided the veteran of World War II. Each program is in turn attributable to the same four factors: an initial shortage of housing even for those able to afford inflated prices; a shortage of housing at rents and prices within the financial reach of the average veteran; a realization of the potential political threat of the house-hunting veteran; and the failure of the Congress to enact a national housing program. Nevertheless, as might be expected, each program is predicated upon a different form of subsidy and will involve different modes of administration and financing.

CONNECTICUT

The Connecticut legislation, Public Act No. 405, 1947, entitled "An Act Providing for State Assistance for Moderate Rental Housing Projects," provides for a State guaranty of the notes and bonds of local housing authorities. It is aimed at the "moderate," rather than "low" income group of the earlier housing authority law, although the definition of "moderate" is so broad and general as to permit of considerable administrative latitude. Once rents are established, eligibility for admission is restricted to persons whose gross annual income is no more than seven (or in the case of three or more minor dependents eight) times the rental. While the act is particularly directed toward taking care of the moderate-income veteran of World War II, it is written in terms of veterans' preference so as to eliminate the possibility of units remaining idle.

The act is a compromise between long-term public ownership and emergency legislation. On the one hand, it provides for amortization periods of 35 years and the possibility of conversion during that period to a low-rent housing project providing Federal financial assistance is obtained. On the other hand, it permits the sale of a project at any time after five years if the State housing authority has determined that the acute shortage of moderate-rental housing in the locality has terminated. Such a sale may be for an amount not less than 80 percent of the principal amount of the obligations and interest then outstanding. In either the case of sale or conversion to low-rent housing, the State's guaranty will cease. Presumably, any contractural arrangement with bondholders could not be abrogated by sale or conversion without the consent of bondholders. This is a problem that must be worked out in the form of contract of guaranty and in the bond itself.

The act is predicated upon the hope that the saving in interest rates, possible because of the State guaranty, and the absence of profit will be sufficient subsidy in themselves to permit achieving a moderate rental. No cash subsidy is contemplated. Indeed, the words of the act are: "Such guaranty and pledge shall be given only when the committee has determined that the housing notes or bonds of the local authority will be sufficiently amortized."

Certain supervisory powers are vested in the State housing authority which was established by earlier legislation. However, the power to contract with local housing authorities for the State guaranty is vested in a new committee composed of the Governor, attorney general, comptroller, and commissioner of finance and control. The committee must approve the amount, the term, the time of sale and any other conditions it deems relevant prior to notes or bonds being advertised for sale. As yet no announcement has been made of the form of notes or bonds to be issued, the form of contract to be entered into between the State and the local housing authority, the conditions to be attached to the guaranty and the type of local authority activity that might lead to a forfeiture of the guaranty. The background of negotiations between the United States Housing Authority and investment houses and bond counsel, in the early days of the low-rent housing and slum-clearance program under the United States Housing Act of 1937, should prove of inestimable value.

One defect in the act, which should be corrected at the special session of the General Assembly that may be called to reduce the sales tax, is the inclusion of temporary notes within the aggregate amount of notes and bonds that may be issued. Section 10, in limiting the aggregate issue, makes no exception for temporary loan notes. Presumably, therefore, any temporary issue is included in the $15,000,000 aggregate.

In view of the opinion of the Court of Errors and Appeals in the case of *Michael Franco* v. *City of New Haven* last summer, there is little if any question of the constitutionality of the act. That case, it is true, involved the sale of city bonds and the expenditure of State funds for temporary housing instead of local authority bonds and State guaranties for permanent housing. Nevertheless, no distinction was drawn by the court between temporary and permanent housing and the language of the opinion clearly indicates that the present program would be upheld without question.

As of October 24, 1947, the following earmarkings had been made:

	Maximum guaranty	Units
Darien	$160,000	18
Greenwich	638,000	73
Hartford	2,958,000	336
Manchester	421,000	48
Meriden	711,000	81
Middletown	479,000	54
New Britain	1,218,000	138
New Canaan	116,000	13
New Haven	2,857,000	324
Shelton	189,000	21
Stamford:		
City	856,000	97
Town	232,000	26
Wallingford (borough)	203,000	23
Waterbury	1,769,000	201
Wethersfield	174,000	20
Willimantic	218,000	25

Tentative earmarkings were also made for Derby, Norwich, Stonington, and Watertown.

MASSACHUSETTS

The Massachusetts program is of an entirely different nature and financing, although the philosophy of need for assistance is the same. The Massachusetts legislation, chapter 479, Laws of 1947 amending chapter 372, Laws of 1946, does not provide for any initial State assistance. It merely authorizes the cities and towns of the commonwealth to borrow up to an additional 2 percent of their average assessed valuation for the purpose of constructing single family, two family and multiple dwelling units for rent and eventual sale to veterans of World War II. Originally, the act prohibited sale before the end of the 5-year emergency period. It was amended in 1947, however, to permit sale before the end of 5 years and to authorize the granting of an option to purchase, both with the approval of the State board of housing. Inasmuch as the primary purpose of the act, making available housing at rentals of $40-$45, would be nullified by sale, it may be expected that most communities will keep title to the dwellings during the 5-year period.

Since the localities are permitted to rent at less than the economic rent, it is expected

that some loss will result annually. Moreover, since the sale market may drop in 5 years, sale prices will not necessarily equal cost. The Commonwealth, therefore, has pledged itself to reimburse any city or town for one-half the loss suffered when all the housing constructed by the city or town has been disposed of, but in no event more than one-half the cost of the undertaking to the city or town.

Not many cities have undertaken projects under the revised legislation. Boston is proceeding with a program of some $20,000,000. West Springfield has sold 10-year bonds (20-year maturities are permitted) in the amount of $350,000 at .0118 and has 43 single-family houses under construction with six scheduled for occupancy in early November. Springfield is undertaking a multiple units project costing about $1,600,000; Worcester is considering the expenditure of some $2,000,000; Amherst already has 21 houses under construction; Everett, Lynn, Cambridge, Watertown, Framingham, and Somerville are among others having projects in the planning stages or under way. Nevertheless, the response has been disappointingly light and slow in comparison to the total need. According to the special message of Governor Bradford to the legislature on April 24, 1947, fully utilized, the act makes possible the construction of 16,000 units and permits municipal borrowings of $120,000,000. Of course, these figures are theoretical maxima only and should not be taken too seriously.

The constitutionality of the expenditure of public funds for the program contemplated by the Massachusetts legislation was upheld in an opinion of the justices of the supreme judicial court while the legislation was still pending in the legislature. No question of validity, therefore, can now arise as it did in connection with earlier legislation (see Robinson, Public Housing in Massachusetts, and the later opinion of the justices dealing with temporary housing) to plague the municipality or the purchaser of municipal bonds. Borrowings are on city or town bonds which are payable from general tax revenues so that their value should have no relation to the project income.

NEW HAMPSHIRE

New Hampshire has adopted the annual contributions technique of the United States Housing Act of 1937 in its housing program. In July of 1947, the general court (as the New Hampshire legislature is called) enacted legislation, chapter 286, laws of 1947, authorizing the payment of subsidies by the State annually to local public-housing authorities for low-rent housing projects. The total amount of annual contributions that may be contracted for is $245,000 a year for 45 years. Again taking a leaf from the Federal legislation, the act authorizes the State to guarantee temporary loan notes of local housing authorities sold in anticipation of the issuance of definitive bonds. The total notes outstanding at any one time may not exceed $7,000,000—the amount of authorized construction—but, since it is the amount outstanding that governs, refunding its permissible and the error, if it was an error, of the Connecticut legislation, is avoided.

The agency of the State that will administer the program is the newly created State housing board. While the notes and bonds issued will be those of the local authority, the State housing board will necessarily approve the contents and form. Here again, it is assumed that the experience of the United States Housing Authority (the present Public Housing Administration) will not be overlooked, but that the board will utilize the experience of the Federal Government.

To date, only Manchester and Nashua have made application for aid. Others will undoubtedly follow. The State housing board has taken the position that its primary function is to disseminate information about the program, not urge its use. It has rightfully placed the burden of seeking assistance upon the community.

The constitutionality of the legislation in New Hampshire, too, is free from doubt, for the sponsors took the wise precaution of securing an opinion of the justices during the pendency of the bill.

CONCLUSION

The Massachusetts' program is a 5-year program. In New Hampshire the authority to contract for subsidies and guaranties lasts until June 30, 1951. The deadline in Connecticut is July 1, 1949. During that period—really a stop-gap period pending passage of Federal legislation—there should be substantial issues of interest to purchasers of municipal bonds. If Federal legislation is not soon forthcoming, moreover, it is quite likely that there will be increased programs in these States. Investment houses and bond houses would do well, therefore, to inform themselves of the three new housing programs in New England and keep current on the municipalities taking advantage of the State aid.

Some Sobering Realities Regarding Our Present Tax Burden

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, while we are considering the pending tax-reduction measure, it seems to me that we should ponder some of the factual information that is available to those who would read. The following is a compilation of facts on the subject by one of the greatest economists of this country.

SOME SOBERING REALITIES REGARDING OUR PRESENT TAX BURDEN, AS COMPARED WITH 1929-30

Many small incomes and estates are even now free from all taxation. Several of our States have not yet imposed personal income taxes. Yet in this third year of peace, our Federal Government alone is collecting taxes at the following rates on the higher brackets.

Individual incomes, around 86½ percent beginning at $200,000 (and 50.35 percent at only $18,000); the top Federal tax bracket on net estates before credits is 77 percent; corporate net incomes over $50,000 are taxed at 38 percent. To all of the foregoing top rates there is in many cases an addition of several percentage points resulting from State taxes on the same incomes or estates.

As of the present time, our Federal, State, and local governments are collecting around $56,000,000,000 anually in taxes of all kinds, or roughly close to 30 percent of the estimated national income which will be produced this year ($180,000,000,000 to $195,000,000,000, depending somewhat on the method of calculation).

In normal periods before the Second World War, our State and local governments collected in taxes around twice as much as did our Federal Government. Now, in the third year of peace, our Federal Government is collecting taxes in an amount about four times as high as the taxes collected by all of our State and local governments, i. e., for fiscal 1947 close to $45,000,000,000, as compared with around $11,000,000,000.

Federal tax rates and collections are holding up stubbornly, while State and local government taxes are bound to increase rapidly for the next few years, because of the extraordinary population growth during the present decade, and the resultant need for many new improvements and facilities, such as roads, schools, sewers, water supply, etc. Also, wages and salaries of Civil Service employees have almost doubled over the past 10 years.

Looking back a few short years, we find that in the prosperous period 1929-1930, the weighted average taxes collected by all governmental bodies in some 50 leading countries of the world, amounted to little more than 15 percent of the estimated national income produced by those same countries. At the same time, in the United States the ratio was scarcely 11 percent, or little more than one-third our present ratio.

A few of the more backward countries levied taxes up to 25 percent or more on their national income. The Communist and totalitarian state of Russia headed the list at about 29 percent, or slightly under the present United States rate. Greece was next, at 27.5 percent. Other very important high-tax countries some 15 or 16 years ago were Germany, at 22 percent of the national income; France, a little more than 21 percent; and Great Britain, just under 21 percent. Where are all these countries now? Bankrupt or totalitarian.

For long years experts and writers on public finance, based on the historical records, have assumed that no nation could long endure and be prosperous and free, with taxes as high as 25 percent of the national income. Further, any ratio exceeding 15 percent was formerly considered too high to be reasonable, and any country with a ratio exceeding 20 percent seemed definitely headed for trouble.

What will, in due course, happen to the United States of America, unless we soon cut our taxes and our public expenditures to a point where the over-all "take" will be not more than 15–20 percent of the national income produced in years of normally good, but not "inflated," business activity?

It is not commonly understood that a very mild and to-be-expected decline of 15 percent in industrial production, and of 15 percent in our price level which has more than doubled since 1940, would probably lead to a 25- to 30-percent drop in our national income produced. We should, in fact, in the light of all past experience, be prepared for a much sharper drop within the next few years, on our present monetary standard. At any rate, it would not be surprising to see our present national income (according to recent "adjusted" computations) drop from a current level approaching $200,000,000,000 per annum to a level some place between $125,000,000,000 and $150,000,000,000. Even the extreme low of such a decline would leave our national income at a point fully 25 percent higher than any prewar year in our history.

It should further be noted that in times of depression or adversity, public expenditures, under our present philosophy of government, tend to increase and not to decrease. Hence, our total public budgets and tax collections, under the assumptions above indicated, could easily turn out to be as much as 40 to 50 percent of our entire national income. Does anyone believe that we would be other than a nation of slaves under such conditions?

Hence, as stated above, as there is little probability or possibility of any decline in the State and local government expenditures and taxes, we must look to the Federal Government for any substantial reductions. Even though the present budget of $40,-

000,000,000 or more should be cut in two, as should and could be done if the voters were sufficiently aroused, we would still be confronted with a total tax burden which by 1950 might be close to $35,000,000,000, or still fully 25 percent of a reasonably shaken-down national income. Even such a burden as this would be, year in and year out, almost unsupportable—and it is the kind of burden which has completely ruined the finances of the once-powerful Great Britain.

In order to effect the necessary reductions in our tax burden, top-bracket rates will have to go far below the theoretical 50 percent level, if we are to encourage the creation of venture capital, and the maximum production of goods, and are to maintain our free enterprise system. We will have to get back once more to top brackets nearer 25 percent, and virtually all citizens will have to pay something directly toward the support of their Government.

In considering the question of top-bracket rates, long experience indicates that any newly launched business has far less than a 50 percent chance to succeed. Also, even among established businesses, year in and year out, not more than 50 percent make profits. Hence, it is evident that the cards are definitely stacked against either the individual enterpriser, or the corporation, if the public powers levy taxes exceeding 25 percent of the total taxable net income; and probably any top-bracket rate over 25 percent tends to check individual initiative.

The American voter must be definitely informed as to the inevitable disasters which lie ahead, provided our Government continues to spend our money in peacetime at anything like the present rate. It is the road to fiscal ruin and to individual enslavement by the state.

The larger incomes and estates have already been substantially redistributed. Within a few short years it will be impossible further to mislead the mass of the voters by telling them that the rich, or those of moderate incomes, can bear the tax burden, while the masses will largely escape taxation. There will soon be no rich. All incentives to risk taking and the production of more wealth and income will be removed. The spirit of enterprise will be broken. Our standard of living will be reduced to that of the moribund countries of the Old World which we are now, no doubt mistakenly, trying to support and revivify at our further expense.

Unless our course is speedily reversed, like the Gadarene swine, we shall rush madly down the steep place into the sea; and we ourselves, through our public extravagances and lack of willingness to fight each day for freedom from over-centralized government, will have become the unconscious agents of our own suicide.

Estimated wealth, income, public debt, and taxation per capita of leading countries

[Arranged in order of net income—most data as of 1929]

Country	Wealth per capita (1)	Public debt per capita (including local debt) (2)	Percent of debt to wealth (2÷1) (3)	External public debt per capita (4)	Net wealth per capita (1−4) (5)	Income per capita (6)	Total taxes per capita (7)	Percent of taxes to wealth (7÷1) (8)	Percent of taxes to income (7÷6) (9)	Net income per capita (6−7) (10)

We Live on Next to Nothing

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in Tom Breneman's magazine, February 1948 issue, entitled "We Live on Next to Nothing":

WE LIVE ON NEXT TO NOTHING

(Anonymous)

Twelve thousand dollars used to be a lot of money. That is the amount we saved for the years when my husband, Lewis, could no longer work, and that is the amount which took wings and simply flew away.

Meanwhile old age just snuck up on us. Like many a person whose silver hairs have begun to outnumber the gold, we woke up to find ourselves on the shady side of the years during which one can make a living, and yet needing the means of subsistence more than ever.

Lewis was successful in business back in Virginia where we built a fine home with a fireplace in every room, and we lived well, attended by servants. I was an active worker in the church, and our social life was very satisfying. Little did we dream of the bleak years which were to lie ahead.

Lewis' business took him all over this country, Canada and Mexico, and I began to travel with him. Hotels were our home, and we leased our Virginia place. However, the tenants kept demanding improvements, which finally annoyed us so that we sold the house. That was a serious mistake.

In 1926 we found ourselves in Oregon where Lewis made his headquarters in a city near the Pacific Ocean, traveling up and down the coast. We leased a furnished apartment at the Clevedon Court and, since we had no children and I had a great deal of time on my hands, I took a job in the millinery department of a large store. Sometimes I received as much as $200 or more a month while Lewis was making $300, and thus we cleared $500 a month for several years. During this time we added to our savings until we had accumulated the $12,000 I previously mentioned. We had two cars, fine clothes, ate at the best hotels and restaurants, attended the symphony concerts and many social affairs. Fortune had indeed smiled on us. But her smile was soon to turn into one of mockery.

Disaster struck suddenly. I became ill and Lewis sent me to a hospital. The doctors could not diagnose my case, and I remained in a private room, with a nurse, at $7 per day. Our savings began to melt. Lewis, who has always been a devoted husband, became greatly distressed because of my illness, for several times I almost died; and, probably as a result of my unfortunate condition, he neglected his business.

I had been in the hospital for 3 years, and my weight had dropped from 140 to 95 pounds when the next blow fell. This was the loss of his share of the business due to the dishonesty of his partner. He gave up his office in the Exchange Building and sold one of the cars.

Then the next stroke of fate descended upon us. Lewis was planning to sell the other automobile, although it nearly broke his heart to have to part with it. One day, while driving on a country road, he was forced into a ditch by a truck, and the car

was demolished. He crawled out, lucky to escape with his life. He was taken to the hospital where I was a patient, and it was discovered that he had a hip injury. Our money was so nearly gone, however, that he could not remain for a thorough examination and treatment.

Doctor and hospital bills had pyramided until our $12,000 had shrunk to almost nothing. Finally our funds were so depleted that it was necessary for me to be sent to the county hospital. Strangely enough, I began to improve after this change and, in a few months, I was discharged, weak and thin, to take up life again, but not where I had left off.

While I was in the hospital Lewis had allowed moths to get into our clothes. They destroyed, among other things, six of his tailor-made suits and my silver fox furs. I cried when I saw the latter, completely demolished except for the tails. My fur coat, miraculously, escaped.

We were confronted with the necessity of adjusting our standard of living to what could hardly be called a wheelbarrow income. Some southern friends of ours found a plain bungalow which we were able to rent for $10 a month, since the depression was then in full swing, and we purchased some cheap second-hand furniture.

We would have starved had not our old acquaintances from Virginia assisted us. Then the stark fact that we would have to go on relief stared us in the face. My husband's spirit quailed at the thought, for it seemed impossible that we, who had lived so well, should have to take that step. However, we could not continue to accept charity from our friends, who were in very modest circumstances. Although he would rather have faced a firing squad, Lewis applied for WPA employment and, with a gang of men, he was sent to work in a park near our home.

Doctor bills continued to come in, including one for $500 from the attorney for the estate of one of my physicians who had died. Of course, we could not pay them. Anyhow, it seemed $12,000 had been enough compensation for the doctors and hospitals.

The next blow of fate was the unexpected development of a sharp ache in Lewis's hip which had been injured in the automobile crash. Soon he could not bear his weight upon it. An examination at the county hospital disclosed that cartilage had formed about the socket bone of the hip, and absolutely nothing could be done to alleviate this condition which resulted from improper treatment at the time of the accident.

Soon Lewis was unable to walk, except with crutches, and, as his condition became worse, he found it necessary to lie down most of the day. So we lost the small income derived from the relief employment.

I joined a WPA sewing project and worked for 2 weeks every month at a school in the neighborhood. In my spare time I took care of children and did housework by the hour for families who lived in the fashionable district up the hill. Also, I began to sell household products from door to door. At first I could hardly carry the case of groceries and drugs, but my health improved, likely as a result of walking in the fresh air.

Finally, Lewis reached the age of 65, applied for a State old-age pension, and was granted the munificent sum of $24.75 per month. But it looked big to us then.

Ten full years of hardship ensued until I attained the age of 65 and could also secure old-age assistance. Because I lived with my husband I could not obtain as much as a person living alone, and my pension amounted to $19.45.

Then the next blow fell. The house which we had rented for so many years for $10 per month was to be sold. Our landlord had been good to us, often allowing us to wait several months about paying when $10 was too much to raise. However, his own circumstances were such that he could no longer be lenient.

In desperation, I managed to find an upper flat in an ancient, sagging building in our neighborhood which was occupied by pensioners. There were two lower flats which rented for $15 a month each and two upper flats which were $10 apiece. One of the latter, with living room, bedroom, kitchen, and bath, was available, and, as beggars cannot be choosers, we took it gladly. My husband dragged himself up the long, dark flight of stairs, and we were "at home" again.

We have been there ever since, oppressed by a tyrannical landlord who, we know, plans to evict us at the earliest possible moment. Last year our water tank began to leak, and when the rooms began to be flooded he turned it off instead of fixing it. Now when we want hot water we must heat it in a teakettle. We're not having such a hot time, I can assure you, especially when we take a bath. Like a vulture, the landlord is watchfully waiting until rent controls are removed, and where we will go then and what we will do I cannot say.

I am now 72 and Lewis is 83. Crippled as he is, it seems pitiful that he will have to move. A few months ago he had a stroke from which he has scarcely recovered, and I have high blood pressure so that I am threatened with a stroke at any time. When his stroke occurred, I rushed to assist him and fell, breaking my foot. Both of us were ill at once, and the old lady across the hall came in and helped us. I had to wear a cast on my leg, and when I was able to get out to shop I had to go up the steps at our flat one at a time, sitting down and working my way up backwards. We didn't dare to ask for medical aid from the old-age assistance office because we feared that this would lead to a reduction of our pensions. A private physician presented a bill for $75, although he knew we were on relief.

Our combined pensions now amount to $66. Our rent, which is extremely low for these times, cuts this to $55. Water is furnished, but the gas and electric bills average $5, which leaves $50 for everything else. Because we are not able to carry fuel up to our rooms we use a gas range and an oil circulating heater. The relief office allows $3 per month for fuel, which is included in our $66 pension; but a barrel of oil costs $5.50 and lasts for only two weeks in cold weather, while the price is rising all the time.

Our food costs about $40 a month, sometimes a little less, although I carry in everything from the chain stores, up the long flight of stairs. We do not take fresh milk, for it is now 20 cents a quart. Butter is something which belongs to the dear, dead days of long ago. Every other Sunday we have fresh meat, usually hamburger mixed with bread crumbs to make it go farther. We almost never use eggs. Fresh bread is also something which belongs to the past, for we purchase day-old bread and doughnuts, and sometimes, as a special treat, a day-old pie or, in very rare instances, cake.

We do not subscribe to a newspaper, which is $1 per month for the daily issue, since a dollar is such a large amount in our domestic economy. Of course a telephone is out of our world, and no amusements are possible. The radio, a small table model, is our only luxury. My husband, suffering constantly, lies on his couch, listening to it day after day.

Like condemned criminals, awaiting the day of execution, we tremble as the time for the lifting of rent controls approaches. We know that we cannot find another place to live for less than $25 or $30 a month, and pensions will not be raised to provide for this additional expense. The first day of March 1948, when it comes, will be, for us, the end.

Rent Control

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. ARNOLD. Mr. Speaker, since rent control and the housing shortage are two questions uppermost in the minds of so many people, and because they are definitely related, one to the other, under leave to extend my remarks in the RECORD I wish to include an article in the January 27 issue of the Wall Street Journal. This explains in some detail the inequalities resulting from an attempt to control rents, and the inability of Government regulations to cope with existing conditions. The article follows:

RENT AND SUPER-RENT—A ROOF NOW BRINGS A PITTANCE OR A FORTUNE; DOUBLE STANDARD GROWS—FLAT COSTS $45 MONTHLY, ITS DECONTROLLED TWIN, $135; ONE APARTMENT JUMPS 200 PERCENT—MAZE OF CONTROL, DECONTROL

Postwar America has developed a two-level rent system.

Take the case of a two-family house in a Boston suburb—typical of many. The upstairs family pays $45 a month for their rent-controlled flat; the downstairs neighbors hand over $130 a month for its uncontrolled twin.

Almost 3,000 miles away on the west coast, a decontrolled Los Angeles apartment is renting for $125 a month. Not long ago it went for only $42.50.

In Chicago, a five-room unfurnished flat in a new suburban building rents for $97 a month. Next door a bigger (six-room) unfurnished flat is frozen at $75.

Why the double standard? It harks back to the bumbling maze of rent controls, decontrols and uncontrols hacked out in Washington since the war.

Most urban rents throughout the Nation are still frozen by Federal law at rock-bottom levels compared with other rocketing cost-of-living prices like butter and beef. (While food costs in the Government's consumer price index have climbed 116 percent from prewar, rents are up only 10 percent). But some rents have managed to shake loose, and they are headed skyward, all the higher because the bulk of rents are so strictly controlled.

SOME FROZEN, SOME NOT

The causes are various, new dwellings, those put up or converted since February 1947, are exempt from Federal rent control. Witness the Californian who's turning his two-flat house, which rented at a ceiling of $40 each, into four apartments that will bring $70 apiece. Or the brand new Pittsburgh apartments going at $150 to $160 a month while similar five-room units within hollering distance are frozen at $60 to $75.

Uncontrolled, too, are old quarters which hadn't been rented for 2 years before February 1947. That brings on many a strange case of two-level rent. Like the San Francisco landlord who lived downstairs in a two-flat dwelling and charged his upstairs tenant the $55-a-month ceiling. The tenant moved out—but then bought the place. He moved back into his $55 upstairs quarters and now rents out the downstairs, identical with his own flat, for $150. It's all legal: The lower flat has no ceiling since it was never before rented.

One Cleveland concern hunting homes for its personnel was offered one at the edge of fashionable Shaker Heights for $125 a month. Across the street a similar place is renting at a ceiling of $45 a month. The owner of the first house had been living there himself. Now that he's moved out, he can charge whatever the traffic will bear.

In San Francisco's Sunset District a man rented his five-room unfurnished house last year for $90 a month. OPA made him cut back to $45 a month. When the new rent-control law went into effect June 30, his house was decontrolled because he hadn't rented it before the February 1 deadline. So he hiked the rent to $125. Houses right around it are still frozen under ceilings from $35 to $45.

Biggest headache, says a west coast rent director, are the 15-percent-hike leases that tenants and landlords are allowed to negotiate. If a lease is broken and the tenant moves out, the place is automatically—and conveniently—decontrolled. The landlord can legitimately charge the next tenant as much as he'll pay. "We've heard of cases where landlords paid tenants to move out to decontrol the units," he reports.

Adding a few extra pieces to a furnished apartment can be a dodge for lifting rents. The law lets landlords hike rents if they provide increased services of major improvements.

In Watertown, Mass., an apartment that used to rent for $50 a month has been boosted to $125 since the owner remodeled it at a cost of $400.

One Pittsburgh landlord has a six-room house which he rented for $45 a month. When the family moved out, he remodeled it into two units by installing a sink in a second-floor room and rented the flats at a neat $55 each. The local rent-control office has slashed the fee to $27 each, but the landlord is appealing to the regional office.

Where rents have mounted when controls came off, landlords blame drastically higher costs. They tab them off on their fingers: High taxes, higher costs of repairs, fuel boosts, bigger checks to janitors. Boston landlords say repairs cost two and a half times what they used to.

To make ends meet, one Portland, Oreg., landlord, whose apartments are frozen at $40 a month, has fired his janitor and now handles his own eight-unit building. His job includes sweeping out and collecting garbage. Despite this, he claims, his profits last year were a niggardly $400.

One Chicago real-estate dealer who remodeled six rooms into two modern apartments claims he won't get his money out of the $6,880 remodeling job for over 8 years—even though he has lawfully hiked the rent from $18 a month to $60 for one apartment and $75 for the other.

BEATING THE CEILING

Meantime, doughty landlords and desperate tenants have dreamed up a host of gimmicks of most dubious legality for beating the rent ceilings still stamped on most dwellings. A Wall Street Journal survey of 11 big cities across the Nation has turned up dozens of trite gags, a few ingenious ones.

One San Franciscan sold a tenant the kitchen sink for $150, stipulating in writing that it was to stay behind when he moved. Another landlord sold a key to his place for $400 over and above the rent.

A New Yorker who has a wife and 3-month-old baby pays $15.50 a week for a $15 room (bath down the hall). The extra 50 cents is for legal fees. When the landlord's appeal for higher rent was turned down, he hired a lawyer to push the case. The tenants are paying the fees.

One west coast couple insist they're running a child-care home. They take only tenants with children and charge them $55 a month extra for minding the youngsters. But the landlord's wife stays safely away and the tenants are left to tend their own offspring.

The Boston rent control office has hauled one landlord into court for allegedly making his tenants buy linoleum for their apartments, as well as refrigerators and other accessories he promised to provide. To top it off, if the tenants asked permission to do any wall papering themselves, the landlord insisted his contractor do the job. He got a kick-back from the contractor.

MORE RENT JUGGLING

An ex-GI autoworker in Detroit rented a 5-room flat over a beer garden with a ceiling of $30 a month. To get the place he paid a year's rent in advance—at $52 a month—paid $500 for some furniture in the place and promised to pay $200 of fixing up. His first year's rent: $1,324, almost four times the ceiling.

Judge Harry S. McDevitt, presiding judge of the common pleas court and chairman of Philadelphia's housing rent commission, reports a new rent racket in the city of brotherly love.

It works this way: A landlord, after refusing for several months to accept rent money sent by registered mail, employs a conniving constable to serve an eviction notice. When the case comes before a magistrate, the landlord accepts the "overdue" rent but insists the tenant pay the constable fees—anywhere from $40 to $50. The constable splits the fee with the landlord.

Other cities report rent deals ranging from having the tenant redecorate the apartment to cooking the landlord's meals or tending his furnace or baby. Veterans in New York City claim some landlords are asking a new car at ceiling price in trade for an apartment.

Often the tenant makes the advances. Apartment hunters advertising in Chicago papers make no secret of the fact they're willing to break the law to get a place. Most common come-on is: "Will meet your terms," but would-be tenants also plead in print: "Will buy furniture," "Will decorate," "Rent no object," and "Help me, I can help you" (from a carpet executive).

FEW TENANTS KICK

Most tenants don't kick—whether they suggested the arrangement or not. Take the most familiar rent-beating gadget, the bonus payment. As a spokesman for one veterans' group in New York City says, "There are hundreds of examples. All I have to do is ask somebody." But few ever get reported. The rent-control office covering the entire Pittsburgh area, for instance, reports one bonus case in the courts.

One Philadelphia real-estate operator says one of every three landlords in that city is a "Simon Legree." He's backed up by Judge McDevitt's estimate that a third of the city's dwelling owners are "chiseling on rents." Rent-control men in Boston estimate that 23 percent of the rents in greater Boston are illegal.

Black-market rates vary. Pittsburghers report that "it's usually some negotiated figure." A United Auto Workers spokesman says the going under-the-counter rate for three- to four-room apartments in Detroit is an average $65 to $70, compared with a $45 ceiling. Philadelphia reports an average apartment rental rate of about $70 but, as one broker put it: "You might get on the waiting list if you hint you'll pay $100; at $125 you would be placed." Rent controllers in Cleveland say rooming-house overcharges usually run $2 to $3 a week over the ceiling, but some have been known to go as high as $60 a month over the limit.

Nation Must Look to Northwest's Hydro Plants To Supply Power and Heat

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ivan Bloch:

NATION MUST LOOK TO NORTHWEST'S HYDRO PLANTS TO SUPPLY POWER AND HEAT

(By Ivan Bloch, industrial consultant, formerly chief, Industrial and Resources Development Division, Bonneville Power Administration.)

To the average Pacific Northwest citizen, the talk of power and fuel shortages seems unreal. "Why," says John Jones, "I flip the switch and get all the lights I want, and Mary doesn't worry about using the electric range. What's this all about?" And although most home owners don't have too much trouble getting fuel oil for the furnace, actually there are a large number who have reason for concern.

Sawdust is pretty hard to get in some communities. Slabwood no longer walls Portland sidewalks. And prices of all kinds of fuel, like everything else, are getting higher.

Energy shortages are pinching industry hard. Many industrial plant operators are scouring sawmills for waste and hogged wood fuel, bombarding the oil companies with requests for more oil. Many of them cannot operate their plants at full capacity because of lack of electric power.

In Portland the Oregon Steel Rolling Mills is reported to be running its two steel-melting furnaces only part of the time. The Puget Sound Power and Light Co. has requested its industrial customers to curtail their use of electricity during evening peak hours. There is serious doubt that the fifth and sixth potlines at the Alcoa Vancouver and the Permanente Metals Spokane aluminum reduction plants, respectively, can be serviced with the 35,000 kilowatts each will require.

The Reynolds Metals Co., Longview aluminum plant, closed down temporarily for rehabilitation in May 1947, must remain idle until next spring because power cannot be supplied to it.

Plans for aluminum wire, rod, and foil production announced by both Alcoa and Kaiser are clouded with uncertainty because of short power supplies. Several industrial concerns considering the establishment of phosphorus and fertilizer plants in southern Idaho and Montana are stymied for lack of assured low-cost power supplies. About 200,000 kilowatts of new industrial capacity for the Northwest, which would mean the employment of as many as 10,000 workers, are similarly held back until word is given that adequate electric power will be available in the near future. Sawmills that had hoped to electrify cannot do so; pulp and paper plants must continue to burn fuel oil; home builders are being specifically discouraged by electric utilities from installing electric house heating.

The power situation is so tight that every fuel-burning generating plant in the region is "on the line," consuming thousands of barrels of oil. Voltages frequently have dropped because of the great burdens upon power systems. The engineers of the great Northwest power pool spend uneasy evening

hours, watching the needles of their demand meters quiver ever higher to the limits of the power capabilities of the system. Only by the most careful use of power and the close scheduling of the region's existing power generating plants can disruption of the power system be prevented.

The power shortage is here, and is likely to get worse before it gets better. On oil, President Collier, of Standard Oil of California, on his December 3 visit to Portland, was quoted as saying: "As far as 1948 is concerned, we have sufficient fuel supplies—we feel we have—for the year." He did not seem to say much about succeeding years. Wood is not as easy to get as it once was and is much more expensive. Coal? Sure, if you can pay the price for Rocky Mountain coal, and provided your furnace can take it.

No one is really worried about keeping the region's homes reasonably warm and well lighted. But unless energetic steps are taken, there is reason to be pessimistic about the long-run situation.

Everywhere in the United States power plants are strained to get their generating limits, with little or no reserve capacity for emergencies. There is much talk about voluntary rationing of oil and gas. Coal production for domestic uses and for foreign aid is outstripping war levels with not too comfortable margin between production and consumption; stocks on hand are low.

Nationally, and to a large measure, regionally, this shortage of energy is due to the enormous expansion of energy consumption far beyond war peaks in the homes and factories of the United States, and shortages of production equipment such as turbogenerators, waterwheels and generators, refineries, tank cars, transformers, and the like. The sudden release of pent-up consumer demands for modern electrical equipment and modern heating devices, as well as industry's increased energy consumption for more production, have catapulted total energy requirements upward far ahead of the capabilities of the energy equipment manufacturing plants of the Nation.

The Pacific Northwest situation, although it finds close national counterpart, has unique aspects. In many respects, it could become the most critical shortage spot of the Nation. With the exception of its hydroelectric potential—well over 40 percent of the national total—it is an energy-poor region. Its coal reserves, although large and potentially important, have made slight contributions to the Northwest's total energy consumption. The region imports all of its petroleum and has never developed important and sustained sources of natural gas. On the other hand, it has been a very heavy consumer of wood for the heating of its homes and the operations of many of its industries.

Somewhat traditional patterns of use are exemplified in the following table. This table, prepared by Roscoe A. Day, of the Bonneville Power Administration, shows the percentage distribution of various forms of energy in the region, as compared with the United States.

Sources of energy consumed in the United States and the Pacific Northwest for 1944

Energy source	United States	Pacific Northwest
	Percent	*Percent*
Oil and gas	42	44
Coal	54	10
Wood	(1)	16
Water power	4	30
Total	100	100

[1] Negligible.

It is evident from these percentages that the Pacific Northwest differs from the rest of the Nation in that it is a much greater consumer of hydro and wood, and a much smaller consumer of coal. However, this picture is changing. Wood, as a primary source of energy, is beginning to slip in importance. The deficiency caused by its tight supply and rising prices is being taken up by oil and hydro. Coal is stationary in its contribution. What is happening to these various sources of energy in the Northwest? We must remember that as the region continues its population growth its consumption of energy will increase in proportion.

Wood as a source of energy supply for Pacific Northwest homes and industry cannot be expected to bear its past share. The lumber industry is increasing its full use of each tree. Less waste is sold as fuel—more of the tree is manufactured into lumber and pulp. The depletion of easily accessible stands of timber is forcing loggers and sawmill operators further and further away from our large cities, making it more expensive to transport waste wood to markets in Portland and Seattle and other communities. Moreover, waste wood is becoming far too valuable for new uses, such as for plastics and chemicals.

The petroleum situation in the region reflects the national problem. The petroleum needs of the Northwest must be met by imports. However, inasmuch as California oil fields are no longer bountiful, foreign oil will be required. The rumors of pipe lines from Rocky Mountain fields are discounted by oil industry officials. Although effort must continue for local exploration of oil and natural gas, there are no prospects of major discoveries and sustained major production in the region.

In the meantime, the price structure of oil is rising and there are no facts to anticipate a reversal of trends. The future role of petroleum as a principal source of energy in the Northwest is cloaked with some uncertainty as to expanding supply. It is definitely under the restraining shadow of increasing prices per unit.

If the sources of about 60 percent of the region's past energy consumption have a downward trend, what can local coal and local hydroelectric power do toward meeting the rising energy demands? What about natural gas from the Alberta, Canada, fields?

The history of coal utilization—coal found in the Puget Sound area, in western central Washington and in some coastal areas of Oregon—is a history of the impact of competition from petroleum products. The discovery of petroleum in California was a blow to a reasonably flourishing coal industry of the Northwest. Recurrent attempts to build up this industry have been made by businessmen, but even those have been faced with a "lost art," a somewhat disdainful market, and heavy competition from higher grade coal mined in Utah. The pressures which are now at work offer opportunity for a revival of coal production in the Pacific Northwest, but not without effort.

The reserves of coal of the Northwest are great. Washington, with the greatest percentage of the total, probably has 63,000,000 tons. Oregon's deposits, although considerably smaller, are not unimportant in terms of local consumption. However, major technical and economic problems in the large-scale utilization of this coal dim the immediate possibility of their taking up much of the lost ground.

However, by the development of suitable processes, a more aggressive attitude on the part of producers and merchandisers, and a rising consumer acceptance, the potentials of Northwest coal reserves should not be ruled out. There are undoubted opportunities in the application of advanced techniques which provide acceptable types of smokeless or almost smokeless fuel. This would require the investment of several million dollars for treatment plants and the expenditure of large sums for market development. Similarly, there are as yet unrevealed potentials in the underground gasification of certain local deposits. This involves the controlled burning of underground coal seams, with recovery of gas and tarry substances.

These potentials have barely been explored.

The conclusion on coal is that it will not provide the major assistance required to meet the energy requirements of the region.

Recent news accounts of a proposed pipe line from the gas fields in Alberta, Canada, raise some hopes. If it becomes possible to bring in 200,000,000 cubic feet of natural gas to the Pacific Northwest, and if the price of the gas is low, the results will be most stimulating. Any region which can offer cheap hydroelectric power, pure water in large quantities, and cheap natural gas has an unbeatable combination for industrial development.

Although hydroelectric power doesn't provide all the answers, assuredly it is the brightest potential spot in the energy picture. Only 1,500,000 kilowatts have been developed so far on the Columbia River, with its potential fifteen to twenty million kilowatts. There is room for expansion. But will it come into production fast enough? Can this potential be brought over the regional power network soon enough to service all the new population and the new industries? What are the prospects for new power plants to nip the current power shortages?

That the region needs more and more hydroelectric capacity was recognized early in 1947 by both private and public utilities at a meeting in Tacoma. It was the judgment of these utilities that an additional 2,628,000 kilowatts of Federal generating facilities be added by 1953 to the region's present production capacity of about 3,500,000 kilowatts. This amount of additional power capacity is almost twice the present installations at Bonneville and Grand Coulee dams. Furthermore, recent studies made by the Department of the Interior indicate a need for at least 8,000,000 kilowatts of Federal capacity by 1960.

These astronomical figures cannot be discounted as mere phantasy or the wishes of an ambitious region. To be sure, the 600,000 or more new people estimated to swell the Northwest's population by 1960 will add to the regional consumption. Actually, these tremendous reserves of hydro are needed nationally to supply electro-process industries.

The location of an entirely new segment of industry in the Pacific Northwest has not been without reason. Industries for the production of aluminum, ferro-alloys, and numerous chemicals require electricity in huge quantities as a raw material. These industries have been growing rapidly, and their power requirements correspondingly so. From 1939 through 1943, the total yearly power requirements of national manufactures doubled. For the same period of time, major electro-process industries quadrupled their annual power consumption. The trend is continuing upward at an accelerated rate because our industrial economy demands increasing amounts of the high-purity products of the electric furnace and the electrolytic cell.

In addition, shortages of iron and steel, partially reflecting growing depletion of high-purity iron ores, are creating heavy demands for light metals—only capable of production by electrical methods. Small wonder that the engineers of prominent industrial firms are combing the United States for large quantities of steady power at low costs. And they must eventually look to the Pacific Northwest, because there is no other section which can ultimately supply their specialized needs. Because of this, advance estimates indicate a possible ninefold expansion of potential electro-process industry power requirements in the Pacific Northwest by 1956.

Although the future for Northwest hydro is replete with potential kilowatts, the immediate outlook is one of continued tightness in supply. Not much before all Grand Coulee generators have been installed and McNary Dam comes into substantial production will the region's capacity to produce begin to match its capacity to consume. Last year it was hoped that 1952 would mark the time when a shift from deficit to sufficiency might occur. However, delays in construction due to insufficient congressional appropriations have pushed the date of plentiful power into the future.

The same applies to Hungry Horse, Hells Canyon, Albeni Falls, and many other dams.

Fuel Oil Conservation by Federal Government

REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. HESELTON. Mr. Speaker, yesterday I obtained unanimous consent to extend my remarks in the Appendix of the RECORD to include therein a letter from Hon. John R. Steelman to myself and a copy of the letter from Maj. Gen. Philip D. Fleming to Mr. Steelman. Unfortunately, I mislaid that correspondence, but have obtained copies today and am including them for the particular use of the entire New England delegation in the House, although the steps being taken will undoubtedly be of interest to other Members of Congress representing areas now seriously affected by the fuel oil shortage.

JANUARY 29, 1948.

Hon. JOHN W. HESELTON,
House of Representatives,
Washington, D. C.

MY DEAR MR. HESELTON: This is in further reference to our past correspondence regarding the possible conversion from oil to coal in Government buildings.

Enclosed herewith is a copy of the report of January 27, 1948, on this subject from General Fleming, Federal Works Administrator.

It would appear from this report that there are some Government buildings in which conversion from oil to coal could be made at an early date and with relatively small expense; and General Fleming has been asked to arrange with the several departments and agencies concerned for corrective action in this respect where such action is feasible and will produce results during the present heating season.

As you doubtless know, the President's order of January 17, 1948, for conservation of fuel oil, gasoline, and gas (copy attached) contains the following paragraph with respect to future installations of fuel oil or gas-burning equipment:

"4. No equipment shall be installed for burning fuel oil or gas or liquefied petroleum gas, and no permanent building or establishment shall be converted to these fuels, without the prior approval of the Bureau of Mines, except where firm commitments for such installations or conversions have already been made."

Sincerely,

JOHN R. STEELMAN.

FEDERAL WORKS AGENCY,
Washington, January 27, 1948.

Hon. JOHN R. STEELMAN,
Assistant to the President,
The White House.

MY DEAR MR. STEELMAN: Further references is made to your letter of December 19 requesting that an investigation be made as to the practicability of converting Government buildings from the use of oil to the use of coal. As you were advised, a meeting was held in this office on December 30 and those present were requested to have final data in our hands by January 2 on which to base a complete report to you.

We have now received a mass of information from the majority of those who were present at the meeting, included in which are figures to show the buildings which cannot be changed over for various reasons, as well as those which are susceptible of being changed and under what conditions. Briefly the information developed consists of the following:

1. Before the date of our meeting, some of the agencies had already issued to their field offices instructions to suspend any further conversions from coal to oil.

2. The Justice Department reported the partial conversion of one plant using 400,000 gallons of fuel oil per year to the use of coal; Public Health Service reported the recent conversion of one small plant burning 15,000 gallons of oil per year to the use of other fuel; and Public Buildings Administration reported the partial cancellation of a contract which had been entered into for converting a building to the use of oil. The contract had been partially completed and would have produced a plant which would burn 370,000 gallons per year.

3. The agencies reporting that conversion from oil to coal is practicable stated that to accomplish this would require the expenditure of a substantial sum, which funds had not been included in the budget estimates and that it would therefore be necessary for them to obtain the additional funds before proceeding with the work. They also reported that the oil-burning plants that are now in operation are in many cases automatically controlled. If converted to the use of coal, it would be necessary to employ firemen to operate them, requiring the necessity of additional funds. I am enclosing two of the reports that were received as samples so that you may see the care that was exercised by the agencies in gathering the desired information. It will be noted that the Department of Agriculture report shows a possible saving of 888,690 gallons of oil per year but that the cost of making the necessary changes would amount to $129,539 and that there would be an increase in operating costs of $70,065 per year. An analysis of the report of the Public Buildings Administration shows that it is considered practicable to convert 35 of the buildings but that this work would cost $414,220. This figure does not include the cost of any additional employees who might be required as firemen.

4. Apparently the situation existing in the Navy Department, which was reported in our letter of January 16, is the only one reflecting a major saving at this time. They can immediately begin the use of coal in certain of their plants previously operated by oil and thereby save at the rate of 1,420,000 barrels of oil per year.

Since the Executive order calling for conservation of fuel oil was issued January 17, 1948, which covers all phases of conservation and also regulates the installation of additional oil-burning equipment, it is doubtful if much more can be done in the interest of saving oil at the present time. It would seem that since the agencies are now acquainted with the existing situation and know that the prospects for the next few years are but little brighter, they will cooperate in every way possible, including the conversion of equipment where practicable, in order to ease the effects of the present fuel-oil shortage.

Sincerely yours,

PHILIP B. FLEMING,
Major General, United States Army,
Administrator.

The American Marine Engineer Says: "Oleomargarine Taxes Should Be Repealed"

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the American Marine Engineer magazine for January 1948:

American families for many years have been paying a scandalous tribute to the dairy lobby through the tax on oleomargarine.

Regardless of efforts made in the States and the Federal legislature, the dairy lobby is still in control of the situation. Here's how it shapes up:

You have to pay a hidden tax on every pound of uncolored margarine of one-fourth of a cent.

You have to pay a tax of 10 cents per pound to get margarine already colored.

Your grocer has to pay $6 a year to sell uncolored margarine and $48 a year to sell colored margarine.

The wholesaler pays $200 a year to sell uncolored margarine but $480 a year to sell colored margarine and the manufacturer must pay a stiff tax of some $600 on the manufacture of margarine.

There are variations, but these general impositions indicate the situation with regard to the discrimination against margarine. In addition to the financial restrictions in the form of taxes, many State have laws which prevent public institutions such as schools or hospitals from using butter substitutes. With butter around the dollar a pound mark, some institutions are hard pressed to include any butter at all on the menu.

If there were ever any health reasons for condemning oleo, they have disappeared and the only remaining argument against margarine has disappeared. Noting the rise in prices on foods, the American Public Health Association, in a resolution said: "The American Public Health Association condemns specific taxes on oleomargarine and respectfully petitions the Congress and the various State legislatures to repeal these taxes."

Rent Control and Housing

EXTENSION OF REMARKS

OF

HON. HAROLD F. YOUNGBLOOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. YOUNGBLOOD. Mr. Speaker, under leave to extend my remarks in

the RECORD, I include the following statement:

RENT ADVISORY BOARD HEARING ON DECONTROL
DECEMBER 29, 1947

The purpose of the hearing is to get some facts and suggestions concerning the problem of rent control and housing.

It is apparent to all that the rental housing situation is continually getting worse. Rent control and present practices are not providing any relief for those who seek rental accommodations. Those who are frozen into rental housing have a special preference, so long as they are subsidized by their landlords, but those who are forced to vacate and join the other rental demands find no relief under the present system.

The situation may be put this way: Rent control issued special ration cards to tenants in possession, in complete disregard of value, freedom of contract, and mutual harmony. As to mass housing, such as apartment houses, large volume of rentals, the situation is one merely dealing with tradespeople, but in many cases of small rentals, two flats and houses, we have a relation of constant personal dealing and where each feels the restraints and regulations we have a situation that brings about hostile and conflicting relations detrimental to the welfare of all concerned.

Those with ration cards for the preferred rentals are given a benefit that others cannot secure. They have from the rent director a special privilege contrary to all our plan of equal and fair treatment. And let it be recognized that those holding these ration cards or privileged positions are in many instances not the workingman, the widow and children that proponents of rent control drag out to play upon our sentiments, but in the majority of instances are tenants who have very substantial incomes, generally in excess of the income of their landlord. State Representative Paul Arnold, cited the example of a business executive, with a substantial income, holding a ration card on a 6-room brick dwelling, built in 1943, at monthly rental of $50 while a returning veteran, rent fixed by OPA and FHA regulations, for a lesser dwelling had to pay $70 a month. Currently, with rental control applying to old tenants and new buildings decontrolled, there are many instances of high-income individuals holding these privileges because of rent freeze, while the widows and children, and almost all veterans must bid for the new homes and pay the high rent that can be secured because there are so few of such places on the rental market and the demand for them is so great. The proofs present a situation where rent control is making the situation bad for the widows and orphans and the veterans, and so long as rent control continues the situation will be made even worse; and if we are going to sob for these people we must sob because rent control mistreats them.

Senator Arthur E. Wood presented the proof that many eviction cases are brought by those who have had to buy housing accommodations, because they hold no ration card for accommodations at the frozen level or at any level. They have been compelled to buy, at current prices—I do not think that the charge, generally made as to excessive price is justified. The prices paid for new and old houses is very little if any out of line with the general economy. Cost of living is said to be about 66 percent to 70 percent up from 1940. This cost of living has the unreasonably low item of rent, which is said to be up only about 10 percent. As rent is generally 25 percent of the cost of living, we could see that the cost of living, if rent had been allowed to follow the general trend, would be up some 90 percent and upward. General cost of housing accommodations is not very generally up 90 percent from the 1940 prices. In addition these factors should be considered—that it has cost much more to build new homes because of excessive delays, material shortages, black-market prices, labor troubles, and increase in costs of material and labor. Recent estimates published in the CONGRESSIONAL RECORD give lumber costs as nearly three times that of 1940. I do not think we gain anything by damning the sellers of housing accommodations. They are only part of the general economy and when they sell in turn must buy or rent on the high market. The real issue is in the short rental market that is created by the buying of homes.

As Mr. Wood indicated, the buyers want the accommodations for their own use because they cannot rent—they have no ration card, or as they are doing, someone took their ration card by purchasing their accommodations. If we consider that prior to rent control, some 75 percent of our population were tenants, we will see the squeeze rent control is putting on tenants. Now, less than 50 percent of housing accommodations are available for renting, 75 percent trying to use 50 percent of the accommodations. Every time a tenant must purchase, generally at considerable difficulty to himself and contrary to his wish, if it is an old accommodation, a tenant must be removed, his ration card taken from him and he cannot get another. As the accommodations become less and less for rental because more become owners, the 75 percent wishing to rent find their lot worse and worse. The answer is not in the fact that it is desirable to have a greater percentage of home owners for we are dealing with problems of providing accommodations not for those who wish to buy but for those who either cannot buy or do not wish to buy, it is the rental housing that is in short supply—there is no shortage of housing for sale. The tenants demanding rent control are not the ones out of possession, but the ones who hold the privileged ration cards—they have secured in illigimate advantage and they want to hold it—tenants out of possession, no matter how deserving or how much in distress, cannot get housing on the same terms. There is no housing available and the proofs are convincing that none was added under rent control and practically none is being added now, though new housing is exempted from control, with the continued agitation, emphasized by Walter Reuther for more stringent control that will include new and decontrolled accommodations, builders are not encouraged to provide rental accommodations.

It should be noted that all advocates of rent control carefully avoided meeting the issue as to whether any substantial new rental units were being provided. They are not concerned about out-of-home or needy people or with justice and welfare in the community, but with their own selfish advantage which has been secured at the expense of others, including many suffering tenants and would-be tenants. All studies cover lean and prosperous periods and consider both the tenant and the landlord and what each should have in return under the existing economy. Now we have thrown out the window all the lessons of past experience and have fixed rentals at an isolated, arbitrary, and oppressive standard, no matter what the tenant income, no matter what the cost of operation, no matter what the other economy does, rents must have no relation to anything else. Then those who have the privileges, the unconscionable advantage, cry to high heaven that there is not enough of rental accommodations, but offer no cure for the problem except the medicine that has made and is making the patient sicker. When asked whether any substantial new housing is provided to meet the rental demand, they shrug it off and say it is not what concerns them, they want rent control that is protecting their privileges, not a remedy for others. They care not what relation rents bear to income, cost of operation, taxes, or rising prices.

The fact is conclusively established that housing for rental was not produced under rent control to keep pace with the demand, practically none. The fact is further established that with rent conrol off new construction, there has been no sufficient housing added to relieve the rental demand, in fact a worse situation continues to develop because rental housing is being taken off the market, both by withholding accommodations from the rental market and offering same for sale and by purchasers taking homes off the rental market. Congressman RALPH A. GAMBLE, chairman of Joint Congressional Committee on Housing, in a statement to New York real estate audience disclosed that more new homes were started this year than in any prior year of our history. Taking off rent control has been instrumental in some degree, but the threat of new controls and the control of old housing has restrained construction for rental. While some 900,000 units are being constructed for 1947, only about 10 percent are for rental, and these are practically all in apartment units. It should be noted that only after rent control was removed from new units that there was any appreciable construction of units for rental, only about 3 percent of construction was for rental prior to July 1947, including construction in areas not under control.

We could not get anyone to give us the ratio of construction for rental as against for sale in Detroit. I think all those advocating control were careful to avoid this issue, for it would show that the result in Detroit is worse than Congressman GAMBLE presents for the whole country. Everywhere we see hundreds of vacant homes for sale, but none for rent. My experience shows that houses are permitted to stand vacant for months so that immediate possession can be given to the buyer. Mr. John Scoville stated that there are currently 30 inches of newspaper ads of houses for sale as against 1 inch for rent. Normally the ratio is in favor of for rent. It should be noted that many for sale ads offer immediate possession.

The situation in Detroit can be appraised somewhat by reference to statistics on housing and population increases in Detroit. Bureau of Government Statistics in September 1947 stated that the basic fact is that 1940 to 1947 more housing was added than population. Population increased 18 percent and housing increased 24 percent. The importance of such decimal change can be shown by the fact that with the same occupancy ratio as in 1940, we would today have a surplus of 50,000 dwelling units. The fact that there is no actual housing shortage poses the question why there is the shortage for rental or why any rent control should be continued. It is obvious that scarcity of housing is not the problem, but that hoarding of housing or withholding from the rental market, is the cause of the housing distress. As Mr. Scoville aptly stated, if some law controlling prices of ham, fixed the price at 10 cents a pound there would be an excessive demand for ham at 10 cents and if ham could not be produced at 10 cents there would be a scarcity, and because of the low price everyone would be trying to get it, and if any was produced many would pay black-market prices and keep it off the legitimate market.

So it is with rent. What supply of rental units is available is hoarded or held by those who have been able to get the ration cards—new units for rental cannot be produced at the low ceiling and are not produced. In normal economy, with 18 percent population increase—more than 70 percent of the increase would be in the tenant class—in a normal economy 70 percent of the added housing would have been for rental. Rent control has disupted normal economy, so that instead of 70 percent of the 24 percent increase in dwelling units, probably less than 1 percent was available for rental, so that practically no new rental housing was added

to take care of the 70 percent of the 18 percent increase in population. Rent control therefore does not, has not, and never will relieve the housing distress, until we have a depression, when it will not be needed to keep down rents. There is no housing shortage, but a housing distress for those who prefer to rent or who cannot afford to buy.

The evidence is conclusive that rent control will not bring relief and that is making the distress of tenants greater. The fact we may have a healthier society by reason of a greater number becoming owners of their homes, or the fact that buyers of homes are taken off the rental demand, does not offer any relief for the problem advocates of rent control say they want to relieve. One must be either blind or allow his prejudices to warp his judgment (we do not believe they are stupid) to contend that continuing rent control will produce any relief to the tenants and would-be tenants who cannot find accommodations. Those who say control must be continued until the distress—and it must not be called housing shortage for the figures are conclusive proof there is not a housing shortage in terms of normal use—is relieved must know that such control would have to be continued forever unless there is a serious depression.

And this must be added. Every industry must be able to build up a reserve. Dun's Review for December, gives us the fact that substantially 20 percent is required to provide for the needed for what is called capital formation, 20 percent of each dollar of goods and service produced. Rent income can be rated as service produced, and of that the normal 20 percent is required to maintain a normal relation in producing new units and providing for expanding demands. Under rent ceilings, where rental income is frozen at a low level of economy—normal growth cannot be had, for all other items of economy have taken a higher level, at least in dollar and cents figuring. We can see that rent control must of necessity operate to increase the distress and can never operate to bring about the relief that advocates of rental-control demand before ending it. The goal they say we must reach is forever getting more and more distant, for there is a constant increase in the ratio of units demanded to the units made available. Today there are less units available for rent than there were in 1940 or any time since. In addition, those providing rental units have not been able to build up a reserve to carry them over the inevitable lean period. Our industry would soon collapse if it did not have provision for reserve.

Much has been said about rent income and that because of full occupancy. Generally, a false assumption is taken. The costs of supervision, expenses of conflicts, ultimate excessive repairs, and often litigation are not included in computing net. The terrible conditions of battle-array relations cannot be compensated by any fuller occupancy, and many owners would gladly have more vacancy than put up with the abuse from tenants. But taking the figures at the best for the claim of great occupancy, without allowing any deductions, there is still only a showing of a possible 10 to 15 percent increase in dollars income, with those who have secured a 15-percent increase in rates, at best there is about 30 percent increase in dollars. But in purchasing power there is a shrinkage of approximately 70 percent, so that the income, giving it the best face advocates of rent control present, the income is still approximately 40 percent under the correct economy and 40 percent less than the average income in comparison. The proof is conclusive that those who insist that rent income has not suffered deliberately close their eyes to the fact they see in relation to their own costs and, while they loudly cry their dollars have lost purchasing power, try to rate the rent dollar at the old level. Certain advocates of rent control are at least intellectually dishonest, if not intentionally trying to deceive and present false comparisons.

There is this other phase. Do we believe in our Constitution and in the Declaration of Independence? We are hypocrites if we say we do and accept rent control in peacetime. There is nothing in the Constitution that authorizes such controls. None of us have the right to speak weasel words in paying respect to the Declaration of Independence and the Constitution, and we are using them if we advocate rent control in peacetime.

The proofs are as conclusive as proofs can be made, that rent control is definitely wrong in principle and contrary to all our ideals: That rent control is not, never will with ceilings, produce rental housing to relieve the housing distress of the tenant segment of our population; that rent control is oppressive and unfair to both landlord and such part of the tenant segment as is not given special privileges or ration cards that are not available to others; that unfriendly and unhealthy social relations are created by the operation of the rent control and unnecessary conflicts and welfare is maintained between people who might otherwise be friendly and cooperative; that so long as rent control continues the distress of those seeking rental accommodations will continue to increase and that the greatest sufferers will be the widows and orphans and the low-income segment of tenant population; that under rent control those seeking housing must purchase and in purchasing must evict tenants in possession and these in turn are compelled to purchase in turn evict others, and that this creates conflicts and is detrimental to the peaceful and harmonious relations we should have.

GREATER DETROIT PROPERTY OWNERS, INC.,
EDWARD B. BENSCOE, *President*.
DETROIT, MICH.

The Viewpoint of a Thoughtful Citizen

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. MILLER of Connecticut. Mr. Speaker, every once in a while there comes to my desk a letter which is so thoughtful and so indicative of the thinking of the people that I feel it should be in the RECORD. The letter which I am putting in the RECORD at this time outlines 11 points, with most of which it is hard to disagree. I hope many of my colleagues will take the time to read it.

JANUARY 25, 1948.

Congressman WILLIAM MILLER,
Connecticut District, Washington, D. C.

DEAR MR. MILLER: For quite some time I have been intending to write to you to say that we back home are well pleased with the way you are progressing in your work. No doubt, your task is tremendous, the hours long, and your work very hard. I guess many people do not realize what a Member of Congress goes through in these trying times. I for one wish you the best and somehow in the final analysis things will brighten up.

Here it is Sunday afternoon at home and I have just finished reading the newspapers which are all featuring our worldly troubles such as compulsory military training, taxes, the Marshall plan, Russian aggression, and so forth. Over the radio we hear the same sort of goings on. This commentator is in favor of one thing, another analyst has the opposite view.

After we hear and read all about our various troubles for 7 days a week, month in and month out and we see no faint ray of this chaos becoming unraveled only getting worse and worse, the multitude of the people are now so confused, so bewildered and uncertain that their confidence in good government has been greatly shaken.

No doubt, Mr. MILLER, you and other Members of Congress are better aware of these uncertainties than we back home. We hear of congressional investigations on this and that. Our State Department suddenly releases a secret Russian-German treaty pact. Only this afternoon Bill Cunningham, news commentator from Boston, said that early in April 1945, Stalin sent a note to former President Roosevelt saying that he, Stalin, would not adhere to Yalta and Potsdam agreements. It is definitely not fair to we the people to have to wait nearly 3 years for this secret stuff to come out. So long as it concerns the people, we demand that this secret stuff be made known Nation-wide immediately.

Multiply these few above-mentioned troubles by any additional number and we have a rough idea of what a mess we are in. So far nothing concrete and emphatic in the way of even a partial cure has been offered. The people are getting awfully tired, confused, and disgusted with all this talk, meetings, United Nations this and that, so many billions for this and so many billions for that. How long can people stand up under this sort of bombardment? I'm afraid not too long.

All this has no reflection on you personally, Mr. MILLER. It is simply brought out to convey the feeling of the people. They feel lost, sort of empty, with no real leader to look up to. Too much confusion and the future looks awfully dark.

Applying ordinary horse sense to this huge problem, it should go something like this. Let's take all the fancy double talk out of this thing and get down to a plan which is constructive or a plan of action. Make it a must with no alternatives, make it either or else and be emphatic. The first one to come out with a real plan to lick this thing in these uncertain times will do a great service to the people.

1. Elect a real leader for President who will work with the Congress.

2. Call the cards which Russia holds. Don't waste time trying to talk, reason, or appease Russia. Her mind is made up. Let here know emphatically where we stand and stick to it. If it means that we must push her back by force, let's do it before we spend billions over there possibly in vain. The people are not sold on the idea of parting with their hard-earned money on anything so uncertain as hoping it will make Russia behave and go home. There is a good chance that it will not work and a miracle if it does.

3. If Russia should back down after getting hit on the head, then, and only then, send money over to help out, but only for a short trial period subject to a check-up to see if the unfortunates are really helping themselves or still playing possum.

4. Invoke military training. Chances are we will need it all of a sudden with little or no warning of trouble. Make this a must by conscription if necessary.

5. Reduce taxes for the people here. A real reduction is in order, not one of the $40 a head things. Some of this loss in revenue can be easily made up by cleaning house in Washington, meaning Government pay rolls, duplications, and overlapping.

Really clean up the place down there and get rid of these hangers-on. This move alone will save millions.

6. We must have a big modern Air Force and Navy. Spend some money on this. It is the best protection for peace known to man regardless of any opposition or who it

comes from. Carry a big stick is still the best idea. This is a must.

7. Have us keep on making A bombs by the thousands. Keep those factories going day and night. One day we might need them but quickly. Spread them out after their made. Cuts time down getting there. Sounds like a warmonger? Not at all. Just mighty handy, just in case.

8. Send no more foodstuff over to the other side than we can stand without endangering our own needs at home. This goes for coal, fuel oil, kerosene also. Enforce this. People are not too happy about doing without at home with no guaranty that their sacrifice is doing much good. Whole thing is too uncertain.

9. Let them all know over in Europe that we are taking over as a sort of helping out period until they can stand on their own feet. If any other outfit gets in our way, show them our big stick and use it if necessary.

10. Allow no more of these secret meetings between our Government officials and other countries without letting the whole world know immediately what was said. This fallacy is now coming to light as a result from the last war. It shakes confidence on the part of the people in their government to have these things backfire.

11. One way or another get some more houses built here at home to ease the housing shortage. Consult private lending institutions and banks. They will be glad to help. No subsidizing. In fact take all subsidies off on everything. Robbing Peter to pay Paul is not good economics.

Mr. MILLER, I again want to thank you for reading my letter and hope you can get something constructive from it. At least it lets you know how the people feel about the whole affair and should convey the importance of getting a definite plan into action quickly.

Very truly yours.

Increase of Pay of Postal Workers

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial appearing in the Akron (Ohio) Beacon Journal of January 20, 1948:

RAISE POSTAL PAY

The cost of living has gone up 26.9 percent and food prices have risen 43.4 percent in the 2 years since postal workers received their last pay raise.

Pending before Congress are bills to increase post-office salaries and to liberalize the pension plan which was barely adequate 20 years ago, when a dollar went twice as far as it goes today.

Both of these things should be done, if not because justice requires them, because it is essential that the postal service remain attractive to able young men.

The most zealous budget cutter in Congress cannot accuse the Post Office Department of extravagance. It uses trucks that belong in a museum and pays salaries that a private employer would be ashamed to offer. Even if the tax cut planned by Congress must be modified a little, postal workers and their retired brothers should be given more money.

Increase in Subsistence Payments of Veterans

EXTENSION OF REMARKS
OF
HON. GEORGIA L. LUSK
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mrs. LUSK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

[From American Council on Education through University of Minnesota News Service, January 15, 1948]

(This is the first of a series of articles describing the results of a survey of college veterans based on the responses received from interviews with a scientifically selected sample of veterans attending all types of colleges located throughout the country. The study was planned by a national committee appointed by the American Council on Education and was made possible by a grant of funds from the Disabled American Veterans. Dean E. G. Williamson of the University of Minnesota acted as chairman of the committee. Ralph J. Strom, formerly of the Veterans' Administration, was director of the project and conducted the survey.)

MINNEAPOLIS.—One of the important problems facing the present Congress is the matter of proposed increases in subsistence payments to veterans attending educational institutions under the GI bill of rights and the Rehabilitation Act.

Veterans all over the country have been requesting increases in the $65 monthly allotment for single students and the $90 per month for married veterans so that they may remain in school despite skyrocketing living costs.

A portion of a survey on veterans' education recently completed by the American Council on Education and financed by the Disabled American Veterans, was devoted to an investigation of the cost of living of a scientifically selected and representative cross-section of veterans attending colleges and universities throughout continental United States.

To determine how much of a differential exists between the $65 and $90 monthly subsistence payments, and their actual living expenses, each veteran contacted in the Nation-wide poll was asked to make a careful estimate of his average total monthly expenses while attending school.

Results of the poll indicate that the average total monthly expenses of single veterans in college is $106.13, while the average for married veteran college students is $175.38. This means that single students spent $106.13 monthly but received only $65, a difference of $41.13. Married students spent $175.38 but received only $90 from the Veterans' Administration, a difference of $85.38.

Board and room costs of the large number of single veteran students who reported paying for their room and board in one lump sum were found to have an average of $55.19 monthly. However, in the case of single veterans who said they found it necessary to eat at places other than where they roomed the average cost of their meals alone was found to be $51.08 monthly. This amount, in addition to the average sum of $21.48 which veterans in this group pay for room rent brings the monthly cost of room and board to $72.56.

Married veteran students, according to the poll, spend an average amount of $38.96 for rent monthly, while their average outlay for food was found to be $67.71, adding up to a total of $106.67 for rent and food, ($16.67 more than the total subsistence allowance).

In order to make ends meet, many veterans work during school terms, and the wives of a great number of married veterans hold jobs on either a full-time or part-time basis. Summer vacation jobs are helpful to a large percentage seeking to augment their income.

Results of the Nation-wide study indicated that 36 percent of college student veterans work for additional income, 12 percent up to 10 hours during the week; 14 percent from 11 to 20 hours; and the remaining 10 percent more than 20 hours a week.

Despite physical disabilities, one out of four unmarried disabled student veterans was found to be working to supplement his income from the Government; one out of three married disabled veterans is working, while almost one-half of the married non-disabled veterans are employed.

Of the more than one-third of the college veterans employed, the survey showed that 46 percent earn $10 or less, 33 percent earn from $11 to $20 and 13 percent earn from $21 to $30. Earnings of the remaining 8 percent range from $31 to $105.

Wives of 56 percent of the married student veterans are working to supplement their husbands' incomes, the survey disclosed, 43 percent on a full-time basis, 9 percent part time, and 4 percent intermittently.

To help pay their living expenses and in an effort to set aside additional funds for supplemental financing of their educational costs during the current school year, 6 out of 10 veterans worked to some extent during the last summer months, according to the poll.

Despite the fact that many veterans did outside work last summer, many were unable to set aside any funds for their scholastic expenses. This was found to be particularly true of the married veterans, many of whom were unable to retain any of their summer earnings for school costs after paying their summer living expenses.

Of the 6 out of 10 married veterans who worked last summer, 62 percent said they were unable to accumulate any savings, 21 percent reported they were able to lay aside up to $250, and 17 percent more than $250.

Many single veterans who worked last summer were in a better position financially when school opened since 40 percent were able to save up to $250, while another fourth set aside more than $250. Only one-third of the single veterans who worked during the summer said they were unable to save any of their earnings.

In an effort to determine the financial cushion which student veterans are able to maintain, they were queried in the poll as to their total personal savings now available for financing their educations.

More than one-third reported in the survey that they have no reserve savings whatever upon which they can draw to help pay their way through school.

The savings of married student veterans are decidedly less than those of all student veterans, according to the poll, 40 percent of this group having no savings whatsoever. In the case of married disabled veterans attending college, one-half have no financial reserves to supplement their income.

America Must Not Give Away Her Merchant Marine

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. BLAND. Mr. Speaker, there appeared in the issue of Newsweek, dated

December 29, 1947, a highly interesting and informative article entitled "Merchant Marine: How America Seeks To Stay in the Oceans While Its Rivals in Trade Are Building Ships Pell-mell." The article shows that ships of 100 gross tons, and over, under construction as of September 30, 1947, were as follows:

Great Britain 483, of 2,112,669 gross tons; Sweden 72, of 294,345 gross tons; Holland 112, of 260,781 gross tons; France 92, of 257,046 gross tons; Italy, 76, of 222,037 gross tons; British Dominions 86, of 189,905 gross tons; United States 55, of 177,669 gross tons.

This article is worth reading at this time particularly in view of the suggestion coming from the State Department that the United States shall sell to European nations some 200 oceangoing steamships and in addition transfer to them on a temporary basis up to 300 more bulk-cargo ships under bare-boat charter.

I fully agree with the statement of Representative BRADLEY, of California, a very able and distinguished member of the Committee on Merchant Marine and Fisheries, in his comprehensive, accurate, and unanswerable speech delivered on the floor on January 13, 1948. Mr. BRADLEY said:

Mr. Speaker, the funeral of an adequate American merchant marine has been arranged by the State Department. The pallbearers may well be some 16 foreigners. The mourners will all be Americans. The Outline of a European Recovery Program, prepared under the direction of the State Department, aims a near mortal blow at our present merchant marine. It may be that this Congress can save the patient's life and disappoint those who hopefully anticipate the reading of the last will and testament.

If we follow the course recommended by the State Department we shall disregard completely the recommendation of the Harriman committee when it said:

The United States needs an active merchant marine for national defense and we must not create conditions in which that merchant marine cannot survive.

It is interesting to note that reliable information exists to the effect that a proposal to defer foreign shipbuilding has been advanced by the United States and definitely rejected. In the meantime, while others build, we are asked to give away our ships. I am definitely opposed to that.

I have been a member of the Committee on Merchant Marine and Fisheries since April 18, 1921. I know Representative BRADLEY and the Harriman committee state the truth, the whole truth, and nothing but the truth. The article in Newsweek is as follows:

MERCHANT MARINE: HOW AMERICA SEEKS TO STAY IN THE OCEANS WHILE ITS RIVALS IN TRADE ARE BUILDING SHIPS PELL-MELL

(How big a merchant marine can the United States maintain in this postwar world? What is happening to the huge wartime fleet? How many new ships should be built and of what type? How much subsidy should be paid to keep the flag at sea? These questions are once again on the Government's agenda and the whole problem will be laid before the next regular session of Congress. Newsweek's special projects editor, Harold Isaacs, here summarizes the American maritime problem.)

This week the steamship *President Cleveland* sails on its maiden voyage from San Francisco to the Orient. It is an event calling for fanfare, large advertisements in the press, and official congratulatory messages. Yet the *Cleveland* is only a modest ship of 16,600 gross tons. What makes its debut a major event is that the *Cleveland* and its upcoming sister ship, the *President Wilson*, are the two largest American passenger ships built since 1939. No other passenger ships of any size are being built and all new shipbuilding plans are being held up until there is assurance that adequate Government subsidies will be forthcoming.

To merchant mariners this seems to be the place where the American merchant marine came in. Once again shipbuilders and operators and the Government are vexed by the same dilemma that has followed the flag to sea since the Civil War. High American costs, standards, and wages have made a large merchant marine an economic liability. But as two wartime experiences have shown, it has to be regarded as a national necessity. The problem is now repeated on a new level, with the United States the possessor of far and away the world's largest merchant fleet. But in essence it is the same: How large a fleet should the United States maintain, and how much money is the Government willing to spend to maintain it?

BUILDING PROGRAM

Only last month a Presidential committee of businessmen headed by K. T. Keller, president of the Chrysler Corp., recommended that subsidies of a full 50 percent of construction costs be paid for the building of 46 passenger ships, including two 50,000-ton express liners, at a total cost of $600,000,000, plus an unspecified number of dry-cargo freighters and tankers as first replacements for wartime ships already obsolescent.

The Merchant Marine Act of 1936 authorized shipbuilding subsidies of up to 50 percent depending on the cost of shipbuilding in competitive foreign yards. Maritime Commission sources indicated last week that spot investigations in Europe revealed the present differential between European and American costs to be closer to 40 percent. Authorization for any larger subsidy to American builders would have to be voted by Congress.

If, in any case, no adequately supported shipbuilding program is undertaken, the American shipbuilding industry will find itself almost out of business 6 months from now. At its wartime peak only 4 years ago, the industry had 1,722,000 workers hammering out five ships a day in 72 yards. It has dropped now to 105,700 workers, the bulk of them in 10 yards. Only 33,000 of these are building ships. The rest are engaged in repair and reconversion. In 1946 and 1947, the yards received only 41 new contracts, of which 22 were for foreign buyers willing to pay higher American costs in return for speedy delivery. Shipyards are currently working on 37 commercial vessels of more than 1,000 gross tons and nine ships of various sizes for the Navy. With the exception of one Army dredge and one cruiser, all this construction will be completed by August 1948. Only one new naval contract, for a submarine, has been let.

Reconversion, repair, and maintenance work in the repair yards will keep only a part of the present working staff at their jobs. As in the aircraft industry, the problem is not merely the fate of a major business but the dispersal of engineering and working skills that cannot easily be reassembled. The Keller 46-ship program, it is argued, will, if acted upon, keep at least the nucleus of the industry in being.

OPERATORS' SUBSIDIES

From the standpoint of the ship operators, equally crucial decisions are also pending. An example was the statement by George Killion, president of the American President Lines, on December 10, calling for guarantees of long-term Government aid before his line could go ahead with the purchase of five new ships for which bids have already been made. Such aid, he stressed, would have to include the 50-percent construction subsidy and assured long-term operating subsidies. The latter, also provided for in the Merchant Marine Act of 1936, were suspended during the war. The Maritime Commission's power to resume them on more than an annual basis is now the subject of a dispute with the Bureau of the Budget. This, too, is an issue that will have to be resolved before the immediate future of the American merchant marine can be shaped.

This is a twice-told chapter in the story of America's merchant fleet, already filled with ironies and international cross-purposes. It makes a strange and convulsive pattern marked by long declines, spurts of wartime building, the creation of huge fleets, and the passage of these fleets into limbo. The fabulous shipbuilding of the war years gave the United States a fleet of 6,200 ships, totaling about 57,000,000 tons. Echoes of the financial aspect of that program will probably be heard for a long time to come in congressional committee chambers, but the result was in any case a complete reshuffling of the international maritime line-up.

UPS AND DOWNS

The American merchant fleet entered the war half the size of Britain's. It ended the war three times larger. Before the war American ships accounted for about one-sixth of the world's total tonnage. After the war the proportion was four-sixths. But most of this tonnage, especially the 2,700 lumbering Liberty ships, was expendable, like crates built for aircraft engines. No one ever dreamed that such a fleet could be maintained in peacetime. The question was how much to pare down and how to convert the remainder into an effective and balanced fleet.

According to latest available figures, the paring down that has already occurred can be summarized as follows: 743 ships lost in the war, 1,090 sold to foreign buyers, 554 sold to American buyers, 1,316 moored in reserve, and 171 scrapped. Still active—privately owned, under Government charter, or general agency agreements, or for the armed services—are about 2,500 ships, totaling some 25,000,000 tons. This still leaves the United States with 45 percent of the world's active tonnage and more than twice the fleet that anybody seriously believes can be maintained in peacetime. The continuing activity of such a large fleet is due only to the current extraordinary need for shipping that is part of postwar reconstruction. This need will gradually taper off and within 2 or 3 years will return to more normal proportions.

Sheer size, however, is not the only criterion. Much of the war-built tonnage was designed for wartime and does not serve peacetime needs. One example is the present serious lack of ships suitable for intercoastal and coastal routes in the domestic trade. Another example, cited by the Keller report as the most important, is the lack of passenger ships. Before the war the United States had 127 passenger or passenger-cargo ships, with a capacity of 38,357 persons. Today it has 36 in service or in prospect, with a total capacity of 8,333. In passenger-carrying capacity, the United States has already yielded leadership to Great Britain and is lagging behind other countries which are feverishly rebuilding to regain their prewar positions.

In addition to being ill-balanced, the American fleet suffers from having been built virtually all at the same time. These ships, with an average effective life of 20 years, will deteriorate or grow obsolete at the same rate. New construction would be indicated over the coming years in all types of needed vessels in order to maintain economy of operation and to take advantage of new developments in ship design. Ideally, construction over the coming years would gradually bring the fleet into a balance not only of types but of relative ages, with replacements coming out of the Nation's shipyards in an orderly manner.

FUTURE FLEET

The average of many recent estimates of the size of a feasible American merchant fleet comes down to a few more than 1,000 ships totaling 11,500,000 tons. This is only slightly larger in tonnage than America's prewar fleet, but the old ships have been almost wholly replaced by new and faster ships. The projected fleet would be at least 30 percent more efficient than the old one. In addition, there would be a reserve of anywhere up to 3,000 ships kept in good repair. One postwar study made for the Maritime Commission concluded that such a fleet could be maintained at a subsidy cost of only $50,000,000 a year. The Keller report recommendations for a building program between now and 1951 would in construction subsidies alone, however, amount to a total of $300,000,000. By comparison, between 1929 and 1939 mail subsidies ran to about $17,000,000 a year, and between 1937 and 1945 construction and operating subsidies cost about $25,000,000 a year. Of the operating subsidy payments, the Government has subsequently recaptured the larger share.

In the final analysis, the size and position of an American merchant marine depends on the state of world trade, which in turn depends on general world prosperity. All estimates for a large American fleet have to be based upon the assumption of a large enough increase in the total volume of world trade and American trade and travel to enable American ships to carry a larger proportion of American cargoes without damage to the vital shipping interests of other trading nations. They also have to be based on the assumption that all maritime nations would get together and work out their problems amicably and equitably.

These have already proved to be rather dangerous assumptions to make. In tabulating their contributions to the Marshall plan, the 16 participating European nations last summer included provisions for their own shipping to an extent which brought hot challenges from American shipping interests. This issue will figure in the ultimate decisions of Congress on the long-range European Recovery Program.

FOREIGN BUILDING

Meanwhile, since the end of the war all foreign maritime nations have gone all out in shipbuilding. As the accompanying chart shows, the United Kingdom's is the largest program. As of last September, it included 483 vessels totaling 2,112,669 tons, including the recently launched passenger liner, the 84,000-ton *Caronia*. Holland was building 112 ships totaling 260,781 tons. France was building 92, the British Dominions 86, Italy 76, and Sweden 72. In this tabulation of ships of more than 100 gross tons, the United States had dropped to seventh place.

There are no reports available on Russian ship construction. The Russian merchant fleet, however, has been augmented by 936,000 tons of American lend-lease shipping which is still technically American-owned, but which no one ever expects to see back in American hands. With this tonnage included, Russia has advanced from eleventh to fourth place in the list of world fleets.

The postwar maritime picture shows other notable changes. Japan, which so strongly challenged the maritime leadership of the western nations, has dropped from third to eighth place and Germany from fifth to eleventh place. Neither Germany nor Japan will, of course, for a long time to come regain their previous high rank in maritime trade. Canada, Brazil, and Argentina have all increased their fleets, and in Latin America as a whole prewar tonnage has been upped 30 percent.

OUTLOOK

The problem of effective interntional cooperation in shipping is at the moment a largely untouched item on the crowded agenda of world affairs. The wartime United Nations shipping pool disappeared and so did the short-lived United Maritime Authority that succeeded it. Today an obscure UN subcommittee handles world shipping problems. If the pell-mell building drive of other nations means anything at all, it presages another era of sharp competition. American wages and standards being what they are, foreign operators can invariably undercut American costs and rates. This is not serious when, as now, there are more goods to move than there are ships available. But come a tomorrow when the pinch of depression may again be felt, the absence of any international meeting of minds on shipping will result in unbridled maritime competition with ruinous results for all. If a cooperative pattern could still be established in world trade, the various maritime nations would each receive proper and adequate shares of the world's cargoes. This would depend, however, on the resolution of issues much larger than shipping.

Detroit Natural Gas Shortage

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter written jointly by August Scholle, president, and Barney Hopkins, secretary-treasurer of the Michigan Congress of Industrial Organizations. This letter was addressed to the Honorable Eugene Van Antwerp, mayor of the city of Detroit, on January 26, 1948, and contains much valuable information in regard to the natural gas situation in the Detroit area.

The letter is as follows:

JANUARY 26, 1948.

Hon. EUGENE VAN ANTWERP,
Mayor of the City of Detroit,
Detroit City Hall,
Detroit, Mich.

HON. MAYOR VAN ANTWERP: This letter is written in commendation of the position taken by the common council of the city of Detroit with respect to the natural-gas situation, and the demand by your honorable body that the consuming public shall continue to receive all such natural gas as is now being delivered to the Detroit area by the Panhandle Eastern Pipe Line Co., and to receive all such additional gas as that company may be able to pipe to Detroit at a competitive price, at future times.

However, these additional measures to protect the public interest are urged for your consideration:

First, that the common council obtain the assistance of Members of Congress from Detroit and Wayne County to the end that an investigation into the Detroit natural-gas shortage may be undertaken by some duly constituted committee of the House or Senate; this may be advisable in view of a possible need for additional legislation.

Second, that the common council inaugurate inquiries into the exact causes of industrial plant shut-down in the Detroit area which are allegedly occasioned by curtailments of natural-gas supplies. It is our opinion that the city of Detroit and the public generally are being deceived as to these circumstances. Further, we believe that the Michigan Consolidated Gas Co. management may be penalizing industrial workers through such shut-downs, whereas the cause of curtailments may, in fact, be due to the gas utility's repeated failures to negotiate for additional gas supplies in prior periods, and to construct facilities for storing surplus gas during recent years.

In connection with this latter request, we submit the following information, based on newspaper reports and our own investigation:

Only 1 week ago, on Monday, January 19, 1948, the Detroit Free Press quoted Mr. Lawrence K. Ritchey, operations manager for Michigan Consolidated Gas Co., as stating: "There is no immediate danger that Michigan Consolidated will have to curtail deliveries to our customers." Today, approximately 200,000 workers are laid off due to such curtailment as Mr. Ritchey pledged would not occur. The Free Press article further credited Mr. Ritchey as stating that "oil shipments by rail were providing Michigan Consolidated with a supplemental supply of gas," which, ostensibly, would prevent recurrence of the experience when "During a cold spell last winter, gas supplies were shut off from February 7 to February 11 to 60 major industrial concerns." Was Mr. Ritchey speaking correctly on January 19, and has his own management, for its own reasons, imposed the present gas curtailment, causing the industrial shut-downs? The people of Detroit have a right to ask your honorable body to learn the facts.

The Detroit Times of Friday, January 23, 1948, carried this headline: "Factory Gas Off—500,000 Idle Here," and said in part:

"Henry Fink, president of the Michigan Consolidated Gas Co., said that supplies had been sharply curtailed by the Panhandle Eastern Pipe Line Co., which pumps the gas to Detroit from Texas fields.

" 'The industrial shut-down is necessary to protect the gas supply to domestic customers,' Fink said. 'No home need suffer from this temporary shortage.'

"Although Fink said that gas for industrial use might be available Tuesday, he added:

" 'How much longer the industrial shut-down continuous depends entirely on Panhandle's ability to give us the natural gas to which we are entitled under our contract'."

In connection with Mr. Fink's claims, set forth above, we beg to inform your honorable body that we have checked into the curtailment of deliveries to Michigan Consolidated by the Panhandle Eastern during the current cold spell and we learn the following:

The maximum obligation on Panhandle under its existing contract is 125,000,000 cubic feet per day. Its recent deliveries were—

For 24 hours ending 8 a. m., Thursday, January 22, 1948, 125,037,000 cubic feet.

For 24 hours ending 8 a. m., Friday, January 23, 1948, 123,485,000 cubic feet.

For 24 hours ending 8 a. m., Saturday, January 24, 1948, 121,656,000 cubic feet.

For 24 hours ending 8 a. m., Sunday, January 25, 1948, 121,586,000 cubic feet.

For 24 hours ending 8 a. m., Monday, January 26, 1948, 121,713,000 cubic feet.

This tabulation reveals a deficiency, due to curtailment by Panhandle Eastern as ordered by the Federal Power Commission, totaling less than 12,000,000 cubic feet. Are we now to believe Mr. Fink's statement that

"sharp curtailments" by Panhandle are responsible for laying off 200,000 workers? Or is the lay-off due to the inexcusable failure of Michigan Consolidated to negotiate, in advance, for an adequate gas delivery, and to store underground the summer surplus of gas available to it, for winter use?

We request early consideration by your honorable body of the above request.

Sincerely yours,

AUGUST SCHOLLE,
President.
BARNEY HOPKINS,
Secretary-Treasurer.

Oil Exports

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. HAND. Mr. Speaker, under leave to extend my remarks, I am including the following radio broadcast made by me from Stations WBAB, Atlantic City, and WSNJ, of Bridgeton, N. J. The broadcast follows:

In the midst of the debate on the tax bill, the result of which is a foregone conclusion, the undercurrent in the House this week is a belated anxiety concerning the continued exports of oil.

Senator BRIDGES, of New Hampshire, introduced a bill for a 1-year embargo on all shipments overseas, except to American military forces, and the House Committee on Commerce under the leadership of our friend and neighbor, Congressman CHARLES WOLVERTON of Camden, recommended an immediate end to the export of petroleum products.

The New York Times headlined all of these activities as "strong move started in Congress to embargo foreign oil shipments"—so it may be that we are finally going to get somewhere.

To those of us who were working on this problem in June 1947, when the weather was warm and very few were thinking of their winter heaters, it is a little ironic that the strong move of others had to await a bitter winter and a very real shortage of fuel before making this move. Our best efforts to forestall the emergency failed to warn Congress in time.

I welcome the support now being offered, and I suppose it is a case of better late than never; but if anything is done now, the present heating season will be over by the time good effects can be felt.

In June 1947 the Merchant Marine Committee initiated hearings on oil supplies in this country. Our original concern was the use of American-owned tankers to transport gasoline and oil to Russia, but the hearings immediately developed a fear in our minds that there would be a general petroleum shortage in the United States during the winter of 1947–48. Hearings continued throughout June and July. Many witnesses were notoriously evasive, and I recall particularly questioning them closely on the effect of exporting millions of barrels of oil. The administration was, and is, so wrapped up in its European programs that any suggestion that exports be curtailed has met with howls of "isolationist." Nevertheless, the committee finally concluded that the continued high rate of exporting petroleum would have a serious effect on the oil supply this winter, not only on the civilian population, but on military supplies. On July 21, our committee reported H. R. 4042, which prohibited the export of gasoline and fuel oil to any foreign country, unless the Secretary of Commerce could certify in writing that such export would not impair the national defense or security, and the civilian use of gasoline and fuel oil. The bill also required monthly reports so that the Congress could keep close watch on the situation.

Our bill passed the House, but was not passed by the Senate prior to summer recess.

Our committee and many other Members of Congress continued to be concerned about this situation, but all attempts to modify exports were strongly opposed by the administration, and President Truman himself warned Congress to be very careful before taking any action on prohibiting shipments of oil abroad.

I know, of course, that exporting is not the only reason for the present oil shortage, but I also know that every million barrels of oil exported is a million barrels less in our national supply, and that the use of tankers and tank cars in the export program is a substantial factor in contributing to our transportation tie-up.

On December 8 and 9, while Congress was considering the $600,000,000 so-called stopgap aid to France and other European countries, I fought to amend that bill by including the same provision against exports of petroleum that I have just referred to. My amendment lost by only seven votes, after strong administration opposition, and opposition by those who, I am afraid, put foreign relief above the safety and health of the American people.

You see, this situation was foreseen and every attempt was made to provide for it, but it has taken a very real shortage, a succession of snowstorms, and weeks of bitter weather before its real gravity is finally appreciated.

Last July was the time to act. It is now too late to help this winter, but perhaps we will have the wisdom to guard against a repetition of present hardships in another season.

Foreign rehabilitation, no matter what its merit, goes too far when it exports the fuel oil needed for the health and safety of America, to France which still has, after all, the unrationed use of automobiles. In the same way, we are talking about rationing meats in this country while exporting meat to Greece, where it is unrationed.

If this makes sense, I fail to see it.

Good night.

Postage on Parcels Sent to Europe

EXTENSION OF REMARKS
OF
HON. EDWARD J. ELSAESSER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. ELSAESSER. Mr. Speaker, the Eightieth Congress should not delay action on one of the many resolutions pending before it which would reduce or even eliminate postage on all parcels sent to Europe.

The reasons for the need therefor are many. First, we are engaged in an effort to relieve want and distress among the destitute peoples of Europe. We have appropriated billions of dollars for this purpose, and many billions more will be needed. These dollars are used to purchase goods in the American markets and to ship these commodities overseas.

Many American families have relatives or dear friends abroad. Despite the high postal rates prevailing at this time, they are shipping packages of food and clothing, and so forth, to these relatives and friends. If the postage were eliminated, or reduced substantially, many more such parcels would be sent overseas. Such voluntary gifts of essential items would alleviate some of the need which our tax dollar has been trying to accomplish.

Voluntary gifts of this nature reach the needy exclusively. There is no handling charge, no opportunity for favoritism, no blundering. Therefore we could dispense with some of the manpower now employed to administer relief programs.

Direct contact between the donors in America and the recipients throughout Europe and Asia must, and will, lead to the creation of international good will. The recipients generally acknowledge these gifts of food and clothing with considerable gratitude. It removes the possibility of political manipulation by foreign nations, such as removing shipping tags on crates, boxes, and so forth, and replacing them with labels of other nations as occurred during the UNRRA administration. This will result in giving credit where credit is due—to the generosity of our people and the wisdom of their Government which made it possible by absorbing the cost of shipping via parcel post.

The gifts, voluntarily contributed by our citizens, will demonstrate to the world the true spirit of America. No ulterior motive can be cited when millions of our people are ready and willing to share what they possess with others less fortunate. Such cooperation and combined effort cannot fail to restore faith and combat suffering abroad.

The shipment of canned foods today is almost prohibitive. In addition to the high cost of canned products, the excessive postage rates deter all but the wealthy from making such purchases and shipping them overseas. Elimination of the excessive postage would allow greater shipments of canned and processed foods.

The cost of this proposal could not exceed the cost of the present method. If anything, it would be less costly. Our taxpayers foot the bills for merchandise bought by our Government for shipment abroad, and for the costs of crating, handling, and distributing it, which include salaries of purchasing agents, technical experts, clerks, supervisors, and so forth. We hope that part of our money will eventually arrive at the homes of the needy in the form of food and clothing. Direct shipments of voluntary gift packages will guarantee the arrival of merchandise where the need is known to the American shipper.

Furthermore, in addition to aiding the needy, we will create a greater degree of good will that is so desperately needed.

I am, therefore, convinced that our Government should lower overseas postal rates substantially or completely eliminate postage, to increase shipments by individuals. This would be a great boon in reviving hope among our fellow men in Europe and Asia, and aid in broadcasting the spirit of America in a way that defies contradiction.

Preservation of World Peace

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. GILLIE. Mr. Speaker, a few days ago a group of more than 50 members of the junior and senior classes of North Side High School, Fort Wayne, Ind., visited Washington and were my guests at a session of the House of Representatives.

Before returning to Indiana, these young people left with me a petition urging that certain actions be taken to strengthen the United Nations and insure world peace. The interest of these young citizens in world problems is to be commended, and I herewith present their resolution for the consideration of the entire Congress:

Since we, juniors and seniors of North Side High School, will have to bear our share of the burden of any policy undertaken by our Government, we wish to voice our opinion in the only way open to us.

Whereas we are the people who will be the future soldiers, sailors, and taxpayers who must pay for all the policies and possible conflicts with our services, money, and even our lives; whereas the United Nations has proven ineffective to enforce a world peace, since this United Nations has no means of enforcing its policies.

Whereas the entire world is endangered through the use of atomic weapons; and whereas the present use of the veto is such that it hinders progress toward future peace.

We thereby have resolved to advocate the adoption of the quota-force plan for the reform of the United Nations; we advocate that an effective tyranny proof world police force should be established; we advocate that as rapidly as possible a control over atomic energy and limitations on all other important weapons should be established; we advocate that the present veto should be abolished in the matters of aggression.

We, the undersigned, do endorse in full the above policy.

(Signatures omitted.)

Foreign Aid

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. PASSMAN. Mr. Speaker, there is a tremendous lot of articulation these days about friendship trains, CARE, ERP, and what have you, to feed and rehabilitate striking Germans, rebellious Italians, egotistical British, arrogant Yugoslavs, treacherous Albanians, and the Red army.

All this talk and hullabaloo is made with a grandiose play on our sentiments; and we, the poor, gullible Americans are right now in the act of selling our birthright and our offspring's solvency to feed, clothe and provide industry for this motley mob, too busy at fomenting strife and organizing revolutions to get down to work, other than reproduction—11,000,000 more population in Europe than on VE-day.

We have already spent about sixteen billions, and are about to obligate ourselves to the expenditure of sixteen more billions in the vain, oft-disproven theory that the recipients of this largesse will love us and fight for us. But why kid ourselves, we will only be called shylocks when we begin to talk about closing the spigots.

You just cannot disprove history nor the old adage, "You can't keep a friend by loaning him money." We tried it after World War I, and had to spend $300,000,000 and a million sons to kill those we had coddled with milk and diapers after we got through making the world safe for democracy. Oh, yes, we accepted token payments from Finland, who got about 3 percent of our European gifts in the early twenties.

Now let us call a spade a spade and see what this present gift to a bunch of decadent tribes—perhaps our future enemies—would do for us if we used just a little cold, calculating, common horse sense. It would build 50,000 brand new modern school buildings and pay teachers and operators for each school twice their present salary for 2 years, plus building maintenance costs. It would build 40 four-lane divided highways across the United States with no cross-traffic intersections or grade crossings. It would build a fleet of 80,000 of the most modern bombers obtainable, and train one pilot for each bomber. It would build 2,000 of the most modern airports possible, or 1,500 fully equipped military airfields. It would put a Buick sedan in 8,000,000 private garages, or feed the entire population of this country for 2½ years.

Just look around a bit, friend and neighbor, and see what else it would do for this country. Go visit the school where your kids attend—I did. See the plaster falling off the walls; see the kids drinking warm water out of the spigot; see the antiquated heating and lighting systems; the fire traps; see the kids put on their overcoats, mufflers, and rubbers to go from their classrooms, or to the lunchroom, because of hallways open to the weather. See the worn out jalopies they ride in—40 kids on a bus with seats for 24. Ask the teacher what her salary is for the year, and how much she has left after paying approximately 50 percent of it back in taxes—income, sales, and hidden taxes.

Check the condition of your 8-year-old automobile, then check your budget to see when you can afford to buy a new one. Think of the death trap our highway system has turned into, and calculate the chance you take every time you drive 100 miles—about 200,000 deaths and 800,000 injuries each year.

Think of the superb air force that could be created and maintained—a force that could smile with confidence at the least sign of a threat from these mobs we are about to set up on a war-making basis again. Think of these diapered European darlings that our school kids are going to have to kill off when they are in the flower of their manhood and get killed in the killing.

Let us keep our strength at home instead of squandering our children's and grandchildren's lives, happiness, and belongings to no good end. Let us tell our Congressmen we are opposed—bitterly opposed—to a repetition of such an enormous sapping of national energy. Some one of these days we are going to wake up in a cold sweat, realizing that the harmless little fuzzy kitten that we fed and nurtured at the expense of our own strength, has grown into a lion—tasted blood—and is licking its chops with an attack squint in its eye—reach for the lunge that will mean—what?

Let us just stop for a minute or two and think soberly—history repeats itself in spite of our idealisms.

Veterans' Temporary Housing

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I have sent to the Honorable William O'Dwyer, mayor of New York City, and to Mr. Thomas F. Farrell, chairman of the New York City Housing Authority:

VETERANS' TEMPORARY HOUSING

A special veterans' committee, whose chairman is Mr. Francis L. Fortune, 25-31 Seventy-fifth Street, Jackson Heights, has protested to me about the extreme conditions of hardship under which veterans are living in the temporary veterans' housing projects. They are unable to obtain adequate fuel oil for heating and are experiencing financial hardship because rents are excessive when the cost of heating is added. They are asking a modification of rent schedules, to include the supplying of fuel by the New York City Housing Authority. I understand this matter has been brought to your attention.

Upon investigation I found that rentals charged were approximately $8.50 a room, or $34 per month for a four-room unit. Each family is required to purchase its own fuel for heating which, at today's prices, costs from $20 to $25 per month. The total rental cost for four tiny rooms, including cost of all utilities, averages from $54 to $59 per month.

I believe the contract of agreement which the New York City Housing Authority has with the Public Housing Administration stipulates that in the event the rental charged, including heat and all other utilities, is more than one-fourth of the income of the tenant, then an adjustment may be made whereby the rental is one-fifth of the income of the tenant in some cases and less in others. I am certain a survey will prove that nearly all of the veterans living in these projects earn less than $250 per month and that the great majority earn less than $200 per month. In view of this, the necessity of an adjustment of rent schedules is obvious. This $54–$59 cost is also in excess of the average rental charged for comparable housing units in similar veterans' temporary housing projects in other metropolitan cities.

I believe that the regulations of the Public Housing Administration further stipulate that the basis for establishing rent schedules for these projects shall be rentals charged

for comparable housing accommodations in the same area. The type of dwelling unit these temporary houses provide is not at all comparable to any other type of housing in the New York City area, either private or public housing. The houses are just what they are called—they are temporary structures, loosely constructed. They are not fully weather stripped, nor are they completely screened. Electric-power lines are inadequate. There are times when houses are without electric power for hours. There are no recreational or playground facilities in most projects. Transportation is poor. Schools and shopping areas are inadequate and inconvenient to reach. On the basis of rentals charged for comparable housing units, it is evident an adjustment of rent schedules is in order.

In view of these facts I urge you in fairness to these veterans to see that immediate steps be taken to have the New York City Housing Authority supply within adjusted, but fair and reasonable, rent schedules the fuel necessary to heat the houses in these projects. I feel confident the Public Housing Administration will approve, and agree to, your recommendations. I am sure it was not the intent of Congress when making these temporary houses available to municipalities that veterans should be charged excessive and burdensome rents. These veterans are entitled to have heat furnished at a fair rental commensurate with the type of house in which they find it necessary to live. They are not living in this kind of housing from choice. They certainly should not be charged excessive rents. The New York City Housing Authority has the responsibility of renting and maintaining these projects, and it would seem to me that it is incumbent upon the Authority to see that fuel for heating is provided.

ROBERT TRIPP ROSS.

JANUARY 29, 1948.

Marshall Plan Implements Military Alliance in Europe

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, the cat is out of the bag. All doubts as to the motives behind the European recovery plan are now revealed. Prime Minister Bevin, 1 week ago, announced the formation of a military alliance against Russia. Yesterday, President Truman at his press conference delivered an ultimatum to Congress that it was all of the Marshall plan or nothing. This morning we read that some kind of secret deal has been made between our Government and the British—in effect a military alliance. Obviously we are again caught in the middle of international power politics and the administration must have the Marshall plan to support this nefarious business. As we financed and fought the last war we are again asked to finance and fight the next one.

Mr. Speaker, as one Republican I do not propose to follow this kind of leadership. If this is bipartisan policy let the Republicans beware; I want no part of it. No more blank checks for war-making purposes. I have had enough, have not you?

As part of my remarks, Mr. Speaker, I offer the January 28 issue of Human Events, a challenging and timely article by Mr. Felix Morley:

A SAMPLE OF SECRET DIPLOMACY

(By Felix Morley)

The Department of State's compilation on Nazi-Soviet Relations reveals a sordid record of deceit and double-dealing on both sides of the thin border between national socialist and Communist ethics.

This story of pot and kettle indicts Stalin and Molotov of war criminality as black as that of any of their former Nazi buddies executed (with Soviet cooperation) at Nuremberg. To give that impression was presumably not the idea in making these captured German documents public at this particular time. But there is a good deal in this record which will eventually boomerang. There are likely to be consequences which the administration has not foreseen.

These consequences are indicated, ironically enough, in one of the messages selected for this collection. It is a telegram, dated September 6, 1939, from Count von der Schulenburg, German Ambassador in Moscow, to his foreign office. The Nazi diplomat describes the somersaults forced upon Russian public opinion when Hitler and Stalin made their alliance. "The sudden alteration in the policy of the Soviet Government," says the Ambassador, "is still not very well understood by the population." However:

"The Soviet Government has always previously been able in a masterly fashion to influence the attitude of the population in the direction which it has desired, and it is not being sparing this time either of the necessary propaganda."

For the past 10 years, at least, the American Government has also been extremely adroit in manipulating public opinion in this country. And it is certainly not "sparing the necessary propaganda" with respect to Russia, defined in the Charter of the United Nations as a "peace-loving state." Nevertheless, there is some reason to think that the American people are not fooled quite as completely as were the miserable Russians. At least there is still a little time for them to examine the road down which they are being led.

The latest, and one of the longest, downward steps on that road is being taken in the follow-up to the British Foreign Minister's speech in the House of Commons on January 22.

Mr. Bevin then announced the decision of the British Socialist Government to form a military alliance of the western European nations against Soviet Russia. Mr. Bevin made clear that "we are not now proposing a form of political union," which many Americans would welcome as the only rational solution for western Europe. What is in prospect and what Winston Churchill warmly approves, is a good old-fashioned fighting bloc. The nucleus is to be Great Britain, France, and the Benelux countries—Belgium, Netherlands, Luxemburg. But around this core it is hoped to group all of the 16 "Marshall plan" nations, and as much of Germany as can be salvaged.

II

With almost indecent haste, the Truman administration rushed in to acclaim the project of an anti-Soviet alliance. Less than 24 hours after Mr. Bevin spoke, the Department of State, issued a proclamation saying that "the United States 'heartily welcomes' the portentous step taken by the British labor government." The Department was, as often, speaking out of turn. It is extremely doubtful that the United States as a whole really does "welcome" a development all too likely to lead to war with our recent ally. But, since Roosevelt, it has become customary for the administration to regard itself as "the United States."

The celerity with which the Department of State "heartily welcomed" the British demarche was informative in another respect. It strongly indicated that the Truman administration had been consulted in advance about this alliance, and had approved it before Mr. Bevin spoke. Indeed, one must doubt whether this ambitious program would have been attempted by the British Government without assurances of American backing as to which the American people are uninformed.

The Department of State endorsed the Bevin announcement the day after it was made. The day before, this announcement was chosen by the Department for publication of German documents relating to the Nazi-Soviet alliance. Those published to date are limited to the period from April 17, 1939, to June 22, 1941. The documents relating to the effort for a negotiated German-Russian peace are being held in reserve.

But the sample of secret diplomacy already disclosed is sufficient for the present purpose. That purpose is to support, at first with money and supplies alone, the formation of an anti-Russian bastion in western Europe. For that purpose the Nazi documents so far made public are undeniably useful. They show beyond a shadow of doubt that Soviet Russia has objectives which are not yet satisfied, and they show further that the present rulers of Russia are absolutely without conscience or scruple about attaining their objectives.

Honest American thinking, however, cannot stop at that convenient point. It is too painfully apparent that the United States is now about to turn on Russia in fashion which in Moscow may seem reminiscent of that followed by Hitler. In his announcement of the new anti-Comintern pact, Mr. Bevin regretted that the compromise reached at Yalta has not worked. It is something of a shock to notice that identical words were used by the Nazi Foreign Minister as the German armies invaded Russia. Von Ribbentrop, too, regreted that "the policy of compromise between the two countries has been unsuccessful."

III

A rude awakening as to the character and conduct of our own foreign policy is now inevitable. The American people will have to realize not merely that we are deeply embroiled in the type of power politics which inevitably leads to war, but also that we are playing power politics ineptly. Illustrations of this ineptitude abound. Here we shall only mention the single case of Spain.

The nation to which General Franco dictates will obviously have to be included in inevitable. The American people will have the anti-Russian alliance which Great Britain has begun to build, with State Department blessing and support. Spain is essential to this alliance, for its resources, its manpower, and as a strategically important base. For some months our Government propaganda agencies have been careful to say nothing offensive about Franco. But we had previously denounced him so roundly as a Fascist beast that it's going to be awkward to get in the same bed with the Caudillo now.

It is worth while to recall that on March 4, 1946, the Department of State released to the press a first, carefully selected, installment of those same German documents now made more completely available. The purpose of the selection made 2 years ago was not to excite the American people against Russia, but against Spain.

Therefore, the only documents published then were those which put Franco in the worst possible light. They included letters from Hitler and Mussolini to the Caudillo, urging him to get on the Nazi bandwagon. Naturally this careful selection gave the reader the impression that Spain was virtually an ally of the Axis.

But in the larger assortment of documents now made public there are several which show that the Nazis never really expected

any important assistance from Franco. There is, for instance, a letter from Hitler to Mussolini, dated June 21, 1941, in which the Fuehrer says: "Spain is irresolute and—I am afraid—will take sides only when the outcome of the war is decided."

In common decency that letter should also have been published 2 years ago, along with the material then selected for the sole purpose of smearing Franco. But that would not have suited our weathercock foreign policy, as it was then veering.

IV

Some of the mess which our Government has made of its international relations results from the plain stupidity of ungifted amateurs. But some of it is the result of demonstrable deception, and should be exposed as such. In particular, the new aspect of the so-called European recovery program must be appreciated, while the issue is still pending before the representatives of the people, in Congress.

With the decision to build a western European military alliance against Russia, ERP ceases to be primarily a program for economic recovery. At least in part, it becomes a method of financing this alliance, but without honorable admission of this purpose.

It is not difficult to substantiate this assertion. ERP is based on the report of the sixteen-nation Committee of European Economic cooperation; made public on September 23, 1947. Even to the amount of the initial appropriation asked, ERP closely follows that report.

But the report freely admits (section 119) that: "A substantial and steady resumption of eastern European food, feeding stuffs, and timber supplies is assumed in this report." And it says further:

"Even on favorable assumptions about the availability of supplies in the East, progress is bound to be slow and the abnormal dependence upon the American Continent will remain."

In other words, without Russian cooperation ERP holds little promise of being more than stop-gap aid. And even before the program is approved, the Administration heartily welcomes a political move which can only intensify the Russian opposition.

Seemingly it is the military significance of ERP which makes the Administration press for unsupervised control over its operation.

As the diplomatic picture is developing, it is absolutely vital that this blank check should not be turned over to the Department of State. But more is needed than the essential precaution of removing the oversight of ERP from the hands of those who are in position to plunge the country into war. If the Administration's foreign policy is not made the biggest issue of the coming Presidential campaign, then the American people will show themselves unable to recognize an issue which affects their lives, their fortunes, and their sacred honor.

American Liberty

EXTENSION OF REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a speech which was made recently at the Men's Club of Temple Sholom in Chicago by Gov. Dwight H. Green, of the State of Illinois. This speech was forwarded to me by Col. Julius Klein, commander of the Jewish War Veterans:

It is indeed a privilege to come here tonight as a guest of the Men's Club of the Temple Sholom. Certainly there could not be a more fitting place for a discussion of our precious liberties as American citizens and their preservation in these troubled days. For 80 years this congregation has provided, not only a temple of worship for its members, but an active center for the advancement of every worthy, cultural, and civic interest of this community. The full protection of the civil liberties of all citizens always has been a major concern of the congregation and of this club.

In coming here tonight I also feel that I am visiting old neighbors. As most of you know, I lived for many years within a block of this temple. Moreover, throughout my life the Jewish synagogue has been a familiar and friendly landmark, for it was my good fortune to be born and reared in Ligonier, Ind., a small city which became, in pioneer days, a center of Jewish settlement in the Middle West. Residents of Ligonier of all faiths have been proudly asserting for more than half a century that their city had the largest percentage of Jewish population of any city in America. Long before any national organization was formed to promote the cooperation of Christians and Jews, the people of Ligonier had achieved that cooperation, so completely, that we had to get away from home to discover there was anything unusual about it.

It seems to me, however, that there is something particularly significant in the period of 80 years covered by the history of this congregation. That 80 years covers a little more than half of the period in which the Bill of Rights has been a part of the Constitution of the United States and the fundamental law of our land. It goes back beyond the date of the adoption of the Constitution of the State of Illinois, May 13, 1870. That Constitution also contains a bill of rights, which guarantees to every citizen of Illinois the fullest measure of liberty to be found anywhere in the world. Most of us are familiar with the language of the Federal Bill of Rights. All of us should be equally familiar with the splendid phraseology of the guaranties of our liberty contained in our State constitution. Let me quote paragraph 3 of article 2, which guarantees religious freedom in Illinois:

"The free exercise and enjoyment of religious profession and worship, without discrimination, shall forever be guaranteed; and no person shall be denied any civil or political right, privilege, or capacity on account of his religious opinions; but the liberty of conscience hereby secured shall not be construed to dispense with oaths or affirmations, excuse acts of licentiousness, or justify practices inconsistent with the peace or safety of the State. No person shall be required to attend or support any ministry or place of worship against his consent, nor shall any preference be given by law to any religious denomination or mode of worship."

The guaranties of freedom of speech, of the press, and of assembly, and the essential rights of trial by jury, due process, and protection against unreasonable searches and seizures, are set forth in language equally forthright and inclusive. (They are all worth reading and rereading.) But it seems to me that every citizen of Illinois should be particularly familiar with the last paragraph of the bill of rights in their State constitution. Let me quote paragraph 20 of the same article:

"A frequent recurrence to the fundamental principles of civil government is absolutely necessary to preserve the blessings of liberty."

I do not know that consideration prompted the signers of our State constitution to write this admonition to future generations in Illinois, into their statement of the basic rights of men. I do know that that admonition is particularly timely today, when freedom seems in full retreat in many sections of the world, and is subject to insidious attack even in this land of liberty. With half the world ruled by Godless philosophies which exalt the State above the individual; and with some timid souls among us willing to trade the sacred rights of the individual for the false security of paternalism, it behooves us all to make "frequent recurrence to the fundamental principles of civil government," as we have always understood them in America.

If there is one lesson which the events of the last decade should have taught all Americans, it is that the battle for liberty is never ended. We had to be taught that lesson. Some Americans have not yet learned it. The men and women of my generation felt in our youth that the liberties of the Bill of Rights were something that had been established for all time for all Americans. We honored the founders of the Republic with a feeling that their blood had insured the blessings of liberty to us forever. Even the First World War did not jar us out of our complacency. While we talked about saving the world for democracy we did not consider our own liberties in danger. Today we know that each generation must win its own salvation.

In today's world of concentration camps, purges, economic and political absorption of small nations, and of scentific development of terrible weapons of destruction, liberty becomes a more precious—and less certain—thing. The Bill of Rights becomes a concern of all Americans, and not just of those minority groups who frequently must turn to it for protection against abuses founded upon prejudice. For today the people who are free, are but a small minority in a world of hate and fear and slavery.

We are constantly reminded that America emerged from World War II the richest and most powerful Nation on earth. No one will wish to dispute that record. Yet 140,000,000 Americans are indeed a minority in a world whose population is over 2,000,000,000. Our very riches and strength breed, first, envy, and then hate, among less fortunate peoples. Although the men and women of America who achieved our victory in the recent war, fought in the spirit of a glorious crusade for the rights of all mankind, they are not so regarded today by either their recent enemies or their recent allies. Certainly today most of the peoples of the world look upon us with jealousy and suspicion, and even with groundless fear or bitter hate. Surely every Jew must understand that that is the almost inevitable lot of any prosperous minority group. He is familiar with the pattern by which those who covet our possessions seek to inflame other peoples against us to destroy our liberties. Every true American knows that we must meet these attacks with eternal vigilance and courage, which puts the supreme trust in ourselves.

America, as a minority in today's world, wants to live in peace and harmony with all nations. We have joined a world organization dedicated to the highest principles of justice and liberty. We have sat down at the conference table in a spirit of give and take; but we have found ourselves faced by men who believed that we should give and they should take. We have come home disillusioned from one conference after another. We have not given up in our quest for peace, but most of us have come reluctantly to the conclusion that whatever security we have in the world today, springs from the fact that we are currently the strongest nation on earth.

For our own preservation, and for the advancement of the ideals which we hold for the world, we must preserve the full strength of America—our national resources, our military power, and, above all, the unity of our

people. In the cold war of ideologies which is being forced upon us, we shall need the strength of every man and woman of every race and creed, just as sorely as we need them in the heat of battle. We shall need the best that is in every American, and we shall need the inspiration that comes from our country's steadfast devotion to liberty and equality.

We are not the first Nation in history to be called the greatest on earth. There have been many in the pages of history which have flourished for a time and slowly crumbled into insignificance or oblivion. The record will show us that no nation has ever yielded to the forces of bigotry and intolerance, and survived as a major power. The Roman Empire flourished when it respected the temples of all religions, so long as its subjects rendered to Caesar the things which were Caesar's, but it collapsed in the era of the persecutions of Christian martyrs. The Spain which prospered by giving opportunity to all, crumbled after the persecutions of the Inquisition. The Germany which achieved a golden age of culture and scientific progress in a period of tolerance, disintegrated under Hitler. The British Empire, whose tragic decline we are witnessing today, was built up, not only by sea power, but by the personal force of Englishmen, Scotsmen, Welshmen, and Irishmen, who were inspired by a greater degree of freedom and opportunity than was known elsewhere in the Old World. Its decline began when it failed to extend the same freedom and opportunity to its subjects beyond the seas.

America stands today at the threshold of a new era of world leadership. That leadership does not result from any imperialist ambitions of the American people; it has been thrust upon us by circumstances, mainly the collapse of other leaderships which failed. This leadership brings to our Republic new opportunities to serve others. It also brings new dangers to ourselves. The greatest danger is that in our hour of destiny we may neglect the ideals of justice and liberty which have guided our glorious history for two centuries.

The enemies of America and our American system know this. The disciples of totalitarianism are doing their utmost—and will continue to do their utmost—to divide us. The hatred and bigotry and bestial cruelty which has flourished in Europe for a generation, spreads like a pestilence. The enemies of the American system are trying to plant its germs in our American life. We must combat the perils of those germs by actions and policies which will serve as a tonic to the lifeblood of our freedom.

Those who are conducting the cold war against America would strike at all our liberties, particularly our economic opportunities. The first object of their attack is our freedom of religion. They know that it is the force of religion, the free conscience of God-fearing men, which has inspired each succeeding generation of Americans to build a greater culture and opportunity for the next generation, and to cherish and defend the free institutions which have been dictated by the fundamental moral concepts to which good Christians and good Jews both are dedicated. They know that our devotion to the flag is inspired by our devotion to God. As the Americans of 48 States are loyal to one flag, which stands for justice and liberty, so the Americans of many creeds and faiths are loyal to one God—a God of justice, mercy, and human dignity.

We must preserve the religious fervor and the religious unity of the American people. The great strides which have been made in promoting amity and understanding between Christians and Jews, and among all factions and sects of each, represent a tremendous contribution to the forces of America. That noble work must be accelerated and expanded. But that is not enough. America needs not only less religious differences in our lives; it needs more religion in our hearts. Amity and understanding and effective cooperation between Christians and Jews will be best established when there are more good Christians and more good Jews—Jews and Christians who will live by the laws of the faith they profess.

We shall never correct the evils which result from religious differences by fostering indifference to religion. Equality, regardless of race, creed, or color, is our American goal. Every man or woman has a race and a color; it is equally desirable that each man and woman have a creed, and live by it. As an American citizen, I do not care what is the religion of any man, but I hope he is a religious man. Indeed, our American society is founded, and I think any world society must be founded on one man's confidence that his neighbor will respect his rights so long as he respects his neighbor's. That golden rule is the law of the prophets as well as the law of Jesus; it is the law of many other faiths. It springs from our common belief in God. With godless men we cannot with confidence cooperate or negotiate. That is why the world's efforts to negotiate with Hitler failed. That is, I believe, the basic reason for the impasse we have reached in our dealing with the Communists of eastern Europe.

The preservation of our American liberties and our hope of extending them to other peoples of the world rests, more than anything else, on a renaissance of the religious zeal, and the godliness, of the men and women who founded and built America.

Ours is indeed a society of Pilgrims—not only the Pilgrims who landed on a stern and rock-bound coast in Massachusetts—but all the pilgrims, the Catholic pilgrims, the Protestant pilgrims, and the Jewish pilgrims, who, for four centuries, from every land have turned their eyes and their feet to the west, and have sought to find in America, freedom to worship God and to live according to His commandments.

We Americans must preserve that freedom. We must continue to worship Him and to live by His commandments. We must guard well every American institution, every precious liberty which has been established here. We must protect ourselves from every attack from without, and from every temptation from within, which would sacrifice the least iota of our American birthright.

Therefore, it is indeed fitting that here tonight, we rededicate ourselves to the preservation of our sacred freedoms as Americans—our religious, political, and economic liberties. As our state constitution so wisely points out, a frequent recurrence to those fundamental principles is absolutely necessary to preserve the blessings of liberty.

As we do so, it is well that we remember the sage wisdom of Benjamin Franklin when he said, "They that can give up essential liberty, to obtain a little temporary safety, deserve neither liberty or safety."

Office of International Trade

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to enclose herewith a significant communication with reference to the Office of International Trade. I commend it to the attention of my colleagues:

JANUARY 14, 1948.

Mr. THOMAS C. BLAISDELL, Jr.,
Director, Office of International Trade, United States Department of Commerce, Washington, D. C.

DEAR MR. BLAISDELL: The World Trade Association of the San Francisco Chamber of Commerce, in regular meeting held at the Fairmont Hotel Monday noon, January 12, 1948, considered the probable effect upon all export merchants of the United States of the new licensing procedure outlined in Current Export Bulletins 431 and 432. More than 150 persons were in attendance.

It was the consensus of opinion expressed by the membership that the objectives outlined in paragraph A of Bulletin 431 are in line with the current export situation and domestic conditions.

With respect to paragraph B, however, there was general disagreement with the methods outlined in paragraphs B–1 (c), (d), and (e). Referring to paragraph B–1–c, which also considers paragraphs B–1–a (1), (2), and B–1–b, foreign governments exercise rigid import controls and checks on use of dollar exchange, the end use of materials and conditions of delivery, before import licenses are issued. Little justification is seen for the OIT to consider consumption of dollar exchange in the foreign country or to judge between various brands or manufacturers of goods or conditions of delivery, this being a matter of competition inherent in private trade, which we approve and which is outlined under the broad policies of paragraph A of the subject bulletin.

The further requirement that total price be shown is ambiguous. It ignores the fact that the price may change between time of application and issuance of license and that many commodities are not quoted on commodity markets as mentioned in the bulletin. Prices are also subject to increase as quantities decrease from car load to less car load quantities when licenses are cut down.

The added requirement of a firm commitment of supply, mentioned in 432, also implies the acceptance of a document which must be given with reservations expressed or implied. A manufacturer may expect to have the merchandise available for a specific shipment at the time of application, but can scarcely be expected to earmark merchandise unless the export merchant has likewise made a firm commitment at that time. Unless the exporter has some reasonable assurance of an alternative use for such merchandise, he can scarcely make such commitment. Most exporters are not speculators.

With reference to paragraph B–1–d, it was pointed out that the requirement of showing the possession of an accepted firm order is completely unrealistic. While an order in hand has been a requirement at all times for filing an application, this has been until recently interpreted to accord with actual conditions, we believe. A careful buyer will scarcely give an irrevocable commitment for merchandise at a date of shipment which can only be determined if and when the license has been issued, of a quantity which also depends upon the license granted. A careful seller will not accept the firm order because of the same uncertainties and in addition will not commit himself to a price which at a later date may be less than his then cost. It can scarcely be unknown to OIT that the majority of export merchants operate to a considerable extent upon simultaneous purchase and sale. He does not own or buy the merchandise covered by the accepted firm order until he knows that he has a license for export.

Although paragraph A of Bulletin 431 and A–1 of Bulletin 432 state that the historical pattern has been abandoned, in the press conference of December 30, the following question was raised: "Assuming that two

identical applications were submitted and assuming that the prices were equal, would the applicant with the historical background be given preference over the nontraditional exporter?" Mr. Blaisdell stated, "It means the historical position will also be taken into account."

Referring to paragraph B-1-e of Bulletin 431, many buyers of commodities order at one time a quantity of a given product for a substantial number of essential end uses, and applications are accordingly apt to be vague. Enforcement of end use requirements has in the past apparently given an advantage to the applicant who could present his case personally.

Strong objection was voiced to the new procedures outlined in 431 and 432, for the reason that they seem to discriminate against the merchant exporters, in favor of the manufacturing exporters, and, in addition, seem to open the door for practices which would require an impracticable amount of enforced compliance.

RECOMMENDATIONS

It is recommended that the price criteria be abandoned as unworkable in accomplishing the competitive situation outlined in Bulletin 431.

Competition in the foreign markets takes care of price limitation as no other method can. It is recognized that a license for a scarce commodity does, in effect, give the exporter a semimonopoly position, but it is believed that limiting the volume of export business which an export house can expect to do under an expanding positive list, should not also bring the prospect of bankruptcy by reducing the margin of profit to such a point as seems to be contemplated, and it is felt that more concern is being shown for the foreign buyer than for the exporters, whose place in the American economy has had, and can continue to have, a beneficial place.

If the price criterion cannot be completely abandoned under the new authorization for extension of export control, our membership urges that consideration be given to allowing the export houses a fair percentage of the quotas and that OIT indicate in its quota announcements the percentages of each licenseable item which will be set aside for each category of exporter, namely: (1) Government-to-government sales, (2) producer-exporter, (3) merchant-exporter; and that the OIT should further indicate what formula it follows in setting up these allotments.

If prices are to be compared in a group of applications, a definite basis of price should be specified, f. o. b. factory, f. a. s., or c. i. f., and rigidly adhered to for all applicants.

The members of this association are anxious to cooperate with a workable system of export controls recognizing the necessity of continuing these and probably of an expanding list of commodities. It is urgently recommended, however, that when changes of this important nature are contemplated, that because of the time element, due consideration be given to regional representation and ample notice of such contemplated meetings be provided.

Very truly yours,

W. J. GILSTRAP,
President.

More Whisky—Less Food

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. REED of New York. Mr. Speaker, in 1936 negotiators for our State Department, operating under the Trade Agreements Act, cut the duty on whisky from $5 to $2.50 a gallon. Imports more than doubled in the next year. On January 1, 1948, the duty was again reduced from $2.50 a gallon to $1.50 a gallon. The trend of imports at the present time is in the same direction as when the cuts were made in 1936. Last year imports of liquors amounted to about 10,000,000 gallons. If we are to judge by what happened in the past, liquor imports in 1948 will be limited only by the amount of precious grain the foreign distillers can take out of the very insufficient stocks. The American duty will be no limiting factor in any degree. Our President has, by proclamation, invited foreign makers to send us every drop they can spare.

Whisky is made from grain, and it takes a bushel of grain to make 4½ gallons of whisky. Wheat is the staff of life; rye makes good bread; barley makes good cereal; corn is scarce and precious. Every trumped-up argument to the contrary, the unchallenged fact remains that in 1943 foreign countries will use at least 3,000,000 bushels of grain to make liquors for export to the United States and millions of bushels more will be used in the foreign production of liquors for home consumption.

One of the very State Department officials that was influential in making the drastic reduction in liquor duties and encouraged its importation made the following statement:

> Europe today is a land of very low standards of living. Millions of families are having a hard time scraping enough together simply to exist, to find shelter, to cover their bodies, and to prevent disease and starvation. So much effort is spent in obtaining the bare necessities that they are unable to do a good days work, thus impairing production and retarding recovery.

Now, I want to make it clear that I understand the need for food in Europe. I agree wholeheartedly with the statement that the situation in some areas is acute. I have no objection to the sending of food to these starving people. I am as charitable as the next person, but I cannot countenance the effort of our President to feed them liquor or to increase the consumption of liquor in this country and abroad, and I make the statement after considerable investigation and serious thought. Our negotiators in the trade agreements made at Geneva, in their blinded efforts to keep pumping exports abroad and imports into the United States, deliberately planned a campaign to increase the consumption of liquor in this country. They did so knowing that thousands of people in Europe would go without bread and cereals so that we might have more and cheaper liquor.

President Roosevelt, and his successor in the White House, as well as numerous State Department representatives have said repeatedly that the great increase in imports resulting from drastic tariff cuts was not intended to replace domestic production. Increased consumption was the goal. By exporting more and doing away with our tariffs we would be able to import and consume more butter and cheese, walnuts and fruits, jewelry, and perfume. The fact that they have cut the rates of duty on whisky a full 70 percent is proof in itself that it was their intention to increase the consumption of liquor.

The foolish argument that rye and barley are used more for cattle feed than for human consumption is entirely without point. It takes as much acreage and labor and machinery to produce rye as it does to produce wheat. The argument that grains exported from the United States are to be used only in the production of food is just as foolish. The unchallenged fact remains that foreign countries who are literally begging for food are producing millions of gallons of liquors every month, and they are making it out of millions of bushels of grain. We have ordered our distilleries to greatly reduce their production so that we might export grain abroad and, at the same time, we reduce the duties on imports of liquor to an insignificant point. President Truman carefully gropes for votes with one hand and hides what he is doing with the other. He wants our whisky producers limited to a few millions of bushels of precious grains per month—but he beams benignly on foreign manufacturers and says, "Welcome to our market. We will take all the whisky you can produce."

And millions of people in the war-torn countries beg for bread. They do not even get a stone—they get liquor. A pound of wheat will make more than a pound of bread, but it puts more money in somebody's pocket if it can be used in the making of whisky, and, to too many people, dollars are more important than starving men and women and children.

Little wonder that labor and capital and the farmers themselves have lost faith in the administration. One of the basic weaknesses of the whole European recovery program is the loud talk of its proponents about "all or none," while at the same time they promote the sale of liquor which they know down in their hearts cuts the delivery of food. They question your patriotism if you do not save your slice of bread per day—but they ask you to consume more of the whisky made abroad from the grain you so patriotically did not eat.

We may drink our society into complete ruin—a very, very high price to pay for an increase in the dollar volume of our imports. Not many Americans will be fooled by the propaganda that we can drink the world into prosperity—or the Europeans into a condition of bounteous plenty. The trade agreements program so ardently pushed by Mr. Truman not only embodies foolish economics, it contains some vicious features which must and will be called to the attention of the people of this country.

Backs, Bellies, and Shelter Are Nonpartisan

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. SABATH. Mr. Speaker, yesterday in opposing the gag rule to provide

for consideration of the Knutson-National Manufacturers Association tax bill—a type of rule which heretofore has only been granted in the consideration of highly complicated and technical revenue and tariff bills—I endeavored to point out the iniquities of that bill, and went on record as favoring the President's recommendations to give a flat income-tax reduction of $160 a year to those taxpayers in the lower-income brackets who are married and have two dependents and the same reduction be given those in the higher-income brackets or the wealthy class. I also urged the readoption of an excess-profits-tax law.

Today I received a letter from the People's Lobby, which reassures me on the stand which I have taken. I feel that their contention is worthy of real consideration and in the hope that it will be given serious study by the membership, under the leave given me, I insert it in the RECORD. It is as follows:

THE PEOPLE'S LOBBY,
Washington, D. C., January 28, 1948.

SUFFERING CANNOT BE HELPED BY EVASIONS

To Members of the Congress:

Every Member of the Congress knows that the reduction in prices that is practical, if profits of big landed farmers, and major manufacturers, developers of natural resources, wholesalers and retailers, and transporters were reasonable, would mean much more, to at least two-thirds of American consumers, than the reduction of taxes proposed by any tax reduction bill pending.

Every Member of Congress knows that a 10 percent reduction of the $118,000,000,000 paid retailers last year could mean about three times more to all people in the lower-income brackets than any tax reduction they will get, and five times as much to many.

The President's recent Economic Report to Congress lists 11,000,000 persons living on relatively fixed incomes as follows:

Veterans living on pensions, 3,000,000.

Survivors and social security beneficiaries, 2,000,000.

Veterans living on educational allowances without other jobs, 2,000,000.

It did not mention the more than 1,000,000 preachers and teachers similarly handicapped.

The A. F. of L. admitted last December: "The 11 percent gain in average hourly rates and average weekly wages scored since October 1946 has meant nothing to the 13,000,000 production workers."

Unless Congress at once:

1. Restores at least half of the repealed excess-profits taxes.

2. Restores rent control and major price fixing and rationing as Canada plans to do.

3. Retains present personal income-tax rates above $5,000 or $6,000.

4. Taxes land values and repeals excise taxes.

5. Adopts most of the anti-inflationary measures urged by Chairman Eccles of the Federal Reserve Board.

Congress will stand convicted of the stupidity of trying to help suffering, without ending the causes of suffering.

Backs, bellies, and shelter are nonpartisan.

Yours sincerely,

BENJAMIN C. MARSH,
Executive Secretary.

The world judges our foreign policies by our domestic.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial which appeared in the January 29 issue of the New York Herald Tribune in regard to the proposed St. Lawrence seaway:

UNTIMELY AND UNPROVED

President Truman remarks that for 25 years Presidents have supported, as he is now doing, the St. Lawrence seaway project. The fact is that in the 25 years technological developments have increased the magnitude of the undertaking and lessened the justifications for it. The original proposal has been revised from a 25-foot to a 27-foot channel depth to accommodate vessels plying between the Atlantic and the Great Lakes. But the modern shipping trend is still toward greater depth. And there is no port on the Great Lakes, no approach channel to accommodate a 27-foot draft, let alone the 35 feet many authorities now deem essential.

Similarly, technological developments in warfare have outdistanced earlier arguments for the seaway as a defense resource. The locks would be particularly vulnerable to air attack, their own defense would be costly. The final justification, power development, does not depend upon completion of the navigation project.

Present plans call for tolls on shipping in an effort to make the project self-liquidating. The agreement between Canada and the United States, which Congress is now asked to approve, limits the charges that can be levied. Moreover, the St. Lawrence is open only 7 or 8 months of the year, so that the seaway could never operate to more than, say, 60 percent of capacity. Consequently, there is little likelihood that the seaway can ever be anywhere near self-liquidating.

Estimated costs, based on the inadequate 27-foot channel, range from $300,000,000 to $1,000,000,000. If Congressional legislators can forget the election, they will recognize that an inflationary period is the worst possible time for any major public work which draws heavily upon scarce materials and sends prices still higher. They will recognize that the necessity for financing the European recovery program and for channeling materials and productive efforts into essential restoration of economic stability at home and abroad rules out unnecessary Government expenditures and commitments. This is definitely not the time for Congress to embark upon a vast project, the cost of which cannot be accurately calculated, the national benefits of which are yet to be proved.

Juvenile Delinquency and Education

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a thoughtful address by J. Pope Dyer, prominent educator of Central High School, Chattanooga, Tenn. Mr. Dyer has made a lifetime study of juvenile delinquents, and I invite your attention to his address which was delivered over radio station WAPO on November 17, 1947:

Juvenile delinquency is not a new term to the people of our Nation. Any student of criminology will recall that practically all the exceedingly notorious criminals in the early history of our Nation, as well as the noted criminals of the past decade or two, were first dangerous and desperate juvenile delinquents. This was the case with the Barker brothers, Karpis, Floyd, and a list too long to be recounted here.

I repeat, juvenile delinquency is not a new problem suddenly arising for solution. The causes broadly are the same from generation to generation. Poor home training, naturally by incompetent parents. Excessive alcoholism, feeble-mindedness, insufficient recreational facilities, bad housing, poverty, truancy, and a multitude of other causes could be listed. Basically, the incompetent parent, who is weak, cannot be expected by society to rear a strong, obedient, responsible, God-fearing child—that is expecting too much of either. As Helen Bailey said a few days ago, "There is no magic formula by which we can solve this problem." I have often said the time to reduce crime and juvenile delinquency is in the high chair and not the electric chair. Judge Tatum, of Nashville, has said many times that in the past few years, as juvenile judge, he has tried approximately 7,000 cases of juvenile delinquents and the number of children who are regular in attendance at Sunday school and church is less than a dozen and the same condition prevails at their homes. Fundamentally, we must recognize that juvenile delinquency exists when the home breaks down in any of its moral or spiritual obligations. We may expect more juvenile delinquency unless parents are willing to take more time for rearing children than any other thing in the world. This problem is serious and great men like Hon. J. Edgar Hoover are alarmed. I quote him, "Parents must awaken to the realization that the family is the first great training school in behavior or misbehavior. Children develop a sense of right and wrong—they are not born with it. Our Nation is sadly in need of a rebirth of the simple life—a return to the days when God was a part of each household, when families arose in the morning with a prayer on their lips and ended the day by placing themselves in His care."

Some of my students have recently received some tremendously enlightening letters relative to juvenile delinquency. Vernon Willingham, of my class, received one from Mr. James F. Wilson, of the Maryland Reformatory for Boys. Mr. Wilson said, in part, I quote, "Why are the boys here? First of all they were selfish. They were disobedient toward God, parents, lawful authority." I quote from another letter from the splendid Superintendent Fain C. Potter, of our own Tennessee State Industrial School. He said, "Most juveniles that are delinquents overestimate their own abilities and feel that they are a little superior to the average boy. Juvenile delinquents are not problem boys—they are boys with problems out of harmony with society. A large percent of them are boys who have not learned to say 'No.' They, as a rule, are a group of overstimulated youth that have very little of that virtue of patience to wait and work for accomplishments."

The schools certainly have a responsibility to cooperate with all agencies to reduce juvenile delinquency. The greatest studies of the careers of delinquents and crime reveal three things:

1. Criminal careers have their roots largely in childhood.

2. The marks of delinquency are in great measure evident during school years, and

3. The families of delinquents are as a rule unable to participate constructively in the training, supervision, and treatment of young offenders without expert guidance.

It is not guesswork to say failure of the home is the chief cause of delinquency. The experts, Father Flanagan, J. Edgar Hoover, Dr. Sheldon Glueck, and others are in absolute agreement at this point.

The school program must recognize the symptoms of delinquency and a program of discipline, instruction, recreation, and understanding must be constructed to meet the needs of these potential offenders. A course of study, specially designed for their needs must supplant the typical curriculum. The best teachers must be used so that these problem children may be saved. A sympathetic, firm, understanding teacher can do much to inspire a potential delinquent to do a great service. The excessive energy of the mischievous boy must be channeled so that it will not mature into downright meanness and destructiveness. It is much cheaper to spend more money now to prevent delinquency than to pay several times as much to incarcerate the youth at a later date. I feel that the school attendance law should be rigidly enforced.

It is time we got serious about this problem—parents, teachers, officials, and all citizens. We can't eliminate juvenile delinquency. We can reduce it. Miss Betty Dawson summarized the problem of juvenile delinquency this morning as follows: "One of the major causes of juvenile delinquency is the lack of religious training in the home. If a child is properly taught, when he is old he will not depart from it. Juvenile delinquency could be cured if parents would take their children to church."

I would add, the school must augment the work of the home and church. They must all be united in this common cause. No one force can neglect to do its share.

Oil and Steel Shortages

EXTENSION OF REMARKS

OF

HON. KEN REGAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. REGAN. Mr. Speaker, much is being published in the press and considerable discussion is being heard daily with respect to the great shortages of oil and steel.

Many independent oil operators of west Texas, and I feel confident that the condition is not limited to west Texas but is a general condition throughout the United States, have felt for the past several years that a shortage of oil was bound to follow the shortage of pipe or well casing that has been an acute condition in the oil industry for the past several years.

This shortage of steel continues to hamper, prevent, and delay the drilling of wells that would, in all probability, relieve, if not entirely prevent the shortage in oil and its products if an adequate supply of well casings could be made available.

Yet, Mr. Speaker, we are told that there are tremendous quantities of scrap steel in Europe and Africa.

Mr. Speaker, we are shipping boatload after boatload of various supplies and commodities to Europe; the boats are returning empty.

Is it not high time, Mr. Speaker, that these United States start practicing some economies at home and do something that will be a direct benefit to all our people?

I have here an editorial by Mr. Ray L. Dudley, of Houston, Tex., as published in this month's issue of the magazine World Oil, that was forwarded to me by my good friend, H. E. Williams, a prominent independent oil producer of Houston, that I feel would be of great interest to every Member of this Congress and, under unanimous consent, I include it in the RECORD:

HOW TO GET MORE PIPE

Last month we discussed the steel situation and said (after talking with steel men in the East) that one sure way to get more steel to make more pipe to drill more wells is to get more scrap steel to the steel mills of the United States. We suggested that great quantities of scrap steel are available in Europe and north Africa and that the practical is to bring this steel back to the United States.

It is possible to increase steel capacity in the United States without the tremendous expense necessary to build new mills, the product of which necessarily would have to sell at a price considerably above present steel prices. But in any consideration of the problem of increasing steel production, the scrap question is well at the top of the list. You recall the efforts to get in the scrap during the war, of how the oil industry organized its efforts to bring in scrap and the large amounts of scrap thus recovered and delivered to the mills. That effort, of course, did not bring in all of the scrap—but it cleaned out the junk pile on many a lease.

There is, however, this big source of scrap abroad, everyone who has visited Europe has noticed it. So far as is publicly known, no effort is being made to bring this scrap to the United States but, on the contrary European nations have requested, under the Marshall plan, large quantities of scrap to be sent from the United States.

We shall shortly be sending these countries aid in the form not only of food but of manufactured articles. They want dollar credits through exports. Why in the name of common sense can't we get this scrap back? Our ships will be going over loaded and coming back in ballast. Why not bring the scrap back instead of ballast?

It will take congresisonal action to bring this about.

Speaking of the desirability of congressional activity along these lines, Alex Walker, president of National Supply Co., in a letter to Secretary of Commerce Harriman, recently wrote:

"This is a far more intelligent way to secure the additional five- or ten-million tons of ingots so badly needed, than to build new steel-producing capacity costing $2,000,000,000 to produce 10,000,000 tons of ingots per year, requiring 2 or maybe 3 years to build, and withdrawing 1,500,000 tons of steel from consumption in other channels.

"I am sure you understand that such action will gradually reduce the price of scrap in America; also the cost of steel; and eliminate the gray market.

"It is my understanding that only the Federal Government can bring foreign scrap back to this country in large quantities, because the amount owned by private industry, who has the right to sell it, is limited; most of the scrap scattered over this world is owned either by the Army, the Navy, or the nation in which it is now located.

"I know of nothing more that you can do to hasten business stability in America, than to build up the scrap supply and break the gray market which is made possible by the present shortage of scrap and finished steel."

Here, in our opinion, is how you * * * and by you we mean every person who reads this, whether owner, executive, or employee of an oil company * * * can help to increase the steel supply in the United States and thereby increase the amount of pipe needed by our industry:

Write your Congressman and Senators and say:

"Why don't you do something about bringing scrap steel back from Europe to the United States? This country needs the steel it will make. Only our Federal Government can do something about it and you are my representative in this matter."

Write the letters today.

RAY L. DUDLEY,
News Analysis Section.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following resolution adopted by the board of supervisors of Erie County regarding the St. Lawrence seaway:

Whereas on various occasions and over a period of years this Board has gone on record, in opposition to the St. Lawrence seaway; and

Whereas said proposed seaway presents a present threat to the economy of New York State and especially to the Niagara frontier as great as at any time since its inception; and

Whereas the people of the State of New York have contributed millions of dollars to provide water transportation from Lake Erie to the port of New York; and

Whereas New York State, because of its great percentage of national wealth, would be required to contribute a great part of the total cost of the proposed seaway and at the same time create a transportation system in direct competition with its own system; and

Whereas the diversion of transportation to cheap foreign shipping and the opening of our inland markets to alien tramp steamers would be detrimental to American labor, the American farmer, and American industry and so lower the whole standard of American living; and

Whereas the entire navigation and seaway project would be built largely at the expense of American taxpayers while a net loss of some $42,000,000 would be sustained by industry and commerce, along with individual taxpayers; and

Whereas such a seaway is unwarranted and unnecessary: Now, therefore, be it

Resolved, That this Board renew its opposition to the St. Lawrence seaway, that it petition our Representatives in the Congress of the United States to oppose any and all legislation proposing such a project; and be it further

Resolved, That this Board join with and urge all organizations, public, semipublic, and private, in the Niagara frontier to create a united force to the end that all opposition possible may be brought against this unsound and undesirable project.

1948 Schedule for State Primary Elections

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. CRAWFORD. Mr. Speaker, in view of the widespread interest in the approaching national election and since we do not have a uniform date for selection of candidates for Representatives in Congress, United States Senate, and governors, I am submitting a schedule of State primaries for 1948. Instances of presidential primaries are also noted. The schedule follows:

Alabama, May 4.[1]
Arizona, September 7.
Arkansas, August 10.[8]
California, June 1.[2]
Colorado, September 14.
Florida, May 4.[1 2]
Georgia, September 8.
Idaho, August 10.
Illinois, April 13.[2]
Indiana, May 4.[3]
Iowa, June 7.
Kansas, August 3.
Kentucky, August 7.
Louisiana (State officials only January 20).
Louisiana, September 14.
Maine, June 21.
Maryland, May 3.[2]
Massachusetts, September 14.[4]
Michigan, September 14.
Minnesota, September 14.
Mississippi, August 24.[1]
Missouri, August 3.
Montana, July 20.
Nebraska, April 13.[2]
Nevada, September 7.
New Hampshire, September 14.[5]
New Jersey, June 1.[2 9]
New Mexico, June 8.
New York, September 14.[3 6]
North Carolina, May 29.
North Dakota, June 29.
Ohio, May 4.[2]
Oklahoma, July 6.
Oregon, May 21.[2]
Pennsylvania, April 27.[2]
Rhode Island, September 14 or 24.[7]
South Carolina, August 10.
South Dakota, June 1.[2]
Tennessee, August 5.
Texas, July 24.
Utah, September 7.
Vermont, September 14.
Virginia, August 3.
Washington, September 14.
West Virginia, May 11.[2]
Wisconsin, September 21.[6]
Wyoming, August 17.

[1] First primary; if run-off necessary, second primary held about 3 weeks later.
[2] Presidential primary also held on this date.
[3] For Representatives in Congress only; Senators and State officials nominated in convention.
[4] Presidential primary held April 27.
[5] Presidential primary held March 9.
[6] Presidential preference primary is held on April 6.
[7] Under new law, party which first files request with Secretary of State has choice of dates; the primary of the other party is held on the alternate date.
[8] For State officials; July 27 for United States Senators and Representatives in Congress.
[9] New Jersey will probably change date to April 20 or May 4.

NOTE.—Connecticut and Delaware do not hold primaries for national or State officials.

The Plain Issue: Taxes

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am delighted to submit for the benefit of those who read the CONGRESSIONAL RECORD the following editorial from the Tulsa (Okla.) Daily World, in the issue of January 22, 1948, entitled "The Plain Issue: Taxes":

THE PLAIN ISSUE: TAXES

Proponents of a $5,600,000,000 cut in the budget submitted by the President have practically defined the principal feature of the 1948 campaign. The bold move of the Republican majority leadership puts the President on the defensive. He will be in the position of defending high taxes and unremitting expenditures.

The cut proposed is explicit. It relates to income taxes. It carries the requirement that Federal expenditures be cut to fit the reduction in income. President Truman is commonly understood to stand for the present tax rate, and, inferentially, against any reduction of outgo. This situation makes the whole matter fairly plain.

The size of the cut would, if carried through, make it imperative that one or both of these things must be done. The aid to Europe must be reduced; the vast Federal establishment must be tamed.

There are two major probabilities: The budget will be trimmed and President Truman will veto the tax reduction bill. Apparently, the Republican leaders would not yield to the suggestion that they could gain Democratic support for a possible overriding of a third tax bill veto by cutting the cut somewhat. It was decided, probably wisely, to stand on the big reduction as a starter.

Mr. Truman's budget message was so palpably political that it created a challenge and largely disgusted the country. He submitted a budget of nearly $40,000,000,000. He has acquired some sort of support of his position that the expenditures cannot be cut now and that not even the desirable reduction of taxes upon small incomes can be voted.

Indications now are that the third veto will be fatal—to Mr. Truman. It is regrettable that the whole matter has become political—but here it is, a political issue.

It is apparent the President's plan is not for reduction of spending here or in Europe. The Republicans have not yet met the issue head-on; that is, they have not gone into cutting off bureaus and sections; they apparently rely upon the theory that if revenues are cut expenses will be cut. There is no action precedent, no deliberate marking of bureaus and sections for extinction. The cutting should begin at the source, not at the ultimate. But the action of the House majority is valuable; it puts the President purely upon the defensive. He is for continued spending and unlimited cost in Europe.

It should be made plain in Washington and over the country that there is basically no conflict between requisite aid for Europe and tax reduction. If we must pour out money for Europe, we must quit pouring out unlimited money at home. The looseness of European aid may mean shortening of rations for political bureaus at home. The whole business is interlocked, and the appearances are that President Truman is firmly tied to the idea of grotesquely large expenditures and the theory of the impossibility of betterment of the home Government.

The Meat Situation

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the American National Livestock Association and resolutions of the Colorado Stock Growers and Feeders Association:

A MEMORIAL TO THE CONGRESS ADOPTED BY THE AMERICAN NATIONAL LIVESTOCK ASSOCIATION AT ITS FIFTY-FIRST ANNUAL CONVENTION IN BOISE, IDAHO, JANUARY 14, 1948

Because of widespread misunderstanding of facts underlying the present meat situation, with respect both to supplies and prices, we present the following facts:

1. CAUSE OF INFLATION

All prices are high. We are in a period of inflation which is the direct result of the currency expansion of the war period. This currency expansion was inevitable once our Government had established a policy of financing the war primarily by borrowing from banks instead of by direct taxation and by sale of bonds to the investing public. This increased the supply of money out of all proportion to the available supply of goods and services. High prices are clearly the result of governmental policy adopted during the war and cannot be charged to any group or class of our citizens.

2. HIGH AGRICULTURAL PRODUCTION COSTS

Farm production costs, which may be taken as representative also of ranching costs, are explained by the Department of Agriculture as follows: "Farm costs are at an unprecedented high level. Since 1939 farmers' out-of-pocket operating expenses have risen from 9 to 25 percent a year. Some further increase is expected in 1948."

Government figures also show that costs in farm production in 1946 exceeded gross farm income in 1941.

3. INCOME-MEAT PRICE RELATIONSHIP STABLE

The Bureau of Agricultural Economics reports that from 1920 to the present time, save only the war years of controlled economy, consumers have spent practically the same portion of their income each year for meat. In other words, meat prices are a true reflection of national income.

4. CONSUMER DOLLAR HIGH COMPARATIVELY

How does the consumer dollar spent for cost of living compare with other dollars spent? The National Industrial Conference Board shows, with Government figures, what has happened since 1935–39. By August 1947 the value of the 1935–39 dollar spent for living costs had been reduced to about 66 cents; that spent for construction of all types had shrunk to 53 cents; that spent for raw materials at wholesale to 45 cents. The value of the same dollar paid to labor in manufacturing industries had dropped to 49 cents.

5. CATTLE PRICES

What about beef cattle at 40 cents per pound? Such prices appear in the press occasionally for a single load or a part load of long-fed prime cattle; but the market page will also show that on the same day all other cattle sold for substantially lower prices. Top cattle have no significance for the average consumer. The meat from such animals does not go to the butcher shop but is a specialty item for hotels and night clubs.

6. THE CONSUMER FIXES THE PRICE

Consumer demand and available supply fix the price of food. Today it is a universal

high demand, created by high income, that has made prices rise. This broad demand, in a period of peak production, is distributing food more widely than at any time in our history.

7. PRESIDENT TRUMAN OPPOSED PRICE CONTROL

What President Truman said about price controls in 1946: "The general control over prices and wages is justified only so long as it is an effective instrument against inflation. I am convinced that the time has come when these controls can serve no useful purpose. I am indeed convinced that their further continuance would do our Nation's economy more harm than good. * * * The Price Administrator has advised me that with so much of the economy freed from price controls, clinging to the rest would, in his judgment, lead to distortions in production and diversion of goods to an extent far outweighing any benefit that could be achieved."

This is in direct conflict with his request now for selective controls.

8. MEAT PRODUCTION LARGE

Production of meat remains close to the record wartime level, but, relieved of war demands, the amount available for civilian use is substantially above even the peak year 1944.

Total meat production in 1944 was approximately 25,200,000,000 pounds. The amount of this available for civilian use in 1944 was approximately 19,200,000,000 pounds. Total meat production in 1947 is estimated to be well in excess of 23,000,000,000 pounds, practically all of it available for civilian use.

9. PER CAPITA CONSUMPTION HIGH

In 1947 each person ate on an average 156 pounds of meat. That is the largest per capita consumption in 38 years. In 1948 the supply will approximate 145 pounds per capita, but this will still be about 15 percent above the amount of meat consumed per capita in 1935–39.

10. BETTER LIVING

Under inflation, food prices have risen, even though the supply of food has been at record levels. More people in this country are living better today, eating more than at any time in our history. It is their demand, their ability to pay, that sets the price of food, whether that price be high or low.

11. RATIONING AND BLACK MARKETS

What would happen if we rationed meat? The present demand would inevitably create black markets and the black marketeer would be the beneficiary. The consumer with an average income would be the loser. That is what happened under OPA.

12. REMEDY FOR INFLATION

Maximum production coupled with a sound fiscal and monetary policy on the part of the Government will provide the most effective remedy for inflation. This would insure the consumer a maximum supply of meat at equitable prices. It can be accomplished only under an economy free from rationing, price controls, or other arbitrary restrictions. Maximum production cannot be realized, however, and reflected in lower prices so long as costs of producing and fattening livestock are dominated by the export to Europe of close to half a billion bushels of grain yearly, and of tremendous amounts of equipment and supplies that are important factors in production costs.

In view of all the above, we respectfully urge the Congress not to reimpose price controls or rationing or the authority therefor.

Resolution 4

Price Controls and Rationing

(NOTE.—On June 21, 1946, at our seventy-ninth annual convention in Canon City, the Colorado Stockgrowers and Feeders Association unanimously adopted resolution A urging Congress to remove OPA price controls, because OPA controls and regulations of livestock and meat products have proved unenforceable and impractical and black market operations fostered by such unenforceable regulations are causing irreparable damage to the economic structure of the industry.)

Whereas President Truman has requested that Congress grant him authority to reinstitute price and rationing controls on food and other products as he deems necessary to regulate prices and consumption; and

Whereas the American public accepted such controls and rationing only as a war measure justified by the danger to our Nation; and

Whereas no such emergency can now be claimed to exist to justify such regimentation and the sacrifice of individual rights and responsibilities, particularly when experience proves that the controls are foredoomed to failure: Therefore, be it

Resolved, That we again point out that production and efficient utilization provide the most effective controls upon prices and distribution and we express our opposition to price and rationing controls as proposed.

Resolution 15

(Resolution supporting a memorial to the Congress adopted by the American National Livestock Association at its fifty-first annual convention in Boise, Idaho, January 13–14–15, 1948)

Whereas the American National Livestock Association, in annual convention at Boise, Idaho, January 13, 14, and 15, wrote a memorial to the Congress setting forth 12 facts regarding the present meat situation, both with respect to supplies and prices, and urged the Congress not to reimpose price controls or rationing or the authority therefor: Therefore, be it

Resolved, That we heartily endorse their action and offer the support of the Colorado Stockgrowers and Feeders Association in opposing price and rationing controls.

NOTE: We believe that if meat were again controlled by rationing as suggested by President Truman and Secretary of Agriculture Anderson, such a Federal order would immediately create black markets for meat, forcing prices to go higher. We know from experience the results would be bad for all concerned and the consumer with an average income would be the loser—and that is exactly what happened under OPA restrictions.

European Recovery Plan

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 30, 1948

Mr. REED of New York. Mr. Speaker, it is about time, before it is too late, for the taxpayers of our country to realize and to resist the raid on their pockets by foreign countries made possible by the American internationalists cooperating in the foreign raid. There can be reduction in expenditures to warrant much greater tax reduction than is provided for in H. R. 4790 if the people instruct their Representatives in Congress to oppose this foreign boondoggling program, which will eventually, if not stopped, make taxpaying slaves of our American citizens.

Under leave to extend my remarks in the RECORD, I include the following radio address by Henry J. Taylor delivered over Station WOR, New York, January 12, 1948:

Exactly who gets the money in the latest European recovery plan? Seventeen billion dollars. I've just found out for sure. I think you'll be very surprised to know.

Our money doesn't grow on trees. It's hard for most any of us to get along at best. Before we're challenged further by the idea that the $17,000,000,000 new European plan must be all or nothing and start paying the bill in our homes and work places and the high cost of living, we need some facts that are contrary to public impression and which were withheld in the original presentation of the plan itself.

Fact number one is who gets the money. It's hard to imagine that fact was left out but it was, and I think we have a right to know. We've already spent $22,000,000,000 abroad since the end of the war. And now we're expected to spend $17,000,000,000 more. Yet, in the mountains of words and figures, this fact was of itself an amazing omission. Actually, the plan, to be truly revealing, should never have been given to Congress and to the public without this fundamental information—who gets the money.

After all, who is more entitled to know where his money goes than the man who pays the bill, which means us all? But the State Department in Washington could not reveal and still feature the anti-Communist angle, my friends, on an over-all $17,000,000,000 basis, on an all or nothing basis. So in order to be factual and exact in discussing on the air this latest project, so important in your land and mine, so heavily involved in our inflation, high prices, taxes, the cost of living that is bearing down on us all and on our future, I've been making for weeks in Washington every possible attempt I could make to get official information regarding what countries in terms of percentages were to get our new $17,000,000,000.

So at long last here are the facts to plug that loophole, the official figures obtainable only yesterday. They indicate much we've not been permitted to know.

First you will find that in percentage of dollars, a full third of our seventeen-billion-dollar plan is primarily another aid to England project. The lion's share of the funds goes to the British Isles, one-third of the entire amount, $5,348,000,000 of the seventeen million—billion to be exact. Now, certainly, that part hasn't anything to do with buying off Communist popularity there, and to this large extent the Marshall plan should not have been presented to us as an anti-Communist measure, any more than the last $3,750,000,000 we gave England in 1945.

Maybe they need it, I don't know. But they certainly don't need it to stop communism in England. No one has even had the nerve to suggest that the British are on the verge of voting Communist. Had the fact that a third of the money we sent—or are to send—was to go there been made public, and early, it would have been impossible to present the powerful appeal for the over-all seventeen-billion fund on an anti-Communist basis, all or nothing basis, in the official support for the outlay, at least to the extent of one-third of the entire proposition.

Now, next with England, seven additional countries are ruled out in the same way, where there is, by common consent, no more idea of the population voting Communist than there is in England—this plan or no plan. I refer to Holland, Belgium, Luxemburg, Denmark, Ireland, Norway, Portugal, and little Iceland. So let's see what they'll get. Some of the figures are unbelievable, my friends, but they are correct and official and at last come from our State Department itself.

Do you know how much all of us are to be taxed for the Dutch? Holland is to get 2,436,000,000 American dollars. Fantastic as it may seem, the plan gives Holland, a little

country with fewer people than live in New York city $2,436,000,000. And if that's a calculated risk against communism in Holland it's quite a calculation, yet imaginable. The plan is nevertheless presented as "take the whole plan or nothing, all or nothing." Why, the figure for Holland alone means a charge on us for $308 for every man, woman, and child who lives on the shores of the Zuyder Zee.

Denmark is supposed to get over a half billion dollars, $582,000,000 to be exact. For this one little country alone, with a population less than Chicago, that's as much as all the stop-gap aid for which the special session of Congress so dramatically called last November. Denmark, a half billion dollars.

Now Ireland: Ireland was not in the war. Ireland is an island. The Communists would have to swim to get there and if there's a Communist there now not an Irishman knows it. But Ireland is to get a half billion dollars, $497,000,000 to Ireland to be exact. So, my friends, three and a half billion dollars out of the 17 billions go to Holland, Denmark, and Ireland.

For good measure, even Iceland. Apparently there must be quite a Communist threat in Iceland and a lot of western civilization tottering on the brink there besides, for Iceland comes into the Marshall plan, and for $38,000,000. Fewer people live on that island than live in Trenton, N. J. And Iceland is just about as much in the throes of chaos, just about as much tottering on the brink of giving up western civilization as Trenton, N. J., except that there isn't much western civilization in Iceland anyway. But they're to get $38,000,000 from us, all or nothing, just the same.

Then there's Norway, where the Communist vote is about 7 percent. But Norway is in for $234,000,000 from us. The plan gives $234,000,000 to Norway.

Next comes Portugal in deciding whether or not the propaganda for the plan is padded in its over-all anti-Communist appeal to our public. Now, in Portugal, the Communist vote happens to be nonexistent. For 20 years the country has been and remains in the hands of a Fascist dictator, Dr. Salazar. Portugal did not fight in the war. Portugal profited immensely in the war by Portuguese standards. Yet, Portugal gets our money just the same. Portugal gets 100,000,000 American dollars in the Marshall plan. All or nothing. Can the seventeen billion be cut? Can the first installment now asked for, $6,800,000,000, be cut? Well, I should say so, and now.

The anti-Communist angle is valid to a degree in some places where the money is to go, like Italy. But, my friends, the simple truth is, now that we get the figures, so belatedly published and in a most confusing way, only yesterday, the truth is that over ten billion of the seventeen billion is going to countries—I visited every one of them myself—that are by common consent no more on the verge of voting Communist than the State of Indiana, which I visited last week, and which hardly looks on the verge of voting Communist to me.

Or take another angle. The appeal is made to us that we are aiding the victims of war-torn countries in gratitude for their losses in the war. Now, there are other appeals that are sound and very much better. That isn't a very good one. How many billions are ruled out on that one? Of the 16 countries in the Marshall plan over $6,000,000,000 out of the seventeen billions are to go to enemy countries, Germany, Italy, and Austria, for which there are other reasons to help, not gratitude. Seven hundred million goes to countries that stayed neutral, did not fight in the war, and, in fact, got richer than they've ever been in their lives during the war, largely at American expense. They might well be giving something back to us—as if anything like that could ever happen. Sweden and Switzerland, however, have asked us for nothing, praises be.

Now, my friends, all summer long in one European country after another, in England, France, Italy, Greece, Switzerland, Belgium, Luxemburg, Holland, Germany, and in broadcasting in Paris, where the 16 nations were meeting to put in their requests for additional American funds in substance now being decided I tried to say on the air as factually as I could, right there on the scene and repeatedly, from London, Rome, Athens, Zurich, Berlin, Brussels, Paris, and a dozen other places and since I've been home, that the objectives of the Marshall plan are good—heaven knows, there's no question about that—but that the gigantic amounts asked for were overstated, inflated, padded, padded, and padded, and shockingly weak in respect to how the money should be administered to get the results on which we pin our American hopes.

In short, I think we should be for the objectives of the Marshall plan. But the plan is no longer just an idea, you know. It's now a tangible piece of proposed legislation, ready to be enacted into law and to absorb billions in our American people's money and goods. It shouldn't be approved as written. I'm convinced it will not be. Once we get the air pumped out of the claims and make the necessary changes suitable to the real problem over there, which is a production problem and needs realistic, production-minded American handlers to whip it, we can stop sailing in the pattern of the 22,000,000,000 that has already gone with the wind since the end of the war and really get some place, really serve ourselves and Europe and the cause of lasting peace by the changes that must be made in the plan and save ourselves billions and billions besides, that would have been wasted had we allowed our judgment to be blitzed.

Freedom Point Raised on United States Education Plan

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, in these days when so much is being said about education being directed from Washington, in one form or another, I am delighted to give my colleagues the benefit of one of the most rational presentations on this that I have ever read. It is an article which appeared in the Washington Star of January 25, 1948, by our esteemed colleague, Representative RALPH W. GWINN of the Twenty-seventh District of New York. Representative GWINN is in a position to know whereof he speaks. He is a member of the House Committee on Education and Labor, and chairman of one of its most important subcommittees. He has conducted many hearings and is qualified to present a rational view on this subject. He addresses himself to the topic Freedom Point Raised on United States Education Plan, which it will be well for all to read. Representative GWINN's article follows:

FREEDOM POINT RAISED ON UNITED STATES EDUCATION PLAN—HOUSE COMMITTEE MEMBER FROM NEW YORK QUESTIONS ADVISABILITY OF GOVERNMENT INTERFERING IN SCHOOLS

[EDITOR'S NOTE.—Representative GWINN, of New York, is a member of the House Education Committee and chairman of one of its subcommittees. He is vice president of the International Council of Religious Education, a trustee of De Pauw University and former president of the board of education in his home town of Bronxville, N. Y. In the following he takes issue with the subject matter of a recent article carried by the Sunday Star and serviced through the Associated Press, written by Dr. John W. Studebaker, United States Commissioner of Education.]

(By Representative RALPH W. GWINN, Twenty-seventh District of New York)

The United States Office of Education is embarking upon a propaganda campaign for the promotion of zeal for American democracy in schools and colleges. What is the purpose of this campaign? Is it necessary? Why should the Federal Government interfere and propagandize? What are the implications and dangers of this enterprise?

John W. Studebaker, United States Commissioner of Education, has been conducting a vigorous campaign to stimulate better education for democracy in our public schools. Until recently, the United States Office of Education has refrained, however, from any concerted plan or propaganda action in this respect. Taking advantage of the intense interest in the problems of democracy and its survival, now manifesting itself in our schools and colleges, Dr. Studebaker boldly announces that his office will enter into the propaganda picture.

We are now about to witness that a Federal office will issue an official statement to all our schools of the essential principles of democracy. We thought that was well taken care of in our magnificent Bill of Rights. Is there any reason to hope that a Federal office in present-day confused Washington can tell our American youth better than the Bill of Rights what true democracy really is?

DR. STUDEBAKER OVERZEALOUS

Dr. Studebaker goes on to announce that the United States Office of Education is ready to suggest certain criteria by which our educators may judge the effectiveness of our schools in the teaching and practice of democracy. In his zeal for democracy Dr. Studebaker becomes overzealous to such a degree that he wants the Federal office to lay down the rules for judging how democratic our schools are.

That Dr. Studebaker's program suffers from a basic self-contradiction becomes obvious, however, when he announces that the office will proceed to provide suggestions of resource material to help the schools fight what is called antitheistical beliefs and practices. Now, if the strange word "antitheistical" in plain English means "Godless," it follows that the Office of Education now will embark on a campaign against Godless beliefs and practices.

The triple purpose of this Federal propaganda campaign in our schools, then, is to have Federal authorities define the basic principles of democracy (over and above the United States Constitution), to furnish official criteria for the effectiveness of democracy in our schools, and to help the schools fight Godless theories and practices.

No citizen will deny that, in themselves, these are lofty and necessary purposes, even though groups of antitheistical citizens may object that the Government has no constitutional right to use money for propagandizing for religion and against citizens who do not believe in God and His commandments.

This whole new Federal program as suggested by the Office of Education is harmful and has most dangerous implications for our freedom of education. It is an unwarranted and unwanted interference in a domain which must remain free of Federal advice, Federal propaganda and Federal missionary effort.

FEARS PARTY INFLUENCE

Political prudence leads us to fear that any teaching of political ideas, directed and

financed by the central Government, will be determined in the end by the philosophy of the party or faction, or even person in power, rather than by precepts of the Declaration of Independence or the Constitution with its Bill of Rights. The practice and teaching of these ideas is strictly the business of the local community.

The idea of liberty happens to be in fashion at the moment, so for the time being there would appear to be no visible conflict. But if the doctrine of the all-powerful, all-fostering Government dominates the executive branch again, as it has been known to do, how long will a bureau in such an administration continue to teach that that Nation is best governed which is governed least? Or that economy in government is a moral virtue? Or that the only way to preserve liberty is to accept no favors from the State? How long will it take before propaganda seeps in saying that the American system "was" a good system, but now we have "new" problems? How long before such a bureau would redefine "representative government" to mean that the Executive should have control of our economic life, leaving Congress with a veto power or even making Congress over into a rubber-stamp institution?

BREEDS FACTIONALISM

Suppose the Office of Education, even in the future, should be led by men of higher intelligence and real integrity. What would happen, however, to such Federal officials, if the President and his chief advisers believed in concentrating powers in the hands of the executive of the planned state? Suppose the head of the United States Office of Education refused to conform to these new ideas of a so-called social democracy, this New Deal for America?

How long would it be before one of his ambitious subordinates would reach the President with a plan for "better" political education? Or some disgruntled State official or "expert" whom he had once opposed, would suggest a new bureau with a new title, to do the political "education" which the administration needed?

Once the central government undertook to spread its own kind of political philosophy, opponents of that philosophy would have no choice but to take over the Government itself, instead of reasoning together in a local community with neighbors on how to teach their notions of liberty. We should soon be deep in factional fights at election time, just as continental European countries now are, because whoever controlled the government controlled the means of indoctrinating the people. Since the party in power is always desperately maneuvering to keep in power, the control of the people's ideas is its first concern, through propaganda and education.

The modern state is everywhere narrowing the sphere of citizens' freedom and civil and economic liberties. When the devil-state has done its job, complete and cruel tyranny comes, as it did to Germany, Italy, and Soviet Russia.

In the twilight of freedom around us, the United States and its great people must lift the torch of liberty. We need a crusade against statism and for liberty in the very grassroots of our democracy.

We must urge more and more free education, spontaneously supported by the thousands of local communities, as the only possible source from which we can teach God and freedom and combat paganism and statism. The turn toward paganism and statism has come about because educators cannot or do not teach about God and self-government under religious disciplines.

Does it not follow that we must reverse our present trend, instead of accelerating it?

Address of Morgan L. Fitch Before National Association of Real Estate Boards

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1948

Mr. BUSBEY. Mr. Speaker, I ask unanimous consent to include in the Appendix to the CONGRESSIONAL RECORD the address which was made by Mr. Morgan L. Fitch on January 21, 1948, upon his retirement from the presidency of the National Association of Real Estate Boards. Mr. Fitch has been a neighbor and friend of mine for many years. His record as president of the National Association of Real Estate Boards has been an enviable one and has brought forth many constructive ideas for the development of the real-estate business and suggestions to alleviate the housing shortage.

The address follows:

My fellow officers of the National Association of Real Estate Boards, distinguished Members of Congress, ladies and gentlemen, it seems to me that the only thing about this little party which would classify it as a banquet is the distinction of our guests gathered here from every corner of the United States, and the price of the ticket.

Some of us from the areas where inflation has not yet come to such full flower, who are accustomed to eating blue-plate specials at 45 cents and who have traveled the return trip on the overland trail to view and to marvel at the majestic processes of Government, have found that travel to Washington not only broadens the viewpoint but likewise flattens the purse.

We start out with no menu, no toastmaster, no speaker of the evening, no juggler, no singer from the civic opera company. We are simply a group of friends gathered together for the purpose of getting better acquainted in a better understanding that we may serve better the wholesome housing needs of the Nation.

I recall that just a year ago I stood in this room with many of you who are here tonight. I told you on that occasion that it was not for me to promise or predict that which might occur as the year unfolded. I said then that we would let the record speak for itself.

Now that record has been made. No word of mine can alter it by jot nor tittle. Certainly if I did not look upon it with pride I could not speak of it. Certainly if I did view the record with pride I would dare not boast, for indeed, as recorded in Proverbs of the Good Book, "When pride cometh then comes shame."

Yet, it is a simple fact that the membership of this national association has grown to 41,000—a gain of 15 percent in the past year. The organization has lived well within its income and is today in full stride of vigorous activity. But more significant is the fact that our members hold high their heads as standard bearers in the cause of freedom for the common man, in the cause of better housing for all men, in the cause of social and national welfare. We have made progress in the spirit as well as in the flesh.

A year ago the housing business was in a sorry mess. It remained then as a prisoner of war fenced in by a stockade of rules, restrictions, limitations, ceilings, and abuses. All the while little people danced around the enclosure shouting in sadistic delight as they tossed in crumbs of subsidy, grant, and loan, to a great industrial giant that was famished only for freedom.

Now, a year later, with only one great barrier remaining, we find supply of housing creeping into balance with demand. Since July 1 we have been creating houses at a rate of almost a million a year. All over the country vacant houses are offered for sale. In some places vacant rental units are offered for rent. The Government tells us that 93 percent of the homes in our cities are in good condition. Fifty-five percent of them are owner-occupied; half of all the rented dwellings rent for $29.33 per month or less.

What an answer to those men of little vision and meager understanding who proclaim in wishful glee that 50 percent of our children are born in slums!

If forces of Government would lift the heavy hand of bureaucracy and devote themselves to freeing the production of goods and labor in a competitive market the housing shortage would be only a memory in 6 months' time.

Indeed our business has had far more than its share of the burden of public interference. We have zoning laws to restrain the use of land, building codes to limit construction, restrictions on the productivity of the man on the job, monopoly in the marketing of building materials, competition from Government at all levels, strangulation by arbitrary and unreasoning enforcement of rent control.

Yet we carry on planning, building, creating, in the firm belief that our system of competitive enterprise has never been rivaled in Russia, France, Italy, or England, and that some day that system will be reestablished in full vigor in America.

I am pleased to recognize in this audience more than 100 Members of the Congress of the United States. I welcome them, not in their official capacities, but as fellow citizens. I have met the gentlemen of Congress all over the Nation and found them to be interested, not just in election—why should not a Congressman be interested in elections? After all a Congressman who is not elected is no longer a Congressman. I have found Congressmen interested, too, in the sound welfare of the Nation; interested in preserving those freedoms guaranteed in the American tradition; interested in building out of today a better tomorrow.

We would have these Congressmen know that people of real estate are likewise average citizens of America who, by their training and talent have a specialized knowledge of real estate. Look at that man who sits opposite you. Look intently. Does he look to you to be anything other than a plain ordinary American who works with his hands and his wits to make a living selling housing? Yet he has been called subversive, vicious, selfish, un-American, greedy, at times by persons in very high places, for he is one of the small parts of the real-estate lobby. He is one of the people who has made so bold as to ask that his business, too, be no longer a prisoner of war.

And come what will, he expects to carry on in spite of abuse, attack, political intrigue, or court prosecution, firm in the maintenance of his honest conviction as one of a hundred million little people in America. That attitude on the part of Realtors of America is the brightest jewel in the legacy I leave as I retire as president of this great association.

Cost of Experimental Unit of Universal Military Training at Fort Knox, Ky.

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, I think all are aware that an experimental program of universal military training is being conducted at Fort Knox, Ky. Various opinions have been voiced as to the cost of the training which has been envisioned and advocated by President Truman. The Department of the Army has set up a model universal military unit at Fort Knox, Ky., and I have had several inquiries as to the cost of this experimental unit. On December 8, 1947, I asked for the figures, and I am happy to give my colleagues the benefit of the information which I received.

The following is a copy of a letter addressed to me under date of January 21, 1948, by Maj. Gen. George J. Richards, the Army Comptroller, Department of the Army, which I think needs no explanation, but speaks for itself and gives us the information on the cost of the experimental unit of universal military training at Fort Knox, Ky.:

DEPARTMENT OF THE ARMY,
OFFICE OF THE ARMY COMPTROLLER,
Washington, D. C., January 21, 1948.

Hon. GEORGE B. SCHWABE,
House of Representatives.

DEAR MR. SCHWABE: Reference your letter of December 4, 1947, relative to the operating cost of the universal military training unit at Fort Knox, Ky., and my interim reply of December 8, 1947, I now have additional information in this regard to transmit to you.

On January 16, 1948, Hon. Kenneth C. Royall, Secretary of the Army, sent a letter to the chairmen of the Armed Forces Committees concerning the cost of the Fort Knox Universal Military Training Unit. Mr. Royall's letter covers the question you asked in such a comprehensive manner I feel you would be interested in its entire contents. I am therefore quoting to you the Secretary's letter in its entirety:

"I have been asked for certain specific information regarding the universal military training experimental unit at Fort Knox. As similar inquiries have reached me from other sources, or have been addressed severally to various Army addresses, I am including in this letter all of the information presently available with respect to the size and cost of the project.

"The UMT experimental unit was organized for two purposes:

"1. To obtain experience of value in a universal military training system covering a special age group, on a national scale, if authorized by Congress as recommended by the President, the President's Advisory Commission on Universal Training, and the armed services.

2. To obtain experience of value to the armed services in revising and modernizing their own training programs in the light of the Doolittle committee's recommendations.

In pursuance of these purposes, a new training formula has been introduced at the Experimental Unit, with greater emphasis on education, moral controls, broader concepts of discipline, and close supervision of off-duty as well as on-duty activities of trainees.

In computing the cost of the UMT Experimental Unit, no attempt has been made to separate the cost of training the 646 enlisted men in the experimental training battalion from the total cost of the unit, nor is such a separation possible. The figures which follow therefore represent a break-down of the over-all cost of an experiment undertaken for the purposes indicated. The figure given as the cost per trainee is likewise the pro rata cost of the unit as a whole, as applied to the men in the UMT training battalion, and not the cost of training these men alone.

SIZE OF UMT EXPERIMENTAL UNIT

Two cycles of training were completed by the Army Ground Force Experimental Unit on December 20, 1947. The first cycle extended from January 1947 to July 1947, the second from July 1947 to December 1947, inclusive. During this time the following personnel were involved:

(a) Average number of trainees (privates, Regular Army battalion strength), per cycle, 646. For two cycles, approximately 1,292.

(b) Average constant training cadre (military personnel):

Number of officer-instructors	77
Number of enlisted personnel	495
Total	572

(c) Approximately 21 civilians were employed during the two cycles as members of the training staff, all but four on a part-time basis. For the second cycle an estimated 17 part-time instructors were required in teaching auto mechanics, radio, typewriting, Spanish, and bookkeeping. Of the 4 full-time civilian employees, 1 was an educational counselor, 1 an assistant educational counselor, and 2 were stenographers for the Educational Center.

Cost of universal military training experimental unit, second cycle, July–December 1947, inclusive

1. DIRECT COSTS

Pay and allowances of trainees (Army pay rate)	$383,167
Pay and allowances of trainers (officers and enlisted men)	472,098
Costs of subsistence (enlisted men)	196,975
Costs of clothing (enlisted men)	73,311
Costs of transportation	52,320
Equipment replacement	171,182
Total	1,349,053

2. INDIRECT COSTS

Transportation	$73,080
Repairs and utilities	24,705
Medical care	70,340
Supplies	230,532
Equipment maintenance	43,866
Administrative overhead and supervisory personnel	60,733
Total	503,256

3. ADDITIONAL INDIRECT COSTS NOT PROPERLY CHARGEABLE TO UNIVERSAL MILITARY EXPERIMENTAL UNIT

Appropriated funds for rehabilitation of post facilities for universal military training experimental unit, but not included in universal military training costs because available for other purposes later	200,000
Grand total, universal military training costs, second cycle (1 and 2 above)	1,852,309

Average over-all cost per 6 months enlisted trainee (at Army pay rate and including all other unit costs), $1,852,309 divided by 646 equals $2,867.

COST FACTORS IN UMT EXPERIMENTAL UNIT

Because of the nature of the experiment, and the fact that cadre training and orientation courses for officers and enlisted men of the several branches of the Regular Army, not connected with the experimental UMT unit, have been conducted contemporaneously with the training of the experimental battalion of 18-year-old recruits, the administrative and instructor personnel of the unit were larger than would be required for training either an ordinary tactical unit or a prospective UMT unit.

The ratio of trainees to trainers in the larger system, for example, would be more than double that indicated in the figures for the experimental unit. At Fort Knox the military personnel necessarily included all elements of a division staff, although only a single battalion of men were being trained for 6 months by the experimental UMT formula. In the first training cycle all arms and technical services were represented. Each training company had to be organized differently. The Information and Education and Special Services staffs were organized on approximately a regimental level. There were two chaplains. The personnel of the unit, in short, was organized to perform a multiple function, and not simply to train 646 enlisted men assigned to it for this purpose. As with any experiment, whether conducted by the military services or in industry, the cost of the pilot model is always higher than the cost of the subsequent product.

Since the trainees were all enlisted men of the Regular Army, and receiving an average of approximately $100 a month in pay and allowances, the cost also reflects this pay rate rather than the $25 a month recommended by the Compton Commission or the $30 a month provided for in H. R. 4278 for the pay of UMT trainees in the proposed national system. The pay differential alone represents an added cost per trainee of at least $70 a month, or $420 for the 6-month training period, while the other factors add substantially to the total cost of the unit.

For these reasons the cost figures given cannot be considered as in any sense a criterion of the per capita cost of training large numbers of men at a very much lower pay rate under a national plan. The Army estimates the cost of training 618,000 men by the UMT formula on a national basis, once the program is standardized to eliminate the added expense of current experimentation, at approximately $1,000,000,000 annually.

AUTHORITY AND COST OF BRINGING VISITORS TO FORT KNOX

It has been asked by what authority visitors were flown to Fort Knox, and the amount and source of funds used for this purpose.

The few groups representing the press and national organizations, invited by the former Secretary of War as a matter of broad public interest to visit the UMT experimental unit at Fort Knox, were transported by Army aircraft pursuant to authority contained in paragraph 1C (1), Army Regulations 95–90, published on April 28, 1947, which provides: "Upon approval by the Commanding General, Army Air Forces * * * personnel of the following categories may be permitted to ride as passengers in aircraft * * *

"(1) Any individual, without reimbursement, when the flight is on matters of concern to the armed forces."

Acting under authority of section 5 of the National Defense Act (10 U. S. C. 34), making it the specific responsibility of the War Department to plan for the national defense, and appropriate Army regulations with reference to the maintenance of public relations, the Department of the Army as a matter of broad public interest continuously attempts to inform the Nation of planning

developments relating to universal military training as well as all other Army operations.

In inviting individuals and groups to visit the UMT experimental unit we hoped to obtain and did obtain helpful suggestions from outside sources. We cannot obtain public reaction to our programs unless we take the people into our confidence.

TRAINING PROGRAM OF UMT EXPERIMENTAL UNIT

All trainees in the UMT experimental unit are enlisted men in the Regular Army. Every Regular Army enlistee is given 13 weeks of basic training. The additional training given in the experimental unit, and which is contemplated in the national plan, if authorized by Congress, is intended to qualify the trainee as a specialist in some arm of the service. It will be obvious that no matter whether the soldier receives the training in the experimental unit or in a tactical unit, it must be accomplished in any case. While not a characteristic training unit of the Army as now constituted, the UMT experimental unit by no means involves expenditures incurred for other than normal service requirements.

In addition to training the experimental battalion of 646 men (average constant enrollment), the UMT training cadre is currently required to instruct 480 potentional UMT training cadre personnel each month. This instruction covers all the positions from platoon sergeant to division commander, and results in a peak load of 200. For the period August 11, 1947, to December 20, 1947, approximately 2,565 students were given such cadre instruction.

It is estimated for planning purposes that of the 1,200,000 men annually reaching the age of 18 years, a total of 850,000, or approximately 70 percent of this figure would be found physically fit and inducted for training under a universal military training system. Of the latter number, an estimated 618,000 would be trained by the Army and Air Force and the remainder by the Navy, under the plan currently recommended by the three services. By carrying on this cadre training now, we shall have made a substantial start in building the organization that would be necessary to train the larger load of trainees later should the universal training program be authorized by Congress.

ARMY PROFITEERING FROM UMT EXPERIMENT

Regardless of the final action on the proposed national universal military training program, all of this instruction and indoctrination at Fort Knox is of great benefit to the Army and already is being translated into training doctrine for the Regular Establishment. It is finding its way into replacement training centers, and has been adopted as the training formula for the Third Armored Division at Fort Knox on a division level.

The modification of disciplinary training through the adoption of a special code of conduct for this special age group, built around a demerit and trainee-court system, is only one of the new methods whose usefulness has been demonstrated in the experimental program. Sound discipline is the first principle of military effectiveness, since without it any military organization would be little more than a mob. It is believed that under the UMT formula, subject to further testing, discipline can be improved, rather than weakened, by giving the trainee and in fact, all elements of the Army, a better understanding of its meaning and importance.

Thus the UMT experimental unit has served and is serving as a laboratory test of training methods and doctrines which will prove of increasing value to the military service as time goes on. It has permitted close study of the problems inherent in training men of the 18-year or minimum-age group not previously explored in any prior training. In fact, I know of no other single experiment in this field which has been so richly productive of constructive results.

I feel sure Secretary Royall's letter will give you the information you desire. However, if you need additional information, I will be glad to obtain it for you.

Sincerely yours,

GEORGE J. RICHARDS,
Major General, the Army Comptroller.

We Must Take Our Stand

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a logical, well-written, and forceful editorial in support of the European recovery program which appeared in the Buffalo Evening News of December 23. I commend it to your attention. The editorial reads as follows:

WE MUST TAKE OUR STAND

The European recovery program, the issue of issues, is now before the people. Secretary Marshall made it plain Friday night that the Russian masters won't make peace now, but will keep on waging chaos in Europe, expecting us soon to pull out of that continent. The President's message to Congress has formally launched the Marshall plan, with the administration's full weight officially behind it. Senator TAFT immediately proclaimed his opposition, contending that the 52-month, $17,000,000,000 project would break our economy wide open. Senator VANDENBERG is wise in calling for immediate full-dress debate on American recovery for Europe. Time presses, and we must take our stand on ERP before it is too late.

It may seem strange that the upside-down situation of the world today forces us to reverse the usual order of things after a great war—first, peace and then, recovery—and to launch an all-out program for the economic recovery of Western Europe, to enable the continent to grow strong enough to permit the right sort of a peace to be made and consolidated there. Nonetheless, such is the situation that stares us in the face and commands our decision.

The European recovery program offers the key not only to the rehabilitation of that continent's economy, but also the key to peace itself. The News accepts the point of view Henry L. Stimson expressed recently in Foreign Affairs: "We Americans today face a challenging opportunity, perhaps the greatest ever offered to a single nation. It is nothing less than a chance to use our full strength for the peace and freedom of the world."

The pity of it is that this challenge, this opportunity comes to us when many of us are confused and unready. It is as though we were in a smoke-filled room, knew we must make our way to the door, but were so fearful of obstacles in the path that we feared to make any move. It is to be hoped that the Marshall plan debate will blow enough smoke from the room for the masses of the people to see the situation that today confronts the most powerful nation the world has ever known. Only by knowing the truth, and heeding it, can the American people give our Government the understanding support without which our hopes will fall to earth.

Whether we like it or not, the United States can never again become an isolated island in the world community, nor even a limited partner. We are a wholly committed member of the world community. We are forced to act in the world as it is.

The ERP decision requires the consent of the people as well as the action of Congress. Foreign policy is no longer simply a function of government, but is becoming a function of people. If the Marshall plan is to succeed, the American people must understand the purposes it seeks, the means by which its architects expect to attain these ends, the productions required on the home front, the austerities we must undertake to strengthen the non-Communist world.

The plan that emerges from the congressional crucible must be strong enough to convince the 16 cooperating European countries that we mean business, and aren't trying to fob them off with a lick and a promise. We can't afford to say that we'll give you enough for today, but don't know whether tomorrow we'll carry on any longer.

Secretary Marshall urged, the President presented an over-all recovery program. The European countries are at the least entitled to feel that if they meet the tests we put them to, we won't turn back in the middle of the stream. It is our right and duty to see that they toe the line in respect of the promises they make to us. In return, we would be under clear moral obligation to finish the job. This is the decision Congress has to make next session. America, Europe, and the world will anxiously await the sort of decision it makes.

Defense of Private Enterprise in Transportation

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. KNUTSON. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I desire to insert a paper delivered by Dr. C. S. Duncan, economist, Association of American Railroads, before the annual meeting of the Railway Treasury Officers at Swampscott, Mass., on October 8–10, 1947. I hope every Member of the Congress will read Dr. Duncan's informative and timely address:

DEFENSE OF PRIVATE ENTERPRISE IN TRANSPORTATION

You have just seen a brief glimpse of the main line of transportation in this country, which with its bands of steel binds the Nation together into an economic unit. It has developed our resources. It has built up our markets, local, national, and international, for the mining industry, the great agricultural industry, the manufacturing industry and the trade organizations that have made this country powerful, a leader in the world, the support for desolated lands and impoverished people—the very bulwark of civilization as we know it today.

We have had in this country a supply of private capital willing to support the development of these private undertakings so that it has been possible to increase production and decrease working hours. Task after task has been mechanized and the back-breaking jobs have been transferred to machines. Our people have had more leisure time and more opportunity for travel and recreation. The main line plays a vital role

here also. It carries our people not only to summer and winter resorts but also has specials for the "big game" of the year and has especially equipped trains for the ski fans.

Of very great interest it is to note that over the main line of transport the history-making Freedom Train has already started on its 30,000 mile journey throughout the land.

This main line was built in a democracy as a private enterprise, by free men, with free play of individual initiative, who were willing to face all the risks and willing to bear the full responsibility to investors, to employees, to the public and to the Government. The achivement has been a marvelous thing. All those connected with its development and its operation may well be proud of its record.

The service performed by the main line is a basic function in our society. If it is not provided by private enterprise, then it will be provided by Government. If it is not provided out of private funds, then it will be provided out of tax funds.

Transportation service is not performed solely, of course, by railroads. There are other agencies that do essentially useful work. Among them the pipe lines alone, with their highly specialized services, stand economically upon their own feet. But of them all the railroads are the basic agency for the great bulk of mass transportation required for the support and advancement of our economy, as the record demonstrates. They are likewise the bulwark of private enterprise in transportation. If they fail, all will fail.

Despite their record of achievement, the railroads are actually on the defensive as a private enterprise. We only hide our heads in the sand if we deny this fact. In the recent great debate in Parliament it was possible for the proponents of the British nationalization of transport to point out that they were following a world-wide trend. In Europe and in Asia there is government ownership of railroads. Even in the British Empire, where private enterprise had been a shibboleth for a hundred years, it was cited that 95 percent of the railroads in Australia and New Zealand was government owned, 81 percent in South Africa, 55 percent in Canada. Throughout the world government ownership represented 45 percent of the total mileage.

Now that Great Britain has gone over to nationalization, the United States, with its great mileage, stands out steadfast as private enterprise. It stood steadfast throughout the war and performed marvelously. The heavy pressure brought to bear for the Government to take over the railroads in those parlous days, even though every advantage was taken of the doubts and fears generated by a world conflict, could not prevail. The achievements of the railroads under private management during that conflict were acclaimed by all responsible men.

If the railroads of the United States were able to withstand the pressure for Government control in the dangerous days of war, it would seem that the forces at work to bring about Government ownership in time of peace would be less. They are, but they are nevertheless consistently at work. We must be on our guard against them at all times. The price of private enterprise is eternal vigilance against those influences that tend to undermine it.

In presenting my ideas on this important subject I propose to ask the following questions and to give my answers to them. Why did the British people, who for so long have been stanch individualists, holding their personal liberties and freedom of action as a precious heritage, yield to the idea of government extending its power over their great industry of transportation? Are the same influences at work here in the United States? If so, what can we do about it?

When the great debate on bill No. 12, the nationalization bill, opened in the British Parliament, Prime Minister Attlee said that he did not expect any disagreement in principle on the nationalization program because it was only carrying forward the trend that had long been evident. He added, significantly, that in his opinion, it was not possible to deal with railways alone, for the various forms must be complementary and not competitive. That, I think, will always be true.

What the Prime Minister meant, it seems to me, by reference to the trend that had long been evident was the groundwork that had been laid in previous years. Its beginnings may no doubt be found in the influences let loose in the early days of Lloyd George when he first came to power and began impressing his ideas upon the people that the Government should be doing more for its citizens, that the Government should take on greater and greater responsibility, that Government activity should be widely extended. As these ideas received acceptance, the inevitable consequence was greater and greater need for Government revenues, and the source of Government revenues obviously was private enterprise. Thus, capital that might have been used for the improvement of the machines and tools of private industry, the advancement and progress of science as applied to industry, and the expansion and modernization of plants was drained off into the Public Treasury. There was less risk capital available for private enterprise, and without risk capital it languishes.

As you will recall, when the British railways were returned to private management following the First World War and they were forcibly consolidated into four great systems, legislation was passed providing for a standard revenue to the railroads based upon the earnings of 1913. The entire rate system was to be revised and rates were to be established by 1928 so that the four large systems might be able to earn the standard revenue which was considered by the British Government as a fair return.

Meanwhile, however, the Government expended large sums of money out of its treasury for the building of a highway system duplicating and paralleling the railroad system, thus providing a roadway for busses and trucks so that they could enter the field of transportation wholly unregulated, free to select the tonnage they desired to handle, while leaving the rest for the railroads to carry, and with full knowledge of the published rates by railroads, placed in a position to cut under them and draw away the cream of the traffic. No fair-return rate system was ever put into effect. Consequently, the railroads were never able to realize the standard revenue or fair return which was to be provided for them.

There was thus set up a vicious cycle. The railroads failed to earn a fair return. Without adequate revenues their credit was limited. Without adequate credit, funds available for improvements and betterments, for providing new machinery and better ways of operation, were restricted. Here was the basis for complaint by the public that the railroads were not progressive. Nor did the shippers or the industrialists of the country understand or appreciate the trend or, if they did, their policy was of a short-time and not a long-time view, seeking immediate advantage without regard to consequences.

Came the Second World War and Government again took over the transport facilities in Great Britain. When the time arrived to consider their return to private management, the long-time trend noted by the Prime Minister was manifest.

It may be seen, I think, that underlying all this movement and possibly the basis of the preparation for it was a persistent undermining of confidence in the public mind of private management.

In the propaganda for nationalization of the railroads in Great Britain, the proponents brought a number of charges against the private management of railroads. Private industry had failed, it was claimed, as shown by the substandard of facilities, rolling stock, both cars and locomotives, dingy, outmoded, old-fashioned stations, unrepaired roadways.

They said that the railways were overcapitalized; that dividends were paid instead of plowing back capital; that shares were held by a few rich men; that railways had never been able to attract new capital; that Government was subsidizing them; that the railway physical plant was "a poor bag of assets"; that the railways were operated inefficiently and their directors were selected more for their social standing than for their ability; that there was no progress either in speed, electrification of the lines, or in the exploitation of the advantages of automatic train control; that trans were underloaded, resulting in car shortages; that service generally was inadequate; that technical improvements had been neglected; that employees were required to work long hours at low pay in order that dividends might be paid; that railroads were a monopoly; and that coordination of railroad with railroad and railroad with other agencies had been made impossible.

These items have not been stated clearly if they do not have a familiar ring.

Every one of them management answered item by item, and attached to many of them the words "wantonly untrue." This, however, did not prevent their repetition. It appears to be a general human trait to believe and remember criticisms rather than praise. The railroads were placed on the defensive in a critical period of time when money and men and materials were not to be had for rehabilitation.

Nor was the criticism limited to private management in transportation. It was extended to bankers and industrialists. I think it will always be true that the discrediting of private management in an essential industry like transportation will be extended to other business management.

The process of the long-time trend is simple—discredit, penalize, destroy.

It was not the businessmen, the shippers, the users of transportation who favored nationalization, but the Trade Union Congress of Great Britain. It does seem clear, however, that private management in other industries held aloof, assuming the attitude that it was not their direct responsibility, and never exerted themselves as actively or as persistently as the proponents of nationalization. To one party it was a bad time for a fellow executive; to the other it was an idea with a rallying slogan. Only when the crisis was upon them did other private managements realize their vital interests were involved. It was then too late.

The downfall of private enterprise in transportation, therefore, only awaited the strategic moment. That time came following the war when improvements and betterments were not immediately to be had, when money and materials and men were unavailable, when the finger of scorn could be pointed at the roofless stations, the inadequate maintenance, the lack of new cars and locomotives.

The fact is that private enterprise in transportation, or elsewhere in fact, cannot long survive when its opponents are continuously active in undermining it but its fellow private enterprisers are indifferent or mildly sympathetic. It takes an idea to master an idea. Those who support private enterprise must work as energetically and persistently as those who support nationalization.

I cannot forecast the future of nationalization in Great Britain. That it is a disturbing factor is already evident. That the individual loses his personal liberties as government expands is inevitable. The government, as Mr. Churchill said, has "thrust the

clumsy butter-fingers of the state into all this intricate apparatus," for good or ill. Of the five-man commission empowered to determine, under the Minister of Transport, what the government policy shall be in the planning and operation of the transport facilities of Great Britain, two are gentlemen of experience and judgment and three are apparently political appointees, rewarded for their persistent and successful efforts. Some 750,000 employees will be added to the government pay roll. Fifty-six thousand miles of line belonging to the four principal systems and 56 local companies constitute the railroads involved. In addition, there will be some 40,000 trucks and the canals with their barges, docks with their equipment and hotels to accommodate rail travelers. Government already is in charge of airways.

The opponents have said that it is "a monopoly which will be cumbrous and top-heavy, whose structural defects are as manifest as its powers are unlimited." They say "this bill gives an unexampled opportunity for political patronage and jobbery." They say that it will do a great injustice and injury to the British people at the very time when all should work shoulder to shoulder for increased production. We can already see that there has been no increased production in coal. Nevertheless, for good or ill, for better or worse, British railways and all other transport facilities, except for private truck operations circumscribed by a 25-mile radius, will follow banking, power, and coal into the hands of the government. The iron and steel industry is next on the list.

You doubtless will already have identified those matters which have an analog in this country. The pattern is taking shape—discredit, penalize, destroy; step by step—discredit, penalize, destroy.

Is it not true that the discrediting of private management is already in evidence, reaching even into Government circles? Is it not true that heavier and punishing burdens are piled up like Ossa on Pelion as, for example, pay-roll taxes, increased wages, and material prices without corresponding increases in rates? Has not the Government built up competing agencies by highway, waterway, and in the air? We have not mentioned private ownership and operation as one of our goals even in our national transporation policy.

I do not know of a widespread, organized movement to nationalize our transport. There are groups, like the Socialist and allied groups, who talk it up from time to time. But my desire is to point out to you the signs of the trend, the discredit of private management and the penalty burdens. Thus went England. The strategic day came. The vote favoring nationalization in Parliament was 362 ayes and 205 nays.

You cannot have failed to hear much to the discredit of railroad management and certainly you in the railroad field have resented the unfairness, bitterly and rightfully. You know the punishment of increased wages, taxes, and material prices without adequate increases in revenues. You are all too familiar with the profit-and-loss account and its effect upon credit standing.

Railroad credit is affected. I need not tell you about the vital significance that profit-and-loss item in a private-enterprise industry. An imaginative writer could make a thrilling story of that account upon which industry pivots, its very guidance and control for expansion or retraction by management, its importance in the money market, its unerring indication of trends toward success or failure. As to this account it may well be said: "The moving finger writes, and having writ, moves on; nor all your piety nor wit can lure it back to cancel half a line, nor all your tears wash out a word of it."

Well, what to do? Railroads must be saved to private enterprise in order to preserve our American way of life. To be saved, they must be supported. They must be supported by all those who believe in our free private enterprise system. It is not a matter of mild interest, as a hard-luck story of a fellow executive. I tell you that to drift is dangerous. If an idea is required to master an idea, then realize this, that free enterprise is as much an idea as nationalization. We must, therefore, first believe in the cause.

To divide and conquer has always been a clever device. When thieves fall out they get caught. When honest men fall out, the thief has his day. We in the railroad field must stand together shoulder to shoulder, steadfastly and courageously. Furthermore, we must have the support of others, our competitors, the users of transportation, the bankers, and all good men and true who believe in the cause of free private enterprise.

You know what private management has achieved in the field of transportation. You know what it could do with adequate funds in transforming the vicious cycle of less income, higher costs, falling credit, and restricted improvement into a rising cycle of new facilities, lower unit costs, better credit, and improved service. It is amazing what can be done, what management stands ready to do with adequate funds in the way of improvements, better service, greater volume, lower unit costs, an increased satisfaction to users and the public.

Private management everywhere, not only in transportation, must be awakened to the danger of our policy of drift today. How can they know, really know, unless they are told? In Great Britain there was no association or organization of traders or businessmen, of users of transportation that came forward to support bill No. 12. While this is true, it is also true that those users of transportation were so negligent in the support of private enterprise that they let the pattern develop which ended in nationalization. Why? Because they thought that they might realize some immediate or temporary advantage.

It can happen here. The same trend is already in evidence and there is the same indifference for the same reasons from the users of transportation. Rates, like taxes, are sought to be escaped or transferred to someone else. Everyone has his own troubles and the Devil take the hindmost. It is then that socialism comes like a thief in the night and often under a pleasant guise. It offers blandishments and roseate pictures of a smooth road ahead, a better way. I ask you to beware when expenditures are made out of the Government Treasury on the basis of benefits rather than charges on the basis of use. The true test of usefulness of transport facilities should be the willingness on the part of the shipper to pay their full costs. The main line in transportation is a product of private enterprise.

Benefits are the Socialists' dividends. Expansion of government, no matter how benevolent, is a fencing in more and more of personal freedom, political liberty, and individual opportunity.

We are not free from socialism even in our American business, and certainly not in transportation. All the costs of our waterways and their improvement and maintenance for transport purposes are provided out of the Federal Treasury on the basis of benefits. There is no identity of interest between the one who pays the cost and the one who receives the benefit. Benefits accrue to the few who are able to use the facilities and the costs are spread out to the general taxpayer. Highway expenditures are distributed on the benefit theory. This is true of airways. All of this is socialistic. Unfortunately, it receives much popular support even from private management of industry.

It may readily be admitted that there are some facilities which can only be provided by the Government. This is socialistic. It can get along with private enterprise in the same economic and competitive field only by obeying the rules of private enterprise wherein costs are matched against revenues instead of benefits, wherein users pay on the basis of use, and wherein the user payments are sufficient to meet construction and operating costs, interest on investment, and a proper sum toward the support of government. In this way alone socialism can be made to harmonize with our American way.

What is it that nationalization has to offer in transportation that cannot be provided by private enterprise? Not better service, not lower cost, not a greater incentive to economic effort. While in theory it is substituting its service to the public for private profit motive as an incentive to economic endeavor, there has been no evidence anywhere or by anyone that the nature of business is changed or that money, power, and prestige by those who love them are not still the impelling force, or that the incentive to economic effort, which those who desire nationalization call public service, has in any way displaced the same old, even if baser, motives, either in those who control and expend tax funds or in those who benefit from them. There is perhaps even greater opportunity in a national enterprise for well-organized pressure groups to gain special advantages for themselves.

We must recognize that business under private enterprise fails or is successful on the basis of earning sufficient revenues from its charges for commodities or services to cover the cost of capital, operation, maintenance, and taxes for the support of government. A nationalized enterprise depends upon the expenditure of tax funds and the expenditure of these funds is directed not on a basis of economic factors so much as by political considerations and government planning. So under private enterprise business problems are determined on a basis of factors of economics, while in a nationalized business problems are determined on a basis of political persuasion and government planning. We do not want that.

We have in this country an organization that is dedicated to private ownership of all forms of transportation. For a number of years it has worked steadily and consistently toward an awakening of all those who believe in free private enterprise, to the risks and dangers of a slow and steady drift toward nationalization. I refer to the Transportation Association of America.

This organization has been asked by the Interstate and Foreign Commerce Committee of the House to analyze the transportation problem and to submit to the committee the methods and means by which there may be realized an equal opportunity among all forms of transportation so that the Nation as a whole may be well served by an efficiently operated and thoroughly coordinated system of transport under private management and operation. I hope that if you are not already acquainted with this organization, you will become so. I hope also that you will have the desire and find the opportunity to support and take some part in this organized movement to retain for ourselves, against the world trend, free private enterprise in the transportation industry.

Cooperation, the Key to Reclamation

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I include a brief address made at the annual convention of the Nebraska Reclamation

Association at Kearney, Nebr., January 15, by Goodrich W. Lineweaver, director of the Branch of Operation and Maintenance of the Bureau of Reclamation. Reports of this convention show that Nebraska is water conscious and is taking its proper place among the 17 western reclamation States. The attendance at the Kearney convention demonstrated the widespread interest throughout Nebraska in the reclamation program.

Mr. Lineweaver's address was on Cooperation, the Key to Reclamation. He mentioned how the cooperative efforts of the people of the Republican River Valley in Colorado, Nebraska, and Kansas had laid the ground work for the program which is bringing that important stream under control. This cooperation by the people, as well as between the Corps of Engineers of the Department of the Army and the Bureau of Reclamation of the Department of the Interior, deserves the highest commendation. It must be perpetuated. Mr. Lineweaver's address is as follows:

Today we hear a lot of talk about cooperation. Much of this talk is lip service, or sometimes it is like the complaints about the weather: Everybody talks about it but nobody does anything about it.

But in the reclamation book we not only talk cooperation but we seek it and practice it for it is the key to western development and is the only way by which the reclamation program can move forward as you want it to move and as we have it programed.

And that means cooperation on both sides of the street, beginning with the present and prospective water users on a reclamation project. Let me cite an example right here in Nebraska that stimulated the Missouri Basin plan that was of itself developed by the coordinated efforts of the Bureau of Reclamation and the Corps of Engineers, and was written into the Flood Control Act of 1944 by the concerted leadership and support of western Senators and Representatives—Democrats and Republicans alike.

You know how the Republican Valley Conservation Association, under the leadership of Harry D. Strunk, of McCook, had cemented the support of farm and town interests from eastern Colorado through the tip of Kansas into southern Nebraska and again into Kansas. Nowhere in the West or elsewhere has there ever been a more effective pooling of mutual interest and endeavor. The association knew what it wanted and presented a united front. It got results, as you can see from the fact that the Congress has made appropriations for five irrigation and flood-control dams that are now or will soon be under construction—one by the Corps of Engineers and four by the Bureau of Reclamation.

All this was not mere happenstance. It came about through wise and far-seeing leadership in the Republican Valley, in your State reclamation association, among your able Senators and Representatives in Congress.

And here is a good place to record again a high degree of cooperation at the grass roots, which made possible the start of construction on Enders Dam in the Republican Valley, the first of the reclamation structures to get under way as a part of the Frenchman-Cambridge unit. The repayment obligation of the water users had been estimated based on the cost of the unit at 1940 construction prices. You are aware of the rising costs due to the war and the warnings of the Congress that increased costs must be reflected in the repayment obligations of the water users if favorable consideration was to be given to reclamation appropriations.

When advised of this situation—it wasn't exactly an ultimatum—the board of the Frenchman-Cambridge district voted to increase their repayable obligation by 50 percent. The Bureau of Reclamation cooperated by recommending that the repayment period be extended nearly 20 years. This recommendation was accepted by the Secretary of the Interior, and the Frenchman-Cambridge example has been heralded as evidence of the good faith of the water users of Nebraska.

Last September it was my good fortune to travel over a substantial part of the Republican River Valley with your Senator WHERRY, who occupies a strategic position in Washington as chairman of the Interior Department Appropriations Committee. At McCook were gathered representatives of some 20 counties and towns that make up the Republican Valley Conservation Association to give the Senator demonstrable evidence of the teamwork that seems characteristic of Nebraskans for in Washington your State delegation meets for breakfast one day each week under the leadership of your senior Senator HUGH BUTLER, who originally hailed from down Cambridge way in the Republican Valley. Occasions of that kind are perhaps one reason that Nebraska, by giving tangible evidence of cooperation, is in the forefront of reclamation today, with the Nebraska Members of the House of Representatives equally concerned with your Senators in advancing the reclamation program. CARL CURTIS, whose district includes the Republican River Valley, was in the forefront in advancing the cooperation to support the Republican River program. Dr. Miller, as a member of the Irrigation and Reclamation Subcommittee of the House Public Lands Committee, represents the important area where our North Platte project is now operating and is also concerned with further Platte River developments. KARL STEFAN, as a member of the Deficiency Appropriations Committee, had an important place in securing the supplemental flood-control project appropriations for Nebraska and is also an important factor in the Loup River development. HOWARD BUFFETT represents the Omaha district which has shown increasing recognition of the importance of water development in Nebraska for that great gateway city of the State.

The Bureau of Reclamation seeks and needs cooperation on all sides. We are seeking to bring to bear on reclamation the full resources of every State and Federal agency that can make a contribution to the planning, construction, and settlement and operation of reclamation projects.

To that end, in November we joined with the State experiment station directors of the Missouri Valley States in a statement of principles relating to cooperative irrigated agricultural research on the Missouri Basin program. This statement, which has been approved by the Secretary of the Interior, was formulated by representatives of four Department of Agriculture research agencies and the Bureau of Reclamation.

The major point in the statement is that the State experiment stations, as the focal points for agricultural research, should be the coordinating agency within the State for research programs relating to Reclamation projects. Through this approach we hope to enlist the full support of the State agricultural colleges in the West and all agencies of the Department of Agriculture for the Reclamation program through their advice, counsel, and actual participation in our activities. The goal goes much farther than the research work of the experiment stations and the cooperating Department of Agriculture agencies, such as the Bureau of Plant Industry, Soil Conservation Service, and Bureau of Agricultural Economics. That goal will also bring into the program the Extension Services of the State colleges and Department of Agriculture through their county agents, the water facilities activities of the Soil Conservation Service, Soil Conservation districts, the Rural Electrification Administration, and the Farmers Home Administration. We need their assistance and cooperation, and we seek both.

At the Phoenix convention of the National Reclamation Association in October, one of the resolutions adopted carried the following clause:

"Be it resolved, That the Bureau of Reclamation seek the cooperation of the United States Department of Agriculture, the State agricultural colleges, and associated State agencies in the study, planning, construction, and settlement of irrigation projects."

The Bureau of Reclamation, with the approval of the Secretary of the Interior, is placing responsibility on its regional directors in the field to develop and cement this cooperation. Regional Director Avery Batson, who is well acquainted with your State agencies, will be found ready to take the lead in cooperation in Nebraska. We believe that this cooperation of Federal and State agencies can best be achieved at the grass roots just as has been shown in Reclamation activities in the Republican Valley, and in this endeavor the Nebraska Reclamation Association can give us a hand.

Canyon Dam Project

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. JOHNSON of Texas. Mr. Speaker, last Friday three members of the Texas delegation appeared before the Appropriations Subcommittee on the War Department civil functions appropriations bill in behalf of planning funds to permit work to continue on the plans and specifications for the Canyon Dam project on the Guadalupe project in Texas.

The benefits which will result from the construction of this dam are tremendous. Tragic floods will be prevented. The power shortage will be lessened. Navigation improvements will lead to lower freight rates. Additional badly needed fresh water will be made available to the entire southeast Texas area. Pleasure will come to hundreds of thousands through the recreational facilities which will be developed.

I hope the funds requested by the Army engineers will be approved so construction of Canyon Dam can commence during fiscal year 1950. The following are the statements made by Congressmen JOHN E. LYLE, CLARK THOMPSON, and myself, as well as a communication to the committee from Hon. Edward M. Cape, general counsel of the Guadalupe-Blanco River Authority:

STATEMENT OF CONGRESSMAN LYNDON B. JOHNSON

I am interested in this bill because of the item of $100,000 earmarked in the budget for advance planning in respect to the Canyon Dam on the Guadalupe River in Texas. While this project is not located in my district, nevertheless, it is the key structure in the development of the watershed of that river, a large part of which is in my district.

The amount asked for is not large. It is necessary that it be made available in this bill, however, in order that the planning

may proceed. A State authority, known as the Guadalupe-Blanco River Authority has been created by the Legislature of Texas to function under the constitution of Texas for the purpose of conserving the water and soil of that watershed. The authority proposes to fit its program in with the Canyon Dam project in such manner that the one will benefit from the other—the program of the authority will be beneficial to and reduce the costs of the Federal project, provided the plans of both are coordinated. If this be done the benefits resulting from the Canyon project will be manyfold greater than if the plans are otherwise developed. Such matters as the necessity of the construction of this dam and the benefits which will result in the way of flood control and aid to navigation have been described in the preliminary reports of the Corps of Engineers and no doubt will be discussed by other witnesses appearing before your committee. In the interest of time, therefore, I simply want to again stress the one point that time is of the essence if we are to take advantage of the opportunity of joint planning to avoid possible waste and confusion in the event that our planning is delayed.

STATEMENT OF CONGRESSMAN JOHN E. LYLE

The budget submitted in connection with this bill contains an item of $100,000 for advance planning of the Canyon Dam project on the Guadalupe River in Texas, which project is located in my district. The mere location of the project in my district and the true benefits to the district from its construction are comparatively minor when the picture is viewed as a whole.

The Guadalupe River is one of the principal streams of Texas. Like other streams in that area, it is subject to periods of drought and low flow, followed by excessive and devastating floods. The flood damage below the site of this project has been as high as one million and a half dollars from one flood and many lives have been lost. By controlling the flood waters, we will not only prevent this loss of property and lives, but will conserve the water for irrigation and render much more secure the navigation project on the lower river upon which the Government has expended and is expending many hundreds of thousands of dollars. Further, it will provide water for the irrigation of lands needing irrigation and for which water is not now available.

In order that you may have a more definite description of the project, I might say that Canyon Reservoir, Guadalupe River, Tex., was authorized by the Rivers and Harbors Act approved March 2, 1945, in accordance with recommendations of the Chief of Engineers contained in House Document No. 247, Seventy-sixth Congress, first session. The project consists of a gravity type dam, located on the Guadalupe River, about 7 miles upstream from New Braunfels, Tex.

This is a multiple-purpose dam and reservoir project for flood control, navigation, and power. The latest approved estimate of cost of this project is $25,952,600 as of September 1947; $260,600 has been made available to date for planning in connection with the preparation of the definite project report for this reservoir. The definite project report is approximately 70 percent complete. With the addition of the $100,000 included in the 1949 budget for preparation of plans and specifications the detailed construction plans should be approximately 40 percent complete by the end of fiscal year 1949. With this progress on construction planning in fiscal 1949, it will be possible to start construction of dam in fiscal year 1950.

STATEMENT OF HON. CLARK THOMPSON

I desire to be heard in support of the bill because of the item of the Canyon Reservoir which is included in the budget submitted in connection therewith. While the project is located a considerable distance out of my district, yet the people of my district and a great area in Texas will benefit directly and indirectly from the project.

A portion of my district suffers from the ravaging and destructive floods which at present go uncontrolled down the main stream of the Guadalupe. This will be prevented by the construction of the Canyon Dam. In other portions of the district, landowners are pleading for water to irrigate their lands. This water is not now available in dependable quantities because the floodwaters which should be stored in the hills are allowed to waste themselves into the bay. The stretch of the Texas coast from Galveston to Corpus Christi is a fast developing industrial section. Chemical and plastic industries are attracted to that section because of the availability of raw materials, including natural gas, as well as the accessibility to deep water. Such industries require enormous quantities of fresh and wholesome water. Even now some of those industries are seeking a supply of fresh water from surface streams, and this water can be made available in dependable quantities only by impounding and conserving the floodwater of our rivers and streams.

Without taking further time, I can say that the reports of the Corps of Engineers revealed in graphic fashion the fact that the Canyon project on the Guadalupe River is feasible from every standpoint and is necessary to accomplish those results so necessary to the safety, well-being, and progress of the region.

GUADALUPE-BLANCO RIVER AUTHORITY,
New Braunfels, Tex., January 28, 1948.
To the Honorable Chairman and Members of the Appropriations Committee, War Department Civil Functions Bill, House of Representatives of the United States.

GENTLEMEN: The Guadalupe-Blanco River Authority is a conservation and reclamation district and a governmental agency and body politic and corporate (art. XVI, sec. 59, Constitution of Texas; ch. 410, Acts of 1st called sess., 44th legislature). The act declares the creation of the authority essential to the control, storing, preservation, and distribution of the waters of the Guadalupe River and its tributaries.

An active phase of the program of the authority includes facilities for the control of flood waters of the river (it has, at this time, no such facilities); a broad program of conservation and reclamation practices; and the development of hydroelectric power. Flood control is now of paramount importance, by virtue of recent large increases in population of the area and large capital investment in the sections subject to overflow.

Navigation to river mile 52 and construction of the Canyon Dam and Reservoir in the interest of river regulation and flood control have been authorized by the Congress (79th Cong., 1st sess., S. 35, Rept. No. 63).

The President's budget message includes $100,000 for use by the Chief of Engineers toward completion of plans for construction of the Canyon Dam, which will eliminate floods in an area heretofore suffering 90 percent of the total losses from that source. Losses from floods on the river average $1,000,000 annually. Existing circumstances create an emergency, and we respectfully request that the suggestion of the President for the appropriation of such funds be adopted.

The authority has cooperated with the Corps of Engineers in a study of the problems since July 7, 1948. It desires to assist in sponsoring the Canyon Reservoir project.

If desired by you, representatives of the authority will be glad to appear before your committee with all information and data available to the authority.

Respectfully submitted.

E. M. CAPE,
General Manager and General Counsel.

District Home Rule

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. AUCHINCLOSS. Mr. Speaker, under the authority granted me to extend my remarks and include the report of the poll on the home-rule and reorganization plan for the District of Columbia taken by the Washington Post, I wish to express the gratitude of the Subcommittee of the House District Committee for this informative and useful piece of work. The questions asked in the poll were penetrating and to the point, and the article by Edward F. Ryan, in collaboration with Jane A. Shepherd, is excellent and well written.

The results of this poll are most heartening to the subcommittee, which has worked hard on this matter, and it is most gratifying to know that 70 percent of the residents in the District are in favor of home rule. However, it is not surprising that the people of Washington want to be like other Americans and have a voice in the management of their city. The expressions of opinion about various details of the plan will be very helpful to the subcommittees of the House and Senate which are now holding hearings on H. R. 4902 and S. 1968, and again may I pay tribute to the Washington Post for a job well done.

SEVEN IN TEN HERE WANT DISTRICT HOME RULE

(By Edward F. Ryan, Post reporter, in collaboration with Jane A. Shepherd, director of the Washington Post poll)

Seven out of ten Washingtonians want home rule.

This is shown by new findings of the Washington Post poll that 70 percent of Washington residents favor home rule, 23 percent oppose it, and 7 percent are undecided.

Congressional hearings on a home-rule plan for Washington will begin at 10 a. m. tomorrow in the caucus room of the Old House Office Building. The plan calls for an elected city council and appointed manager to run the District, subject to veto by either House of Congress and the President on major local legislation.

The new poll results show the same percentage of District citizens favoring home rule as was disclosed by the 1946 plebiscite. The big development since 1946 is that District leaders at the Capitol have taken over leadership in the drive for home rule.

NATIVES ARE ENTHUSIASTS

Washington's general sentiments on home rule showed up in answers to two poll questions.

The first question was:

"As you know, people who live in the District do not have the right to vote for city officials. How do you feel about this situation?"

The percentage results:

	Total	White	Negro
For home rule	70	65	83
Against home rule	23	30	4
Undecided	7	5	13

There is little difference between home owners and renters in attitudes toward home

rule. Sixty-seven percent of home owners favor it, as compared with 72 percent of renters.

Native Washingtonians are as enthusiastic as those who have moved here from other States. Seventy-two percent of native Washingtonians favor home rule.

Strongest opposition comes from those who are not natives but have lived in the District more than 10 years. Of this group, 28 percent is opposed to home rule.

The second question:

"If the District had home rule, do you think the city would be better run, or worse run? In what ways?

	Length of residence				
	All groups	Under 5 years	5 to 9.9 years	10 years and over	Native
	Percent	Percent	Percent	Percent	Percent
Would be run better	54	65	53	48	60
Would be run worse	14	7	16	16	15
Depends on type of government, elected officials, etc	7	8	6		
Would be the same	3	2	5	2	2
Undecided	22	18	20	26	20

People who have moved into Washington since the beginning of World War II are most convinced the city government would be improved by home rule. Native Washingtonians are also somewhat more convinced of this. Most skeptical are those who are not natives but have lived here many years.

DEMOCRACY AND TAXATION

The poll went into the specific reasons why citizens like and do not like home rule.

The poll showed 46 percent of all residents believed home rule would be more democratic. Individuals in this group said things like, "Every citizen should have the right to vote; people in other places have the right to vote and it should be the same here; it's undemocratic now."

Others said they want home rule because they pay taxes but receive none of the benefits of democratic representation in their own city government. This group represented 10 percent of the total.

Another 9 percent felt that home rule would promote citizen interest in civic affairs and make officials more responsive to public opinion.

In the line-up against home rule, 13 percent of all those questioned and 19 percent of the white persons questioned said they were fearful of Negro domination under a home-rule system. (Latest estimates show about 30 percent of Washington residents are Negroes.) Two percent opposed home rule because they felt there were too many transients, too many outsiders, too many Government employees, or too many undesirables here.

Five percent oppose home rule because they prefer the present District government. They said things like, "The city has been doing all right. I'm satisfied with the way it's running now. Washington has the finest form of municipal government in the United States. We have fine public service, the lowest per capita cost and no undue scandal. We're better off because most cities are corruptly run in the United States."

ADMINISTRATIVE EFFECTS

Some who are opposed to home rule think the city would be better run if it had the vote, while others of this group are uncertain. Of those opposed, 8 percent think the city would be better run; 54 percent think it would be worse run; 10 percent say it would depend on the form of government, or on the elected officials; 7 percent say it would be the same as now; 21 percent are undecided.

Home owners do not differ significantly from renters on this question. Fifty-three percent of owners say the District would be run better under home rule, as compared with 55 percent of renters.

Of those who feel the District would be run better under home rule: 24 percent express a faith in the effectiveness of democratic process; 21 percent say elected officials would be more responsive to the needs and desires of the people they represent; 20 percent believe that city services and administration would be improved; 18 percent say District residents would take more interest in and responsibility for their city government; 2 percent say any change would be for the better—things are so bad now; 12 percent mention other ways in which District government would be improved; 12 percent give no way in which it would be improved.

(Adds to more than 100 percent because more than one answer was possible.)

Of those who feel the District would be run worse under home rule: 44 percent say it would give Negroes too much voice in District government: 18 percent say politics would enter in if the District had the vote; 18 percent say they like it the way it is now and feel the present form of government is satisfactory; 14 percent mention other reasons; 9 percent give no reason.

(Adds to more than 100 percent because more than one answer was possible.)

ONLY THIRD CAN VOTE

Besides gauging the over-all sentiment on home rule, the poll checked into the home rule views of local citizens who have had the experience of voting elsewhere. The poll found that 60 percent of Washington residents have never voted—22 percent because they were native Washingtonians—and 40 percent have voted at least once in their lives. The poll also showed that only 34 percent of District residents have a legal right to vote elsewhere—hitting hard at the theory that Washingtonians do not need a vote because they vote elsewhere.

Then this question was asked:

"On the whole, would you favor or oppose home rule for the District?"

Here are the percentage results:

	Have voted before	Have never voted before	Native of Washington
For home rule	64	73	72
Against home rule	29	15	21
Qualified opinion	1	1	
Don't know	6	11	7

Representative JAMES C. AUCHINCLOSS (Republican, New Jersey), first sponsor of the home-rule bill, was told about the poll results. He declared the showing of 70 percent of Washington residents in favor of home rule "is most encouraging to us."

"I'd like to say," he added, "that the Washington Post has done an extraordinarily helpful thing in conducting this poll and preparing the detailed information obtained. It clearly shows that the people who live in the District approve the efforts made by those of us who have studied the organization of the District government and have drafted the home-rule bill.

"We recognize the bill isn't perfect. Our minds are open to constructive criticism and amendments. We feel that once the home-rule plan is in operation, constructive changes can be made."

"DISPLACED" WILL OBJECT

As the poll makes clear, the hearings can be expected to produce sharp conflicts on the merits of the bill.

Strongest opposition is slated to come from District and Federal agency officials whose operations would be widely affected by the bill. For example, the District Commissioners will probably endorse some of the reorganization features in the bill while questioning the home-rule feature. Maj. Gen. U. S. Grant 3d, chairman of the National Capital Park and Planning Commission, wants the District run by an appointed governor, with power to veto acts of the city council. Powers of his agency to buy public lands in the District would be shifted to the city government.

Washington's appointed, unpaid school board opposes the idea of having an elected board of education, whose members would be paid, which would take over control of public libraries. Washington's library and recreation boards are expected to oppose the provisions of home rule that would put them out of business.

Strongest pressure for the bill will result from the allied interests of Washington groups which want home rule and congressional groups which want to get out of the business of handling the District's petty legislative chores.

Wilbur S. Finch, head of the Central Suffrage Conference and chairman of the suffrage committee of the Federation of Citizens Associations, has called on all supporters of home rule to turn out for the hearings.

The hearings will be held by a joint committee headed by AUCHINCLOSS and Senator JOSEPH H. BALL (Republican, Minnesota). They are chairmen of the House and Senate subcommittees on District reorganization and home rule.

VETO IS NECESSARY

On one point the residents of Washington show a desire for more self-determination than the Auchincloss-Ball bill can constitutionally express. The bill gives each House of Congress and the President veto power over legislation proposed by the city council. The reason for this requirement goes back to the Constitution, which gives Congress exclusive legislative jurisdiction over the District. Framers of the home-rule bill wanted to give District residents the initiative in writing the laws under which they live, but the Constitution keeps Congress from giving District residents final power to write their laws.

The veto provision was placed in the bill to make it constitutional. As things are now, a District law comes into being when each House of Congress has passed it and the President has signed it. The home-rule program would put the present machinery into reverse, by saying that legislation proposed by the city council could become law only if neither House of Congress nor the President disapproved it.

Another strong reason for the veto feature is the belief of sponsors that without it home rule would never pass Congress.

Whatever the reason for the veto, 50 percent of Washington residents are shown to be against it in the poll. The veto feature was approved by 30 percent, and 20 percent had no opinion.

Here is how individuals voiced their dislike of the veto: "If we're going to have home rule we should have the final say; the council should be capable of making its own decisions." Those who favored the veto did so in these terms: "The Nation's Capital is Congress' responsibility."

COMPENSATORY FEATURES

Because a limit must be placed on the number of questions in a poll, the survey did not bring out two features of the home-rule plan which offset the veto.

One is that the city council would be given all the ordinance-making powers now held by the District government. Such ordinances would become law without having to clear through Congress. The second is that the council would have final power to write the annual city budget. While the budget

would be sent to the proposed Joint Congressional District Committee for review, that group could only recommend, not make, changes.

The types of legislation that would have to clear through Congress under home rule include major changes in laws, revenue and taxation measures, changes in the charter, and proposed bond issues for public works.

Responses of Washington residents varied on other features of the Auchincloss-Ball bill:

The voting requirements were approved generally, but by a slimmer margin than the general home rule proposition. The bill would let District residents who have lived here a year or more vote in the local elections. The bill also says they can vote here without losing their right to vote on national affairs in a State.

This question was asked first on the election plan:

"I'd like to ask your opinion of some of the points in the plan. First, all people who have lived in the District a year would be eligible to vote for District officials. Do you approve or disapprove of this?"

The results:

	Have lived in District less than—			
	All groups	5 years	5 to 9 years	10 years or more
	Percent	*Percent*	*Percent*	*Percent*
Approved	59	65	70	55
Would approve if they were going to stay, etc	4	2	4	4
Disapprove	32	30	20	35
Don't know	5	3	6	6

This question followed:

"District residents who have kept their right to vote in other places could still vote there in national and State elections. Do you think they should be allowed to vote here also for District officials?"

The results:

	All groups	Those who have voting residence elsewhere	Those who have no voting residence elsewhere
	Percent	*Percent*	*Percent*
Yes, should be allowed to vote here	39	49	35
Yes, if they plan to live here, etc	6	7	5
No, should not be allowed to vote here	43	35	46
Don't know	12	9	14

Chief reason for opposing the double voting privilege is a misunderstanding about what it would mean in any one election. Twenty-nine percent say a person should have only one vote, shouldn't vote twice in the same election. A few say that people who have maintained voting residence are not so interested in District affairs (4 percent); that these people should vote for local officials where they come from (3 percent); that they are out-and-out opposed to home rule (2 percent).

ELECTED BOARD CARRIES

The proposal for an elected school board was backed by 62 percent of those polled. AUCHINCLOSS said "that is most encouraging, because we have been getting a large number of letters on the school-board plan." Opposition to electing school-board members was voiced by 22 percent, and 16 percent had no opinion.

The vote was closer on the question whether Washington's chief executive under home rule should be a manager appointed by the city council, or a mayor elected by the people. (In the home-rule bill the top administrator would be a council-appointed manager. There would also be a mayor, but he would be a member of the council, elected by it to serve as presiding officer and to represent the city in ceremonies.)

This was the question on manager versus mayor:

According to the plan, people would vote for members of a city council. The city council would then hire someone trained in city government to carry out the District laws. Do you think it is a good idea to hire someone trained in city government for this job, or would you rather have an elected mayor?

The results:

	Percent
Good idea	43
Rather have a mayor	39
Qualified	1
Don't know	17

In a final question, the poll showed strong support for the plan in the home-rule bill to make District elections strictly nonpartisan. Here is the question:

People running for office in the District would not run as members of any political party, like Republicans or Democrats, but as individuals. Do you think this would be a good idea?

The results:

	Percent
Yes	59
No	22
Don't know	19

The Washington Post poll made its home-rule survey late in December. All interviews were held in the home. The residents questioned were selected to give proportionate representation to all groups living in the District. Interviews were held in all parts of the city, and the calls were made in both daytime and evening to insure representation of working people.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Maryland Gazette of January 29, 1948:

KNUTSON TAX PLAN

The Congress should pass the so-called Knutson Federal tax-reduction measure, now before it, and not be deterred in any way by rumors that President Truman will exercise the right of veto if it is enacted.

President Truman has already vetoed two tax-reduction bills and has shown his opposition to any plan that tends to reduce the scope of Federal spending. The Congress should pass the Knutson bill and put the matter of saving some of the taxpayers' funds squarely before him. Let him, for the third time, exercise his right of veto if he sees fit, and then if the measure dies, let him face the people in the coming election as the President who three times in succession acted to prevent them from getting relief from the high burden of taxation.

The Presidential proposal of giving every taxpayer and his or her dependents a $40 income-tax credit and making up for this by additional taxes on corporations should be consigned to the wastebasket. On its face it is a mere political gesture, the only result of which, if enacted into law, would be to bring about price increases. It would not reduce the cost of government in any way, but would simply curtail corporations from expanding their productive facilities.

The Knutson bill, the product of the thorough consideration of the House Ways and Means Committee which has held hearings and sounded out popular sentiment in drafting two previous tax-reduction bills, is a real reduction measure.

As a matter of fact, it is more advantageous to the majority of workers and income-tax payers than the Truman suggestion. Both start equally by exempting all net incomes of $600. At the $800 income level Truman's flat credit of $40 would leave a taxpayer owing $17, while KNUTSON'S would cost him $27. After that the Knutson bill has the edge. At the $1,200 income stage the Knutson bill would levy a tax of $80 and the Truman measure $93. The Knutson plan holds this advantage throughout.

The tax reduction can be brought about by paring the $39,700,000,000 budget which President Truman has submitted to the Congress. This is the second largest peacetime outlay in the Nation's history and the sixth, including the war years. It calls for the third largest tax levy, $44,400,000,000, in the Nation's history, including the war years. So, it is obvious that President Truman, unless forced by Congressional action, will not, of himself, curtail Federal spending.

During the last Congress the President's 1948 budget and other sought appropriations were trimmed by $7,181,005,249. These reductions included a cut of $2,361,889,749 from the 12 major budget estimates, a cut of $402,041,986 in four supplemental estimates, a cut of $268,935,548 in six deficiency estimates and joint resolutions; a cut of $40,000,000 in permanent appropriations; a cut of $90,805,020 in supplemental and deficiency estimates, submitted but not considered, and a cut of $4,017,332,946 as a result of rescissions during the present Congress. Total reductions for all items, exclusive of rescissions amounted to $3,163,672,303. The total reduction for all items, including rescissions, was $7,181,005,249 and this did not include a total of $830,380,811 impairment of capital in the Commodity Credit Corporation which was not replaced by appropriations.

As a result of Congressional economy measures, and in the interest of efficiency in government, 15 boards, agencies or units of the Federal Government have been abolished since January 1, 1947, and remaining functions have been absorbed elsewhere.

Federal employees have decreased by $1,724,489 since the war peak, but substantially all of this has been in the War and Navy Departments, and the Government is still more than twice as large as it was in 1939. This indicates that further reductions can be made without curtailment of needed activities. Since the war peak up to October 1947, a total of 1,792,775 employees were dropped by the War and Navy Departments, but in all other agencies, there was an increase of 68,286 employees making the net decrease of 1,724,489.

Since 1933 the Federal administration has pursued a policy of an increasingly paternalistic government which, in itself, necessitated larger expenditures as its functions increased in number and scope. During this time Federal personnel multiplied from 563,000 to 2,013,407 and annual Federal expenditures rose from less than $5,000,000,000 to $42,500,000,000, while the national debt increased from $22,000,000,000 to $258,000,000,000. The number of Government bureaus rose to 1,039 while the number of offices increased to 46,865. Many functions previously administered by the States or local units, or by private enterprise, were taken over by the National Government.

Much of this was caused, at least in part, by depression and war, but much was brought about by the administration's philosophy that the lives of its citizens could be better administered by the National Government than by State, local, or private organizations. Between 1934 and 1946 Federal grants-in-aid to States cost the taxpayers $29,000,000,000, Federal subsidies totaled over $13,000,000,000 and Federal lending ran over $40,000,000,000.

There is plenty of room in this vast Federal financing and bureaucracy to save enough to finance a tax-reduction measure, and reserve adequate surplus for debt reduction. But funds cut from budget estimates would not have been used for debt reduction—they would have been spent. The taxpayers of the Nation might just as well spend the total saved, and passed on to them by tax reduction, as have the Federal bureaus spend it.

Tax reduction at this time, by curtailing the money taken from pay checks and envelopes in the form of withholding taxes, would act as a pay raise to thousands of workers, and thus tend to stave off demands for third-round increases, with the threatening inflation spiral. It also would provide risk capital for investment in the Nation's industry, now strained to its productive capacity, and in need of expansion. President Truman himself has pointed out how necessary it is for business to expand its productive facilities.

Veterans' Subsistence Bill

EXTENSION OF REMARKS
OF
HON. GLEN D. JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. JOHNSON of Oklahoma. Mr. Speaker, I was pleased and gratified when Mr. ALLEN, of the Rules Committee, announced last week that at long last the veterans' subsistence bills, H. R. 4212 and S. 1394, would be brought up for consideration tomorrow.

As a member of the Veterans' Affairs Committee I voted to report this bill out of our committee in June of last year. While I think we should have voted on it last session, maybe the phrase, "Better late than never," will apply in this instance.

To show the need for this legislation and the widespread demand for it I quote from a telegram I received last Saturday from Preston Moore, commander of the Thomas C. Reynold American Legion Post at the University of Oklahoma in Norman. Mr. Moore's telegram in part read:

I am sending air mail, petition signed by 1,000 veterans thanking you for your sincere cooperation on veteran subsistence bill.

I will not burden the RECORD by inserting the list of names on the petition which I received in my office this morning, but they were the signatures of over 1,000 of the veteran students attending Oklahoma University. I call the fact to your attention to show the keen interest the veterans attending school under the GI bill attach to this pending legislation.

As further evidence of the interest of student veterans in the subsistence bill I quote in part from a telegram I received this morning from the veterans' committee of the East Central State Teachers College at Edmond, Okla., which stated:

We appreciate your support of H. R. 4212. It will be a great help to veterans on this campus.

I sincerely trust that on the morrow this House will keep faith with our veterans by speedily passing the veterans' subsistence bill.

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. BRADLEY. Mr. Speaker, labor, management, and the public are endeavoring to cooperate in the Eighteenth Congressional District of California in the way that Americans should conduct their mutual relationships in business and civic affairs.

This cooperation is so excellent in the over-all picture that it does not make even the inside pages of the press. It is, however, one of the reasons why this particular southern California area has advanced so rapidly in its industrial capacity and output during recent years.

I am pleased to insert herewith a statement by Mr. George E. Roberts, district representative, United Rubber Workers of America, as published in the South Gate Press-Hollydale Press, of South Gate, Calif., of January 22, 1948:

LABOR LEADER PRAISES FRIENDLY RELATIONS EXISTING BETWEEN WORKERS AND MANAGEMENT IN MANY PLANTS

(By George B. Roberts, district representative, United Rubber Workers of America)

As a representative of organized labor and a resident here, I would like to extend greetings to the citizens of South Gate on the twenty-fifth anniversary of our city.

We are happy to take part in the festivities and celebration during the silver jubilee week.

Many might think that organized labor is interested only in hours, wages, and working conditions. Basically that is true, because with standard hours, fair wages, and working conditions it makes for better conditions in the home and, in turn, in the community in which we live.

In the past 10 years we in the CIO have established fine relationships with many employers in southern California. Year after year improvements have been made upon the working agreements and labor relations in these plants.

Unfortunately the public seldom hears or reads about plants or factories in which management and labor are working together in a harmonious manner—that just doesn't make news.

We, of the CIO, have come to realize we have other responsibilities besides taking up day-to-day grievances in our respective plants. We recognize that we have an obligation to our community.

We want to work with the many progressive-minded citizens and organizations, in helping to make our city one in which we can be proud to reside and rear our children.

We are interested and want to take part in our civic affairs. We feel that to be a really true American we must register and vote and take part in city, State, and National affairs. Only we, as citizens, can enslave ourselves by our failure to exercise our right at the pools on election day.

We, in the labor movement, are deeply interested in broader educational and recreational facilities for children and adults.

We are proud of our city park and we are anxious to see it expand, to include such as a swimming pool and public auditorium where many interesting events can and will be held. We have many sports committees in our local unions which are ready to cooperate with other groups in our city to furnish clean fun to young and old alike. I dare say we have members in South Gate who attend practically every denomination of church represented in this city.

We are interested in every phase of our community life and pledge that in the coming years we shall take even more interest in civic affairs and will try to conduct ourselves in such a manner that we will be worthy of the respect and cooperation of the many citizens, business and professional people of South Gate.

Jack Beall's Radio Report on Communism

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a radio address made over the American Broadcasting Co. network at 6:45 on December 27, 1947, by Jack Beall. It is interesting to note that Mr. Beall touched on the situation in the Panama Canal Zone and the UPWA's communistic influence, as pointed out by me in my remarks before the House on January 12 and again on January 19 of this year.

The address follows:

Good evening. The United States has sustained one of its sharpest diplomatic defeats. And partly, at least, it can be attributed to Communist influence. I refer to the action of the Panama Assembly, which voted down the proposed treaty with the United States for the maintenance of 14 bases in the Republic of Panama—chiefly radar stations—for the defense of the Canal. We are now pulling out of those bases. It may be a permanent set-back. Without these bases, in fact, our defense against air attack on a vulnerable set of locks, is almost impossible. The Canal, itself, may become untenable in time of war. The free passage of our fleet from one ocean to another, the transport of our goods from coast-to-coast through a Canal that cuts off 8,000 miles of distance around the Horn, may be stopped. The safety of the Nation is involved, no less.

Let's look at this thing from historic perspective. For sheer ingratitude, the action of the Panama Government is pretty shameful. We practically set the Panama Government up, when we first decided to have a go at building the Canal. We gave recognition 5 days after it declared its independence of Colombia. We protected it from the counterattack of Colombia. We stabilized its currency by making a payment of $10,000,000 in cash and agreed to pay a quarter of a million dollars every year in rent

for the Canal Zone. We dug the Canal, bringing great prosperity to the people of Panama. The point I make is that the Republic of Panama had greatly benefited from all its relations with the United States. We had not acted in a high-handed, and certainly not in an imperialistic way with her. Colombia might complain of us, but certainly not Panama.

And yet, there were administrative details, which caused friction. There was a distinct Jim Crow problem down there which was seized upon by the Communist Party in trying to get a foothold. The Communist Party of Panama supported an underground press in 1931; headway was made among the intellectuals, the professors and the students of the universities, by propaganda which depicted the United States as the avaricious "Colossus of the North" bent on "Yanqui imperialismo." The equally familiar Jim Crow argument was used on the general public. Congress scented some growing trouble a few years ago and passed a law saying that only Americans or citizens of Panama could work on the Canal, or hold jobs in the one great industry down there. But it became scandalous how easily almost anybody, at a cost of about $2, could get Panama citizenship.

In later years a great influx of Cubans in the Canal Zone took place where they became citizens overnight and got jobs. Habana is now the central clearing house of the Soviet Union in its work on South and Central American countries. A powerful radio broadcasting station beams Communist propaganda and slanted news to all countries to the south of us.

Many Cuban Communists were sent into Panama deliberately for purposes of infiltration. A handsome, two-color magazine, 76 pages at times, began to appear with pictures of Stalin, Lenin, and Molotov, praising the Soviet Union as the defenders of the people against Yankee imperialism. The Soviet Union, it maintained, is not imperialistic because it is a "socialistic state and therefore has no need to exploit weak countries." I suggest Belgrade, Bucharest, and Prague papers please copy.

For weeks, a tremendous propaganda drive has been going on in Panama, against the ratifying of the treaty on bases. It had been signed by the two countries and was thought sure to pass the assembly; but street demonstrations, with picket signs and cloth banners, following the familiar Soviet model, took place. There had been clashes with police. A foreign minister resigned. The uproar became louder and louder. Finally, on the night of the vote, a mob of 10,000 people whirled about the assembly hall. They were screaming the old, old slogans against Yanqui imperialism. All reports from there said that Communists had a leading part in all the demonstrations. A State Department spokesman here confirmed it. According to Time magazine, only President Jiminez dared to defend the treaty. When votes were cast, instead of having a few votes margin for the treaty, as had been originally expected, every single, solitary deputy voted against it. What was the explanation? Assembly President Arosemena supplied it: "Nobody," he said "will vote for the bases when they can look out the window and see 10,000 boys sharpening their knives." When he said "boys" he was referring to the radical student element, which traditionally makes Latin-American revolutions.

So we sustained a first-class defeat in our own back yard. One can mark up a major success for the Soviets against us, the strong country of the west—at almost the same time when France and Italy, those weak countries, were chalking up successes against the Soviets. France and Italy turned back the tide last week. We didn't even know we had been hit until we were down and the State Department told the War Department to begin getting its troops out of those bases.

And here let me bring in a thing which comparatively few people in this country know about, but which may be the most serious thing of all in the Panama situation. It is the penetration of an extreme left-wing union, called the United Public Workers of America, into all the activities of the Canal Zone, from engineers opening and closing the locks to waiters in mess halls. It controls the labor of 17,000 people down there. There is a peculiarity about its stand on getting American troops out of military bases that ought to be aired, right in this connection.

The United Public Workers of America was formed from two other left-wing organizations—the United Federal Workers and the State, County, and Municipal Workers. Abram Flaxer is the president of the new international. As president of the State, County, and Municipal Workers he had seen his organization follow a faithful Communist Party line before and after the Stalin-Hitler pact, and before and after the Hitler attack on the Soviet Union. "Flaxer," according to a report of the House Committee on Un-American Activities, "has been active in the affairs of the Communist Party as far back as 1936.

"Although he has never publicly avowed membership in the Communist Party, his allegiance is indisputably established by his presence at closed meetings of the party, by the statements of those who have been closely associated with him in the labor movement, by his complete loyalty to the party line, throughout its various changes, by his defense of Communists and Communist fronts and by the standing established by his union as a Communist-controlled organization."

The secretary-treasurer of the UPWA is Eleanor Nelson, who had been head of the United Federal Workers before the merger. The House Committee on Un-American Activities has this to say about Eleanor Nelson: "She has been eulogized by the Daily Worker, official Communist organ—a mark of distinction reserved for those who possess the confidence of the Communist Party. The union headed by Miss Nelson followed the Communist Party line cautiously, but faithfully."

When these two organizations, with such a record and with such leaders, merged at a convention, held in Atlantic City the latter part of April 1946, the convention records show that it passed resolutions in a most peculiar way for a union of Federal Government workers. Its resolutions attacked the foreign policies of the United States. They praised the actions of the Soviet Union. UPWA charged that demobilization of American troops throughout the world was being deliberately delayed to further the imperialistic ambitions of the United States and Great Britain and to isolate Russia. And here is the nub of the thing—as it affects bases—it called for the immediate withdrawal of American and British troops from all friendly countries. Not a word was said about calling for the immediate withdrawal of Russian troops from the half dozen friendly countries which its armies had overrun. When this was called to the attention of the convention by one Peter Demas, he was shouted down and the convention went on record as favoring only British and American withdrawal from bases. Now I think this has some pertinence about Panama when you think of what happened next. About a week after the Atlantic City convention there was a May day parade in Panama City. Three thousand people marched with signs demanding the establishment of diplomatic relations between Panama and the Soviet Government. They carried banners calling upon the masses to break the chains of capitalism and denouncing Anglo-American imperialism.

On the very next day, May 2, Operation Panama, as it was called in the Communist press, was launched. The newly launched United Public Workers of America—just 8 days old—began organizing the Government workers of the Panama Canal Zone. By September they claimed to have 17,000 on their rolls. Such an organization, headed by such people, is now in control of the one big union in Panama, recognized as the bargaining agent for upward of 17,000 employees in all conditions of labor and positions of trust down there. I would like to see it officially and authoritatively denied that any of these seventeen thousands were among the demonstrators agitating against bases for the United States, or surrounding and cowing the assembly on the night when the United States-Panama treaty got no votes. In a way it is unthinkable that United States employees would be among those who agitated against the United States; demanding that its armed forces withdraw from airfields and radar installations, designed to protect the Panama Canal. And yet, when you think back to the main foreign-policy resolution of the very union that organized these people, you find that it favored getting the United States out of bases all over the world, while saying nothing about Russia withdrawing its soldiers.

I ought to tell you the sequel to the Atlantic City Convention. A storm broke over the heads of the UPWA, not only on account of the foreign policy resolution, but also on account of the attitude which had been taken about strikes against the Government. Flaxer, before the merger, had stoutly maintained the right of Government employees to strike. It was in the constitution of the UPWA that it was against UPWA's policy to strike, but, at another place in the constitution, it set up the procedures for strikes to be called.

This was a bit too thick for the administration. President Truman denounced it as intolerable. The Government couldn't exist under such circumstances, he said. Bills and riders were passed by Congress to make every employee swear that he would not strike against the Government and would join no organization that asserts such a right to strike.

This would just about have blown the UPWA out of the water, if some action had not been taken. The international board was hastily called together and it passed a resolution that it did not and never had asserted the right to strike against the Government. It adopted what it called a law that there should not be a strike against the Government of the United States. Of course, there was a loophole here. The original strike procedures were imbedded in the union constitution. They were not cut out or changed, they were negatived later by a mere resolution of the board. And, plainly, the union could still strike against local and State governments.

Also, there was much pressure from within the union against its pro-Russian policy and finally the UPWA substituted the standard CIO foreign policy declaration for its own.

It was partly because of the concern in Government circles over the United Public Workers of America and whether such a union, under such sponsorship, could be allowed to go along unmolested, which caused the President to set up a loyalty board, to purge the Federal payrolls of subversive or disloyal elements.

When you think of what has just happened in Panama, you ought to think of the far larger question: "Is the hand of Josef Stalin reaching into the Canal Zone to paralyze the possibility of defense in time of war of the most vital link of our naval operations and our Marine commerce?" It is something to ponder about before it is too late.

This is Jack Beall saying good night from Washington.

Address of Speaker Joseph W. Martin, Jr.

EXTENSION OF REMARKS

OF

HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. ARNOLD. Mr. Speaker, at the annual banquet of the American Road Builders' Association at the Hotel Statler, Washington, D. C., Tuesday evening, January 27, 1948, the Honorable PAUL CUNNINGHAM, Republican Representative from Iowa, in introducing the speaker of the evening, paid merited tribute to the distinguished Speaker of the House, JOSEPH W. MARTIN, JR., who then delivered an interesting and informative address on the importance of roads in keeping pace with the tremendous strides of the automotive industry.

Under leave to extend my remarks, I include the introduction and the speech in the RECORD:

INTRODUCTION BY HON. PAUL CUNNINGHAM

Mr. Chairman, distinguished guests, ladies, and members of the American Roadbuilders Association, it is generally believed that all positions of authority and prominence in the Congress of the United States are the result of seniority and length of service. This is not true in all cases. The Speakership of the House of Representatives is the most outstanding example. A Member is, and always has been, elevated to the Speakership by merit and merit alone. The selection is made by his colleagues of the party in power and is based upon ability for the office and not length of service alone.

In January of 1947, the present incumbent, Mr. JOSEPH W. MARTIN, JR., was the unanimous choice of his colleagues of his own party. In fact, this choice was so unanimous that no one even thought of running against JOE and no one considered urging anyone else to run against him. The retiring Speaker, Mr. SAM RAYURN, whom we all love, at the installation of JOE MARTIN, said that "If we have to have a Republican Speaker, I would rather it would be JOE MARTIN than anyone else," and I am satisfied he was speaking the convictions of his colleagues of the minority party.

However, JOE MARTIN was not elected a year ago this month, but only the votes were counted on that date. He was elected during his years of service for his honesty, industry, and fairness. To us he is more than just the Speaker. He is our dearly beloved and much-respected JOE MARTIN. He is second in command of the Government of the United States today. In fact, he is the Vice President and for aught we know, come next November, he may be President in his own right.

Ladies and gentlemen of the conference, it is my great privilege and signal honor to give you the Speaker of the House of Representatives of the United States of America.

ADDRESS BY SPEAKER JOSEPH W. MARTIN, JR.

Road builders are among those who substantially contribute to the progress of our Nation. Our economic and cultural progress has been made possible largely through the improvement of the highway and "its other half" the motor vehicle, of which there are now 37,000,000 engaged in the transportation of goods and people. We can realize the tremendous contribution good roads have made to this Nation when we consider the expansion of road use by our population from 55,000,000 vehicle miles in 1921 to 361,000,000,000 vehicle miles in 1947.

Our highways are not mere ribbons of paved surfaces radiating out across the Nation; they are a part of the production lines of our factories. They stretch out to our farms and to the sources of raw materials. Every ton of agricultural products starts to the market over the highways. More than 25,000 communities in the United States depend entirely on highways for land transportation of goods. In my home community of North Attleboro, Mass., we are touched by a railroad. But our principal transportation is over the highways. We enjoy all the comforts of modern civilization.

Roads and ease of communication enable the farmer to reach his markets. They provide an indispensable service to industry. They develop community welfare. They provide access to places of religious worship. They bring modern district schools closer to rural homes. More than 80,000 school busses extend educational opportunities to 4,700,000 American youth in rural areas. And, not the least important, good highways are essential to our national defense system.

The benefits of government are brought closer to the home by good roads. Police and fire protection are made more quickly available. Rural mail service is extended daily to more than 29,000,000 persons. In the cities, motor trucks transport the bulk of the mail between post offices, collect it at corner boxes and deliver it to homes and offices.

I am informed that motor transport employs over 8,000,000 people, or about 1 in every 7 jobholders in the Nation. Commercial truck driving is today one of our largest single occupational classes outside of agriculture. Truck drivers outnumber all other transportation workers three to one. Farmers continue as the largest class of truck users. They now own 2,000,000, or double the number they had in 1940.

The construction of arterial routes for the free movement of through traffic around cities help that traffic, and keep city streets free for business.

One of the most important functions of our whole highway system is to relieve the centers of congestion in the cities of America. We realize the beneficial effects of urban life. People who can have a chance to own their own modest homes in uncrowded sections have a chance to be out of doors. They and their children can live closer to nature. They not only have pure air but they can have a few chickens, and the children can have pets.

In other words, our highways make possible a more wholesome life for those who want to get away from the congestion and the distractions of crowded places. No one questions what a tremendous advantage this is, made possible, as it is through better highways.

Adjusted to current values, I am informed the Nation's highways represent more than a $30,000,000,000 asset. At the end of 1945, there were 1,430,000 miles of surfaced rural highways and 220,000 miles of surfaced urban streets, providing a practically continuous network for the movement of traffic. These highways are of the greatest importance in our national life. They are essential to almost every form of business and social life. We cannot be content to let them remain in their present inadequate condition while traffic and congestion continue to grow.

This fact was recognized by Congress when it encated the Federal-Aid Highway Act of 1944, which authorized an appropriation of $500,000,000 in each of the first three postwar years to assist the States in developing a long-term program of highway improvement. It is interesting to note the Federal Government collected, in the calendar year 1946, motor-vehicle excise taxes amounting to $882,000,000.

In addition to an annual appropriation of $225,000,000 over a 3-year period for improvements on the regular Federal-aid system, the 1944 act also made available an annual appropriation of $150,000,000 for secondary roads and $125,000,000 in each of three fiscal years for work on sections of the Federal-aid system in urban areas. The program differs from many types of Federal-aid public works programs in that it is a cooperative enterprise. It requires implementing legislation on the part of the Federal Government and many of the States, and also calls for coordinated activity on the part of the Public Roads Administration and State highway departments in planning and developing the program.

The Federal-aid program administered by the Public Roads Administration is a necessary and very useful instrument of government to promote proper integration of our highway developments with the public needs. There are 48 State highway departments, over 3,000 counties, 3,000 cities of population over 5,000, and special highway authorities of one sort or another. There must be some mechanism for the integration of their activities in the public interest.

Another phase of the road-improvement program in which the Congress has provided assistance is in the extension of rural road improvements to reach more farm gates. The Federal-Aid Highway Act of 1944 includes provision for a more comprehensive rural road program through cooperation between the State Highway Department, the county, or other appropriate local road officials, and the Public Roads Administration, in the selection and improvement of a system of principal secondary or feeder roads. I understand this program is proceeding successfully. Specific improvement projects have now been included in the program to absorb 73 percent of the funds made available for the fiscal years 1946, 1947, and 1948.

This Federal-aid secondary program was authorized to meet growing demands of farmers who needed improved roads to and from market centers. It was conceived as the beginning of a long-range continuing program based upon the sound principles and experience of more than a quarter of a century of substantial Federal assistance in road-improvement work.

Early in the history of Federal-State cooperation in the development of our primary road system it became clear a system of roads must be established as a long-range goal if highway funds over a period were to be spent in the most effective way to serve transportation requirements and to assist in raising the economic level of our country. Routes were included in this system which were of topmost importance in the transportation pattern. Without the prior establishment of this system, annual programs would have been developed with a scattering of projects. We would have had haphazard, scattered improvements. There would have been no careful coordination and integration of the various projects all aimed toward a goal of completing a system of supreme importance to each State and to the Nation. In the extension of Federal-aid to secondary and feeder routes as provided for in the 1944 legislation, the benefits of this experience were all recognized by the Congress. The Federal-Aid Highway Act of 1944 provided for a similar approach through the requirement that Federal-aid secondary systems be established. The experience of the last couple of years shows determination on the part of the counties, the States, and the Public Roads Administration to make this program a success. Systems which have been established are based upon sound transportation concepts. These systems in the United States as a whole include approximately 370,000 miles of roads of greatest importance in rural areas. In combination with the 230,000-mile Federal-aid primary system, they include mileage equal to one-fifth of the total rural road mileage in the United States. My information is that 20

percent of the total rural mileage passes or comes within two-tenths of a mile of approximately 40 percent of all rural dwellings. People living on the other four-fifths of rural roads more remote from market areas travel the routes of the Federal-aid primary and Federal-aid secondary system in traveling from farm to market and return.

The current program providing for $900,000,000 of Federal, State, or county matching funds during a 3-year period is providing for improvement of some 50,000 miles of roads. This accomplishment is visible evidence of cooperative county, State, and Federal efforts to provide a basis for a permanent solution to the secondary road problem. These efforts warrant continuation of the program.

A wonderful future lies ahead for both motor cars and our national highways system. Unquestionably the product of the automotive industry has been and will continue to be a marvel of design and engineering. Admittedly, highway construction in the past has not kept up with the tremendous strides in the development of the motor car. But in the future as the highway builders overtake and keep up with strides of the automobile industry—after we have unravelled the national traffic tangle, provided for a free flow of traffic on modern highways, solved our parking problems, and other major details, the Nation will realize the full potential of that great team—the automobile and the highway of tomorrow.

Fertilizer Shortages

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 27, 1948.

Hon. OTTO PASSMAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Being weather-bound I have been reading the papers a little more closely than usual, and ran across the attached article in the Shreveport Journal, and I feel it my duty to send it to you, and tell you that a great many of your people are beginning to feel this way about things, perhaps not as forceful in some ways as this man, but they are sick of everything being sent out of this country at our expense. Now, take my situation: I have a nice oat acreage, raised at great expense (paid $3.50 a bushel for seed, plus cost of cultivation, to say nothing of the use of the land), and I have the stock to feed most of a normal crop to, both milk cows and beef. I believe you to be a common-sense businessman, as well as a Congressman, or I voted wrong, and I think you will say that both are necessary to our present economy. Now I am told by my fertilizer manufacturer that has supplied me for years that he has been trying to get some ammonium nitrate for months for these oats, and he cannot get a sack, because the Department of Commerce is sending the whole output out of this country, have been doing it for months, and have ordered it continued through the next few months; and, if I don't get this ammonium nitrate, I probably will not get any oat crop, not even the seed back. It is necessary to the growing of the crop—absolutely necessary. Then what will be the situation when cotton-planting time comes around? How can the fertilizer folks make their fertilizer without nitrogen, I ask you?

I think you and the other north Louisiana Representatives and our Senators should look into this situation, and bear in mind what this man says over here in Shreveport; it reflects what they are also saying at home. I can tell you if you ignore it now at election time many you are counting on will secede again. That is when they talk.

A FRIEND, VOTER, GROWER, AND DISSATISFIED CONSTITUENT.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James Reston, from the New York Times:

WASHINGTON SEES BIG NEED FOR A POLITICAL ERP—BELIEF GROWS THAT IT IS NECESSARY IF WE ARE TO SUCCEED IN EUROPE

(By James Reston)

WASHINGTON, January 31.—There are two sets of Marshall-plan worriers in the State Department—the short-range worriers, who are concerned mainly about getting the plan through Congress, and the long-range worriers, who are concerned about what will happen when the bill does get through.

Both are in a state of melancholy decline this week end. The short-range worriers are alarmed by the Senate Foreign Relations Committee's clear indication that it intends to lop at least a billion dollars off the administration's request for $6,800,000,000 for the first 15 months of the program.

The long-range worriers, a more philosophic lot, are nevertheless uneasy about the growing suspicion that an economic-recovery program for Europe without an effective political-recovery program for Europe may not succeed.

Although the great hullabaloo in the Capital is over the size of the appropriation and the administration of the aid, the long-range political problem is in many ways more fundamental, and may be defined as follows:

Europe cannot really become a modern, self-sufficient economic unit, unless it really does get together in something very much like the union of states proposed by Foreign Secretary Ernest Bevin.

Coordination of western Europe's economy is absolutely fundamental to the political stability of Europe. The coordination of Europe's industry and agriculture is so tied up with Europe's security, however, that the European states will never combine together or coordinate their security industries without a political and military commitment from the United States to defend them if they are attacked.

ECONOMIC STABILITY FIRST

The two basic ideas behind the Marshall plan—as defined by Secretary of State Marshall—were that economic stability in Europe must precede political stability, and that economic recovery depended, not only on aid from the United States, but on a change of the old atomized European economy into a coordinated, efficient, self-sustaining production and trading economy.

From these two ideas, the outlines of an experiment in intercontinental partnership emerged: the United States was to supply the available raw materials of recovery; these raw materials were to strengthen the economies of the Marshall-plan countries, and these countries, in turn, were to coordinate their national recovery programs and their economies so that the 16 countries and western Germany would gradually develop into a large, productive, unified international trading area.

The order of business, as the administration saw it, therefore, was, first, economic aid from the United States and economic reorganization and coordination in western Europe; and second, through these economic measures, political stability leading to security.

What the long-range planners are beginning to see more clearly now is that it is not so easy to separate the political and strategic problems of Europe from the economic problems.

In terms of economic reconstruction in Europe, bold and emphatic measures should be taken to revive the industry of Germany, unify the electric-power system and the rail and road systems of the Marshall-plan countries, standardize certain industrial machinery, eliminate uneconomic competitive industries and build up interdependent industrial and agricultural systems in which each country concentrated on the products it could produce the best.

In terms of politics and strategy, however, intelligent economic recovery programs of this sort are not always possible. The revival of the industrial Ruhr and Rhineland makes sense economically, but the French, who have been invaded by the Germans three times in 75 years, oppose for security reasons its being effected, without assurance against a revived arsenal for Germany.

ROADS AND POWER

The European road system should be improved, for economic and commercial reasons, and the Europeans admit it. Right now, however, good roads in western Europe often stop 20 or 30 miles from the frontier for a very simple reason—a road that can take a truck from one capital to another can also carry a tank or an invading army, so in the present state of political tension, governments still hesitate about promoting international highways.

The same goes for unification of power systems. The amount of power in Europe could be greatly increased by building hydroelectric systems capable of serving parts of various countries; but what are they to do, the Europeans ask, if there is war? Then, what is good economically may be disastrous strategically.

In terms of finance and commerce similar problems arise.

Europe very much needs large capital expenditure to be self-sufficient in a modern world, and Europe still has, hidden away by private individuals, considerable capital; so long as there is political instability and uncertainty about peace, the capital will not come out of hiding to assist in economic reconstruction.

In that small and select company of Washington officials who have time to think, the theme that is being developed, therefore, is this:

The Marshall plan needs a political and strategic counterpart. We have our troops in Germany and Trieste; we have our warships in the Mediterranean, we have reopened a large air base in Libya, we are trying to meet our responsibilities in the United Nations, and we are planning the economic reconstruction of western Europe.

Our policy in Europe, however, is almost as uncoordinated and uncertain as the economy of Europe itself. We are moving boldly on a number of fronts, but by uncoordinated fits and starts.

While we are taking great chances, we have not defined our political and strategic moves

clearly; and neither our own people nor the Europeans have the requisite confidence in the objectives or continuity of our political policy.

FEAR AND INSECURITY

Above all, this thesis continues, we have not dealt with the problem of fear and insecurity in Europe that threatens the attainment of our Marshall-plan objectives. Now, as in the days before the First and Second World Wars, neither our friends nor our potential enemies know whether we intend to use our power against any aggressor in the future or whether we still hope to stabilize and withdraw.

The specific suggestion that is beginning to be heard, therefore, is that our policy should have been reversed, that the 40-year treaty of alliance offered to Britain, Russia, and France against the Germans should have been a simple treaty of alliance with the British, open to other states as they chose, to stand together against any aggressor in Europe.

Once that had been pledged, Europe would have known where we stood, national economic programs could really have been planned in a way to produce an effective self-sufficient continental system, and the Combined Chiefs of Staff could have planned in a rational way.

As it is now, responsible observers here feel, we are getting the worst of every compromise we make. Money is voted for a recovery program, but the measures necessary to recovery on the other side are not taken. An air base is opened in Libya. Marines are sent to the Mediterranean, but again they are enough to disturb Moscow without reassuring Rome, Paris, or London.

All this will provide some idea why the long-range worriers at the State Department think they have more to worry about over the recovery of Europe than the short-range worriers. Both are concerned about a cut in the Marshall-plan appropriation, but for different reasons.

To those who are just trying to get the bill through, the figure of $6,800,000,000 has taken on a magic significance. To the long-range planners, who have never thought the figure was high enough to deal with the problem, the figure is important mainly as a test of whether the executive and legislative branches can really get together on a steady foreign policy.

The conversation of well-informed people in Washington is on the side of the long-range worriers. There is little that can be done now about the precise figure that comes out of the Foreign Relations Committee; Senator VANDENBERG has evidently made up his mind that a cut can be made without hurting the objectives of the program. And such is the dependence of the administration on his support that once he goes against them there is very little they can do.

STEADY POLICY WANTED

In the embassies of Washington however, the problem of getting the Europeans to combine their economies, and if possible, their strategy, is seen as probably the decisive long-range issue. As one very high official of the State Department has admitted, even $5,000,000,000 with effective political and economic cooperation in western Europe would be far better than $6,800,000,000 without that cooperation.

What the long-range worriers are aiming at is something more than the matter of a billion dollars. They want a policy that is steady and comprehensive.

They want a Europe that is really an entity in something more than name.

They want a Defense Department and State Department team that really works together effectively on strategy, defense serving the policies of state. They want dependable allies in key positions. They want a political recovery program and an economic recovery program, together.

They are not afraid that we are going to pull out of Europe. In fact they think we are going to stay there and defend the purposes and principles of the United Nations, regardless of what happens.

The point they are making is that it would be better for everybody if Moscow and London, Paris and Rome, Prague and Warsaw, all thought so too.

A Program of Action

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD I include the resolutions adopted by the forty-fifth annual meeting of the American Automobile Association relating to subjects of national importance. These statements of policy represent the views of the large portion of the motoring public, for they were voted on by over 500 delegates from all parts of the United States, representing 2,250,000 association members.

PROGRAM OF ACTION FOR 1948

HIGHWAYS AND HIGHWAY TAXATION

Federal aid should be confined to general-purpose roads of national significance and based on transportation needs for those roads. All such roads should constitute an integrated Federal-aid system, clearly defined and very strictly limited as to mileage. The newly designated interstate highway network should be the backbone of such a Federal-aid highway system and should be expeditiously completed.

In order to assure priority of attention to this network, Congress should direct the Public Roads Administration to make a study of methods of financing it and to submit a proposed plan including recommendations as to Federal, State, and local responsibilities. Because of the national importance of the interstate highway network, Congress should earmark a very substantial proportion of Federal-aid highway funds for use exclusively on the interstate network, requiring that an appropriate proportion of these earmarked funds be expended in urban areas.

AMOUNT OF FEDERAL AID

The amount of Federal aid for highways should be determined by the Congress on the basis of the vital interests of the Federal Government in the Federal-aid highway system.

FEDERAL EXCISE TAXES

Federal aid for highways is a charge against general taxes. The Federal-excise taxes on motor vehicles, parts and accessories, tires and tubes, motor fuel and lubricating oils should be repealed.

ADMINISTRATION OF FEDERAL AID

Federal aid should be administered by one agency—the Public Roads Administration—at the national level, and one agency—the State highway department—at the State level.

FEDERAL SHARE OF COST

Federal-aid highway funds should be made available for projects within the States on a basis of not to exceed 50 percent of the construction cost, said cost to include the cost of acquisition of rights-of-way, but not to include any maintenance costs.

An exception to this general rule which the American Automobile Association urges for the consideration of Congress relates to the interstate-highway network on which, because of its national importance, the Federal Government would be justified in assuming a larger percentage of such construction costs.

NATIONAL PARK AND FOREST ROADS

In the apportionment of Federal aid among the States, special financial provisions should be made, as heretofore, for the public-land States and for the construction and maintenance of highways in national parks and within national forests, including roads whose major function is that of providing access to national parks or forests.

NATIONAL PARKS

The American Automobile Association urges that the Congress hold a hearing on the entire subject of revenues and facilities of the National Park Service. Congress should determine the extent of services to be rendered, the fees to be charged, developments to be made in the parks, policies governing concessions, and related subjects. Among the conditions necessitating such a hearing by Congress are:

1. Accommodations in the national parks are wholly inadequate, in a bad state of disrepair, and urgently in need of replacement and modernization.

2. Roads in the national parks have deteriorated badly and are in need of immediate and extensive repair.

3. There is need for revision of present policies governing entrance fees to the parks. The present system of singling out motorists for paying entrance fees is discriminatory and unjustifiable and has never been specifically authorized by Congress. Congress should establish major entrance fee policies, including limitation of amounts to be charged. Entrance fees should apply to individuals rather than to vehicles, so all users of the parks would contribute a fair share regardless of the method of transportation used in entering the parks. Provision for a season ticket should be made for the benefit of people living in the neighborhood of a park area.

RUBBER

The temporary legislation under which the use of natural and synthetic rubbers is controlled expires on March 31, 1948. The American Automobile Association strongly recommends that Congress proceed speedily with the development of a long-range rubber policy for the United States. The association reiterates its belief that it is of the most vital importance to national security that a synthetic rubber industry be maintained in continuous operation. It recommends that a minimum amount of synthetic rubber be produced and used from year to year; and that in addition to the plants in active operation, sufficient stand-by facilities be retained to permit large-scale expansion of synthetic rubber in the event of an emergency. It further recommends that government and industry sponsor programs for continuing improvements of man-made rubber.

In the allocation of synthetic rubber for end uses under a long-range policy, the American Automobile Association herewith declares that the motorists must be placed on an equal footing with other users as to the price and quality of tires and tubes and other rubber products incident to the use of the automobile.

GASOLINE

The demand for petroleum products of all kinds is at an all-time high. The balance between supply and demand is now so close that it could be easily upset. Serious product shortages could develop, including a

shortage of gasoline. The American Automobile Association views this situation with real concern. It strongly urges that steel and other materials be made available in sufficient quantities to speed up the programs now under way for oil-well drilling, new refineries, and petroleum pipe lines. It is urged that the United States Maritime Commission speed up withdrawal of additional tank ships from Government laid-up fleets to take care of domestic needs; and that tank-car building programs be accelerated.

It should be the policy of Government and industry to meet oil commitments for aid to Europe from oil areas outside the United States, and it should be the policy to balance product or crude exports with imports. Our domestic needs must at all times have first call on America's petroleum resources.

TRAVEL

International

A. The United States is urged to take leadership in bringing before the United Nations the problems of international travel regarding both individuals and automobiles. To that end, steps should be taken for the adoption of a standard, world-wide system for the issuance and recognition of passports, registration and driving licenses, and customs documents, assuring freedom of travel for all bona fide tourists.

B. The United States Congress is urged to extend the life of a passport from 4 to 6 years, through establishment of a second 2-year renewal period.

C. Since 1897, United States law has permitted travelers a duty-free exemption of only $100 on personal property purchased abroad. Despite the rise in prices and standards during the past 50 years, this country still retains the same low ceiling. This discourages American travelers from spending and from making their full contribution to world trade. The AAA urges Congress to raise the exemption limit to $500 on personal property brought in by returning tourists.

D. The American Automobile Association urges the immediate elimination of the 15-percent Federal tax on foreign and domestic transportation. This step would benefit millions of American travelers, as well as the important transportation industry.

E. No one agency of the United States Government has complete responsibility in the field of international travel. The Commerce Department is responsible for promoting travel and maintaining statistics; on leaving our shores our nationals deal with the State Department and, if they are naturalized citizens, with the Immigration Service; on returning they must contact the United States Public Health Service, customs officials of the Treasury Department, and the Immigration Service. A foreign visitor would have contact with all these agencies. Integration and correlation of the work of these agencies is urgent and imperative if we are to make full use of the potential of foreign travel. The AAA proposes, therefore, the establishment by congressional authority of a Federal interdepartmental committee on foreign travel.

F. An increasing proportion of people going abroad are anxious to enjoy the comfort and mobility afforded by using their own automobiles on overseas vacations. The international travel department of the AAA will process some 2,500 American cars for European travel during 1947. The association urges United States ratification of the international driving convention of 1926, which provides facilities for the movement of automobiles across national boundaries without the necessity of obtaining a driver's license and registration document in each and every country visited.

Inter-American

A. It is strongly recommended that all nations of the Western Hemisphere, including the United States, adopt a standard inter-American travel card permitting citizens of other nations of the hemisphere to enter as a tourist or business visitor for a 3-month period without being forced to obtain passports, visas, and other documents that now hamper travel in the New World.

B. All nations of the Americas are urged to adopt and ratify, at the earliest possible moment, the convention on the regulation of inter-American automotive traffic, to the end that private passenger cars may circulate with maximum freedom throughout the nations of the Western Hemisphere.

C. The American Automobile Association reiterates its strong support for the earliest possible completion of the all-American highway system linking the nations of the Western Hemisphere. To this end it urges that as promptly as possible restrictions on travel over the Alaskan Highway be removed, and that the Governments of the United States and Canada work out arrangements for the continued maintenance of the highway. It also urges that the United States cooperate with other American nations in bringing about construction that will link together completed segments of the Pan-American Highway.

The Tax Bill

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. LUDLOW. Mr. Speaker, about all that can be said about the tax bill that the House passed today is that it is a political bill, drafted with an eye on the 1948 election. When we consider the colossal cost of our Government and the finances we are pouring into the European recovery program the fact stares us in the face that this is no time to reduce revenues. Many of our friends on the other side who voted in November to appropriate over half a billion dollars for foreign relief cast their votes today to reduce revenues below the danger line. Somehow I am reminded of the philosophy of the old-time stateman who made it a practice to vote for every appropriation and against every tax bill. From the standpoint of Government finances the bill the House passed today is thoroughly unsound. The bill offered by the minority as a substitute was not an ideal measure but it had the merit of offering relief to small wage earners and white collar workers without diminishing revenues.

A good way to justify a reduction of taxes would be to eliminate thousands of excess employees from the Government service. Years ago when I was a freshman Congressman, full of zeal, I sent out a letter to constituents inviting them to tell me their troubles, in order that I might try to help them. One man replied in a melancholy vein that he was bothered with an uncontrollable right foot and he posed the question, "What can you do with an uncontrollable right foot?"

At long last I think I have found the answer to his question. The thing to do is to use it in removing from office bureaucrats whose main purpose is to strengthen their hold on the pay roll and to glorify the particular branch of the service with which they happen to be connected.

Tensas Basin Project

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Civil Functions Subcommittee of the House Committee on Appropriations:

Mr. Chairman and gentlemen of the committee, first, I would like to thank the committee for hearing me at this time. I have the honor of representing in Congress the Fifth Louisiana District. My constituents requested that I express to the chairman and members of the committee their sincere appreciation for the consideration given to the several projects in my district last year.

Mr. Chairman, I am vitally interested in the Tensas Basin project. The several projects in the Tensas Basin area by name are the Boeuf and Tensas River projects, the Bayou Macon and Bayou Lafourche projects. Certainly, I am interested in all of these projects, but more especially the Tensas-Cocodrie sector of the Red River backwater area.

At this time I should like to direct your attention to what is known as the Tensas-Cocodrie sector of the Red River backwater area. This project is a worthy one. In fact it is an essential project if the people who live in that area are going to continue to live there and exist and produce the necessities of life. I pointed out last year that these people are very tolerant and broad-minded. But I repeat, if they are to continue to exist, whether they be farmers or small town residents, the subject project must have preferred consideration. The preferred consideration should be given because the area that will be protected from backwater after the completion of the Tensas-Cocodrie backwater project, has been inundated almost every year for the past 8 or 9 years. Such is not an act of nature, but has been brought about by an unavoidable result of what has been done in the general over-all flood-control improvements elsewhere. The Tensas-Cocodrie backwater project, when completed, will conserve approximately 287,000 acres of as rich land as can be found in the world. I would like to point out that on account of the rich farm land in this area the Government would soon be repaid directly and indirectly from the increase in farm production and in taxes.

I should like to request that the committee consider revising upward the amount recommended in the budget so that the amount this year would equal the amount appropriated by the Congress last year.

Mr. Chairman, I would like to point out that 12 of the 14 parishes that I have the honor of representing have voted bond issues making available large sums of money to be expended on the Boeuf and Tensas River projects, the Bayou Macon and Bayou Lafourche projects, and if in the wisdom of the committee the amount recommended in the budget could be revised upward, then it would justify the several parishes in starting their drainage projects which will tie in with the Federal and State plans. All of the projects in the Tensas Basin can be com-

pleted at a very substantial saving if the Federal Government makes an adequate appropriation to justify the parishes in getting their part of the program underway. I repeat, that on account of the many hundreds of thousands of acres of rich farm land in the Tensas Basin, after completion of the several projects in question, the Government will be repaid in the way of increased production and direct and indirect taxes.

I wish to thank you, Mr. Chairman and gentlemen of the committee, for hearing me and I sincerely hope that the committee will see fit to provide adequate funds for the continuation of the several projects in my district now underway.

Bipartisan European Aid

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Bristol (Pa.) Courier of January 31, 1948:

BIPARTISAN EUROPEAN AID

One of the major disputes about the Marshall plan continues to be over the question of who shall have charge of it.

This is an issue which the public finds hard to understand. From the citizens' point of view, it would appear that, if the program is a proper one, and if its general scope were defined by Congress, then it doesn't make too much difference which manager is assigned to supervise it.

The issue goes much deeper than that.

As a matter of fact, the issue may be said to have been raised by General Marshall himself. He has virtually refused to have anything to do with the program that bears his name unless he is put personally in charge of it. He is willing to accept any sort of front, in the way of an advisory board—so long as he doesn't have to take their advice, and can do as he pleases; but he has refused to consider any arrangement which places part of the final authority elsewhere.

This is a stubborn attitude, and his mere mulish refusal to argue the matter has caused a good deal of trouble in Congress. Moreover, Congress has not been satisfied with this explanation for his attitude, which is that since a part of the program bears on our diplomatic problems, he as head of the diplomats should administer all of it.

Many have challenged this position; Senator TAFT is among them. He has urged that some way be found to give Congress a voice in the administration—at least, that some of the power be lodged beyond the control of the State Department. There is a scheme called the Herter plan, after the Congressman (Massachusetts) who proposed it, which would set up a board of Government officials and citizens to run the plan through a director. Ex-President Hoover has vigorously condemned any effort to operate the plan through the State Department.

On the other hand, Senator VANDENBERG, who until recently was the undisputed leader of the Republican Senators in foreign policy matters and is the one who dragged them a year ago into the so-called bipartisan approach on these matters, has appeared to feel that it ought to be possible to work out a bipartisan solution to this problem.

Recently supporters of Secretary Marshall, including such persons as Governor Driscoll, of New Jersey, and William L. Clayton, advisor to the Secretary of State, have taken up this tag phrase, and are urging that Marshall be given (in effect) a bipartisan vote to run the program any way he wants to.

A deadlock has thus arisen in which it seems perfectly obvious that someone is going to have to back down.

Either Secretary Marshall is going to be told, as Hoover recommends, that he is to have no control over the program; or the various critics of Marshall's one-man control are going to have to contend with some sham of bipartnership in which a handful of other persons will have high-sounding titles, but Secretary Marshall will have the power.

If face saving is to be the question, a solution should be easy. But the real test is going to be a very simple question—when all the laws are passed and signed, is or is not Marshall going to have final authority over the program?

There are two reasons why any program which includes Marshall as one of the apparent partners in a cooperative nonpartisan system of operating the Marshall plan will never be truly bipartisan.

One has to do with the personality of Secretary Marshall. He is a very stubborn man. He is determined to have his own way in this matter. He makes no bones about it—no one could have made more clear to Congress that he proposes to run the Marshall plan the way he wants it run, regardless of whomever else Congress puts in the picture.

The other is that Secretary Marshall is neither bipartisan, nonpartisan, nor impartial.

On the contrary, he is very much in the coming race for President—not, of course, for himself but as a sort of unofficial campaign manager for President Truman.

As a matter of fact, General Marshall has been running interference for New Deal Presidents for several years.

He personally, by helping suppress the Army report on Pearl Harbor until long after the 1944 election, and by compelling Roosevelt's opponent, Governor Dewey, to keep quiet about that report in his campaign speeches, probably did more than any other one man in the Nation to reelect President Roosevelt for his fourth term.

Secretary Marshall moved in as political adviser and strong man for President Truman about a year ago, and has carefully built him up to the point where many believe the President has a better than even chance of being reelected.

It would be unfair to say that the Marshall plan was invented only because of its political value to President Truman while running for reelection. On the other hand, it would be childish to assume that the inventors of the plan were blind to the tremendous assistance which the program, with its vast expenditures and vaster economic powers, would be for the Truman candidacy.

Why should we kid ourselves?

In Secretary Marshall's hands, the Marshall plan will be neither bipartisan nor nonpolitical.

Like a coin, the plan has two faces. One is aid to Europe. The other is aid to President Truman in a desperate, all-out struggle to stay in the White House.

Radio Address to the People of My District

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on January 31, 1948:

Dear friends of the Triple Cities and my congressional district, to yo: scores of real patriotic Americans who are writing to assure me of your continued faith and confidence in your Congressman, I give thanks.

I am grateful to you for the support you offer. These are difficult times, and I need your friendship and counsel to help solve the tough problems this Congress is face to face with.

I need your help also in making swift answers to falsehoods spread by irresponsible out-of-towners, who push their way into your circles and by aggressive action, proceed to lambast men you elect to office.

The next time you hear one of these wiseacres spinning a yarn, walk right up to him, and find out where he hails from. Chances are he's from some place south of here.

He will probably be standing in the center of a group of honest working people. He may perch on a soap box and utter vicious un-American insinuations from his flannelred mouth.

Of course, he will concentrate his vitriol on the Congress. He will be specific in naming and blaming me for all the ills the country now labors under.

Eye this man closely. Your conclusion will be that he is subversive, that he is not American. You feel a sense of nausea coming over you as you hear him belittle the Stars and Stripes, the Constitution, and the United States Congress.

After a while, this gets annoying. The sick feeling leaves you and anger takes its place. You ask what right this individual has to smear the institutions you hold dear, and take vulgar potshots at the one you elected to represent you?

Outside of his few evil followers, this agitator carries very little weight. But he bears watching because his hysterical rantings sometimes fall on unsuspecting ears.

Segregation is my remedy for such a fellow. He is obviously not sold on America. He doesn't like anything American. He is vociferously and violently against the Congressman you want to vote for.

Fortunately, the FBI usually catches up with this type. They know he's a bad actor and you know you don't like him.

However, there are too many of these political perverts still at large. There are too many like him well on the wrong road. The problem is to keep these monkeys from multiplying.

But I repeat, segregation is the real answer. Why allow any flannel mouth to roam the streets at large under the guise of free speech to sing hymns of hate and preach the gospel of intolerance to your friends and mine? Why irritate them with such viciousness, especially when the difficulties of making a living weigh so heavily upon all of us?

I say, let's round up these Red agents and throw them out. Let's treat them all alike, whether they're Commies or Nazis or Fascists.

I say they have no right smelling the free air of this grand country if they don't want to keep it free. They should be shown up for what they are and treated accordingly.

These agents advocate the violent overthrow of our Government. They make no bones about that. They are dedicated to such an objective.

Are we going to let them get away with it? I'm not. I'm sure the American Legion, the VFW, the DAV, and all the other veterans' groups won't either.

Next week, the House is going to vote to reduce your income taxes. And I believe you'll get a reduction, too, if the Senate will go along. Even a veto from the President will be overriden, so they say.

Well, you can count on my going right down the line for a tax cut. I'm sick of hearing a few say we've got to keep these high taxes. I'm tired of seeing the American people soaked to pay other people's taxes.

Aren't they doing just that? Haven't we poured billions into the British Empire and other points west?

What have American tax dollars done for them? You and I know that England, Australia, and several other nations of the Old World have just cut income taxes.

Are you willing to keep our tax rate high so the rest can get a reduction? I know you're good-hearted and generous, but I don't think you're that soft.

So you can realize why I'm so anxious to see the tax cut go through. I'm not arguing about the amount of exemptions. The lower-income groups never get enough to suit me. I'd raise those exemptions a little if I had my way.

But I'm generally satisfied. If we can't get a whole loaf, the best way out is to accept a half or three-quarters.

Give the American people the relief they need and you will release billions of dollars in this country to purchase the necessities we all must have. The United States will be nearer prosperity than she has been since the war ended.

Thank you.

Tax Relief

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Atlanta Constitution:

TAX RELIEF INDICATED

The amazing lethargy of lawmakers toward the fundamental problems of inflation is almost perfectly illustrated by the treatment of oleomargarine.

Margarine is an effective substitute for butter. It is fully as good and in some respects better than butter itself. Long since has it ceased its role as the poor man's butter. Today it is the only butter known by the millions who cannot afford to pay a dollar a pound and up for the dairy product.

And while the price of butter spirals higher and higher, the people of Georgia are taking to margarine as never before. This is aptly illustrated in figures released by Marion Allen, collector of internal revenue, which show that more than half again as much taxes have been collected on margarine since last July 1 than were collected during the entire 1947 fiscal year.

Up through January 22 Mr. Allen's figures showed Georgians paid taxes of $197,658.46 on margarine. Total taxes collected during the 1947 fiscal year were $125,801.91. These figures indicate that margarine will more than double in popularity this year.

But the figures reveal more. They show the extent to which Georgia housewives, attempting to beat inflation, are being penalized by a vicious tax imposed upon oleomargarine at the instance of the dairy lobby in order to attempt to eliminate competition.

Margarine is the most heavily taxed of all food commodities. It is the only food product under control of the Bureau of Internal Revenue. On every pound of margarine the housewife buys she must pay a Federal tax of 10 cents. So prohibitive is the Federal license for selling colored margarine that only 364 retail dealers in Georgia are able to afford it while nearly 7,000 sell the uncolored product, and there are only 14 wholesalers in the State who handle colored margarine.

The dairy lobby has gone to such lengths to fight margarine's popularity, and with such success, that sale of the butter substitute is circumscribed by all sorts of phony regulations, the breach of which makes the violator liable to fine and imprisonment.

For instance, if a private family has a paying guest, it is liable for the manufacturer's tax if margarine is colored in the home. Hospitals and charitable institutions which use margarine also must pay the manufacturers' tax.

Congressmen spend much time composing grandiose schemes to defeat inflation. They much better could serve the public by spending a little time repealing the taxes on margarine, reducing its selling price to the consumer and, because of the added competition thus created, eventually resulting in lower butter prices, too.

Mikolajczyk Describes How Roosevelt Appeased Stalin at Tehran

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. KERSTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two additional installments of articles published in the Milwaukee Sentinel which describe that while words of high-sounding statesmanship were proclaimed at the Tehran Conference, nevertheless the men of Tehran carved up Poland, not represented at the conference, without any regard for the rights of the Polish people. Until statesmen begin to act like they talk there cannot be permanent peace.

Following are Mikolajczyk's two additional installments:

MIKOLAJCZYK REVEALS CHURCHILL, F. D. R. SCUTTLED POLAND AT TEHRAN PARLEY

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment XII)

The death of Prime Minister Sikorski was mourned throughout the Allied world, with the exception of Russia. While Roosevelt and Churchill joined in world-wide expressions of regret at the passing of a great democratic leader, their colleague, Stalin, remained ominously silent.

In that atmosphere of broken Soviet-Polish relation I was named Prime Minister of our Government in Exile on July 14, 1943, after we had sought and obtained the consent of our Polish underground Parliament by means of our radio contacts from London.

My immediate task was to reassure Polish patriots everywhere that the will of General Sikorski would be carried out. As fast as the German invaders of Poland tore down our underground's posters pertaining to Sikorski and the continuing fight, we pasted up new ones. Polish fliers, who formed so great a part of the RAF, were included in our assurances.

But conditions in our undeground were of great concern, too. The Reds were dropping parachutists into Poland, not to render us the military aid we so sorely needed but to prepare the way for the coming political domination of our country by the Kremlin.

That propaganda usually took the form of violent blasts against German rule, or an occasional grenade thrown into a house or meeting at which both Germans and Poles were present.

It was never coordinated with our underground's well-reasoned attacks, and it produced only additional woe for the Poles. When one Communist grenade would be thrown—perhaps killing a couple of Germans who were of no great concern to the Poles—the Germans would line up 100 Poles as hostages and shoot them.

On the other hand, our organized underground forces were systematically blowing key bridges, wrecking German troop trains, and making other well-planned attacks.

Before his death, Sikorski had sent Stalin a plan for collaborating these Communists assaults with the larger operations of a Polish underground, which was composed of members of all Polish political parties except the Communists. Stalin ignored the plea.

Nevertheless, we attempted to aid the Russian parachutists. When we hid them the Germans killed all those instrumental in the protection of the chutists and many others who were completely innocent. When we were successful in spiriting them out of Poland, the Germans burned down entire villages in reprisal.

I pledged my word to Poles everywhere that as Prime Minister I would do my utmost to reestablish friendly relations with the U. S. S. R. As a first step, I appointed Tadeusz Romer Foreign Minister. He had served our government in Moscow and was known for his direct approach when speaking of Stalin, Molotov, Vishinsky, and other Russians.

BLAST AT DICTATORSHIPS

On July 27, 1943, I made my first public statement as Prime Minister. I recalled the spirited declaration of Sikorski for a free Poland and added, "There is not and will not be in the future Poland any room for any totalitarian government, whatever its shade or kind."

On the Russian question, I pledged a "maximum of good will and faith," and asserted, with all the strength at my command, that Poland wanted only friendly relations with the U. S. S. R.

There was no reply from Moscow, and the growing chilliness of Britain toward the Polish-Russian split was becoming noticeable. Before his departure for the Moscow conference, Anthony Eden privately told me there was little possibility that Russia would renew relations with the Polish Government unless we agreed to give the Reds that huge portion of Poland which the Red Army invaded in 1939 as an ally of Hitler.

RECALLS 1941 NOTE

I reminded him that he himself, in a formal note of July 30, 1941, had stated that Great Britain would not recognize any territorial gains taken by force, and that Churchill had said the same thing in the House of Commons in a memorable speech on August 5, 1940.

"If we give up this territory—which, actually, we are not empowered to yield—it will be only the beginning of Russian demands," I told Eden. But it was useless.

To freshen his memory, I gave Eden a number of solemly agreed to Polish-Soviet pacts before he started for the Moscow conference with Molotov and Secretary of State Cordell Hull.

I learned at the time of the Moscow conference that it was simply a prelude to the long-awaited first meeting of Stalin, Roosevelt, and Churchill—to take place in Tehran a few weeks later. We had heard from Washington that Roosevelt was content that as soon as he sat down with Stalin he could straighten out the Polish-Russian problem.

SNUBBED BY F. D. R.

But I wanted to see him, to warn him of Stalin's tactics. I asked for an appointment in Washington or anywhere else along the way to Tehran, but the White House said the best that Roosevelt could do was to see me the following January.

I was also unable to see Churchill, who likewise believed he could do business with Stalin, though I did learn from the British that the reason for not seeing me at just this time was a fear that it might antagonize Stalin and prompt him to snub the meeting—as he had snubbed the Quebec conference.

The world never has been told what occurred at Tehran. There was, of course, the short, lofty statement of December 6, 1943, containing such phrases as "Our nations shall work together in war and in the peace that will follow" * * * "we look with confidence to the day when all peoples of the world may live free lives untouched by tyranny and according to their varying desires and their own consciences."

COLD-BLOODED BUTCHERY

But behind these classic words lay one of the most infamous injustices of history. Poland, first to fight Hitler, indomitably opposed to establishment of even the slightest kind of Quisling cooperation with the Nazi invader, had been cold-bloodedly divided by Stalin. Stalin easily forced Roosevelt and Churchill into appeasement.

I used the splendid wording of their Tehran announcement as a basis for my own statement of the same day, lauded them for upholding the quest of peoples for freedom, promised that liberated Poland would follow the precepts of democracy and warned that territorial grabs would rupture the agreement.

TALKS WITH CHURCHILL

I saw Churchill February 6, 1944, and he came right to the point.

"You know, there will be no restoration of Polish-Soviet relations unless you agree to territorial changes," he said. "As a matter of fact, the Russians are demanding political changes in your government, but we can overcome those objections, we believe, if you consent to the territorial changes. They're more important."

"But I'm not empowered to give away half of my country," I protested.

Churchill turned away, rather unhappily. "I'll have a public statement about this matter in the near future," he said.

The statement came February 22, 1944, 5 days after we had offered to permit eastern Poland to be ruled—until the peace treaties—by an Allied commission, if Poland remained a complete sovereignty throughout its western section. We called it the demarcation line.

Churchill submitted this concession to Stalin and received what he later called a "very crude answer," and so on February 22 he spoke in Commons on the Polish question and revealed officially some of the unspoken aspects of Tehran.

AGREES TO CURZON LINE

Churchill, all of a sudden, had embraced the old Curzon line as a fitting boundary between Russia and Poland, though the British had discarded that line and ratified the Riga Treaty line, which was the U. S. S. R.-Polish boundary from 1921 until the Red Army invaded it as Hitler's ally in 1939.

He said Germany had used Poland twice in his lifetime as a road of attack on Russia, but neglected to state that in the first instance—in 1914—Poland was then divided among Germany, Russia, and Austria. He neglected also to add that Russia invaded us in 1939 before the break in Fascist-Communist relations.

I had no positive confirmation of what crimes had been committed against Poland by our big-power allies, however, until a meeting I attended in Moscow on October 13, 1944, with Churchill, Eden, Averell Harriman, and Molotov.

TEHRAN TREATY TOLD

At that meeting I brought up the question of Polish boundaries by protesting against the illegality of the Curzon line as a frontier. Molotov stopped me, and, turning from Churchill to Harriman with a surprised expression, he said:

"But all this was settled at Tehran! We were all there. I want to remind you, if you have forgotten. Mr. Roosevelt said he entirely agreed about the Curzon line—that it was a just frontier—but he added that that was not a good time to announce the matter publicly.

"The Soviet Government is therefore entitled to conclude that the Curzon line was, and continues to be, acceptable to all three big powers. There is no need now for Mikolajcyk's objections."

I looked at Churchill and Harriman, praying that they would object.

They looked down and remained silent.

The British and the American leaders had made a complete about-face under Stalin's pressure. They had gone into the war filled with a determination that there must be no territorial changes brought about by force. Now they condoned just that.

ROOSEVELT PLEDGED POLAND WOULD COME OUT OF WAR WHOLE

(Installment XIII)

When it became increasingly apparent that half of Allied Poland had been appropriated by Stalin at the Tehran Conference, with the consent of Churchill and Roosevelt, the Polish Government in London attempted to resign in protest.

It was only on the advice of the underground that we agreed to carry on. With that in mind, I decided to go through with my meeting with Roosevelt and I left for Washington with a heart made heavy by the fact that I could expect little except expressions of sympathy.

D-day was approaching, so before leaving London I recorded a speech to be broadcast to the Polish underground in France and Poles impounded into military or other service by the Germans, and urged them to facilitate the entry of United States and British forces into the continent.

I arrived in Washington June 5, 1944, and saw Under Secretary Stettinius on the first day. One of our first points of discussion centered around the tone of OWI broadcasts to Poland. They were consistently following the Communist line, which made our own job more onerous, so I said to Stettinius:

"It is unwise to adopt this approach to the Polish people. If you continue to call Russia a democracy you may eventually regret that statement, and your people will condemn you.

"Your Government once called Poland the inspiration of nations, but now the OWI calls the Communist forces just that. Please don't think we have not tried to make friends with Russia, for we have. Poland just does not want to become another Red satellite."

Stettinius took a lot of notes to be sent to President Roosevelt, and when I saw the President on June 7 I found him well prepared, though strikingly older and more exhausted than when I had met him with General Sikorski in 1941.

He had only a few months before agreed, we later learned for certain, to turn over to Stalin the huge section of Poland which the Red Army had invaded while an Axis partner, but his manner was one of great courtesy.

"Poland must be free and independent," he said.

"What about Stalin?" I asked him.

"Stalin is a realist," Mr. Roosevelt replied, lighting a cigaret. "And we mustn't forget—when we judge Russian actions—that the Soviet regime has had only 2 years of experience in international relations.

"Of one thing I am certain," he added. "Stalin is not an imperialist."

I thought to myself, "Here is the perfect idealist, but his faith in what Stalin is saying, and what Stalin is doing, is sadly misplaced."

PLEDGES SETTLEMENT

Roosevelt continued cheerfully. He said that personally he and Stalin had gotten along famously at their Tehran meeting; gotten along better, he added with a laugh, than did Roosevelt and Churchill.

He had personally brought up the matter of the Curzon line at Tehran, Roosevelt told me.

"Stalin wasn't eager to talk about it," he added. "I want you to know that I am still opposed to dividing Poland with this line, and that eventually I will act as a moderator in this problem and effect a settlement."

Roosevelt then explained to me what a "moderator" was and used, as an example, the role of a moderator in certain United States labor disputes.

"I understand, Mr. President," I said. "But in the case of domestic problems you are dealing with your citizens. You can settle matters by a bill or decree. But this would hardly apply to the current Polish problem."

POLAND'S WORRY, TOO

Roosevelt paused before he went on.

"I haven't acted in this matter because this is an election year. You, as a Democrat, understand such things." He laughed suddenly. "You know, I mentioned the matter of the forthcoming American elections to Stalin and he just could not comprehend what I was talking about. I guess he'll never become accustomed to understanding that there is a device known as free elections—by which political matters within one's country may be changed."

That was my worry, too, and I told the President just that. He was more thoughtful when he answered.

"In all our dealings with Stalin we must keep our fingers crossed," he said.

Then his mood changed again.

"You Poles must find an understanding with Russia," he said. "On your own you'd have no chance to beat Russia, and the British and Americans have no intention of fighting Russia.

"But don't worry," he added. "Stalin doesn't intend to take freedom from Poland. He wouldn't dare do that because he knows that the United States Government stands solidly behind you."

OFFERS GERMAN AREAS

The President looked at me seriously.

"I will see to it that Poland does not come out of this war injured.

"I'm sure I will be able to manage an agreement in which Poland will get Silesia, East Prussia, Koenigsberg, Lwow, the oil region of Tarnopol, and the oil and potash area of Drohobycz. * * * But I don't believe I can secure the city of Vilna for you."

I was tempted to repeat that what he was offering was land in exchange for sovereign Polish areas; that Russia had no more right to half our country than it had to that portion of the United States from the Atlantic to the Mississippi, and that more than 4,000,000 Poles had by that time died in the actual or spiritual defense of the land.

But the talk was turned to other things geographical, including his memories of bicycle trips through Europe as a young man.

MORE HELP OFFERED

In the end, Roosevelt asked me to see Stalin. I agreed instantly because I still hoped to achieve better relations. Roosevelt then messaged Stalin, asking him to

receive me. He gave me a nice send-off and urged Stalin's cooperation with Poland.

Before I left Washington Roosevelt generously offered to increase the scope of American aid to the Polish underground, a notable act, and I had made a short speech—in my halting English—at a White House dinner.

In the speech I said that my dream for the future Poland was to see it become a country whose people possessed that most priceless gift showered on the American people by their own hard work and honesty—freedom.

"As human beings we are essentially the same as Americans," I said. "We could be happy with only a tiny portion of your physican possessions. We could endure a much lower standard of living * * * if we could secure the freedom for which we fight.

"I should not limit this wish to Poland," I finished. "It is my hope that the United States precept of freedom will some day rule all European peoples."

Roosevelt might possibly have been surprised at Stalin's reply to his telegram concerning Poland, in view of the fact that he was sure of his role as moderator, Stalin wired:

"Thank you very much for informing me about your meeting with Mr. Mikolajczyk.

"It is to bear in mind that the establishment of cooperation between the Red Army and the Polish underground is undoubtedly now an essential matter. The solution of the problem of Polish-Soviet relations has a great bearing in this matter.

"You are familiar with the point of view of the Soviet Government and its endeavor to see Poland strong, independent, and democratic and the Polish-Soviet relations good neighborly and based upon durable friendship.

"The Soviet Government sees the most important promises of this in the reorganization of the emigre Polish Government which would provide the participation in it of Polish statesmen in England, as well as Polish statesmen in the United States of America and the Union of Soviet Socialist Republics, and especially Polish democratic statesmen in Poland itself, and also in the recognition by the Polish Government of the Curzon line as the new border between the Union of Soviet Socialist Republics and Poland.

"It is necessary to say, however, that from the statement of Mr. Mikolajczyk in Washington it is not seen that he makes in this matter any step forward. That is why it is difficult for me, at the present moment, to offer any opinion about Mr. Mikolajczyk's trip to Moscow.

"STALIN."

Flow of Venture Capital

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. MARTIN. Mr. President, on January 29 the junior Senator from Colorado [Mr. MILLIKIN] spoke in Philadelphia, at the forum of the Investors' League, Inc., and upon the request of several Philadelphians I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The assigned question is, How can we resume the flow of venture capital?

I suggest that the over-all answer is to be found in a completed decision of the American people for the restoration of the free-enterprise system.

Politically speaking, at the present time we stand half in and half out of the system.

The Congress, elected by the people in 1946, is working for the system while the President, succeeding a President also elected by the people in the preceding election of 1944, sends messages to the Congress which are valentines to the Wallacites and commemorative bouquets to the centennial celebration of the manifesto of Karl Marx.

This is the year for clarification and for redemption.

By his State of the Union message to Congress, the President spread out for public consumption, most all of the moldy and rejected political dishes of the last 15 years.

To the credit of Congress, on both sides of the aisle, it should be said that never in our history has a Presidential message been received with such noisy silence.

The President's notion of postwar income-tax relief is to give each income-tax payer and each of his dependents a $40 a year tax bonus credit.

Even though the President's specific plan is inadequate and badly conceived, we may take some pleasure in his belated and reluctant conversion to the policy of Congress in this session and twice affirmed last year and twice vetoed, to give especially favorable consideration to our citizens in the lower income brackets.

To determine whether this proposal soundly and fairly protects the interests of all of our citizens who support the Government by payment of income taxes, let us take a look at the present burdens on those in the middle and upper brackets, take a look at the increase in those burdens since 1939, and the extent to which they would be lightened if the proposal were adopted—which it will not be.

When I refer to income, it is net income before exemption and credit for dependents. It is assured that the taxpayer is married and has two dependents. For the purpose of my point, this puts the figures in the worst possible light.

In 1939, the taxpayer with income of $10,000 paid $343 for Federal income taxes and under present rates he pays $1,862. The President would relieve his burden $160.

The taxpayer with income of $15,000 paid $831 in 1939 and under present rates pays $3,638.50. The President would relieve his burden $160.

The taxpayer with income of $20,000 paid $1,469 in 1939 and under present rates pays $5,890. The President would relieve his burden $160.

The taxpayer with income of $50,000 paid $8,621 in 1939 and under present rates pays $24,111. The President would relieve his burden $160.

The taxpayer with income of $100,000 paid $31,997 in 1939 and under present rates pays $62,301. The President would relieve his burden by $160.

The taxpayer with income of $100,000 paid $303,568 in 1939 and under present rates pays $406,600. The President would relieve his burden $160.

The taxpayer with income of $1,000,000 paid $678,436 in 1939 and under present rates he pays $838,850. The President would relieve his burden $160.

It is now apparent, I believe, that the income taxes in the middle and upper brackets in 1939 were already heavily punitive, and that sharp increases have been added since that time.

And now it can be readily seen that under the President's tax reduction philosophy whereby increases in taxes are to be shared under sharply progressive rates and decreases are to be shared by the grant of a flat, across the board, equal per capita credit, all income taxpayers, other than those in the lowest brackets, might as well resign themselves to their oars in the galley. For those taxpayers it is "Heads, I win, tails, you lose."

And this is precisely what the left-wing politicians, drooling for the opportunity to destroy the free enterprise system and to bring everyone to equalized poverty, have been working and praying for.

It is indeed lamentable that a President of the United States, supposed to represent all of the people and to protect their welfare, would turn his back on his sounder advisers and go for that kind of destructive error.

There are fair ways to eliminate and lighten the income-tax burdens of those in the lower brackets.

For example, out of $4,100,000,000 of income-tax reduction provided in H. R. 3950, which was the second tax-reduction bill passed by the Congress last year and vetoed by the President, $2,572,000,000, or 63 percent, would have gone to taxpayers with incomes of less than $5,000 per year.

Last year those facts so crippling to demagogic argument, were studiously obscured or brazenly denied by those who were opposing our efforts to reduce income taxes.

In my opinion, our next income-tax-reduction bill which will be passed during the present session of Congress, will remove entirely from the rolls several million taxpayers in the lower income brackets, will provide for relief to all income taxpayers all the way along the line including the right to married persons to split their incomes and again will assure that the greatest percentage reduction and the greatest amount of money reduction shall go to those in the lower brackets.

But the President made two low bows to the extreme leftists. He proposed to recoup the loss of revenue which would result from his flat, all the way across-the-board $40 tax credit out of the profits of our corporate employers.

Thus was touched off the official 1948 election-year rebirth of the "hate profits" and "hate your employer" themes which brought this country to economic dead center in the thirties and which, if sanctioned by the people, will ultimately destroy the free-enterprise system and the Government itself.

Also, there is a second barrel to this proposal. By reducing the revenues by one method and equalizing the loss by another, it is intended to be sure that there will be no net tax reduction at all and that the high spending by the President's agencies shall continue without the slightest restraint.

The people observed, and I believe they will remember, the frightful results of the hate campaigns of the thirties.

Their effect was to discourage the pay-roll makers, to dry up investment, to prolong massive unemployment, to force mendicancy on decent citizens, to make the Government the grand almoner, to pile up debt, to introduce class hatred, and to afflict our economic system with a wasting anemia which for the first time since the 1860's halted the previous and fabulous rise in the American standard of living.

The war compelled a halt to those divisive and destructive hate campaigns. The results afforded a startling contrast to, and condemnation of, what had been going on in the thirties.

The executive department of the Federal Government, after fumbling around and getting nowhere with its own pet "long hairs," was forced to call in the Nation's industrial and business leaders who had been trained in the free-enterprise system.

They found Uncle Sam flat on his back, bound hand and foot with the red tape which had been wound around him by a crawling horde of Lilliputian bureaucrats.

With the cooperation of patriotic workers they cut him loose, got him on his feet, and got him going. Unshackled Uncle Sam, again lean, sinewy, clear-eyed, and star-spangled, came through with the mightiest production effort of all history.

From a standing start, he armored his fighting sons with food, clothing, medical care, and fighting tools far superior to anything ever known in wartime.

We sent armadas of goods to our allies, which in a happier day were acknowledged by them as having turned the tide. While bearing the burden of war production, we maintained a higher standard of living here at home than ever before.

Then the free enterprise system received another test. The transition period was approaching. The leftist planners simply could not tolerate the thought that the productive exuberance of private enterprise would be equal to the task. We were to go back to the stagnating economy of the thirties and the depressed standards of living then prevailing and we were to like it.

To chill the marrow of our bones and to condition us into acceptance of their "crutch, cushion, and planned interference" nostrums, the planners conjured out of thin air the grim picture of 8,000,000 unemployed promptly following VJ-day, the same as in the thirties.

In Congress we were confronted with legislative proposals which in operation would certainly have assured that result. But, thank goodness, the Congress did not give them their laws.

Once more, the free enterprise system went to work, and for this dreaded transition period came up with production levels surpassing what had been thought to be the unsurpassable levels of the war years.

Once more we have not only taken care of our own with the highest living standards in all history but at the same time have fed the world's starving, have sent billions of dollars' worth of goods and credit all over the world to aid the economic rehabilitation of stricken and devastated countries. And I believe that we shall continue to do more of the same thing but on a more efficient basis.

And where do the enemies of this system go for their inspiration? To the Old World countries which are operating under the very philosophies which they would fasten upon us and which must now come to the free enterprise system of the United States for their salvation from complete collapse.

One of these days we are going to have a President in the White House who will recognize and give due weight to the fact of enormous significance that about 40,000,000 of our 60,000,000 workers have many thousands of corporate employers.

With a full and fair recognition of this fact, that President will align his influence against "hate your employer" and "destroy profits" campaigns. He will make it clear to those who are misled that if profits are hobbled, pay rolls are hobbled; that ceilings on wages must follow ceilings on profits.

He will make clear the need for incentive investment, necessarily resting on the expectation of profits commensurate with risk, in providing ever more and better tools to ease the labors and increase the output of the worker.

He will explain this self-evident fact—and if a sincere man he will be believed—that the interests of the worker, the investor, and the corporate or individual employer are all tied together.

He will bring home the fact that if any of these inter-reacting interests are hurt, all of them are hurt; that if any of them are to be protected, all of them must be protected.

He will explain that competition, unpunitive taxation, and the jailhouse will take care of the hogs and the crooks and that labor itself has the federally protected power to take care of the oppressor.

When this occurs, and it becomes clear that the enormous prestige of the Presidency is not available to the divisionists we will again have a united people in these United States.

When this is done, there will be no question about how to stimulate the formation of investment capital. Such stimulation will follow automatically and there will be a new release of hope, energy, good will, and new advances in our standards of living greater than anything that has ever happened or has been contemplated in the past.

The economics of this Presidential proposal for limits on profits in peacetime standing by themselves, are plenty bad enough. But this proposal, in combination with the President's notion for the granting of an across-the-board $40 tax bonus, presents us with an incredibly fantastic nonsequitur. With one hand the President would distribute his $40 across-the-board tax bonus with the idea of increasing purchasing power, and with the other hand he would grab a source of funds needed for expansion of production to supply the increased demand which he wants to create.

True, such a tax will catch some monopoly profits, and some profits which are the result of gouging the consumer in a market characterized by unusual and temporary scarcities.

But it is certain to be discriminatory in its impact, penalizing the new and developing business upon which economic progress so largely depends.

We should always remember, I suggest, that high profits are not necessarily excess profits. High profits may be the reward of unusual enterprise or a payment for the assumption of a great risk. In these cases, high profits are a necessary payment from the social and economic point of view. They must be paid in order to get the job done.

Because even a well-drafted excess-profits tax law cannot distinguish adequately between high profits which are necessary in this sense, and those which are not, the excess-profits tax has long been regarded as inappropriate for peacetime.

Republican and Democratic Secretaries of the Treasury alike have condemned excess-profits taxes in peacetime. No more vigorous expression of it can be found than in the statements of the present Chief Justice of the Supreme Court when, as Secretary of the Treasury in the Cabinet of President Truman, he appeared before the Senate Committee on Finance in 1945, to recommend the repeal of the wartime excess-profits tax.

Among other statements, Mr. Vinson made the following:

"Repealing the excess-profits tax means getting out of the tax system a tax which certainly in its present form has no place in the peacetime system. The case against the excess-profits tax for 1946 goes beyond the facts that it is primarily a wartime control and that it is erratic and inequitable. It is also an obstacle to that reconversion and expansion of business which is so necessary for a high level of employment and income."

And again Mr. Vinson said:

"The over-all impact which this tax is likely to have on business planning as well as business profits constitutes a serious threat to our postwar employment objectives. The testimony of businessmen is that they are unable to take the risk of full peacetime business expansion until this tax has been removed. That testimony comes not only from corporations subject to the excess-profits tax; indeed, it comes primarily from businessmen contemplating organization and expansion in competition with established corporations."

The accuracy of Mr. Vinson's judgment that the removal of the excess-profits tax would be a stimulus to business expansion is borne out by the statistical record.

Between January 1946 and November 1947 the personal income of the individuals in this country climbed from $169,000,000,000 to $205,000,000,000. In the same period the Federal Reserve industrial production index climbed from 160 to 192. Construction contracts awarded, as reported by the F. W. Dodge Corp., have increased from $358,000,000 in the month of January 1946 to $715,000,000 in the month of November 1947. The removal of the wartime excess-profits tax made funds available without which such business expansion could not have occurred.

The excess-profits tax proposed by the President would set a precedent for the peacetime use of a form of taxation which has a strong repressive effect upon the incentives motivating the American economic system.

True, we are told that it is a temporary measure, to be repealed when the inflation subsides or when budgetary requirements permit.

However, as has been pointed out, the tax frustrates the temporary merit claimed for it in connection with inflation, and I am suspicious of the claim that we can get rid of it when inflation subsides.

It is now routine for one executive emergency to pant on the shoulder of the next one to come. We might as well be practical and adjust ourselves to the fact that under our present executive department "emergency" and "normality" are synonymous terms.

A tax which has become entrenched is extremely difficult to dislodge. Proposals for its repeal or reform are invariably met by the objection that the revenues cannot be spared. We should avoid establishing this peacetime precedent for a tax which on an emergency or long-term basis fails to meet the tests of equity and sound economics.

As is well known, the major normal source of venture capital in the free-enterprise system is in the savings of those in the middle and upper income brackets. The income of the managers of our economy is in those brackets and they must find their rewards and incentives in what is left after the tax collector gets through with them. The President's tax program is either oblivious or indifferent to this fact and to its enormous importance.

Today we face a situation in which the flow of goods and services is inadequate to meet demands, a situation characterized by rising prices, sharp increases in the cost of living, and all the inequities and hardships which these changes produce.

We should attack the problem on a wide front. But among the remedies that of rapidly increasing production is the one best fitted to the free-enterprise system for the simple reason that it does not arbitrarily reduce demand to fit the output of a reduced and less-efficient economy.

Today and tomorrow the continued advance of the standard of life of this country will depend primarily upon increased production. This calls for the continuing investment of very large sums in new plants and equipment.

It is not just a problem of replacing the equipment which is wearing out, with something that is just as good. New and better equipment must be built and financed.

It is not just a matter of going on expanding the production of the same articles and services which we now consume. New and better products and services must be developed, and this process involves the assumption of very substantial business risks.

We cannot progress if we merely continue the existing patterns of management. New techniques must be developed and applied. Such changes in technique require not only the assumption of unusual business risks,

but also unusually hard work on the part of those who plan the new techniques and put them into operation.

This is why the incentives which we offer to the men who can perform the work and assume the risks of new and developing business are of critical importance to the future of this country.

This is why I suggest that the effect of our taxes upon incentives is among the most important of the tests which our tax system must face. Unfortunately the application of this test to our present Federal tax system yields rather discouraging results.

Observe, please, the repressive effect on incentive of the levy on individual net incomes. This tax alone produced nearly 54 percent of the total Federal tax revenues in the fiscal year 1947. The Treasury estimates that this tax alone will produce about 55 percent of the total in 1948 and 1949.

It is a tax which falls heavily upon the great bulk of managerial rewards and of distributed business earnings.

As has already been noted, one of the most obvious characteristics of the individual income tax is the extreme progression of its rate schedule. We all have a general idea that this is so, but most of us are not really sharply aware of its extent or significance.

I believe the best way to present the situation to you is to invite your attention to the so-called marginal rates, that is, the amount of tax collected on additional dollars of income received by persons in different income brackets.

These marginal rates are the ones that are critical from the point of view of incentives because they show how much of the extra reward for extra effort the individual taxpayer will be allowed to keep.

Most of us are aware that the rates range from 19 percent at the bottom of the scale to a maximum of 86.5 percent. But do we appreciate the fact that an individual receiving a surtax net income of $10,000, who obtains additional net income of $1,000, must pay 36 percent of it to the Federal Government alone?

Are we aware that a person whose surtax net income is $25,000, and who earns an additional $1,000, must turn over 56 percent of the increase to the Federal Government? Do we realize that a person whose surtax net income is $50,000, and who earns an extra $1,000 must pay 71.3 percent of this $1,000 to the collector?

The effect of rates like these upon the willingness of individuals to work, to save, and to assume business risks is all too obvious.

I believe that the current stock market, among other things, reflects the unfavorable effects of these rates upon the willingness of investors to assume business risks. The market is sluggish and shows a marked preference for securities with a low degree of risk. State and municipal issues sold in 1947 were $2,200,000,000 as compared with $1,000,000,000 in 1946. Corporate bonds and notes sold during 1947 totaled $3,300,000,000 as compared with $2,000,000,000 the previous year. On these two items, which represent securities with a comparatively low degree of risk, the 1947 financing was over two and one-half times that carried out in the previous year. On the other hand, the sale of equities dropped from $1,500,000,000 in 1946 to $1,200,000,000 in 1947.

The average yield on new securities has been increasing for some time, and the spread between the rates paid on issues involving a greater degree of risk and those of the gilt-edged variety is now substantially larger than it was a year or so ago.

All this is evidence that the business community is having difficulty obtaining risk capital, and in my opinion this situation is attributable in no small degree to the severe marginal rates now imposed under the tax on individual net incomes.

If as a result of tax penalties of this size, the managers and owners of our business enterprises relax and fail to put forth their best efforts, our attack upon the current problem of scarcities will fail.

If because of these tax penalties the investors of our society are unwilling to assume the risks of starting new enterprises and bringing new products into the market, the tempo of business is certain to decline, and the rate of progress of our economy will slow down to the detriment of all the persons who make up our society.

Appreciating these facts and their impelling urgency for action, I believe the Congress will give priority to income-tax reduction.

I would not have you think, however, that the Congress is insensitive to other defects in our tax structure.

In our search for tax influences which impede the flow of capital and incentive for new plants, new tools, new techniques and new venturesome approaches without which we cannot go forward, we do not look exclusively to the field of income taxes.

Our excise-tax system, for example, is loaded with a hodge-podge of regressive levies and inequities.

Included among the suspects are double taxation of dividends, loss carry-over periods which may be illiberal, discriminating notch provisions, insufficient tax incentive to small business, too much inflexibility in allowance of depreciation charges, uncertainty over the application of tax on excessive accumulation of surplus.

These and many other matters are under study in the House Ways and Means Committee, aided by an expert advisory group.

We look forward to surpluses which will warrant reductions and corrections in addition to those involved in the first step of income-tax reduction.

Taxes are now so high and the evils of this are so manifest that the situation calls for truly massive reductions. But we will be unable to enter all of the gardens of this heaven in one jump.

First, reasonable debt reduction accompanied by income-tax reduction, and then as soon as possible relief in other fields, as surplus after reasonable debt reduction again becomes available through elimination of waste and useless functions.

The expenditure side of the budget obviously is of equal importance with the revenue side. Thus zeal for tax reduction must be matched by zeal for a less expensive Federal Government.

Finally, when this world gets itself durably postured for peace and our budget is thus freed of the terrific costs of interim watchfulness and foreign-help programs, we should be able to complete the job of reducing taxes to a point where they no longer menace the free-enterprise system.

This, of course, assumes that the people later this year will provide their completed decision referred to at the outset of my talk for the continuance of this system.

Challenges to Democracy

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. ROBERTSON of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Challenges to Democracy, delivered by me on Friday, January 30, 1948, at the annual meeting of the Danville, Va., Chamber of Commerce. In these remarks I undertook to discuss the Marshall plan and inflation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great privilege and a high honor to address the leading business and professional men of an old and historic Virginia city, whose origin was a small village on the banks of the Dan in pre-Revolutionary days when tobacco was not only the cash crop of the section, but was used for currency, and when the only market for that tobacco was the mother country.

In order that the local tobacco might be inspected and graded for market at a point closer than Richmond or Petersburg, the Virginia Legislature in 1793 authorized an inspection station to be located at Wynne's Falls on the Dan River, the site of the present city of Danville.

My earliest participation in politics was in support of that brilliant son of Pittsylvania County, Claude Augustus Swanson, when his seat in the United States Senate was being contested by my equally illustrious predecessor, Carter Glass. When Claude Swanson, who with great distinction had served his State and Nation as a Member of the House of Representatives, as Governor, and as United States Senator, died, as Secretary of the Navy, the flag of the United States went to half-mast all over the world. His spectacular rise from obscurity to national and international fame can appropriately be explained by only one word "genius."

Because of the leadership furnished in State, national, and foreign affairs by men like Swanson, Rorer James, and other distinguished sons of Danville and Pittsylvania, I have been privileged to know for the past 40 years, I have decided to discuss with you tonight the two major problems now confronting our Nation—international cooperation, to preserve the future peace of the World, and inflation control, to preserve the soundness of our economic system.

THE MARSHALL PLAN

At a high price in blood and treasure we won World War II but we have not won the peace for which those sacrifices were made. At the San Francisco Conference in 1945 we helped to frame a blueprint for international cooperation which was intended to be our major reliance for winning the peace. It has disappointed us. The veto power of the permanent members of the Security Council of United Nations to which we not only agreed but upon which we insisted was intended by us and Great Britain to be power in our hands to veto future war. It has been utilized by Russia to veto peace. We are now convinced that as long as Russia continues to hold that type of veto power there is no hope for the successful functioning of United Nations, a situation which could have been anticipated in the fall of 1945 because between August 17 and October 3 Russia indicated on six different occasions that she had no cooperative spirit.

Nations can drift into war but they cannot drift into peace. The relations between Russia and the democracies of the world are becoming more and more strained. In spite of the one world contemplated by the Charter of United Nations, the world is now very definitely divided into two parts with a major portion controlled by the democracies which prefer peace and the remainder by the Communists, who are bent upon expanding their sphere of influence. Two costly world wars could have been prevented if the democracies of the world had united in taking a firm stand at the proper time and proper place, against German and Japanese aggression.

When our friendly overtures to Russia to cooperate for the establishment of one world dedicated to peace were rejected, when Russia on 22 different occasions used her veto power in violation of the spirit of United Nations for peaceful cooperation, and when Russia deliberately violated the provisions of the Atlantic Charter, to which she was a party, with respect to the recognition of the integrity of smaller nations and violated her agreements at Yalta and Potsdam with respect to boundaries and free elections, we became convinced that the only practical means of checking trends that would ultimately lead to another conflict would be the economic rehabilitation of the countries of Europe who preferred peace to war and individual freedom to state tyranny. As a basis for cooperation Secretary Marshall proposed in his now famous speech at Harvard on June 5, 1947, that all nations of Europe who shared our ideals for peace and were willing to cooperate to that end should unite in formulating a program for their own postwar recovery and then indicate to us what aid they would need from us and the nations of the Western Hemisphere in implementing such a program.

In spite of determined efforts by Russia and her satellite nations to sabotage that program, 16 nations met in Paris and formulated a program along the lines indicated by our Secretary of State. When that program was received by our State Department, committees of the ablest business and industrial leaders of the Nation were formed to analyze the request for aid from the standpoint of need, from the standpoint of self-help which we were entitled to seek, and from the standpoint of our ability in terms of goods as well as of dollars to finance a European recovery program. As a result of the work of those committees the request submitted to us by the 16 nations in question was materially scaled down and our ability to finance a reduced program of that character was carefully appraised.

A conclusion was then reached that we could finance over a period of years an adequate aid program the cost of which for the first 15 months of a contemplated 4-year period would not be in excess of $6,800,000,000.

No one, of course, in estimating needs which run into billions—a sum beyond the actual comprehension of the human mind—can say with any degree of certainty whether the figure agreed upon is so many million dollars too much or so many million dollars too little. We merely know that those responsible for analyzing this program have given it as their deliberate and best opinion that the sum of $6,800,000,000 is the minimum. It may well be that some millions and perhaps some hundreds of millions could be trimmed from that program, but the burden of proof is upon those who claim that it could be reduced by one billion, by two billion, or by $2,800,000,000, to substantiate their position. An aid program which is inadequate will be money wasted.

Personally, I favor aid that will be both adequate and timely because in this emergency time is of the essence. The reason I favor such aid is that I think now is the time for us to take a firm stand on the subject of Russian expansion in western Europe. Russia within a period of 5 years will have not only the secret of the atomic bomb but a supply of those bombs, and in the hands of an aggressor that will be a weapon more terrifying than anything Hitler had. Our possession of the bomb does not disturb Russia. She knows we will never use it for purposes of aggression. What she does not know and what she now needs to be told in no uncertain terms is where we stand with respect to future aggression in western Europe. That is a message that mere words will not convey to the Russian mind and the Russian understanding.

However unpleasant the choice may be the alternative rests between rehabilitation of the 16 nations in Europe on the one hand and the development of a military establishment with which Russia would hesitate to contest on the other. Either plan involves a calculated risk; both plans cost money and involve sacrifices. Of the two plans I feel that aid to European recovery will be less expensive than a military establishment, the maintenance alone of which by 1952 is now estimated to cost in that year and each succeeding year the total of the proposed Marshall plan. And regardless of what military establishment we may succeed in building, I am convinced that it would merely postpone and not prevent World War III, and that should World War III come there will be no victor.

But in giving my support to the Marshall plan I associate myself with those who believe that we should control exports and not ship abroad food or other scarce items in a manner that would unduly contribute to an inflation that would be calculated to end in a disastrous depression. A maximum of our supplies should be tools with which Europeans can help themselves and a minimum should be consumer goods—a destroyer of production incentive. For instance, the 32.4 percent of the total proposed aid for the 4-year period to be spent for food needs to be reexamined. Of the 16 nations Great Britain is the only one which over a period of years has been dependent upon food imports. The nations of western Europe did not stop eating in 1932 when we exported to them only 20,000,000 bushels of wheat. Last winter the weather in Europe was the worst in 50 years. Last winter the black market in Europe was the worst in 100 years. Last winter currency inflation in Europe was the worst in all history—but this year crop prospects in Europe are excellent and in asking our aid the 16 nations promised currency reform and the elimination of black markets.

I also think that organizations should be set up both here and abroad to so administer and supervise the aid program as to give it the best possible chance of accomplishing the desired result. In Europe such an organization would be comparable to the organization which formulated the aid request at Paris with emphasis upon the inclusion of the leading business and industrial experts of the countries in question. And in the event of the creation of such a foreign administrative body, it would be the part of wisdom for us to create a similar administrative body in this country to the end that priority be given to sound business principles and likewise for the purpose of counteracting the Russian propaganda that the program in question is a purely political program on our part inspired by a spirit of imperialism and administered for the purpose of making dependents and satellites instead of coequal partners of the respective nations.

I am likewise of the opinion that if we go into this undertaking at all we should do so for the same purpose and with the same spirit in which we fought World War II in which most of these nations were our friends and allies. It was our war as well as theirs. They were fighting for survival and we were doing the same thing. Russia now threatens their future freedom in the same way that Hitler did, and by the same token threatens ours. I have yet to see a well-informed man who did not believe that if Russia dominated the skills and productive capacity of the 270,000,000 people of western Europe that she would then be a greater threat to our future security than the Axis powers ever were. If the proposed aid to Europe is not in keeping with our enlightened self-interest it has no validity other than food donations from a humanitarian standpoint. But if the program is to promote the cause of peace and thereby our security as well as that of western Europe, and clearly it is, we should treat the nations of western Europe as partners in a joint enterprise and not ask them to accept humiliating restrictions upon our aid or attempt to make them crawl to us in a spirit of humble supplication.

The essential characteristic of democracy is self-government. The democracy of the nations asking our aid is changed in degree but not in kind from that of ours. In supporting their form of democracy we are likewise supporting our own. Possibly less than 10 percent of the people of any of the countries in question would prefer to exchange their democracy for communism. Nothing short of economic disaster in the midst of which men are willing to trade ballots for bread would cause the majority of the countries in question to vote to give up self-government for totalitarian government. And the people of western Europe recognize even more clearly than we that they can vote on that issue only once, because once a totalitarian government is established it maintains itself in office by force. Of course, if any recipient of our aid abandons the right of its people to self-government, it would be a proper justification for the withdrawal of our aid.

I am likewise of the opinion that a union of the countries of Europe, as proposed last week by Mr. Bevin and Mr. Churchill, will be essential to the success of the Marshall plan. I seriously doubt if there can be any sustained prosperity in western Europe without currency reforms and a break-down of trade barriers, racial prejudices, and extreme nationalism among a group of European countries that are too small to be a successful economic unit.

In fact, conditions have so changed in world affairs that I do not believe any nation in the postwar world will be large enough, strong enough, and with sufficient natural resources to be a self-contained unit, and that applies to Russia as well as the United States.

Free trade between 48 States in this country has made us the best market in the world for our own products as well as those of other nations. The 16 nations of the Marshall plan group in prewar days controlled about 50 percent of the world's trade and were the major market for our exports. Trade among these nations which will stabilize their economy and promote their prosperity will likewise make of those nations better customers for our goods and not harmful competitors.

I do not have to sell that idea to our tobacco farmers, but it does have to be sold to some of our manufacturers.

INFLATION

Second only in importance to our foreign policy to win the peace is the domestic problem of controlling inflation. In fact, the two are closely related because the higher prices go, the higher the cost of aid to Europe and the higher prices go, the greater the danger of a period of deflation in which we could render no aid to anyone and perhaps would face a major struggle to preserve our own democracy.

I am convinced that Russian leaders are acting under two misapprehensions in a refusal to cooperate in postwar rehabilitation which is hurting the standard of living in Russia as well as in all parts of the world.

The first misapprehension relates to the loyalty to this country of organized labor. The Russians think that Communists can control the labor unions of our country. That is a false and malicious slander upon the American workingman who in World War II surpassed all production records the world has ever known and who would be equally loyal and patriotic should our liberty again be challenged.

The second misapprehension is that we are headed for an inevitable depression which will wreck our economy. My personal opinion is that certain price readjustments are

now overdue and inevitable. Some think that they will occur before the end of 1948. Many think that they will come some time during 1949.

A good harbinger of what is in store for the general economy is the trend of farm prices, which are the last to feel the effects of inflation and the first to feel the effects of deflation. For many years the total national income has ranged from six to seven times that of the farm income, although those in the farm group comprise approximately one-fifth of our population. In 1947, when the cash farm income of $30,300,000,000 was the highest in history, the total national income was approximately six and one-half times as great. In 1947 the unparalleled increase in the price of grain, beef, and hogs accounted for the increase of total farm income. In 1948 there will be fewer cattle marketed and normal crops of wheat and corn will send the price of those food grains much below current levels.

Recent studies disclose that in 1947 the indebtedness of Virginia farmers, including mortgage debt, short-term unsecured debt, and consumer credit, increased, meaning, of course, that Virginia farmers spent all they earned and then some more. And that is generally true throughout the years of the American farm group and is the reason loss of purchasing power of the farm group is so quickly reflected in the prosperity picture. If the cash income of farmers in '48 should fall by as much as $2,000,000,000, we may look for a drop in the total national income of approximately $14,000,000,000, and that will signal the end of the boom. From then on our major undertaking will be to stabilize prices at a level which will permit us to carry our war debt and to finance a Federal budget approximately 80 percent of which will be for past wars and future defense. If we lose that stabilization fight we will slide into a depression and sliding down hill is sometimes a faster process than pulling up hill in good times.

The readjustments I have just mentioned have already occurred with respect to such farm products as fresh fruits and vegetables, dried fruits, canned goods, tobacco, and other items in lesser degree.

An acute shortage in the 1947 corn crop, plus unusual exports of wheat limiting that grain as a feeding substitute has caused a temporary rise in food products produced from grain such as milk and its products, eggs and meat. We still have more food of every kind than we had before the war and if the alleged acute shortage of beef should occur in the coming spring months we will still have a per-capita supply of beef of 20 pounds greater than in 1939.

For the past 3 weeks I have closely followed the hearings of the Banking and Currency Committee, listening to the testimony of witnesses pro and con on the subject of preventing a further rise in prices and perhaps of reducing them. I am firmly convinced that the occasion for the price rise in certain farm products when the prices of other farm products are so rapidly falling is so fundamental that the situation cannot be reached and cured except in a fundamental way, namely, through increased production or a voluntary curtailment of effective demand. I recognize how burdensome the high cost of living has become to a large segment of our people. I am keenly and acutely conscious of that problem. If I knew any legislative fiat by which a fair and stable economy could be substituted for inflation, I would not hesitate to support it. But I believe in intellectual honesty and, with all due deference to those who view the problem differently, when my study of proposed solutions leads me to believe that what is to be offered to the people is a stone, I cannot call it bread.

The testimony presented to our committee convinces me that rationing by itself would be utterly futile and that complete rationing coupled with complete price control all the way from the producer to the consumer level would be futile without a larger army of regulators and enforcement agents than we had in the postwar days of the OPA. In spite of the best efforts of OPA to hold the line in September and October of 1946, it is now admitted that during that period 60 percent of the meat sold in this country moved through black-market channels. Edmund Burke said that nations do not learn by experience, but that experience is so recent and so vivid in the minds of all of us that I can't believe that the American people would care to risk a repetition of it. We now have in currency and bank-check money three times as much money as we had before the war. After eliminating what goes into savings and the fact that the white-collar group has less purchasing power now than it had before the war, it is generally agreed that as a whole there are approximately $2 of purchasing power in the market places for each dollar of goods and services, and as a result the present dollar ranges in value from less than 50 cents to approximately 66 cents of the prewar dollar. In many realms of service the present dollar, as compared with the prewar dollar, buys less than 50 cents worth of services. In the construction field the present dollar buys approximately 55 cents of construction. But when spent for food and clothing and the other items that enter into the cost of living, the present dollar buys 66 cents' worth as compared with the prewar dollar. It necessarily follows that the problem of price inflation cannot be solved merely by an attack on food.

Those not familiar with the extent to which farm costs have increased may be surprised to learn that while the cash income of our farmers in 1946 was then at a peak never previously reached their cost of production in that year exceeded their total cash income in the last prewar years. It now takes 55 cents worth of corn to add 1 pound of meat to the corn-fed steer. Yet most cattlemen in Virginia received last fall about 22 cents per pound for finished steers from grass, and are now getting from 25 cents to 26 cents a pound for corn-fed steers. In 1920 Virginia farmers paid 18 cents a pound for feeder steers and carried them for a year on high-priced feed and sold them in the fall of 1921 for 9 cents a pound. When Ezekiel was called to leadership over Israel he said: "For seven days I sat where they sat." Those in our cities who would like to take those hazards are welcome to try their hand at producing cheaper meat.

We want our farmers to increase the food supply for the Nation. But how can we control farm prices without stifling production unless at the same time we control all the costs of production—labor, machinery, fertilizer and transportation? But you couldn't end your controls there because the farmer gets only about one-half of the consumer's food dollar.

We have built the strongest Nation in the world under a system of free enterprise and under that system we have out-produced the world. But that is a system under which the fundamental laws of supply and demand are not unduly interfered with. It follows that to select a few items now in short supply for rationing or price-fixing or both ignores the intimate relationship between cost of production on the one hand and effective demand on the other in an economic system which is highly integrated. Not even the totalitarian power of Russia could make rationing and price-fixing work in the presence of an excess amount of purchasing power, so Russia, exercising the powers of a dictatorship, tackled one of the fundamental causes (too much money) by means of a capital levy—a process which would be unthinkable in a democracy.

The answer to inflation is clearly increased production and pending that production a spirit of patience, of unselfishness and, if need be, a patriotic self-denial. That is an undertaking in which all must share. What communism has done to Russia and what it is now attempting to do to Europe should be a warning to us. We must preserve our system of private enterprise. It is the love of God that sharpens the tools of justice; it is the love of freedom of action that sharpens our incentive to produce.

Prayer by Ministers Representing the National Fraternal Council of Negro Churches

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1948

Mr. LANGER. Mr. President, I ask unanimous consent to have placed in the RECORD, at the request of Rev. W. H. Jernagin, the national prayer, prayed by the ministers representing the National Fraternal Council of Negro Churches, on the steps of the Capitol of the United States on January 7, 1948.

There being no objection, the prayer was ordered to be printed in the RECORD, as follows:

Our Father, the Father of all mankind: We come to this place today in Thy Holy Name. We come in sacred memory and deep gratitude for Thy goodness and mercy to us as a Nation. Thou has protected, and exalted this Nation, and permitted it to grow and prosper and sit in high places among all the nations of the world. We pray for all the peoples of Thine earth; for those who are consumed in mutual hatred and bitterness; for those who oppress; for those who groan under cruelty and subjection; for those who are hungry, cold, and shelterless the world over. We beseech Thy blessings for the outcast tribes, the ignorant, the wretched and the enslaved of all races and nations.

Thou God who has made of one, all nations to dwell upon the earth; and who, by Thy Son Jesus Christ, has broken down the walls of partition between Jew and gentile, slave and free, Greek and barbarian; break down, we pray Thee, all that divides Thy peoples one from another; shame our jealousies, lay low our pride; cast out all race prejudice, that the peoples of the world may be united in the bond of fellowship and mutual service, so that black and white, Jew and gentile, may live in peace together, in honor preferring one another to the glory of thy great name.

Help this Christian Nation to glorify the things of Thy spirit. Help us not to depend on material things for power. We need Thy protection and Thy guidance. We pray for the leadership of faith; for prophetic vision and the light of the moral mind, lest we lose our way and wander in darkness and despair, war and bloodshed. Send us men endowed with the grace of insight, the gift of interpretation and the accent of command, to guide the affairs of state.

Bless we pray Thee those who bear the rule and responsibility of our Government; the Executive head, his Cabinet, the Senators and Members of the House of Representatives, the governors and legislators of the several States that make up our Nation. May they feel keenly their obligations in making and enforcing laws for the protection of the life

and rights of all the peoples that make up this great Nation. Deliver them from narrow-mindedness, give them clear vision and understanding of their duties and the courage to perform them.

Help our Congress, now assembling, to consider grave and far-reaching questions, not to become a house divided against itself on questions that make for justice, progress, and peace. Help them to find a way to outlaw mob murder. Help them to enact laws that shall give to every man, woman, and child in this nation equal opportunity for education, work, and protection under the law.

Teach us all, Kind Father, how to live together in peace, no man exploiting the weak, no man hating the strong, each race working out its own destiny unfettered, self-respecting, and fearless before Thee as Father of all, unto the coming of Thy kingdom in righteousness and peace upon this earth.

In Jesus' name, we ask these blessings, and the forgiveness of our sins of commission and omission.

Amen.

Flood Control

EXTENSION OF REMARKS
OF
HON. JOHN H. OVERTON
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1948

Mr. OVERTON. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a portion of an address recently delivered before the annual meeting of the Mississippi Valley Association, in St. Louis, Mo., by Lt. Gen. R. A. Wheeler, Chief of Engineers.

Section 2 of the Flood Control Act of 1944 for the first time gave a Federal agency jurisdiction over drainage, which is of vital importance to a great section of the Nation, particularly in the eastern portion of the country, where millions of acres of land otherwise tillable and rich in fertility are in disuse because of the lack of drainage facilities. General Wheeler's address contains a discussion of this relatively new phase of our national resources development program, and it is that portion of his remarks to which I particularly desire to bring attention.

There being no objection, the matter was ordered to be printed in the RECORD as follows:

In the course of public service it is incumbent upon a Government agency, or an association such as this, to keep the people informed. In carrying out this responsibility, particularly in the light of the President's recent message on the state of the Union and his Budget message to this Congress, both advocating the continued conservation and development of our natural resources, I should like to discuss in some detail an important phase of our flood-control work which pertains directly to land resources, namely, drainage. Improved drainage is the natural complement of flood-control improvement—so much so, in fact, that flood control is not complete unless improved drainage of fertile lowlands is provided.

The war put a tremendous strain on our agricultural production and inevitably caused depletion of our land and soil resources. It was generally assumed that with the end of hostilities, agriculture, along with many other activities, would revert to normalcy and there would be a chance for land to rest and recover itself. Such has not been the case. Moreover, we now know that expanded agricultural production and intensive use of all cultivable land will continue for a long time, if not indefinitely. Not only must we supply food for export, but our own industries are becoming dependent more and more upon agriculture for basic raw materials. This situation contributes to prosperity in this country, but it also is a sober warning that we must make better use of available land and also bring into production marginal land that can be made usable through drainage. We cannot always wring ever greater crops from the same farm lands, no matter how well they are managed. But in the same agricultural areas of the United States where farming has been the long-established occupation and the facilities for handling farm production are available, there are hundreds of thousands of acres of fertile soil that can be brought into production by economically sound major drainage improvements.

This phase of flood control is not new. The Congress has long recognized this situation and in section 2 of the Flood Control Act of December 2, 1944, it specifically placed major drainage under the jurisdiction of the Corps of Engineers by providing "That the words 'flood control' as used in section 1 of the act of June 22, 1936, should be construed to include channel and major drainage improvements." Accordingly, major drainage improvements are eligible for authorization as Federal undertakings, "if the benefits to whomsoever they may accrue are in excess of the estimated cost." Our district and division engineers are fully cognizant of the importance of major drainage and are giving this subject careful consideration in their examinations and surveys.

This work, just like all of our flood-control work, is fully coordinated with the functions of the Department of Agriculture in the field of drainage and land conservation. Whereas our jurisdiction covers major drainage and channel improvements with large direct Federal interest, the Department of Agriculture has jurisdiction of Federal aid for extending drains directly to individual tracts of land. The two departments have established procedures to insure that the work of each complements the other without conflict or duplication.

In addition to the numerous authorized flood-control projects that involve incidental drainage improvements, the Corps of Engineers now has under way a number of projects designed primarily for major drainage improvements. Examples of these include projects located in Minnesota, Missouri, Arkansas, Kentucky, Tennessee, Mississippi, and Louisiana having a total estimated cost of many millions of dollars. Our program of investigations and examinations authorized by the Congress embraces many reports on major drainage improvements in other areas, as well as review studies with a view to supplementing the flood-control and drainage projects that have been completed or are now under way. Favorable reports for additional work of this character in western Tennessee and southeastern Arkansas are now before Congress. An investigation of this problem in eastern Texas is being prosecuted vigorously. The flood- and water-control problems of the flat regions of southeastern Florida are the subject of a report recently completed by our Jacksonville district. The Board of Engineers for Rivers and Harbors considered this Florida report at its January meeting and at the request of the Florida people will hold hearings in Florida early in February. Still other investigations are under way in the States of Washington and Oregon.

I have no doubt that time will show that practically every State in the Union has potential improvements of the character authorized by the wisdom of Congress in formulating the Flood Control Act of 1944. And before leaving this subject I want to point out that the examinations, surveys, reports, and final recommendations to the Congress for major drainage improvements will be prosecuted by the Corps of Engineers in the same democratic procedure followed in the authorization of flood control and river and harbor improvements—a procedure well known to you and thoroughly proven to be advantageous both to the people and to the Federal Government.

Disloyalty to American Consumers

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1948

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter received by me from Benjamin C. Marsh, executive secretary of the People's Lobby, Inc., together with the enclosure.

There being no objection, the letter, with its enclosure, was ordered to be printed in the RECORD, as follows:

THE PEOPLE'S LOBBY,
Washington, D. C., January 6, 1948.

THIS CONGRESS MUST END DISLOYALTY TO AMERICAN CONSUMERS

To Members of Congress:

The cost of living will be the universal issue in 1948.

The release of atomic energy has determined the speed with which we must make necessary economic changes.

America must choose between a democratically controlled planned economy, and uncontrolled chaos.

The United Mine Workers Journal, July 15, 1946, stated:

"The only way to take the poison out of inflation caused by increased Government debt, is to levy capital taxes that will wipe out all or part of the debt. Otherwise it will really be boom and bust—OPA or no OPA."

John L. Lewis is correct that some form of capital levy, including much heavier taxation of land values, is inescapable, unless the national debt is to be repudiated, but that is not enough.

Establishing "parity" between farm and industrial prices, and providing unemployment insurance for a large part of workers, makes Government planning of the national economy, with public, cooperative, and private ownership, inevitable, if we are to escape chaos here, while we seek to end it abroad.

Democratic processes cannot survive chaos now, any more than they did in March 1933, when snap bills and substituting bond issues for ending economic bondage, started a course which made war and present postwar problems inevitable.

In the enclosed brief we point out:

1. Farm policies have failed.
2. Labor policies have failed.
3. So-called "private enterprise" has failed.
4. Fiscal policies have failed.

The bleakest reactionary knows we are headed for a bust—which can be averted by intelligent policies, including drastic taxation of swollen profits, personal incomes, and land values.

It is incumbent upon this Congress to enact legislation insuring production, but not through consumer's credit.

Basic reconstruction in America is a prerequisite to the European reconstruction to

which we are committed, because it is the only way to make peace possible.

Yours sincerely,

BENJAMIN C. MARSH,
Executive Secretary.

THIS CONGRESS MUST END DISLOYALTY TO AMERICAN CONSUMERS

On domestic policies, Congress has followed much of the pattern which brought Fascist controls in several European countries.

There is no reason to think America can prevent such controls here, if these practices are continued much longer.

America has two alternatives—a controlled economy, or uncontrolled chaos.

Government must adopt, and operate efficiently, policies which will insure reasonably full employment and production and a fair living standard for all, out of current income, without subsidies, regardless of pressure-group clamor.

1. FARM PROGRAM HAS FAILED

Secretary Clinton P. Anderson recently told the House Committee on Agriculture, studying a long-range policy for agriculture:

"We never used, nor are we using now, systems of soil and forest management that will sustain permanent, high-level productivity in the Nation."

The preliminary report of this committee states: "Since about 1920 the United States has had no clearly defined agricultural policy. Because of this, agricultural programs and activities have lacked an over-all guiding purpose and have been undertaken in haphazard fashion, one at a time, to meet each specific agricultural problem as it arose."

Albert S. Goss, master of the National Grange, discussing the three lines of defense of farming, told the Senate Committee on Agriculture:

"The first line would be to develop our marketing efficiency. We believe that this can be done so effectively that 80 or 90 percent of our trouble can be cured without calling on the Government for supports or other governmental aids."

On conservation, Mr. Goss told the Grange annual meeting in November:

"We must recognize that a system which pays cash bonuses to farmers for doing what good farmers ought to do anyway, and which does not reach the landowners who persist in allowing their soils to wash away, can hardly be considered the basis for a sound, permanent program."

The Department of Agriculture's Post War Policies Committee, recommended in January 1944:

"The agricultural production of the United States should be adjusted to national requirements with due regard for export demand and desirable imports.

"We believe that private property is a public trust, and that wherever public and private interests in land use conflict, the public interest should prevail."

In 1947, Government conservation payments to farmers were about $240,000,000; Government paid about $370,000,000 for wool, eggs, potatoes, and other farm products to keep up prices, and Government is loaning over $500,000,000 on wheat and cotton, to maintain prices, and paying high prices for farm products for foreign relief. About half of all farmers get 80 to 85 percent of total farm income, and of the increase in the selling price of farm lands, while agriculture's net income in 1946 was $18,089,000,000 and about as much in 1947. During 7 war years:

1. The selling price of farm lands increased nearly $25,000,000,000.

2. Farmers' financial assets increased over fourfold, to $22,077,000,000.

3. Cash receipts from farm marketings increased nearly threefold (193 percent) and were in 1946, $24,519,000,000.

2. LABOR POLICIES HAVE FAILED

The American Federation of Labor in its Weekly News Service (December 2, 1947) says average weekly earnings of factory workers during October was $50.97, but, "the 11-percent gain in average hourly rates and average weekly wages scored since October 1946, has meant nothing to the Nation's 13,000,000 production workers."

The United States Department of Commerce in its Supplement to Survey of Current Business (July 1947) reports that in 1946 personal income was 7.4 percent more than in 1944, but wage and salary receipts were 4.9 percent less, while proprietors' and rental income was 21.7 percent more in 1946 than in 1944.

In 1946 and before the war, wages and salaries were about 65.5 percent of total personal income, but they are now only about 63 percent.

Dividend payments conceal the relative income from ownership or control of property since, despite the requirement on distribution of profits, so much profits have been retained that surplus and undivided profits of corporations alone, are now close to $50,000,000,000, of which part is postponed income, payable at the discretion of directors or the insistence of stockholders.

Wage and salary earners, as such, do not have this cushion.

Wage and salary earners, in Government and non-Government employment, know that merely increasing rates of pay to increase the take-home pay is futile, as a method of increasing their purchasing power, without fiscal policies and economic controls to make increases last.

3. SO-CALLED PRIVATE ENTERPRISE HAS FAILED

It is not accurate to speak of "private enterprise" as long as we have private monopoly of land and other natural resources and of credit, our present patent and tariff laws, privilege fomented and maintained private monopolies, and trade associations designed to obtain for small and allegedly competitive enterprises the benefits of monopoly with immunity from antitrust and price-fixing laws.

There is now an illusion of prosperity based upon temporary conditions:

1. Depletion or near exhaustion of irreplaceable natural resources.

2. Mining the soil. The Secretary of the Interior states that every year about 600,000,000 tons of top soil are washed into the Gulf of Mexico.

3. Business inventories at the end of October were about $41,000,000,000.

4. People on small incomes have within the past 15 months used about $10,000,000,000 of their savings, chiefly to meet high living costs.

4. Consumer credit has increased to about $11,500,000,000.

6. Our exports have been running at the rate of $11,000,000,000 to $13,000,000,000 a year above imports, which cannot be kept up indefinitely.

7. Bank loans and investments were on November 1, $135,200,000,000.

The costly advertising campaign financed by industry on the "American way" shows industry knows the insecurity of that way, also markets will soon be falling off.

4. FISCAL POLICIES HAVE FAILED

Corporate profits after taxes, for the first half of 1947 were at an annual rate of about $17,000,000,000 or two-thirds more than the peak war year 1943, while surpluses and undivided profits of corporations are close to $50,000,000,000.

The United Mine Workers Journal, July 15, 1946, states editorially:

"Sooner or later thinking leaders of labor are going to awaken to the fact that, regardless of what has happened in America before, a capital levy tax is the only way out of the financial mess in which the country finds itself."

The "financial mess" is much worse now than when John L. Lewis made this statement:

Interest on the national debt is now over $5,000,000,000 a year, or about twice as much as spent on public education in the Nation.

Congress should recognize that the repeal of the excess-profits tax was in the same category as scuttling OPA. In the year after that betrayal, consumers paid $10,000,000,000 more for food and other goods than under OPA price ceilings.

The Mine Workers' Journal editorial also states:

"The only way to take the poison out of inflation caused by increased Government debt is to levy capital taxes that will wipe out all or part of the debt. Otherwise it will really be boom or bust—OPA or no OPA."

In times of genuine prosperity, or "fool's gold" inflationary prosperity, the national debt should be reduced every year at least two or three times as much as the interest on that debt; by $10,000,000,000 to $15,000,000,000 a year.

That would save $225,000,000 to $337,500,000 in interest every year.

A SEVERE DEPRESSION MAY BRING POLICE STATE OR SOCIALIZED ECONOMY

United States News, December 26, states: "Today, Government activity is the most powerful single force in the Nation's economy. Washington decisions affect the daily life of nearly everybody in the country."

It lists the number of aids and controls as follows: Business—aids, 11; controls, 16. Agriculture—aids, 10; controls, 3. Finance—aids, 6; controls, 6. Individuals—aids, 5; controls, 3.

Instead of free enterprise we have a policing state with a modified balance between aids and controls—Government subsidies to profit-making agencies and land speculators, and subsidies to the victims of exploitation.

A serious depression would make maintaining the present policing state precarious.

The alternatives then, as now, would be:

1. A police state with the police superseding both legislative bodies and courts.

2. A socialized economy with an over-all plan for all production, with due regard for desirable imports and necessary exports.

Unless plans are made now for such a socialized economy, a police state may result by default.

A planned socialized economy would include:

(a) Public ownership of natural resources; natural monopolies, such as the banking and credit system and transportation; and basic industries, such as steel, motors, much food processing and distributing, textiles, and manufacturing of building materials.

(b) Cooperative ownership of much distributive and some extractive and manufacturing agencies.

(c) A large segment of private ownership, including most farms.

(d) Allocation of materials and credit to essential uses.

(e) Taxing land values, big incomes and profits, instead of consumption.

The ERP Tobacco Program

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. ROBERTSON of Virginia. Mr. President, in an address to a meeting of

tobacco growers at Danville, Va., last week, I reminded them of the fact that in the past approximately 40 percent of our tobacco crop has been exported, and emphasized the importance to them of the European recovery program, under which it is proposed to export nearly 2,000,000,000 pounds of tobacco over the 4-year period.

To further emphasize the part which tobacco is scheduled to play in the recovery program, both in preventing surpluses disastrous to our farmers and in providing the type of incentive needed to spur production in western Europe, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the Christian Science Monitor entitled "ERP Tobacco Program Linked to World Trade."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ERP TOBACCO PROGRAM LINKED TO WORLD TRADE

WASHINGTON.—The administration's European program calls for the shipment of American tobacco to Europe in considerable volume.

There have been reports that Europe would prefer to have more food and other goods, than to receive quantities of tobacco. There also have been rumors that American tobacco interests were pressing their product on the European recovery program to establish themselves on the European market.

The following information drawn from official sources may shed some light on the situation.

According to the State Department's commodity study, the amounts of tobacco scheduled to be sent to Europe under ERP are as follows: 50,000 metric tons during April-July 1948; 199,000 metric tons during fiscal year, 1948-49; 212,000 metric tons during fiscal year 1949-50; 202,000 metric tons during fiscal year 1951-52; 663,000 metric tons during 3¼ years of ERP.

MARSHALL STATEMENT

Secretary of State George C. Marshall, speaking at Atlanta, Ga., on January 22, said: "Tobacco is another staple that will be shipped to Europe in considerable volume. It is not as essential as food and clothing, of course, but even under austere living conditions and rationing it is found advisable to make some concessions to human nature. * * * Incidentally, I don't smoke. I did, but now I don't."

The 16 European nations in drawing up their original report on recovery needs listed tobacco as a necessary import. "Though not a food," it said, "it plays an important part in the international trade and in the balance of payments of a number of countries * * * the participating countries as a whole are big importers of tobacco from overseas sources, mainly the United States. Over the next 4 years an increase in European production of 30 percent as compared with prewar production is envisaged * * * total consumption is expected to grow and is reflected in estimated larger imports both from certain participating countries and from overseas."

The 16 countries that met at Paris estimated that their average prewar imports of tobacco reached 215,000 metric tons a year. According to Washington estimates the United States supplied 133,000 metric tons of this, on the average. This fiscal year, though, the United States is supplying these European powers with 182,000 metric tons of tobacco.

FOUR-YEAR PERIOD

While the 16 European countries did not outline where their tobacco needs should come from, they did estimate their individual and collective needs over the 4-year period as follows: 237,000 metric tons during 1947-48; 247,000 metric tons during 1948-49; 258,000 metric tons during 1949-50; 257,000 metric tons during 1950-51; 999,000 metric tons during 4 years.

The United States in its ERP report, however, has estimated their total import requirements (not only from the United States but globally) as follows: 278,000 metric tons during 1947-48; 328,000 metric tons during 1948; 328,000 metric tons during 1948-49; 343,000 metric tons during 1949-50; 344,000 metric tons during 1950-51; 1,621,000 metric tons during the same 4-year period.

The commodity report on tobacco that was submitted to Congress (along with the rest of the Administration's proposed program) has this to say about tobacco's place in Europe's recovery:

"Western European countries customarily import large quantities of tobacco, and the per capita consumption is relatively high, with a pronounced upward trend when sufficient tobacco is available. * * * All countries participating in the ERP program, with the exception of Greece, Italy, and Turkey must import either all or a large percentage of their tobacco requirements."

INTERNATIONAL TRADE

"CEEC recognized the importance of tobacco in the European recovery program, for its part in international trade, and in the balance of payments of a number of countries.

"The import requirements set out in the CEEC report appear reasonable with the exception of the zero requirement listed for western Germany, and no report for France and Switzerland. Included in the suggested revision of total import requirements is an allotment of 17,000 metric tons for western Germany for 1947-48 and increasing to 45,000 metric tons for 1950-51.

"The remaining amount of the increase in the CEEC import figures is accounted for almost entirely by an estimate of about 30,000 tons of imports for France and 10,000 tons for Switzerland, inasmuch as no figure was included in the CEEC total for these countries."

ADJUSTED PROGRAM

"The adjusted program based largely on CEEC information, where it was available, represents a consistent and conservative set of estimates. There is also every evidence that tobacco will be available to the full extent of requirements. The program from the standpoint of the United States is of vital importance in order that customary market outlets may be maintained.

"World trade in tobacco will also make a contribution toward general economic stability, and a reasonable supply of tobacco in European countries presumably will stamp out illegal traffic with tobacco as a medium of exchange."

According to this explanation and the comments of the Secretary:

The difference between Paris and Washington estimates are largely accounted for by the latter including estimates for France and Switzerland that were omitted in the former.

The United States anticipates a greater postwar preference for American blended cigarettes than has been Europe's custom.

From the United States standpoint ERP imports of American tobacco are "of vital importance" if the United States is to "maintain" its customary outlets.

By making tobacco or cirgarettes more available in Europe, the cigarette standard which covers much of Europe's black market may be eliminated.

Keeping Guard on Our Fisheries

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Keeping Guard on Our Fisheries," from the Seattle Post Intelligencer of January 16. This subject is of real importance and interest to every Member of the Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KEEPING GUARD ON OUR FISHERIES

Encouraging progress is reported by Congressman HOMER R. JONES in his efforts to bring about the appointment of an Assistant Secretary of State charged with representing the interests of the American people in ocean fishery matters of international character.

This is of vital importance—not only because of the benefits which would be derived by the fishing industry from such a step, but because of its effect on the welfare and security of the whole Nation.

The Pacific Fisheries Conference, held in San Francisco last September, did not overstate the case in its "Policy for Fisheries—a Policy for Peace" when it declared:

"War or peace may hang upon the fishery clauses written into the peace treaty granted to Japan. Controversies over fisheries have led to war in the past. This danger is doubled today when nations compete for food in order to survive.

"Alone among industries, ocean fisheries are international affairs. In the fisheries alone, Americans compete in physical contact with men of other nations in areas where only international law applies—and few holds are barred * * *.

"Other nations recognize the international importance of fisheries, and the need for a firm voice in their behalf. They have ministers; we have subordinates. In our State Department there is no official of rank who can meet with the fishery ministers of other maritime nations on a basis of equality. Now, when we are granting a treaty of peace to Japan—the foremost fishery nation of the world—there is among our diplomats no authority competent to represent American fisheries."

The Seattle Chamber of Commerce has gone on record in support of the Pacific Fisheries Conference demand, and only this week laid the matter before the Western States Council as part of its program for the development of Alaska. Council approval would bring the concerted backing of all the chambers of commerce in the 11 Western States.

Meanwhile Congressman JONES has been enlisting the support of Senator ARTHUR VANDENBERG, chairman of the Senate Committee on Foreign Relations, and Senator ROBERT A. TAFT, chairman of the Republican policy committee.

Senator VANDENBERG has promised to urge the State Department to give urgent consideration to the matter, and Senator TAFT expressed deep interest in the subject when he visited Seattle last autumn.

Thus we have reason to be optimistic, but we must not be complacent. We must keep up the fight until it is won.

The urgency of the situation was well expressed by Miller Freeman, chairman of the Pacific Fisheries Conference, in his keynote address.

"Almost alone," he said, "America liberated the Pacific, but we do not ask that it be made an American lake. We seek only equal opportunity for our fishermen on this greatest of oceans, but an equality measured in realism which recognizes:

"1. Difference in standards of living.

"2. The iniquity of employing debased currency and debased labor as weapons of international competition.

"3. The rights of Americans in the markets of America.

"4. The preferential position which a record of conservation and protection confers in fisheries.

"Finally, that the young men of the Pacific, who redeemed the Pacific, will not be driven from the sea."

As Mr. Freeman observed so eloquently, we must see that "the things America bought with blood are not given away by visionaries," and an adequate fisheries secretariat is essential for that purpose.

Whisky or Bread

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. ROBERTSON of Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Whisky or Bread?" from the Christian Science Monitor of January 31 last.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHISKY OR BREAD?

The House Banking and Currency Committee has thrown out a Senate bill to extend another month the President's authority to restrict distillers in the use of grain. Mr. Truman has countered with a vigorous message urging a further grant of powers.

Distillers have already tried to make their case in advance. They assert they use less than one-thousandth of 1 percent of the total wheat, and that their use of corn "does not deprive America or the world of a single slice of bread." This is deceptive part-truth.

The great bulk of grain is used on the farm. Percentages mean something only if they refer to grain which reaches the market. This is the grain that sets the price. This is what is available for European relief. Of the domestic commercial consumption, distillers have been using 17 percent of the corn, barley, rye, and sorghum.

The feed supply is so tight that whatever grains the distillers may bid up and buy risks that much wheat being fed to livestock instead of to people. In this situation any grain saved equals wheat saved.

The distillers say they should not be curtailed to save grain while European distilleries go right on using grain. Here they are half-justified, but only half.

When grain is desperately needed for starving people there is no logic or humanity in arguing that all distilleries should run full blast because some are not limited. We would urge that all the liquor makers in all the countries involved in the relief program should be curtailed alike, and that this proviso be made one of the conditions of American aid.

When the distillers cry that all this grain-saving talk is nothing more than a foot-in-the-door for prohibition they drag in a pretty stale red herring. There is no imminent likelihood of reviving prohibition—yet. But if the distillers want to give dry sentiment a real boost, they have only to brazenly mock the aroused humanitarianism of a people. For taking account of all shades of American attitudes, the most that can be conceded the liquor industry is that it is a tolerated business.

The Drift to World War III

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Can We Stop the Dangerous Drift to World War III?" by Dr. Clarence Poe, a reprint from the Progressive Farmer of January 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW CAN WE STOP THE DANGEROUS DRIFT TO WORLD WAR III?

(By Clarence Poe, president and editor)

Someone has recently written a book calling our present period The Age of Anxiety, and that seems to be correct. Our scientists and inventors and captains of industry have made inventions and discoveries that should make this the greatest era of both peace and prosperity humanity has ever known. We have the marvelous machines, the giant factories, the scientific knowledge, the quick transportation, the highly trained workers. And yet we do not have peace * * * only a small part of the world (our part) has reasonable prosperity * * * and a great part of the human race lives under the dread that our military and political leaders, while professing (and probably sincerely wanting) to promote peace are nevertheless pursuing policies that somehow seem to bring us ever nearer to war.

I

And what causes war? Two things—hate and fear. Perhaps we might say three things: 1, Hate; 2, fear; 3, military preparations to wage war. If another man and I increasingly hate each other, and increasingly fear each other, and increasingly arm ourselves with deadly weapons, there is danger of death between us. And so it is between nations. Christianity teaches love instead of hate, calmness instead of fear, and says of warlike preparations, "They that take the sword shall perish by the sword." The reckless radio commentators, daily columnists, militarists, and newspaper publishers who seem to thrive and prosper by promoting hate and fear—they, in my opinion, are more likely to bring on war than anything else. The same sort of cantankerous hotheads in the North and in the South drove our two sections into the war of the sixties—to the everlasting hurt of both sections. We must not let hotheads now drive us into war again. The last words ever written by the late Franklin D. Roosevelt should be read—re-read and memorized by every young person old enough to understand English:

"Today we are faced with the preeminent fact that, if civilization is to survive, we must cultivate the science of human relationships—the ability of all peoples, of all kinds, to live together and work together in the same world, at peace."

Let's readily admit that the Russians have been bad-tempered, unfair, threatening. Instead of answering with more bad temper, threats, and fist-shaking, what would Christianity suggest? Would not real Christianity suggest that more of our leaders say to the Russian people, "The mothers and fathers of America do not wish to have our sons kill your sons. We can never forget that in World War II your heroic 21,000,000 who were killed and wounded in stopping Hitler's legions at Stalingrad and on a hundred other battlefields kept America from having only 1,000,000 casualties. We want no war with a people who sacrified as much as you did for our safety and world safety. The warmongers among us do not represent the real spirit of America."

II

At this point I should like to present not merely my own opinion, but the opinion of some of America's foremost thinkers and writers as to the need for a less combative and more Christian attitude on the part of American leadership. Walter Lippmann has just written after his return from Europe: "Our own greatest danger is that we shall accept a false estimate of the European situation, and of the real alinement of forces, and that as a result we shall be frightened and violent when in fact we should be confident, constructive, and magnanimous. For our real problem is * * * to push toward a settlement which permits the recovery of Europe and of the world, and to relax the tension, to subdue the anxiety, and to end the panic."

Brooks Atkinson who lived for years in Moscow as the able representative of the New York Times sums up the present situation by saying: "We are afraid of Soviet Russia which is afraid of us * * * two powerful nations shaking in their boots at each other and competing with each other in a tempest of rancor * * * Russia is a large country populated by admirable people with infinite potentialities, but led by a handful of fanatical doctrinaires who are scared * * * Russia cannot fight an aggressive war now, nor can she risk provoking war, for she has hardly begun to recover from the appalling losses of the last."

As Pearl Buck, who has lived long in Asia and understands the orientals better than almost any other writer, wrote recently in Look magazine:

"Nothing else but the fear of a new aggression, accompanied this time by a frightful weapon, can stir Russia's people to fresh efforts. What shall we do? Common sense answers very simply, 'Anything except to threaten war.' We should do all we can to work against Communists, first of all by not talking about fighting Russia. Every time an American talks about fighting Russia, he hands a gun to the Communists. They run shouting with it to their people, 'See? I told you the Americans want to fight us!' I do not believe in appeasement. But certainly I do not believe in helping the Communists by doing what they want us to do, and by saying what they hope we will say."

As David Lawrence, one of the ablest and most patriotic American writers, wrote recently in his extremely informing and level-headed publication, the United States News:

"We must be ready to 'debunk' our own course whenever it is palpably wrong. Thus, for example, we deplore Russia's intervention in the Balkans, but we do not consider our own intervention in Greece as violative of the basic principle of nonintervention. We accuse Russia of trying to control the composition of Balkan governments and influence elections, yet we ourselves endeavored to influence the course of the Argentine people when Peron was a candidate. We blame Russia for helping the Communists in China

but we help the National Government there—the side which the Russians call 'Fascist.'"

As Mr. Lawrence continued: "Our Secretary of State went all the way to Moscow last spring and was there 6 weeks and never called on Stalin, the head of the Russian Government, until after the conference had failed and was in process of adjournment. Why?" And Drew Pearson recently quoted ex-Secretary James F. Byrnes as laying down this formula for peace:

"Get people who believe deeply that we can find a basis for working with the Russians. Then support these people to the limit. When they start getting discouraged and cynical, replace them with others who are confident that a solution can be found."

III

We believe Christianity is the only way to save humanity from World War III. In our opinion, Christianity has not been tried by Congress or our President or our State Department. We believe it ought to be tried. Jesus Christ said, "Blessed are the peacemakers"—but all too many Americans now denounce every would-be peacemaker as an appeaser. Jesus Christ said, "They that take the sword shall perish by the sword"—but our militarists want us to shoot first and risk the consequences. Jesus Christ said we should try to conquer our enemies by showing a nobler, friendlier, more patient, and more forgiving spirit than they show—but too many Americans, as Pearl Buck says, play squarely into the hands of the most violent element in Russia by trying to outdo Vishinsky in violence and fist-shaking, proclaiming that we hate Russia and are ready to make war.

Participation of Garfield's Mother in His Inauguration as President

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD an article by a very distinguished writer of my State, Mr. E. E. Patton, commenting on Mrs. Garfield being the first woman to see her son sworn in as President of the United States. I believe it will be extremely interesting to those of us who are fond of United States history.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELIZA GARFIELD FIRST WOMAN TO SEE SON SWORN IN AS PRESIDENT OF UNITED STATES

(By E. E. Patton)

Mary Ball Washington, born in 1707 in Fredericksburg, Va., became the second wife of Augustine Washington who had been a widower 2 years. It is said that he was literally thrown at her feet because of a carriage wreck in London. They were married March 6, 1731, but there is no record to show whether they were married in London or in America. Her son, George, was born February 22, 1732. He always addressed her very formally as "honored madam" and signed himself "Your humble servant." Her farm overseer said: "When I meet the blue lightning of Madame Washington's eyes I feel exactly as if I had been knocked down." Lafayette visited her before going back to France at the close of the Revolution and she was very simply dressed in a house frock.

She attended a big ball in honor of George after Yorktown. On April 16, 1789, George stopped in Fredericksburg to see her while on his way to New York to be sworn in as first President; he seemed to sense that he would never see her again and he did not, as she died in September of that year. Just to show the difference between then and now, it might be mentioned that Washington did not get the news of his mother's death until 2 weeks after she died.

There is a small monument in Fredericksburg on the side of which are carved these words: "Mary, mother of Washington." When the people of this country fail to understand fully these words, there will be no necessity to take thought about the safety of the country, for it will be gone.

Nellie Conway Madison was born at Port Conway, Va., September 29, 1749; married James Madison in 1766, at the age of 17. She belonged to the Episcopal Church, but attended the Presbyterian; she did not formally join the Episcopal Church until she was past 80. We find this in the minutes of the church: "Among the goodly number confirmed by the bishop was the aged mother of the President. She became a communicant at 20 and now at the age of fourscore and four, she came forward to ratify her early baptismal vows." James Madison was the eldest of 12 children. His mother died in 1847, at the age of 98.

Jane Knox, the daughter of a Revolutionary soldier, who was one of the first members of the Order of the Cincinnati, was born in Sugar Creek, N. C. She married Samuel Polk, a man of considerable property for that time. James Knox Polk was her first child, and it is said that one of her neighbors came to see her; looked at the child and said: "Your child is all right, and some day he will be President of the United States." Perhaps we might take that with a grain of salt—perhaps, two grains.

When James Knox Polk was 11, his father moved to Columbia, Tenn., and it was there that young Polk opened a law office and entered political life. Samuel Polk died in 1827 and 2 years later his widow married a man by the name of Edens. She died in 1852, at the age of 76.

Hannah Simpson was born November 3, 1798, in Pennsylvania; moved to Ohio in 1818; married Jesse Root Grant in 1821. They lived in Point Pleasant, Georgetown, and Bethel, Ohio, but in 1854 they moved to Covington, Ky., and remained there until the death of Jesse Grant in 1874.

While her son was in the White House she did her own housework and was never in Washington during his 8 years in the Presidency. Her husband and her daughter went to Washington for the first inauguration in 1869 and Jesse Grant saw his son inaugurated the second time in 1873, the only man in our history to witness two inaugurations of his son. One history says that when Jesse Grant visited his son while he was President that he stayed in a modest hotel; but I have seen it stated that he was a guest in the White House, and I think the latter is correct.

Jesse Grant died in 1874, and his widow went to New Jersey to live with one of her daughters, but she did not go to the White House while on her journey to her last home. She died in 1883, at the age of 85. The New York Herald mentioned her death in a 3-inch obituary column. It might be of interest to the people of Knoxville to know that Judge Hugh Simpson is related to U. S. Grant's mother.

Eliza Ballou Garfield was born in New Hampshire in 1801; moved to Ohio in 1819. It is said that her husband's wedding gift to her was a three-legged iron kettle. Her husband's name was Abram and her youngest child was named James Abram Garfield.

When young Garfield was about 3 years old his father died after an illness of 2 or 3 days. The neighbors came in, made a coffin, and prepared him for burial. While they were waiting for the funeral hour this innocent youngster was calling for his father. The neighbors shook their heads and said they didn't believe that "Mrs. Garfield will ever raise her three children. She'll just have to bind 'em out."

But she lived to see her son sworn in as President of the United States, the first woman ever to have that experience. Other women were living when their sons became President, but they did not see the ceremony. When he had taken the oath he stooped down and kissed his mother.

Nancy Allison McKinley was born in Ohio in 1811. She was less than 5 feet tall, but what she lacked in physical stature she made up in energy and determination. She was a loyal Methodist and it is said that she did everything about her church except the preaching; that the janitor work was often done by her. She wanted one of her sons to be a bishop, but this never happened.

Once when she was on her way to Columbus, Ohio, to see her son when he was Governor a stranger asked her if she knew anyone in Columbus. She said, "Yes; I have a son who lives there," but she did not disclose her identity. When she was a guest of her son when he first went to the White House she is reported to have asked the President if he kept a cow. He replied, "Mother, I have not been here long enough to find out."

I Belong Here

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. LODGE. Mr. President, in the January 17 issue of Information Service, which is published by the Federal Council of the Churches of Christ in America, there appeared the account of an address recently delivered by Archbishop Richard J. Cushing, of Boston, delivered before the ninth constitutional convention of the CIO. It is such a remarkable address, and so full of newness of thought and real inspiration on the relations between man and man and between man and God, that I ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The CIO has published in pamphlet form under the caption, "I belong here" the address of the Catholic archbishop of Boston, Richard J. Cushing, delivered in that city on October 13, 1947, before the ninth constitutional convention of the CIO. A letter signed by James B. Carey, secretary-treasurer of the organization, commends the address to the attention of ministers as one of the most remarkable expressions of sound social views ever uttered by a churchman. Excerpts from the address follow:

"I am glad to come this morning because Mr. Murray invited me. But I am also glad to come because I belong here. I am a priest, an archbishop. As such, I am by office and should be by my every personal action the representative of One whom 20 centuries have hailed as their High Priest. To the eyes of other men, the Saviour appeared as a tradesman—a worker—and all those who share His priestly office should be found

present wherever men are gathered who share in the labor which was the earthly vocation of Jesus Christ.

"For this reason, priests have always belonged close to the ranks of labor, whether organized or not. In the Old World, as the late pope once remarked, the tragedy of both religion and of labor for several generations has been that too many factors and forces came between some of the priests and many of the working people. * * *

"Here in this country, in the New World, there has never been the cleavage between the working classes and the clergy against which Cardinal Manning raised his voice. Not long ago the present pope, speaking to a large gathering of Italian workers, said: 'Visit countries where the church can live and act freely, even if its members are only a minority, as for instance in the United States of America. Penetrate there in the huge organizations of industrial life. You will not find any trace of conflict between the church and working world.'

"How could there be? In this country it has been working people who have built the seminaries in which our priests are trained. Our institutions have no princely patrons; they are monuments to human labor and to the generosity of hard-working men and women. Workingmen not merely built and paid for our seminaries, they sent to them some of their best sons. I have said this before, but it is important to repeat it here: In all the American hierarchy, resident in the United States, there is not known to me one bishop, archbishop, or cardinal whose father or mother was a college graduate. Every one of our bishops and archbishops is the son of a workingman and a workingman's wife. That is one further reason why I belong here this morning. * * *

"The aims of the CIO are those of the trade-union movement and of organized labor generally. These are chiefly three: (1) the organization of the working men and women of America, without reference to race, creed, color, or nationality, for mutual aid and protection; (2) the establishment of sound collective bargaining and wage agreements; (3) the promotion of legislation to safeguard economic security and social welfare, and to extend democratic institutions, civil rights, and liberties.

"For my own part, I cannot see how any man in his right mind, certainly how any American with the slightest comprehension of Christianity, can complain about those objectives. * * * The trade-union movement has long since established its reputation for Americanism and its right to be heard. Whatever mistakes it may have made—and they are no more than those of other groups—to whatever excesses it may have gone—and these are easily balanced by those of its critics—the trade-union movement is now a permanent part of the American picture. Labor is organized and it is organized to stay * * *

"I know the criticisms which are made of organized labor and I know, as do most people, the lines currently used in the campaign against unionism. You know them even better than I do. Some of the current criticisms may have some foundation in fact. If they do, you are in a far better position than your critics to know what these facts are and how to remedy them yourselves. Many of the criticisms of organized labor, its power, its proposals, its principles, come from men who would stop at nothing to bring back days to them dear but to the rest of mankind happily dead.

"In any case, there are no problems arising out of American organized labor, no problems internal to the labor movement or external to it in its relations with the rest of the community, which American labor cannot solve in an American way within the framework of American law and in the best interest of the American people. * * *

"When I hear the excited talk about this, that, or the other problem allegedly created by organized labor, I remember a famous report Cardinal Gibbons filed with regard to one of the earliest efforts at labor organization in the United States. You know, in his day an effort was made to discredit labor organizations and even to bring about religious condemnation of certain aspects of the labor movement. Men, professing to be the friends of law and order, when really they were the foes of both so far as working people were concerned, attempted to aline the church against the new labor organizations and the labor movement identified with them. The enemies of labor were powerful; they brought their case all the way to Rome. They knew then, as they would know now, that the great masses of American labor are loyal to their religious leaders and are inclined to hear with respect the voice of religion.

"The Roman authorities asked Cardinal Gibbons what he thought of the dangers said to be present in the labor movement as of that time; the alleged danger that the wrong people might take over, the possibility of top-heavy power, the menace of political abuse, and all the rest of it. The cardinal was a calm man. He knew America and he knew Americans. He took a long-range view of all questions involving the conflicts or competitions of the various groups which make up America and when that conflict was at its hottest he would point out that the lasting concord in a Nation like ours can only come out of conflict fairly faced and honorably settled. So when they asked him whether the labor movement should be condemned because a lot of people had become upset about certain aspects of it, the cardinal replied: 'The American people behold with perfect composure and confidence the progress of our social contest, and have not the least fear of not being able to protect themselves against any excesses or dangers that may occasionally arise.' * * *

"I have read with interest some of the deliberations of both management and labor concerning the so-called guaranteed annual wage. I know labor's position on this proposal. The worry of the workingman has traditionally been this: Jobs today—but what will happen tomorrow? Up to now many millions of Americans have been unable to answer that question for themselves. As a consequence they live in a fear which God never intended should be theirs. A wage earner must have steady work and pay this week, next week, and all the year round if he is to have security. Only an annual wage is an adequate wage. So runs the labor argument and it is a hard argument to answer. * * *

"The other positive point toward which I would direct your attention is concerned with certain questions of foreign policy on which organized labor has already shown a willingness to declare itself. Unfortunately at the moment, attitudes toward foreign policy are complicated by what are called 'conflicting ideologies.' Now I do not know what an 'ideology' is. I suspect the word of being a catch phrase, a 'phoney' word which can't be defined and which is therefore used to describe something not worth defining. Nowadays we hear a lot about fighting 'ideologies,' and, here too, I am not sure how you go about fighting an 'ideology.' But I know what hunger is—and I know how to fight that. You fight it with food. I know what poverty is. You fight that with money. I know what winter is. You fight that with coal and clothing. I know what discouragement is. You fight that with friendship and friendly deeds. I know what fear is and defeatism. You fight them with faith."

Our Monetary and Credit Problems Today

EXTENSION OF REMARKS
OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1948

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Our Monetary and Credit Problems Today," by M. S. Szymczak, member of the Board of Governors of the Federal Reserve System, on January 22 last, at the annual stockholders' meeting of the Federal Home Loan Bank of New York.

I am informed by the Public Printer that the address is estimated to make 3½ pages of the RECORD, at a cost of $248.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHANGED SITUATION IN OUR MONETARY AND CREDIT PROBLEMS TODAY

Since the days when I was active in the operations of building and loan associations, many changes have taken place—changes in the number and size and activities of building and loan associations, and changes in the operation of our economy and the organization of our society. The problems which confront the central banking authorities with which I have been associated are also reflected in the problems with which you have to cope.

In 1914 the United States was a debtor Nation; a substantial part of national development had been and was being financed abroad. We were in the process of shifting from a predominantly agricultural Nation to a predominantly industrial and urban Nation. Our conventional patterns of finance drew no distinction between the fiscal position of Government and that of individuals and businesses.

There were about 6,600 organizations of the type we think of as building and loan or savings and loan associations, as compared with about 6,000 today. These associations, through the thrift and saving of their members, had accumulated total assets of $1,360,000, as compared with about $11,000,000,000 today. At the same time, there were about 26,000 commercial banks with total deposits of about $17,000,000,000, compared with about 14,000 banks today with deposits of $140,000,000,000. The Federal debt was only $1,000,000,000. Today it is two hundred and fifty-four billion.

Our pre-World War I economy was a composite of regional economies. Perhaps the heart of our central banking problem at that stage of the country's development was to reconcile the monetary and credit needs of major regions and to maintain a balance between these needs. It was largely with this end in view that the Federal Reserve System was established. At that time there did not seem to be any necessity for separate provision to balance special needs of the various regions for mortgage credit.

When the Federal Reserve Act was revised substantially two decades later, between 1933 and 1935, the Nation had become a great creditor country internationally and a great industrial economy domestically. Our monetary and credit problem had changed from the problem of distributing funds among regions—which had been solved fairly well—to the problem of controlling the total sup-

ply of money and equating this supply to various national uses. In addition, the economy had gone through a great war, two great "booms", and two great "busts." The war, the booms, and the busts were national in ramification. While regional differences in economic organization still existed, the reality of regional interdependence was a more fully demonstrated fact than ever before in our history. During these two decades there were indications that traditional methods of mortgage financing were not completely adequate. We had the notable experiment with various kinds of mortgage bonds, mortgage participations, and "guaranteed" mortgages, and we had the notable failure of traditional mortgage financing methods in the Florida "boom" and crash.

Our great "bust" in 1929 had been particularly severe and its aftermath was widespread bankruptcy, unemployment, and poverty. The economy's critical problem of that period was idle men, idle machines, idle money. It was determined to solve the problem on a national basis. Fiscal policy and central banking policy became, more directly than formerly, the instruments of national economic policy. Many new agencies, among them the Federal Home Loan Bank System, were created to complement these two major instruments of national policy.

Once more we find ourselves in a new period. We have again gone through a great and devastating war. The war has changed our position in international affairs, and we find ourselves overwhelmingly a creditor.

The balance of power between capital and labor is different from what it was in 1914 and 1935, and is still changing. The relationship between creditor and debtor has also changed, in important part because better financial arrangements and techniques have been worked out. Banks make one kind of arrangement with farmers for the repayment of loans and a different kind of arrangement with manufacturing concerns, each arrangement calculated to fit the operations of the borrowers. Relatively little mortgage credit is extended today for the short periods of 1, 3, or 5 years which used to be conventional. Most mortgage lenders have adopted the practice of writing long-term amortized loans which building and loan associations were pioneering in 1914.

The Government is no longer merely another borrower in the market. It is by far the largest borrower. The Federal debt accounts for nearly three-fifths of the entire indebtedness of the country, and interest on the debt is a major item in the Federal budget, amounting to more than $5,000,000,000 a year. In this situation, special arrangements have had to be made for selling and managing the public debt. The Treasury and the Federal Reserve work closely together in issuing, retiring, and refunding the debt. This greatly increased importance of the public debt is one of the major factors in the present inflation.

Why has this increase in the public debt contributed so strongly to inflation? If we understand this point, we shall understand why some of the problems of the Federal Reserve System are so difficult to handle.

During the war, the Government spent more than twice as much as it collected in taxes, making up the difference by borrowing. Producers—workers, farmers, and business organizations—were paid for all the production of the economy, but the taxes they paid were less than half the money spent by the Government for the goods and services needed to win the war. Producers, as consumers, therefore, were left with more money to spend or save than the value of the goods and services they could buy. To some extent, they used these excess funds to bid up prices, but because we were at war, and because some goods, such as automobiles and many others, ware not available, controls were effective in spreading the supply of goods and services and restraining price increases. People, therefore, saved. Some of the savings were in currency, some in bank deposits, and some in other liquid assets, particularly Government securities.

The country's aggregate money supply, as measured by currency in circulation and privately held demand, time, and savings deposits, is two and a half times as large as at the beginning of the defense program, about $168,000,000,000, compared with sixty-six billion in June 1940. In addition, the general public, outside of banks, insurance companies, and Government agencies, increased its holdings of Government securities to $105,000,000,000, or nearly seven times as much as in June of 1940. These Government securities in the hands of the public are practically the equivalent of money because they are readily convertible into cash. In sum total, this stock of purchasing power available to buy the current output of goods and services amounts to almost $273,000,000,000, compared with a stock of about eighty-two billion in 1940.

Most of this expansion in the money supply and liquid assets in the hands of the public occurred during the World War II period. However, further expansion has taken place over the postwar period, and in recent months the expansion has shown marked signs of acceleration. This recent acceleration of expansion largely resulted from very active bank lending to businesses and individuals.

Since the war the economy has been operating very close to capacity, and the general public has shown a pronounced disposition to enjoy all the things that were in short supply during the war, from shirts and socks to automobiles and houses. People have been willing to spend their current incomes and dip into some of their accumulated savings. They have also supplemented these funds by borrowing from banks and other lenders, and by buying on installment credit. As a result of these strong demands for goods and services—demands in excess of supplies—prices have risen, and we have had inflation. As long as the volume of goods and services available, valued at current prices, remains less than the amount of money being spent inflation will persist. This condition, in fact, is the essence of inflation.

Two other factors are adding to inflationary forces. First, the addition of productive facilities to the economy is going on at a rapid pace. Second, our large export surplus. On the first, producers are paid now for turning out machinery and building warehouses, factories, and houses, and, on the second, producers are paid now for making the goods which are being shipped abroad. But goods and services to match these incomes will be turned out by the machinery and buildings only over a period of years, and it will also take some years for us to receive goods and services from abroad in payment for our exports financed through loans.

Both expansion of productive capacity and the export surplus have resulted in additions to the money supply through the creation of credit, and by the use of funds previously held idle. An additional source of increased money supply has been payment in gold for some of our exports of goods.

This brings me to the problem which confronts the banking authorities and about which the Federal Reserve Board is deeply concerned, for it shows clearly the changes which have taken place in the tasks of the Federal Reserve System.

Here it is.

Taken as a whole, the commercial banking system is fundamentally a mechanism for creating money—for allowing borrowers to spend money which no one has saved. This is in contrast to other types of lending—lending such as your institutions, or savings banks, or insurance companies, or individuals do—which is a matter of transferring savings from those who have them but do not wish to spend them to those who do wish to spend them.

It is true that limits are set to the amount of credit banks can create by the legal requirement that they must hold cash reserves to the extent of some proportion of their deposits—which deposits are themselves largely the result of loans and investments. Banks which are members of the Federal Reserve System, which hold 85 percent of all commercial-bank deposits in this country, must hold their reserves as deposits with the Federal Reserve banks, and no income is derived from these reserves. On the average, required reserves amount to about one-sixth of commercial-bank deposits. For every dollar of reserves, credit can expand six times.

Reserves are the heart of commercial banking, and control over commercial bank credit has traditionally been exercised by control of these reserves. Three techniques have been used to exercise this control: (1) Varying the rediscount rate, or the rate of interest at which member commercial banks may borrow from the Reserve banks; (2) open-market operations, or the buying and selling of Government securities by the Reserve System; and (3) varying the level of reserve requirements, that is, the amounts which member banks deposit with Federal Reserve banks as legally required reserves.

Two of these techniques for controlling bank reserves—discount rates and open-market operations—are not so effective as they once were, while the third—varying the level of reserve requirements—was exhausted under present law as a restraining weapon early in the recent war, except for a relatively small percentage in central-reserve cities—New York and Chicago. The present limited effectiveness of available credit-control technique is due almost entirely to the size and wide distribution of the public debt largely inherited from the war. Commercial banks now hold $70,000,000,000 of Government securities, an amount equal to about 50 percent of their total demand and time deposits, which they can sell in order to obtain additional reserves without borrowing from the Reserve banks.

The traditional open-market operation to reduce excess bank reserves is for the Federal Reserve System to sell Government securities, thus drawing down private deposits at commercial banks. In turn, this draws down the reserves of commercial banks by reducing their deposits with the Federal Reserve banks.

Here, however, we come up against the problem of management of our huge public debt of $254,000,000,000. If the Reserve System were to sell enough Government securities to reduce bank reserves and curb credit expansion, it would involve great dangers for the entire economy. To make possible this volume of sales, the prices of Government securities would have to be permitted to decline. With a marketable public debt held by investors other than the Federal Reserve banks amounting to $143,000,000,000, no one can say how great this decline in prices would have to be. As prices declined because of Federal Reserve sales, investors would suffer capital losses and in turn would be encouraged to sell their holdings while their losses were still small, and these sales would further drive prices downward. In brief, Federal Reserve open-market operation to reduce bank reserves might lead to a disruptive decline in Government-security prices, which might spread to the prices of other securities. This is a risk too serious to contemplate.

Traditional open-market policy would also have serious consequences for the Treasury. As prices of bonds decline, their yield, or effective interest rate, rises, and, if Government securities were to fall seriously, all future Treasury financing would have to be done at higher interest rates, thus raising the

cost of servicing the Government debt. Also, in such a market, the price at which the Treasury and other borrowers could sell securities would be altogether uncertain, and this uncertainty would interfere with the orderly management of the public debt as well as the orderly financing of private corporate investment programs.

On the other hand, the Federal Reserve System through its open market and discount policy in close cooperation with the Treasury, has already recognized that interest rates have undergone an upward readjustment, probably in response to temporary forces. It has recognized this, first, by lowering the support price (increasing the yield) on short-term Government securities, and second, by lowering the support price on long-term obligations (with assurance, however, that support of the lowered levels would be aggressive and continued for the foreseeable future), and third, by the increase in discount rates from 1 to 1¼ percent. It seems much better to us to permit interest-rate changes in this manner than to leave the economy's marketable debt to find its own interest level in a free market, dominated by Government securities.

It should be apparent from what I have said that the most important change in the problem facing the central banking authorities is the greatly increased influence of the public debt in our monetary and fiscal affairs. After the First World War the public debt ($26,000,000,000) could be looked on as merely another set of obligations—to be allowed to find their own price level in a completely free market. This policy, which was in line with traditional attitudes, resulted in large losses to many individuals and businesses, but these consequences were not nearly as serious as those which would result from a similar policy now. The public debt today is a factor to be reckoned with in all public and private decisions. Both its size and its wide distribution have given it great leverage in monetary policy and economic conditions. Moreover, the fact that the Treasury, unlike other borrowers, must constantly refinance its debt makes stability of the market for the public debt particularly crucial.

The increased importance of the public debt is also a factor in another situation which has received relatively less attention in public discussion. This is the shift which has taken place from the hands of the banking and fiscal authorities of a significant part of the control over the supply of money. I have already mentioned the primary difference between bank credit and credit extended by other lenders—namely, that nonbank lenders lend only savings which have been accumulated by savers, while banks also make available to borrowers funds created by the 6 to 1 expansion of deposits to which I have referred above.

It has been customary and, in the main, correct, to say that loans made by nonbank lenders add nothing to the money supply. Today this is no longer true. Before we can say whether a loan by, for example, an insurance company or a savings bank or a savings and loan association adds to the money supply or not we must know where these funds were obtained.

Take an insurance company for example. In the first place, of course, the insurance company obtained the funds from its policyholders in the form of insurance reserves on policies; that is, policyholders' savings. In this sense the funds were saved by the policyholders. But this is not the full answer. For if the insurance company had these funds invested in Government securities, and, in order to make a loan, it sold these securities indirectly to the Federal Reserve banks, it added to the money supply, or at least to the potential money supply. Such an addition to the money supply results because when a nonbank investor sells Government securities, their prices tend to fall, and if prices threaten to fall too far, the Reserve System buys in order to preserve a relatively stable and orderly market for these issues. This increases private deposits at commercial banks, and the deposits of commercial banks at the Federal Reserve banks, thus increasing bank reserves, and the capacity of the banks to lend. The effect, in other words, may be just as inflationary as if commercial banks had sold the securities. The insurance companies, the savings banks, and the savings and loan associations are apostles of thrift and foes of inflation and yet by selling Government securities to add to their currently available funds for investment they are contributing to inflationary pressures.

In the light of all these considerations, the Federal Reserve Board has recommended to Congress the adoption of a plan which we feel would restore some of the powers over the money supply which have been lost because of the great increase in the public debt. Very simply, this plan involves a temporary increase in reserves which all banks would be required to hold, except that instead of being legally required to add to their cash reserves, banks would be permitted to hold certain income-producing assets, namely short-term Government obligations.

We could, of course, ask Congress to raise the limits to which required cash reserves may be increased, but it now appears to the Board that to increase required cash reserves by this means far enough to be relatively certain of restricting bank credit by an amount that may be required, would mean reducing the earnings of banks below expenses and a reasonable return on capital. This, however, in my opinion, may become an alternative to the special reserve plan proposed by the Board.

We recognize that the Board's proposal is no cure-all and that it would only deal with a part of the inflationary problem. But the proposed measure would constitute an important, available restraint, which is now lacking, on bank-credit expansion in the present inflationary situation.

There is likely to be little need for the suggested special reserve during the next 3 months because of the large amount of Treasury surplus funds, taken from the market through taxes, which will be available to retire bank-held public debt. This will temporarily exert pressure against bank-credit expansion. If inflationary bank-credit expansion continues after this period, however, and if further Treasury surpluses are foregone in favor of tax reduction, the need for restraining pressure will be urgent. It is better to have power to deal with the situation when it develops rather than to have it provided, if at all, too late to be used.

The urgency for the Federal Reserve Board's proposal, or some other proposal to curb credit expansion, will be especially great if we relax our current fiscal policy while inflationary dangers exist. Fiscal policy is by far the most effective way to deal with the demand side of inflation just as production and particularly more production per man-hour is the most effective way to deal with it on the supply side. This means rigid Government economy and deferment of all deferable expenditures. It also means as large a surplue of tax receipts as possible so that dollars are removed from the spending stream and used to retire public debt held by the Federal Reserve System. This takes dollars out of the money supply by an equivalent amount and is a reversal of the wartime process by which the money supply was expanded. The classical precept of sound finance that debt should be paid off in boom times has peculiar virture in the case of a public debt the size of ours, so much of which is held by the banking system.

There is still another side to the credit picture.

As you know, curbing of inflationary pressures cannot be accomplished by monetary and fiscal policy alone. Among other necessary measures are appropriate private decisions. You, for example, must ask yourselves whether, as a group, you are extending mortgage credit on a sound basis—credit which will stand up in whatever storms are ahead of us. In this connection, I commend to your attention, as well as to the attention of all bankers, the program formulated several weeks ago by the American Bankers Association and the joint statement on "Bank Credit Policy During the Inflation," issued November 24, 1947, by the Board of Governors of the Federal Reserve System, the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Executive Committee of the National Association of Supervisors of State Banks.

As you can see, I have so far spoken almost entirely about a fairly technical side of the inflation problem which confronts the monetary and fiscal authorities, that is, about how the supply of money is being increased. Another, and just as important, problem is how this large and increasing supply of money is being used. Here, again, developments have removed a substantial measure of control over bank lending from the hands of the banking authorities.

Banking authorities have always exercised some measure of influence over the kind of loans and investments made by banks as well as over the total volume of their credit. Such influence has been exercised by way of statutory prohibitions of limitations, by way of varied privileges of access to Federal Reserve credit, and by way of bank supervision. Statutory prohibitions and limitations have generally been quite inflexible. Federal Reserve influence on the kind of lending done by member banks has usually been accomplished, therefore, by keeping informed as to the credit policies followed by member banks and limiting the access to Reserve bank credit of those member banks found to be following unsound policies. Bank examination policy is also adapted, in cooperation with other supervisory authorities, to changing conditions.

Developments over the past 15 years, particularly in Government programs, have modified the effectiveness of the powers of the central banking authorities. This modification is particularly marked in the case of real-estate loans. It would be rather difficult, for example, for the Federal Reserve Board to say that banks with large mortgage loan portfolios shall be denied the right to borrow at the Reserve banks—even if rediscounting had any significance today—when a large part of bank real-estate loans are guaranteed by the Federal Government, either in whole or in part. Similarly, in these conditions, a bank examiner might have some difficulty in persuading bankers to reduce the volume of their guaranteed real-estate loans or to establish additional reserves against them.

It is probably not correct to say that restraint or encouragement of credit expansion through central bank credit and supervisory policies ever exercised a decisive influence on the lending activities of nonbank lenders. It would be equally incorrect, however, so say that such policies in the past exercised no influence. Central banking policy gradually came to exert a broad influence over national credit conditions and the prudent nonbank lender took these conditions carefully into account in shaping his own lending program. But since the middle thirties, financial developments, particularly those of wartime, have tended to reduce the influence of central banking policy. In addition, the link between important sectors of the credit market has been weakened at several points.

In the case of mortgage credit, for example, where this change is most pronounced, programs and practices instituted since 1932 have resulted in almost complete separation of this field of lending from general credit policy. Even mortgage lending by commercial banks has been largely sheltered from the influence of general credit conditions. Loans underwritten by the Federal Housing Administration and the Veterans' Administration are obviously difficult to discourage by ordinary techniques of bank credit control when they are being encouraged on social grounds by other agencies.

Your own organizations, the savings and loan associations, are adding to the problems of restraining inflationary credit developments, again largely because of Federal programs developed since the passage of the original Federal Home Loan Bank Act in 1932. Let me say here that I would not argue for one moment in favor of returning the savings and loan business to the conditions that existed before that date. Then, there were no effective restraints on savings and loan lending except the volume of capital available to associations, and you suffered severely as a consequence. There was no effective means for transferring funds from areas of oversupply to areas of scarcity, and developments in real estate were uneven as a result. There was not sufficient protection for shareholders against either mismanagement or unfavorable economic conditions—and many investors lost heavily through no fault of their own.

The savings and loan system has been strengthened to perform its functions, and that is a good thing. We must face the fact, however, that this very strengthening of the system has made it independent of national credit policy, in a way it never was before. Funds are attracted to a savings and loan association as much by the insurance of share accounts as by an association's reputation for being a sound, well-managed institution. The right of borrowing from the home-loan banks makes it possible for associations to make more real estate loans in a community than there are savings in the community available for real estate lending. The capacity of the home-loan bank system to borrow in the general money market makes it possible to channel the funds available for investment in institutions sponsored by the Federal Government into the particular field of real estate. All of these conditions, among others, have given savings and loan lending a degree of independence it never had in the days when the only resources of an association were the investments of its shareholders and depositors and loans from commercial banks.

Let me emphasize that the present condition is much sounder than the earlier condition. Home-mortgage credit, accounting as it does for almost a fifth of all private debt, is important enough in the economy to warrant special facilities operating under special legislation. Just because it is so important, however, its general policies need to be related to and integrated with broad national policy in the credit and fiscal areas. Mortgage credit can and does add to inflationary pressures at a time like the present. I know you realize that credit is needed to finance the construction of houses and you are making more and more of your loans for this purpose. You are also aware that credit extended for the construction of more houses than can be built with the materials and labor available drives prices upward and I am sure you are limiting your lending in such a way as to minimize these price pressures. As experienced businessmen you know not to lend money to Tom Jones just so that he can pay more for a house than Harry Smith can afford, because that is the way bad loans are made and bad loans seem to have a way of staying on the books longer than good loans.

And now let me summarize and conclude my remarks on this occasion.

Important changes have taken place in the structure of our economy and in the organization of our society. As a result central banking and fiscal policies have lost a large part of the influence they once exerted over the supply of money. The credit and monetary control thus lost has not been placed in other hands but has been diffused throughout all financial sectors. At the same time, national influence over the use to which the money supply is put—never as strong as control of the supply itself—has been weakened, partly by these same forces, partly also by the independence which particular credit programs have had because they are specially sanctioned and encouraged by the Government for social reasons.

The Reserve Board has recommended adoption of a special reserve plan which it believes would restore a desirable degree of control over the money supply. I suggest that the reconstruction and strengthening of policy controls over the use to which the credit supply is put also requires careful and conscientious study. I do not suggest that we keep reaching out for more power and more controls, but I am aware of the fact that in honestly and sincerely seeking to promote economic stability at a high level, new effective techniques may have to be devised to meet the changing situation. For many years the Board has been able to control the flow of bank credit into the securities market, and during the war it was given the task of regulating consumer credit. The Board has recently asked Congress to renew this power, at least so far as installment credit is concerned.

It is possible that central banking policy will find the instruments necessary to perform its tasks under the new conditions which we face in a combination of traditional controls over the supply of money and selective controls over the use to which credit is put. If this be so, cooperation will be necessary between the central banking authorities and other agencies. For example, the mortgage credit field may be one in which such coopertation will be fruitful. At any rate, this is a question that you and we should be studying at this time, both separately and jointly.

The problems which monetary and credit policy must face today are different from those of a few years ago. On our success in finding ways to deal with these problems will depend in no small measure our success in reaching the goal of sustained prosperity.

Coal Production in the Ruhr

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. KELLEY. Mr. Speaker, the current issue of Time magazine carries a statement by Gen. Lucius Clay that the tonnage of coal in the Ruhr district is about 254,000 tons daily. I do not know why the General is boasting, for he has no reason to do so. In fact, it should be embarrassing to him, or to anyone else with authority over there, to mention it at all. To realize this, all one needs to know is that this tonnage is only one-third of the normal, prewar production of that area. Even after the peace was signed and our troops were in control of the area under General Eisenhower, the production of coal stood at about 400,000 tons a day.

The new bizonal arrangement, whereby we share responsibility with the British for production of coal in the Ruhr, does not seem to be working out so well, as many of us suspected. Last summer, just before the transition from British to dual control, the production was about 230,000 tons a day. Some spokesmen for the War Department here in Washington said then it would be up to 300,000 tons by the end of 1947, which was a laughing matter to those who knew something about the situation.

This condition would not be so serious or be the subject of comment if it were not that coal production is so important to the recovery of western Europe. There can be no recovery or success of the Marshall plan without full production of coal in the Ruhr district. That is indisputable, for coal is basic and this is the area from which it must come.

I do not know where lies the responsibility for failure to bring about greater coal production in the Ruhr and failure to repair the chemical plants, especially for the production of nitrogen or fertilizer. Fertilizer plants have been lying idle or have been dismantled. The production of nitrogen was in the neighborhood of 700,000 tons a year before the war, and now it is about 150,000. In the meantime the shortage must be made up by shipments from the United States, where it is also badly needed. This would be unnecessary if there were ample coal production in the Ruhr and by rehabilitation of the byproduct coke plants.

Let us do away with this short-sighted policy and get rid of people who cannot see beyond their noses in this. Last summer, on returning from Europe, I said, and also told the President, that the quickest way to get production in the Ruhr district was for us to assume responsibility for the operation of those mines and coke plants and put our own technicians, engineers, and managers in charge. I am satisfied that we could do the job as it should be done, instead of having people over there sitting around playing tiddlywinks with coal production while the taxpayers of this country pay for their indifference.

Until recently, and perhaps now, we had no one on our staff in Germany who knew anything about coal production, no competent engineers, no experienced managers.

Building Citizenship

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a

report on the book, Building Citizenship. This report was rendered by a Subcommittee on Health, Education, and Recreation of the District of Columbia. I commend the reading of the report to my colleagues.

REPORT ON THE INVESTIGATION OF THE TEXTBOOK ENTITLED "BUILDING CITIZENSHIP"

The Subcommittee on Health, Education, and Recreation of the District of Columbia Committee held executive hearings on December 4 and 6, 1947, and January 15, 1948, on the book, Building Citizenship. At these meetings the Veterans of Foreign Wars, represented by Charles F. Sullivan, Jr., the American Veterans Committee, represented by Maynard B. DeWitt; the author of the book, Dr. Ray O. Hughes; and Dr. Hobart M. Corning, Superintendent of the District Schools, were heard.

The subcommittee finds that the book Building Citizenship is now used in several States and a number of jurisdictions. The subcommittee realizes that dealing with school textbooks and suggesting how and what to teach the growing child is a delicate and complex problem. The results obtained from any instruction depend a great deal upon how the teacher presents the subject. The teacher surely directs and molds the thinking of the students.

Our free public schools are distinctly an American institution. Under this system every child is entitled to an equal opportunity for a sound education. The American taxpayers support our educational system, and they have the right to demand that our schools be really American in viewpoint and influence. Our educational system is the bulwark of our freedom and generally enjoys the confidence of our people. It can only enjoy this confidence if it is kept free from politics and propaganda.

The Board of Education, Superintendent of Schools, and the teachers of the District of Columbia are legally and morally charged with the responsibility of education in the District of Columbia. In that respect they are more than individuals. Textbook writers guide the thinking of classes using textbooks. They are in a powerful position to mold the plastic minds and the attitudes about our American way of life. The subcommittee feels that all educators should aim to educate the children and influence their faith and belief in the basic principles upon which our liberties are founded. They should allow no subversive ideologies to be taught to our children.

The subcommittee feels that the book Building Citizenship needs revisions because there has been an overemphasis on the unfavorable aspects of our American way of life and history, with an underemphasis on the favorable aspects or an omission of their mention entirely. There has been too much said about poverty, depression, unemployment, and other ills, but not enough mention of the tremendous economic and social progress made by our people.

The subcommittee likewise is of the opinion and recommends that now and in the future those responsible for the selection of textbooks and the textbook committee of the Board of Education carefully review year by year all social studies and teaching materials that are used in the District of Columbia, taking into consideration the rapidly changing events of the world.

The book in question, Building Citizenship, consists of some 700 pages and is used in the District schools as a basic book of instruction, starting with the ninth grade. It attempts to cover the entire field of history, civics, government, and related subjects.

The Veterans of Foreign Wars appeared before the subcommittee condemning certain sections of the book as not teaching good Americanism. They make a particular reference to the quotation from the immigrant who said, "America—a place like heaven for the rich and like hell for foreign worker." The subcommittee feels that this statement is not properly counterbalanced by statements from immigrants, and there are millions of them, who praise our country. The quotation serves no useful purpose if, as the author stated, it was included to teach consideration for immigrants. The statement or similar reference should be more comprehensive or omitted.

The subcommittee feels that the reference to the teaching concerning the respective religions and the life hereafter, criticized by the Veterans of Foreign Wars which appears at the bottom of page 181, are objectionable and should be deleted in any future editions of the book. The author has agreed to make the necessary changes.

The subcommittee feels that in many instances the conditions in Russia and its type of government have been inaccurately reported. It should be remembered that this book is being used by youngsters in the ninth grade who are approximately 14 years of age. Their minds are receptive and pliable and great emphasis should be placed upon the glorious position our Nation holds in the hearts of our citizens.

In many instances the book seems to select the minute imperfections in our system of government and to magnify them without giving credit to the thousands of good things under our system of government. In the light of information available the book does not paint a true picture of the real life in Russia under communism. The students should be taught the truth about communism and the book should state clearly that communism, as we understand it, seeks to destroy free enterprise, religious institutions, and to completely regiment the individual under the control of a dictator.

Students must know the truth and they cannot know the truth unless taught the evils of communism. The subcommittee feels there is no necessity for the book to carry a picture of Stalin and hold him up as a hero. If the book places favorable emphasis on Russia and her system of government and then places our own American institutions in an unfavorable position, it is not in proper balance. In some instances it seems to do so.

Our present form of government is based upon the existence of two strong political parties. The book states:

"Sometimes we wish we could get along without political parties, but we have not learned how to do so. If we must have them how can they be used for good rather than harm."

In this quotation the student is impressed with the thought that political parties do harm rather than good. Such teaching is contrary to the concept of good Americanism and the achievements attained and the opportunities available to each individual under our two-party system.

The author of the book, R. O. Hughes, when he appeared before the subcommittee on January 16, 1948, pointed out certain revisions which he is making in the book. The subcommittee feels that these revisions will help remove some of the objections to the text which appeared in previous editions.

The subcommittee feels that the books written by Louis Adamic, Harold Rugg, and Louise Krueger, and others cited by the Committee on Un-American Activities have no place in the school system of the District of Columbia. They should promptly be removed, both from the schools and the library and be given no further recognition. This is the more important because the Walt Whitman School, of which Louise Krueger is a director, has been cited by the Department of Justice as subversive and disloyal to the United States Government.

The subcommittee recommends:

(1) A revision of the book to delete all of the unfounded favorable comments on Russia.

(2) The school authorities and the teachers should continue with renewed vigor to teach the evils of communism and its destruction of individual liberty and freedom because:

(a) It seeks to overthrow our form of government.

(b) It is opposed to private enterprise.

(c) It is opposed to morality and freedom of religion.

(d) It is opposed to freedom of speech.

(e) It is opposed to freedom of the ballot.

(f) It fosters slave labor and concentration camps.

(g) It permits no freedom of collective bargaining.

The subcommittee cannot emphasize too strongly the fact that the schools, citizens' groups, and all of us must be eternally vigilant and insist that only the highest quality of Americanism, integrity, morality, and good citizenship be taught in our schools.

The subcommittee was impressed with the fact that the school authorities appearing before the subcommittee had a common objective, that of teaching good citizenship and keeping America strong. We commend the VFW and the citizens of Washington who have written and shown a keen interest in the District schools. We hope they will have a continuing constructive interest in our schools and in our Government. The subcommittee believes that the salvation of our Nation is in the watchfulness of its citizens.

Tax Reduction

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. REED of New York. Mr. Speaker, I am inserting as a part of my remarks on taxation a radio address delivered by a very distinguished tax expert in my district, Mr. Samuel J. Lasser, of Jamestown, N. Y. Mr. Lasser delivered the following address on the Town Hall program in New York City on January 27, 1948. I am sure that those interested in taxation will be very glad of this contribution to the subject.

SHOULD THE PRESIDENT'S TAX PLAN BE ADOPTED?

By implication Mr. Denny has made an expert of me, and I want to put a quick disclaimer. When I was 20 I thought I knew all the answers, but I am over 40 now and I'm not quite so sure. This evening my colleagues are all in official positions in public life, while I come from the "grass roots," a small but energetic industrial city in western New York—Jamestown.

Back in reconstruction days northern carpetbaggers offered each of our colored brethren the bait of 40 acres and a mule. This time the offer to all of us is $40, and no mule. A good many people, who have no ax to grind, feel that Mr. Truman's proposal is merely political hocus pocus. I wouldn't know about that. I'll just treat it as a tax proposal, not politics, and in the time allotted to me try to make a few points clear as my reasons for not favoring it.

The President's own circle is not sold on the plan. Secretary of the Treasury Snyder has admitted that he wasn't even consulted about it. And in Congress the high-ranking member of the President's party wouldn't introduce the bill for it. The President's plan is not a tax-reducing plan. It proposes to collect in taxes just as much as before. Don't forget that the tax rates now on individuals

are near the dizziest heights that ever existed in the country's history. Those rates were justified when we were at war and our annual expenditures were $100,000,000,000. They cannot be justified when we are at peace and our annual expenditures are, at most $40,000,000,000. Any plan that does not involve a substantial reduction in our taxes is indefensible. No amount of talk or fancy economics or bugaboos can overcome that simple fact.

The proposal is based on an estimate of this year's surplus. Judging by the past, Mr. Truman doesn't know what that surplus will be. For example, a year ago in his budget message he estimated a surplus of less than two billions. Actually, it was almost five billions. Now he is guessing that it will be seven and a half billions this year, and almost five billions for 1949. It might well be more for both those years; after all this is quite a country.

The tax collectors will take about twenty-three billions from individual income-tax payers as well as about seven billions in excise taxes this year, a bigger amount than in any previous year of peace or war. And admittedly there will probably be a bigger surplus than ever before. Well, how much of a surplus must we have to justify a tax cut? And if a tax cut, on what basis? Why $40 across the board? It's just a figure; maybe it should be $29.98 or $49.50. We are each to get a $40 credit, for ourselves and our dependents, but some wool-pulling goes with this. It is proposed to take this credit back quickly through an increased tax on corporations. As for the raised corporation tax, this is the old excess-profits tax again, and if Secretary Vinson backed its repeal in 1945 because it was a roadblock to reconversion and the expansion of business, why on earth would it be a good thing now? The answer is that it wouldn't.

Who are the corporations, anyway? You and I. When a corporation pays anything, it comes out of the pockets of the people who own the corporation. The corporations are owned by the mass of people. American Telephone and Telegraph, for example, has several hundred thousand stockholders. We little fellows are interested in the corporation, not only through direct purchase of stock, but also through our bank deposits or insurance policies, since the banks and insurance companies lend our money to the corporations or invest in the corporations. If corporate taxes are raised, it will reduce net earnings and therefore dividends. The Government will lose, because there will be less dividend income to tax. So the people get a second bite taken out of them, one, the higher corporate tax which will cut their income, and, two, their own personal income tax. To lop off individual taxes and take it right back from corporate taxes is like the story of the fellow who says that in order to save express charges he cut all the buttons off the suit, and then he says, "P. S.—You will find the buttons in one of the pockets of the suit."

And individuals had better realize this. Increased taxes on corporations almost always lead to higher prices. That is especially true in a sellers' market which we have at present. And so again we consumers pay through the nose.

The economists agree that the way to get prices down is through increased production. More production can be stimulated by lower taxes—never by higher taxes.

The President's plan is for 1948 only, and leaves real tax revision for some future Congress to take up. It is a mere temporary and arbitrary makeshift. It proposes to apply the entire surplus to reduction of the public debt. That is not sound. The debt should be taken care of by a scientific plan, not by hit and miss. We should agree now to a plan to systematically pay off the debt over a period of 50 or 75 years. This would not only create immediate and sustained confidence in Government bonds, but also release billions right now for tax reduction. Such a plan combining tax reduction and debt reduction would pep up our whole economy, stimulate production, and lend confidence to the future.

Our present tax structure is called a structure only by courtesy. It is put together with hay wire, old nails, and string. The President proposes to rearrange a few of the planks. It doesn't even deal with the proposal to permit husbands and wives to split their income in computing their taxes. Though endorsed by the Treasury, the President simply passed it up, leaving people in 36 states to carry a load put upon them because those in 12 other States and Hawaii get a special advantage.

The give-it-to-the-people with one hand, and take-it-away-with-the-other proposal now before us is inequitable, unfair, and improves nothing. It merely sounds good to the people who don't understand taxes. I might add "Who wants to understand taxes anyway? We just want them reduced"; and Mr. Denny, that the President's proposal does not do.

Aspects of the Marshall Plan

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks and include therein a series of five articles on "Aspects of the Marshall Plan" by E. F. Tompkins, editor of the New York Journal-American, I hereby present the first such article entitled "A Fundamental Error." The article follows:

ASPECTS OF THE MARSHALL PLAN

(By E. F. Tompkins)

I. A FUNDAMENTAL ERROR

If our $3,750,000,000 postwar loan to Socialist Britain has taught us anything, it should be that the $17,000,000,000 long-range Marshall plan for the rehabilitation of Europe has been so devised as to be a failure.

This is true, not because of niggardliness in the dollar values involved, but because of the political character of the two unprecedented transactions.

In both instances, the amounts of our disbursements were determined in advance computations of the supposed foreign needs, supported by ample statistics.

In mere arithmetic, the estimates considered the borrower more than the donor and were substantially presented, in the case of the Marshall plan, in the form of a joint capital levy by 16 associated nations upon our national means.

Quantitatively, therefore, the first doubt with respect to the Marshall plan is not whether Europe has demanded enough, but whether America can meet the requisition on its production without incurring disruptive inflation, a consequent economic crisis, and thereafter a debilitating impairment of our industrial efficiency—inflicting chronic unemployment—due to severe depletions of our resources.

These adversities could radically alter for the worse our social, economic, and political institutions.

In similar though less severe circumstances—less severe because we did not then have the burdens of World War II to sustain—New Deal socialism intruded itself into many segments of our national life.

But even if we can afford the Marshall plan, as its official advocates assert that we can, the plan itself requires the most careful diagnosis.

The proclaimed strategic function of the Marshall plan is to hinder or to avert Communist encroachments.

It is fails to work as projected, exactly the opposite effect is likely to ensue; and meanwhile we may have sacrificed our own capacity to resist communism effectively at home as well as abroad.

For the express purpose of compelling such an outcome, Soviet Russia has openly declared war upon the Marshall plan, and Soviet Russia may be calculating better than we.

Here is a risk affecting our security—and the welfare of mankind—to such a degree that the risk ought not to be taken unless the Marshall plan contains within itself the assurances of success.

And these assurances are not to be found anywhere in its valuminous documentation.

On the contrary, the very conditions of failure have been written into the arrangements.

For as it stands, the Marshall plan is—like the British loan—a scheme for financing European socialism at the expense of American free enterprise.

But this central fact has been deceptively glossed over, although it is both explicit and implicit in the Paris report of the Committee of European Cooperation, outlining Europe's requisition, and in the complementary report of President Truman's Committee on Foreign Aid, headed by Secretary of Commerce Harriman.

And thus—as has become usual in our devious diplomatic relations—the citizens of the United States are being allured into an ill-conceived foreign venture by humanitarian appeals.

It is axiomatic, in all presentations of the Marshall plan, that Europe's primary necessity is to get its people back to work in order to revive its agriculture, its industries, and its trade.

This country has accordingly been called upon by its Government to provide, in addition to $5,000,000,000 in emergency winter relief supplies, capital investment aggregating four or five times that sum during the next 4 or 5 years.

The people of this country have, and should have, no motive for doing so unless the people of Europe are to be the beneficiaries in improving standards of living, in stable political liberties, and in useful opportunities to own and operate business enterprises.

We know—from our own development in a century and a half, from Europe's history in its greatest era of social progress, and from the current slavish examples of the Marxist states, that the desired objectives cannot be even approached under regimes or systems of confiscation, repression and regimentation.

It is not the aspiration of the American people—and it is certainly not the mission of the American Government—to finance Socialism—or any other type of collectivism—anywhere at any time.

We can indeed, by pursuing a purblind course in Europe, inter the still surviving elements of free enterprise which are the seeds of reconstruction in the war-ravaged continent.

In doing that, we will destroy all individual incentive and deprive Europe of the creative services of its entrepreneur class.

And here, at the very core of it, the Marshall plan in its present guise is fatally defective.

Congress will be wasting our money, and promoting Soviet Russia's aims, unless it judges and amends the Marshall plan accordingly.

We Don't Understand

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. GWINN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered at a banquet in the Wardman Park Hotel constituting the National Small Business Men's Association's observance of Small Business Day in Washington, January 14, 1948:

WE DON'T UNDERSTAND

(By DeWitt Emery, president, National Small Business Men's Association)

It's an honor, a privilege and a pleasure for me to speak at this meeting. I say that particularly because the more than 350 of our members who are present, coming from 34 States, have as their guests more than 150 Members of Congress.

This meeting marks an important milestone in the progress of the National Small Business Men's Association and is certainly a far cry from our early days in 1937 when we had nothing except an idea and a lot of determination.

The original stated purpose of our association was to give small businessmen a voice in national affairs and to preserve freedom of competitive enterprise. That is still our basic purpose.

I am not going to bore you with a long detailed list of claims concerning what we have accomplished. I do, however, want to stress one fact, which is that, directly or indirectly, the National Small Business Men's Association is responsible for the vast amount of consideration small business is now receiving and has received during the past 10 years. I say this because prior to the founding of our association in 1937, no one in or out of public life ever gave small businessmen as a group any consideration whatsoever. We started the small business movement and have been, and are, the principal factor in keeping it going at an ever-increasing rate of effectiveness.

I think one of the principal reasons we have been able to do what we have done is that we have never advocated nor supported class legislation of any kind and have vigorously opposed this type of legislation when it was proposed by others.

Also, we have been fortunate in that our membership has grown steadily year after year, and for the past 5 years our renewal rate each year has been above 94 percent.

Speaking at the New York Herald Tribune forum in New York on October 26, 1938, among other things, I said:

"We seek no special consideration or privileges of any kind. We do not want any one, the Government least of all, to hold an umbrella over us. All we want is a 50–50 break. Given this, we'll take care of ourselves and at the same time make a major contribution to the happiness and prosperity of every American citizen."

That is just as true today as it was then. Small business does not need or want any special privileges or consideration.

Our visit to Washington today is undoubtedly unique in the history of such visits. When the farmers go to Washington, they want something special for farmers; when labor goes to Washington, the idea is to get something exclusively for labor and frequently whatever it is labor wants is presented on an or else basis; when the veteran group goes to Washington, it wants something for veterans; and so on and on throughout an almost endless list. We, on the other hand, are not here to demand special privileges for small business. We have no desire to threaten or coerce anyone. We are here primarily to get better acquainted with our representatives in Congress and to give them an opportunity to get better acquainted with us. We are here also to say to these representatives of ours, "Forget groups, blocs, classes and cliques and do the best job you can for the country as a whole. We'll back you to the hilt on such a program."

Yes, as part of our visit, we are making some recommendations on legislation and if these recommendations are followed, the benefits therefrom will flow to all business, to farmers, labor and to every American citizen.

I'd like to go over these recommendations one by one, but that would take more time than is available this evening. Also, we will undoubtedly, in the near future, discuss these recommendations in detail at one or more Congressional hearings. So, let's go on from this phase of our discussion to a consideration of certain aspects of the national picture.

Personally, I'd like to jump right into the middle of a discussion of international affairs and the United States foreign policy. But that's out as our association has always confined its activities to domestic affairs and we have never had an expression from our membership on any phase of the international situation.

However, passing up foreign affairs is not going to handicap us in any way as there is plenty to talk about right here at home. There are an awful lot of things concerning our domestic picture which we do not understand.

We don't understand, for example, why the budget for fiscal '48 was not reduced far more than it was, and we are hoping that the drastic curtailment in appropriations for the executive department, which we feel should have been made in '48, will be made for fiscal '49.

As we understand it, the Constitution says Congress shall have control of the purse strings. If this is true, then it seems to us that if any department, branch, bureau, or agency of the Government is spending more than it should, the remedy is for Congress to decrease its appropriations. Certainly if the money isn't appropriated, it cannot be spent.

We know something about the tremendous pressure that was brought to bear on Congress not to cut this, that, or the other appropriation when the '48 budget was being considered. We know further that most, if not all, of this pressure was inspired and actively promoted by the bureaucrats. This brings up what we think is a mighty important question; namely, is Congress going to control the bureaucrats or are the bureaucrats going to control Congress?

There was a time, not long ago, when the "brass hats" of organized labor thought—at least that's what their actions implied—that they were big enough and strong enough to dictate to Congress. This situation was handled by Congress in passing the Taft-Hartley Act over the President's veto. This act does not take anything away from organized labor which rightly belonged to it. It does very effectively, however, clip much of the dictatorial power over union members that a handful of labor leaders had built up under the Wagner Act.

In our judgment, the growth in number, influence, and power of the bureaucrats, which has been going on steadily for many years, has now reached a point where it seriously threatens our republican form of government.

We can't stand for that. Therefore, the bureaucrats must be cut down to size, pronto. We believe that the best way to do this is to decrease appropriations to the point where at least a million of them will have to go back home and get jobs in industry and commerce where they will become tax producers instead of tax eaters.

In this connection, I believe you will be interested in a pamphlet which was recently called to my attention. The title of this pamphlet is "Common Human Needs," by Charlotte Towle. It was published by the Federal Security Agency as an interpretation for staff in public assistance agencies. Miss Towle states that "social security and public assistance programs are a basic essential for attainment of the socialized state envisaged in democratic ideology, a way of life which so far has been realized only in slight measure."

How do you like that? I've known for several years that the ultimate aim of the public assistance and social security boys was national socialism—the Government owning and controlling everything and everybody—but this is the first instance which has come to my attention where one of the insiders admitted this objective in so many words. Yes; the bureacrats must be cut down to size pronto. Personally, I have every confidence that the Eightieth Congress will handle the bureaucratic challenge in a most satisfactory manner.

We further do not understand why the 40-hour week, which was adopted to spread work at a time when jobs were scarce and there was much unemployment, should be kept in force now that everyone who wants to work has a job and there are still many thousands of jobs to be filled, also an unprecedented shortage of goods.

There is much talk about combating inflation, but most of it concerns doctoring symptoms rather than treating the basic disease, which is an oversupply of money and an undersupply of goods. Abolishing the 40-hour week, so our productive facilities could be operated at straight time on a 44- or 48-hour workweek, would help tremendously in increasing the supply of goods which would most effectively combat inflation.

Still further, we don't understand, if the press reports are true, that we have practically no army, a third-rate air force, and a navy that is operating on a skeleton basis, what is being done with all of the many billions of dollars appropriated for national defense. Where is all this money going? How is it being spent and why are we getting so little in return for vastly increased expenditures over any other peacetime year? It doesn't add up.

I might continue the "we don't understands" almost indefinitely, but since I do not have all night, I'm going to move on to a couple of other things which I think are important.

One thing that bothers a lot of people, including a great many businessmen and some of the Members of Congress I have talked with, is why the United States is as far down the road to the left as it is?

The answer most frequently given is that the New Deal, with its strange, unorthodox fiscal and economic policies and its philosophy of scarcity-something-for-nothing, is to blame. Maybe that's the answer, but I don't think it is and I certainly cannot be accused of carrying a torch for the New Deal.

In fact, if the New Deal, something-for-nothing idea, were carried to its ultimate conclusion, it could only mean that, after awhile, everyone would have everything for producing nothing, and that, of course, is about as cockeyed as it's possible for anything to be. In my book, the New Deal is, or was, if you prefer, an effect rather than a cause.

I can give you what I am sure is the answer to this country being where it is on the road to the left in one word. That word is "ignorance." Not nearly enough of the American people know and understand the basic facts of life concerning our free enterprise economy.

Whose fault is this? Is Congress to blame? No; Congress is not to blame. The blame, in my judgment, rests right squarely on the shoulders of the businessmen of the country, large, medium-sized, and small.

Every businessman knows what freedom of enterprise means to him, but how many have seen to it that those on their pay rolls know what freedom of enterprise means to them? Not very many, notwithstanding the fact that it's just as important, if not more important, to sell the system which makes possible the production and distribution of goods and services than it is to sell the goods and services themselves. We've thrown the baby out with the bath water and, quite naturally, most of us place the blame on everything and everybody except ourselves—the real culprits.

Every Member of Congress knows that his judgment on a given piece of legislation is no better than his information concerning that legislation. Also, every businessman knows that his judgment is no better than his information. But altogether too many of us have entirely overlooked the fact that exactly the same thing is true of a factory worker, a truck driver, or a machinist. If his information is wrong, his judgment cannot possibly be right. As someone said, "Give the folks the facts and our country will be saved."

Fortunately, this condition can, and to some extent is, being remedied. More and more companies are publishing and distributing simplified financial statements to their employees. More and more companies are devoting part of their magazine and newspaper advertising to an explanation of what makes our economy tick. This is all helpful, but the effort will have to be expanded at least one hundredfold in order to do a comprehensive job.

Our own effort on this is being carried out by a special organization—the Small Business Economic Foundation—set up for that purpose. The foundation is entirely educational—its one and only purpose is to make the largest possible contribution toward getting the man in the street to understand what freedom of enterprise means to him.

I mention the need for getting accurate information on fundamental, basic economics to the American people, because if you feel that this is important—we think it's as important as it's possible for anything to be—you Members of Congress, through your contacts with constituents and others, can help tremendously on getting the job done.

I mentioned the Small Business Economic Foundation because the foundation has a great quantity of educational material, most of it in pamphlet form and all of it written in simple, down-to-earth, easy-to-understand language, all or any part of which is available to you any time you want it.

And now, as Lady Godiva said as she neared the end of her ride, "I am drawing close to my clothes." I want to close by giving you my definition of our American way of life.

I searched diligently to find what I considered an adequate and satisfactory definition of our American way of life and when I had no luck in finding it, I asked some of my writer friends, Channing Pollock, Samuel Crowther, John T. Flynn, Lawrence Sullivan, to write one for me. They all promised to do so, but none of them did. So, since I've always been the sort of person who had more sand than sense, I rushed in and wrote my own. Here it is:

"Our American way of life is made up of many things, bathtubs, and automobiles; big cities and small towns; farms and victory gardens; mammoth steel mills and village machine shops; colossal educational institutions and the little red school beside the road; churches and hospitals; railroads and air lines; chewing gum and ice cream; department stores and crossroad general stores; specialty shops and beauty parlors; pool rooms and race tracks; Hollywood, Broadway, and the high-school play; laughter and sorrow; eagerness and despair and people—millions of all kinds of people—gathered together from all over the world, drawn by the magnet of freedom, opportunity, and justice.

"Our American way of life provides each individual an opportunity to go as far and climb as high as his willingness to work, his skill, ingenuity and integrity will carry him.

"Our American way of life recognizes that the individual has the right to work when and where he wishes, the right to worship as he pleases, to speak his mind on any subject, to meet with his fellow men for any peaceful purpose, to be secure in his possessions, and to have his day in a free court. It also recognizes that the individual is superior to the State, that our public officials are servants of the people and that they derive their just powers from the consent of the people.

"These things taken together created an atmosphere of freedom and an economic climate which made possible in the United States the greatest production and diffusion of wealth in the history of the world, and the establishment, for even the lowest paid worker, of the highest standard of living the world has ever known.

"Why? Because for more than 150 years, free men in a free country have been working together to provide this better way of life. Let us hold what they have given us and go forward in the sure faith that the American way of life is the greatest blessing known to mankind any place on the face of God's earth."

Palestine

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein two communications regarding the Palestine question from leading constituents of mine.

The first one of these petitions comes from Morris Long, vice president of the Worcester Zionist district, who resides in my home town of Clinton, Mass., and who is an old and valued friend and long a zealous worker in behalf of a homeland and free commonwealth for the Jews in Palestine and charitable and fraternal activities of his people.

The second petition is from the ladies auxiliary of the Milford, Mass., Hebrew Association of B'nai B'rith, an organization composed of leading and representative Jewish women of that community.

My interest in the Palestine question is so well known that I scarcely need reemphasize my views. I have recently spoken at considerable length about this matter before an outstanding chapter of the B'nai B'rith of Fitchburg, Mass., in my district. At that time, I stressed the importance to our Nation of recognizing the principle of self-determination and the independence and autonomy of all nations. I declared that the age-old aspirations of the Jewish people for a homeland of their own, long recognized by democratic-minded nations the world over, should be fulfilled. It is not only a question of according freedom and self-determination to a people but also of providing at the same time a haven and refuge for victims of oppression and persecution within the boundaries of a free nation of their own.

In an effort to settle this great humanitarian question once for all, the United Nations has voted to recognize the Jewish homeland and the members thereof should be prepared to implement this decision. It is not enough that we should render lip service to this cause. Within the framework of the United Nations and in the exercise of our sovereignty, mindful of the early struggles of our own country, mindful of the sacrifices made by our own and other peoples for liberty and justice, let us implement this far-reaching epochal decision of the United Nations. It is to be hoped that peaceful means may be found of resolving the conflicting claims and ameliorating the bitterness and contention that exists between the parties to the dispute in Palestine. But in any event, we must make our position clear that we stand squarely behind the decision of the United Nations. Neither the Executive nor the Congress can afford to evade this burning issue. Let us render encouragement and support to deliverance from persecution and the establishment of free government for the Jewish people.

LONG'S CLOTHIERS,
Clinton, Mass., January 29, 1948.

Congressman PHILIP J. PHILBIN.

DEAR CONGRESSMAN: We respectfully urge that the United States, which played the leading role in securing passage of the partition plan for Palestine in the UN General Assembly, act in a manner which would indicate that our Government sincerely desires the effectuation of that UN decision. American Jews are disappointed that the United States has taken no step forward in the direction of implementing this UN decision.

On the other hand, by placing an immediate embargo on the shipment of arms to the Jews of Palestine who are desperately fighting to defend their lives and the perpetuation of the UN decision, our Government has retreated from the position of high-principled trust which motivated it during the recent session of the United Nations on Palestine.

The inclusive and vacillating policy maintained by our Government since November 29 has given the enemies of the UN decision obvious encouragement for their nefarious insurrection against the verdict of the world's highest tribunal.

We demand that in this moment of crisis our Government give access of its surplus arms and munitions to the only force now materially backing up the United Nations in Palestine—the Haganah.

The United Nations' resolution on Palestine envisaged the creation of a Jewish militia. Haganah is now carrying on the duties of that militia. It must be armed as the first step toward implementing the policy which our Government championed so ardently and which the United Nations adopted.

Respectfully yours,

MORRIS LONG,
Vice President, Worcester Zionist District.

MILFORD, MASS.,
January 30, 1948.

Representative PHILIP PHILBIN,
House Office Building:

We respectfully urge that the United States, which played the leading role in securing passage of the partition plan for Palestine in the UN General Assembly, act in a manner which would indicate that our Government sincerely desires effectuation of that UN decision. American Jews are disappointed that the United States has taken no step forward in the direction of implementing this UN decision. On the other hand, by placing an immediate embargo on the shipment of arms to the Jews of Palestine who are desperately fighting to defend their lives and the perpetuation of the UN decision, our Government has retreated from the position of high-principled trust which motivated it during the recent session of the United Nations on Palestine. The inconclusive and vacillating policy maintained by our Government since November 29 has given the enemies of the UN decision obvious encouragement for their nefarious insurrections against the verdict of the world's highest tribunal. We sincerely hope that in this moment of crisis our Government give access of its surplus arms and munitions to the only force now materially backing up the United Nations in Palestine—the Haganah. The United Nations resolutions on Palestine envisaged the creation of a Jewish militia. Haganah is now carrying on the duties of that militia. It must be armed as the first step toward implementing the policy which our Government championed so ardently and which the United Nations adopted.

MILFORD HEBREW ASSOCIATION,
B'NAI B'RITH, LADIES AUXILIARY.

The Red Mogen Dovid

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. CELLER. Mr. Speaker, I have so many years participated in and listened to seemingly endless discussions on controversial matters that, do believe me, it is like taking off a tight collar to be permitted the luxury to talk for a few moments about the Red Mogen Dovid. There are no issues of merit or demerit involved, no pro and con. There is no "on the other hand." The Red Mogen Dovid, the Red Shield of David, in its humanitarianism, dedicated to the task of healing and sustaining human life, has its reason for being in mercy only. The quality of mercy bestowed upon mankind is a precious gift. It draws us out of ourselves, making room for compassion and understanding and tolerance to enter our hearts. Mercy is the expression of the dignity and beauty and value of each human life. It has the same selfless passion of pure science; it neither condones nor judges. Mercy follows the need. It remembers only that there is a human being in pain.

When we recall the years of our lives and how many deeds of strife, hatred, confusion, vengence, and greed these years have witnessed, then is it not a thought to seize upon and cherish that man has grouped and continues to group together for acts of construction, for life-giving, not death-dealing, objectives? In the confusions and fears each day poured upon us by the press and the radio, in the uneasy knowledge of the horror of the past decade, in the gnawing anxiety of where man is heading toward, there is a very special urgency, almost a hunger within ourselves, to ally ourselves with deeds of conscience and humanity. For if there are no deeds of conscience and humanity, what difference does it make where the world is going? I say that every little triumph of mercy and justice, whether it be the act of your next door neighbor or the organized act of the Red Mogen Dovid, meets with another little triumph of mercy and justice until the accumulated weight changes the course of human destiny. It is a postulate that history has proven and reproven throughout time. This is not naïveté or wishful thinking; it is the realest of realistic thinking. I believe this passionately. That is why I am speaking today, joining in tribute to the work done in the past by the Red Mogen Dovid and grateful for the opportunity to share in the work before it.

From the year of its origin in 1930, the Red Mogen Dovid has served the humanitarian needs of the people of Palestine. Because Palestine was not a sovereign nation, it could not affiliate with the International Red Cross. The tasks that faced Palestine, colonization, industrialization, the development of the soil, the building of settlements and towns, the achieving of a workable economic and social pattern, the unfreezing of a culture, the political struggle for independence, the problem of immigration and so forth. It is truly full of wonder in face of these multifarious goals, Palestine with its amazing sensitivity to human needs, made room for, nurtured, and developed the Red Mogen Dovid. Today in Palestine, the Red Mogen Dovid has 28 first aid stations; approximately 200 secondary stations, blood transfusion centers, 46 ambulances, 20 of which were contributed by the American Red Mogen Dovid. It is nonsectarian, coming to the aid of the neglected Arab as well. It has a total of 600 volunteer doctors and nurses. It has educated 7,000 inhabitants in the principles of first aid. It cooperates closely with the International Red Cross.

Today the struggle in Palestine has been intensified by the defiance of the UN decision by a handful of Arab chieftains. There are episodes of violence and bloodshed. The day-to-day pursuits of the Red Mogen Dovid continue, but we, eating and talking in comfort here today, in making our calculations dare not forget the intensified struggle for national existence. Medical supplies, surgical instruments, ambulances, blood plasma are urgently needed in abundance. The new Jewish state needs us in every conceivable aspect to assist at its birth. If we are callous or indifferent to those needs, then I say unexpiable is our guilt. The refugees whose one hope lies in Palestine, the Jews in detention camps placed there by British colonial machinery, the citizens of Palestine who by sweat, blood, and tears rebuilt and reclaimed the Holy Land must not be allowed to think they are alone. Two thousand years is a long, long time to wait and the fulfillment of a vision alive for as many years must be shared by all of us who, only by the geographical accident, escaped being the needy and not the needed.

Permit me to leave just one more thought with you. During the period of the massacres of the Jews in the hundreds and hundreds of thousands, no Red Cross, no Red Mogen Dovid could reach them. The ministering organizations like the Red Cross could reach all prisoners of war except the Jews. Now that the doors are open, shall we not in whatever measure we can, both in memory of the dead and in hope for the living, translate our conscience into deeds?

Enemy Prisoners of War

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. KEATING. Mr. Speaker, last November I urged that steps be taken by this Government to expedite the repatriation of our late Allies of enemy prisoners of war still held in lands foreign to their birth.

When the interim-aid bill was considered I introduced an amendment seeking to accomplish this result, which, unfortunately, was ruled out on a point of order.

The recent heroic rescue of Sgt. Angelo A. LaSalle, of Des Moines, Iowa, the sole survivor of a Flying Fortress which crashed in France Saturday, has thrilled the world. Sergeant LaSalle owes his life to Horst Kupski, a former German Air Force pilot, who is one of the enemy prisoners of war still held by French authorities.

I have today introduced a concurrent resolution, asking that the Secretary of State request the Government of France for the immediate repatriation to Germany of Horst Kupski as a gesture of good will, both toward the United States and toward our foreign enemies. Such acts of brotherhood transcend national lines and must be multiplied manyfold if we are to build a world which will know war no more.

Horst Kupski, who deserves special treatment for his good Samaritan deed, is, after all, primarily a symbol. He is one of millions now languishing in the dungarees of a prisoner of war, far from their homes and families. We cannot ever hope to build an enduring peace until this situation is corrected.

The resolution introduced today, therefore, goes further than to deal only with the case of Horst Kupski. It provides that this Congress request the Secretary of State again to draw the attention of our erstwhile allies to the fact that the repatriation of all war prisoners is long overdue and that the United States, as a signatory of the Geneva Convention and of the instruments of surrender of our former enemies, has a direct interest

in the fate of all war prisoners, not alone those already returned to their homelands by us, but also those still held by the nations, at whose sides we were engaged in conflict.

The resolution recites that the European recovery program will be hindered rather than furthered by the continued employment of forced labor; and that the United States of America has a right to expect that its allies will abide by the very principles and ideals in whose defense American soldiers and sailors fought and died.

Proposed Amendments to the Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. MacKINNON. Mr. Speaker, under leave to extend my remarks I include a copy of the speech I delivered in Minneapolis, Minn., on January 30, 1948, to the annual convention of the Minnesota Employers' Association:

Mr. Chairman and gentlemen, your committee has informed me that your association has never heard a talk on the Fair Labor Standards Act. I can well understand this because from my own personal experience and from our recent hearings on this law I have observed that the scope of this law and its importance has never been fully realized or understood by many. In other words, the provisions of the law did not receive sufficient attention by a great many employers and employees. They never really came to understand the effect of this law upon their business and work. This group who were uninformed on the law was composed practically entirely of small businessmen—the small machine shop—the small lumber yard operator—the small coal dealer—to name only a few. Of course, the United States Steel Corp.. and the large manufacturers made extensive studies of the legislation and brought their practices into conformance at an early date, but the small businessman whose business is largely under his own personal direction and who had all he could do to run his own business and eke out an existence largely by constant effort of his own, was the man who generally failed to appreciate the impact of this legislation upon him and upon his business.

POLICY OF THE LAW

The Fair Labor Standards Act—better known as the wages and hours law—was enacted by Congress in June 1938 to:

1. Help spread the work so as to help alleviate the very substantial unemployment that was then existing and which had plagued the New Deal from its inception.

2. Classify substandard wages and excessive working hours as a form of unfair competition and make such practices illegal. The attempted proselyting of industry by our Southern States, using the bait of low wage standards and long hours, was the immediate evil which Congress sought to remedy by declaring this policy.

3. Restrict oppressive child labor practices.

THE SCHEME OF THE ACT

Generally the structure of the act may be divided into two main headings, i. e., those dealing with minimum wages and those dealing with maximum hours.

1. The minimum wage edict of the law makes it illegal to pay a minimum wage of less than 40 cents in covered employment.

2. The maximum hour edict requires 1½ times the regular rate of compensation be paid for all hours worked beyond 40 hours in any week.

PENALTIES

For unwilliful violations of the minimum wage and overtime pay provisions the employer may be required to (a) pay the unpaid minimum wages and the unpaid overtime compensation, and (b) pay an additional amount of liqudated damages equal to the amount of unpaid wages or unpaid overtime compensation. Reasonable attorneys' fees and the cost of the action shall also be paid by the employer. This provision for attorneys' fees and costs is mandatory. Employees can sue to get this money themselves or they may appoint an agent to sue in their behalf.

For willful violations a fine of $10,000 or imprisonment up to 6 months may be imposed.

These are very substantial penalties both of a criminal and of a financial nature.

The money penalties have created very serious problems in instances where lawsuits have attempted to recover for retrospective liabilities that were not foreseen by the contracting parties when they entered into their wage contracts. You recall the portal-to-portal cases which are one example of a situation such as I describe. While the final court decision in these cases held that little or no money liability existed, it pointed up to Congress the very substantial amounts of money that might be involved where determination of the rights of the parties were delayed an unreasonable length of time. Congress replied to this situation by enacting the Portal to Portal Act of 1947 which was approved on May 14, and which is now the controlling law on the length of time that parties may go back into the past and seek to impose retrospective wage demands.

WHAT EMPLOYERS ARE COVERED

What employers are covered? I know this is a question that interests you all, but at the outset I should point out that the act does not apply to employers as such but rather to employees. This is an important distinction to note. The application of the act does not depend solely upon the character of the employers' business but rather upon the character, effect and results of the service rendered by the employee and in many cases where the products he produces are marketed. In the language of the act the minimum-wage and maximum-hours provisions are applicable to employees who are engaged in commerce or in the production of goods for commerce. However, the scope of the act is not limited to the normal and ordinary meaning of those words but is extended to further situations by the process of defining certain words to have an abnormal meaning. I refer to the statutory definition accorded to the words "goods," "produced," and "engaged in the production of goods."

As defined by the statute:

"'Goods' means goods (including ships and marine equipment), wares, products, commodities, merchandise, or articles or subjects of commerce of any character, or any part or ingredient thereof, but does not include goods after their delivery into the actual physical possession of the ultimate consumer thereof other than a producer, manufacturer, or processor thereof.

"'Produced' means produced, manufactured, mined, or handled or in any other manner worked on in any State; and for the purposes of this act an employee shall be deemed to have been engaged in the production of goods if such employee was employed in producing, manufacturing, mining, handling, transporting, or in any other manner working on such goods, or in any process or occupation necessary to the production thereof, in any State.

No person can read those definitions without observing the wide application of the law. He would also immediately visualize the tremendous number of difficult and borderline decisions that would be required to determine the extent of the application of the law to the millions of situations which arise out of the employment of millions of individual American workingmen.

EXEMPTIONS

A word is in order at this point concerning the specific exemptions provided by the act. Most of these are contained in section 13 which provides that the wage-and-hour provisions of the act shall not apply to: (1) "Executive, administrative, and professional" employees or those in a "local retail capacity" or acting as "outside salesmen." An important power with respect to this provision is the fact that the Administrator may define the terms by regulation; (2) to employees engaged in "retail" or "service establishments," the greater part of whose selling or service is within one State; (3) seamen; (4) airplane carriers; (5) employees in the sea-food industry; (6) agricultural employees; (7) learners, apprentices, and handicapped workers exempted by regulation of the Administrator; (8) employees of certain weekly or semiweekly newspapers; (9) employees of local carriers such as streetcars, busses, etc.; (10) employees engaged in preparing agricultural or horticultural commodities for market "when employed within the area of production"; (11) switchboard operators in certain small public telephone exchanges; (12) employees of interstate carriers.

ADMINISTRATION

One of the most important things in any law is the nature of the administration that is provided. With respect to this law, Congress chose to establish an administrator with certain somewhat restricted powers to supervise the functioning of the act. His powers are not absolute. A great many of the provisions of the law require court adjudications for their enforcement. There is, thus, a double-barreled administration under the present framework.

There you have the basic outline of the law. With the exception of three minor amendments the law was unchanged by legislative enactment from the date of its adoption in June 1938 until the passage of the portal-to-portal law in 1947.

You may have noted that I stated the act continued "unchanged by legislation action." These words were carefully chosen because I did not wish to indicate that the law had remained constant throughout that period. Far from it. In fact, the law was changed many times during that period, not by legislative action, but by administrative interpretation and judicial decision. This is no idle statement, for Congress, in the portal-to-portal law specifically declared in its findings that the Fair Labor Standards Act "had been interpreted judicially in disregard of long-established customs, practices, and contracts between employers and employees," and this brings us to the next point.

THE WORKING OF THE ACT

How has the act worked? To determine this the Wages and Hours Subcommittee of the House Education and Labor Committee, of which I am a member, began a full-scale investigation. This was the first investigation ever undertaken by a congressional committee of the workings of this law. Our hearing was most complete. Every phase of the effect of the law was fully explored both from the standpoint of labor, government,

and business. As our investigation proceeded, we began to see that such investigation had been long overdue.

What did we find? While our subcommittee has not finished its findings in this respect, certain preliminary conclusions can be reached. First, as to administration; we found that while there had been many instances of arbitrary and officious action by a few field employees of the Wages and Hours Division, that the majority of field agents were extremely conscientious, reasonably well informed as to the workings of the law and in general closely followed the administrative orders and directions which emanated from higher authority. We found that many of the complaints that the businessman had against individual field investigators were in reality complaints against administrative interpretations, orders, and directions from Washington.

That brings us to the second phase of our investigation, the administration given the law by those top officials who were charged with this administration. In order to arrive at an unchallengeable decision on this point, we investigated specifically a great many individual acts and decisions of the top officials. In general, I would say it was our finding that in a great many instances the law had been interpreted administratively and judicially in disregard of long-established customs, practices, and contracts between employers and employees. This is practically verbatim, the same conclusion that Congress itself reached and embodied in a legislative finding in the preamble to the Portal to Portal Act. In other words, we found the same condition existing with respect to the law in general, insofar as administration and interpretation was concerned, as Congress found to have existed with respect to those portions of the law that were before Congress in the portal-to-portal matter. This is also the phase of the application of the law that comes in for most of the complaint from businessmen, particularly small businessmen. They complain primarily of those instances where the Administrator has given the act an unreasonable interpretation or a specious construction. Most of these interpretations are in one direction, that is, toward extending the coverage of the law. That hits the small businessman. Many of these constructions ignore the plain language of the statute. It is true that the Administrator has not been successful in all these attempts. Only recently he was quite sharply cut down by the United States Supreme Court in a case involving the construction to be given the motor carriers' exemption.

However, we are hoping that the present Administrator will do a better job of interpreting the act. He is a man with previous business experience and now that he is familiar with some of the objections to the acts of previous Administrators, I believe he will profit by their mistakes.

PENDING AMENDMENTS

As a result of our hearings a great many changes in the act have been proposed. In fact we have not had one single witness who appeared before the committee who expressed himself as satisfied with the act in its present form—that includes labor, management, and Government. They all propose substantial changes—some extreme in both directions. There are those who proposed the complete repeal of the act and there are those who proposed extending its provisions to every employed individual in the Nation. I do not consider that either of these extremes is a practical solution to our problem at this time, but the fact that no one is satisfied with the law in its present form indicates that some legislative changes are desirable.

I now propose to discuss with you the principal changes that have been suggested and which are presently under consideration by the committee. First and foremost is a change in the basic rate which is presently fixed at 40 cents an hour. This means an overtime rate of 60 cents an hour. Most proposals for a change in this provision suggest a new rate of from 55 to 75 cents an hour. Those in the South generally favor a lower rate, those in the North a more moderate rate, and the labor groups generally suggest a rate from 65 to 75 cents an hour for the straight-time rate which would be a $1.02½ to $1.12½ an hour on overtime work. The South is the big objector to fixing this rate at what you and I might think was reasonable, but I believe that it will be possible in this congressional session to bring this rate somewhere within the 60 to 75 cents range.

The second major change that has been suggested deals with the definition of the words "regular rate of pay" which form the basis for computing overtime compensation. In the act as presently worded "regular rate of pay" is not defined and a great many very difficult decisions have arisen. For example, whether bonus payments, profit-sharing plans, and other forms of extra compensation should be considered as being within the individual's regular rate of pay is most troublesome.

OVERTIME ON OVERTIME

It is also under this phrase that the famous overtime-on-overtime cases have arisen. At present these cases concern principally the longshore industry, which fixes a regular rate of pay and an overtime rate of pay by a collective-bargaining agreement. In some instances the overtime rate of pay is available to individuals who have not worked a full day. Because of this the longshore industry throughout the Nation is now being plagued with numerous suits, involving millions of dollars. These lawsuits are based on the contention that since a small number of workers might get this overtime pay without working the regular 8 hours, that it was thus not overtime pay, and hence to the extent that individuals performed work in the excess of 40 hours in any week that they were entitled to receive for their overtime work not the overtime rate fixed in their contract, but one and one-half times the money that they actually received. So here we see the situation where an industry has drawn up a collective-bargaining agreement that is more favorable to its employees than the Fair Labor Standards Act, and we now see a group attempting to use the mechanism of law to impose upon the employer a liability in excess of that contracted for. It should be said to the credit of the labor organization involved, which is the International Longshoremen's Association, affiliated with the American Federation of Labor, that they have recognized the threat to free collective bargaining that is inherent in such claims, and they have appeared voluntarily before the United States Supreme Court in opposition to these wage claims of many of their members. In the brief they filed before the United States Supreme Court they stated:

"The danger to the longshoremen is real and immediate. The very foundations of free collective bargaining are threatened—and we cannot believe it was the purpose of Congress that the Fair Labor Standards Act should be construed so as to make it such a threat."

This case has been argued before the United States Supreme Court. Its decision will determine whether we face the possibility of another wave of litigation such as was involved in the portal-to-portal cases. Of additional interest in these cases is the fact that it is the United States Government that stands to eventually foot the bill for the millions involved because the work was performed during the war on Government contracts calling for Federal reimbursement of the costs involved.

THE EXECUTIVE, ADMINISTRATIVE, AND PROFESSIONAL EXEMPTION

One phase of the act that is sure to come up for consideration is some clarification of the definition of the exemption to "executive, administrative, and professional" employees. This has proved to be quite troublesome. The Administrator has present authority to define these words and his definition has not proved satisfactory. It would seem much better for Congress to specifically set forth its intent with respect to these words. The same can be said for clarification of the "local retailing" exemption. And akin to this exemption is a similar exemption to employees engaged in "retail" or "service" establishments, the greater part of whose selling or servicing is in intrastate commerce.

AREA OF PRODUCTION

Also up for consideration is a redefinition of the "area of production." This language furnishes the test for determining the coverage or noncoverage of individuals handling agricultural commodities for market. The Administrator is authorized by the act to define the "area of production." One of his definitions was annulled by the United States Supreme Court because it was predicated on factors not germane to the words defined. Even the present definition is somewhat open to the same objection. Clearly, this is another phase of the act where Congress should clearly express its intent rather than leave it to an administrator to legislate.

In summary of the changes that are proposed, you will note it to be my interpretation of the situation that we can look forward to Congress adopting some increase in the rate and providing greater clarity of some of the terms. I would be less than honest in my statements to you if I expressed myself as believing that further changes would be adopted. I also wish to point out that Congress will, I believe, be very leery of adopting new language which would only substitute a new problem for an old one. I am sure that a vigorous attempt will be made to clarify the details of the act but I have not observed any substantial support for those who propose to repeal or emasculate the Fair Labor Standards Act. I do not believe that Congress will gut the law. We are going to attempt to be fair and reasonable to both labor and management and to clarify the law so that a reasonable minimum rate will be fixed and so that a person of reasonable intelligence will be fairly apprised of the obligations he must meet.

In closing, I want you all to know that the knowledge that I have acquired on this legislation is available to you all regardless of where you come from in the State of Minnesota. That is true not only to you men who are employers but also to your employees.

If you or your employees have any problems arising out of the interpretation of this act, I will be most pleased to act for you or for them either directly or through the proper Congressman, regardless of where they come from in the State of Minnesota. I consider that I serve on this committee as a representative of the State, and I have conscientiously replied to all inquiries which affect the jurisdiction of this committee regardless of whether they come from my own district, the State of Minnesota, or from the Nation as a whole. Please remember this if you or your employees have any problems or suggestions. Thank you.

In Support of Increased Allowances for the Education and On-the-Job Training of Veterans

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. SADOWSKI. Mr. Speaker, there is no question that one of the outstanding facts in the Nation's life at the present time is the drastic advance in the cost of living. This has appeared after every war. Opinions may differ about its immediate causes; opinions may differ as to whether the advance would have been less drastic if other policies had been pursued by the Congress or the Executive; opinions even differ as to the precise degree of this advance. As usual in these cases, statistics vary with the statisticians. But there is one general fact which no one can deny. It is that each item of necessity costs more, usually much more, than it did 5 years ago, or 3 years ago, or 1 year ago. Food to eat, clothes to wear, a roof over one's head and four walls within which to sleep, require more and more dollars and cents.

For many groups in our population, this increased cost of living has been compensated for in whole or in part. Wages are uniformly higher than they were; profits are higher than they were; the income-tax returns show that for the Nation as a whole the force of this increase in basic living costs has been cushioned by larger incomes.

There is at least one highly important group, however, a group for whom the Nation itself has accepted responsibility, a group to which the Nation owes a vast debt, for whose members the increase in living costs has not been cushioned. I call your attention to the way in which the advanced cost of living has affected our veterans who are studying in colleges and schools under the GI bill of rights.

In 1944, the Congress recognized that among our 15,000,000 service men and women there were many who had their education interrupted by the years they so willingly gave to serve the Nation in the war. They lost 1 year, 2, 3, 4, in some cases 5 years. Withdrawal from education meant for them delay or actual blighting of hopes for useful careers in line with their capacities. The Nation itself had much at stake, too. If the best possibilities of a whole college generation of the finest young men and women, with the best minds and highest ambitions, were to be lost to us, the harm to our democracy in the future, to our culture, to our science, to our spiritual life, even to our national properity, would be beyond all estimating.

Accordingly, Congress in 1944 opened up as part of a vast program of veteran benefits, the possibility of further school and college for these young men and women—all who could qualify and profit by it. Tuition and books to be paid for, and a subsistence allowance, which, although it would not cover all the student's expense, and was not expected to do so, would give such a boost that he could get along by working a few odd hours in time spared from his studies or by utilizing such other resources as might be available. The amount of subsistence was fixed in 1944 at $50 a month for single veterans, and $75 for those with dependents. In 1945 these allowances were increased to $65 and $90.

This response to this proffer of assistance in obtaining education has been amazing. Although many believed that a period of military life at the crucial age of 18 to 20 would blunt the desire for education and that comparatively few would want to go on, just the reverse of this happened. Men who had not merely been in a training camp, but actually engaged in the brutalities of war for years, turned to academic pursuits in such numbers, once the opportunity opened, that they could hardly be provided for. The colleges have been bulging at every seam. In the fall of 1946 there were 1,080,000 veterans in college, which was more than half of the total college enrollment of the country, including the women's colleges. In the fall of 1947 there were 1,150,000 enrolled in colleges and universities, and 651,500 in schools below the collegiate level. Over 6,000 veterans are studying in 442 schools and colleges in 44 foreign countries as well.

Another surprise appeared when reports began to come in about the kind of academic work these veterans were doing when they went back to school. The same educators, and many others, too, had predicted that military life would not only dull the desire for education, but would dull the wits as well. This apprehension was groundless. Uniformly, all over the country, in colleges and schools of all sorts, the veterans began setting records as earnest and successful students. A characteristic comment, similar to expressions used by college educators everywhere, was that made last March by the acting president of Columbia University.

Academically—

He said—

> the records of the veterans to date have been outstanding, almost invariably surpassing those of nonveterans. Their seriousness and fixity of purpose have won universal acclaim. The ease and completeness with which the ex-servicemen have fitted into the academic background has been remarkable.

He described them as "more mature not only in years and bearing, but also in judgment," and added:

> They are vitally concerned with public affairs, with world problems, and with equipping themselves for citizenship.

These young men and the young women who are among them are one of the richest possessions of the United States—far more important than any material resources. They are our future statesmen, business leaders, clergymen, newspapermen, artists, and authors. In the years to come the affairs of the Nation will be turned over to them.

But the increased cost of living, with which I began, has hit them too. At a time when well-paying jobs in business and industry have not been hard to get, these veterans have been clinging with all their might to their educational aspirations while they lived on an ever-dwindling pittance. Many—no one knows how many—have had to give up the struggle and quit. More will have to do so, unless the subsistence allowance is put once more on the basis intended in the GI bill of rights in 1944. This can be done only by increasing the allowance to take account of the shrinking of the dollar.

Let us see how this $65 and $90 allowance has shrunk. The average for all cost-of-living items is put by the United States Department of Labor, in 1944, at the index number of 125.5. In 1945 it rose a little to 128.4. In 1946 it jumped to an average of 139.3 for the year, but at the end of the year, in December 1946, it was 153.3. In November 1947 it was 164.9. It is still going up. This means that roughly the cost of living has gone up 40 percent or more since 1944. The biggest advances of all are in food and clothing, and all students require food and clothes, even if their rent is low. The single veteran finds it increasingly difficult to manage on $65 a month and the veteran with one or more dependents finds it almost impossible to manage on $90 a month. Increasingly, time and effort and anxiety must be put in on outside work to the detriment of studies for those who have no independent income. Many are forced to give up the struggle.

A survey made by the regional office of the Veterans' Administration for the District of Columbia region, revealed that in one term, the following numbers of veterans stated financial difficulties as their reason for giving up their educational career:

George Washington University	22
Georgetown University	17
University of Maryland	53
Catholic University	64

Other frequently named causes for dropping out were job conflicts, entering employment, or the like, which in most cases probably means that these veterans found the financial struggle too much for them. The heading "Personal and other reasons" which also bulks largely in the reasons given for withdrawal in these colleges also probably includes many whose primary motive was weariness with the financial struggle.

The cost of veterans' education has indeed been very great—over a billion and a half out of the nearly $8,000,000,000 we spent in 1947 on veterans' benefits. Yet there is no part of our veterans' program which will bring back so much in returns to the country in future years. We must take care of the widow and the orphan and the disabled. We are right in doing all we can to readjust all veterans to civilian life. These are obligations. But this educational money is an investment. It will return to us in the future citizenship and leadership of America.

Such measures as have been proposed for increasing the subsistence allowance for veterans in schools and colleges are restricted to bringing that allowance nearer to the levels anticipated in the GI bill of rights. The bill that was passed by the Senate, S. 1394, on July 19, 1947, proposes $75 subsistence a month for veterans without dependents, $105 for veterans with one dependent, and $120 for veterans with more than one dependent. The Committee on Veterans' Affairs of the House reported out on July 23, 1947, H. R. 4212, which is an identical bill to S. 1394. H. R. 4212 will come before the House on Tuesday, February 3, 1948, for 40 minutes of debate under suspension of the rules.

Of equal urgency is the passage of legislation which has been reported out favorably by the Veterans' Affairs Committee of the House that would raise the ceilings on wages and allowances payable to veterans undergoing training on the job. When Public Law No. 679 was passed on August 8, 1946, providing that "in no event shall the rate of such—veterans'—allowance plus the compensation received exceed $175 per month for a veteran without a dependent, or $200 per month if he has a dependent or dependents." I protested vigorously against this limitation because it did not carry out the intent of the majority of Congress to make it possible for the veterans to take full advantage of the educational and training programs that were provided under the GI bill of rights. The Kearney bill, H. R. 246, which was reported by the House Veterans' Affairs Committee in February 1947, provided for the raising of this ceiling so that a veteran attending a course on a part-time basis, and a veteran receiving compensation for productive labor, whether performed as part of his apprentice or other training on the job at institutions, business, or other establishments, or otherwise, shall be entitled to receive subsistence, provided that the rate of such allowance, plus the compensation received, does not exceed $250 per month for a veteran without a dependent, or $325 for a veteran with one dependent, or $350 for a veteran with two or more dependents.

This bill, H. R. 246, providing for the raising of the ceiling of on-the-job-training allowances, will also come before the House on Tuesday, February 3, 1948, for 40 minutes of debate under suspension of the rules.

With the increased cost of living since the original legislation was passed providing for what was then considered by many to be adequate assistance to our veterans, it is urgent that favorable action be taken at once on the Meade bill, H. R. 4212, and the Kearney bill, H. R. 246, to make it possible for our veterans to pursue their educational studies. Many of these men are being forced to give up the struggle because they are finding it impossible to exist on the meager allowances they are presently receiving. It is up to us to provide them an opportunity to complete their education and help to make up for part of the time that they lost through their war service.

The high cost of living has affected burials, too. We have increased the burial allowance by 50 percent. Should we not increase the allowance for those who by living will serve and guide the country in the years of the future?

Congressman Celler Opposes Fabric-Design Bill—Cure Worse Than Disease

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. CELLER. Mr. Speaker, H. R. 2860 merits opposition because it seeks to protect that which in the practicable and economic sense is unprotectable, designs on textile fabric. Designs or patterns or markings have been devised from time out of mind since man first chiseled curves and lines on a stray stone. Through the ages these designs have come down, modified and remodified. Most designs are the result of variations here and there. The line between originality and modification in most instances, if not in all, would be so thin as to be indiscernible.

This bill is an attempt on the part of the large manufacturers of fabrics to obtain for themselves undue protection for their designs. While it is true that designs have been pirated and copied, it is also true that they will continue to be pirated despite this bill. Whatever may be accomplished by this bill will be far outweighed by the evil that will follow in its wake.

In my opinion this is an attempt on the part of the large manufacturers to develop monopolies and to impede the flow of commerce by the intimidation and coercion of retailers, the manufacturers of cloaks and units. These big manufacturers will copyright the design and because of the copyright demand a higher price for the product, though the design may be a modification of one already old as the hills. Protection, undue protection is being handed to these big manufacturers on a silver platter.

There are millions of designs. Many would be copyrighted under the bill. How could the users of the cloth determine the infringement. The retailers have not the means or the time to separate the chalk from the cheese. Manufacturers of suits and blouses, ribbons, brassieres, in fact, any item involving the use of textiles would be placed at a decided disadvantage. They could never feel safe or free of fear that they may be guilty of liability for infringement. This bill would place such manufacturers in tightening straps that must ultimately impede production. One thing is certain: the manufacturers of fabrics would have a field day in price upsurge. This would be most reprehensible in view of the rising cost of living. With the exception of the copyright owner, no one would dare buy any fabrics without risking a lawsuit.

Moreover, this bill is discriminatory. It applies only to fabrics. It does not apply to, say, glassware, metalware, furniture, plastics, felt, leather, and so forth. What about the manufacturers of pocketbooks, women's hats, travel bags, breakfronts, jewelry, kitchen equipment and utensils, paper doilies and the like? Practically everything of utility value can be treated with design. With this bill we are forced to admit that the textile manufacturers are powerfully well organized and have been able to propagandize us in the direction they wish to move. There is no question that the manufacturers of items mentioned above will soon beseige us with their own definitions of originality. We will have a pretty kettle of protected designs then.

It is passing strange as one reads through the hearings on this bill that no retailer appeared. Were retailers invited to testify? Were any organizations representing the general public invited to testify? Certainly the consumer should have something to say about this subject. He has to pay.

If there is anything that requires protection, our present patent laws give ample coverage.

The bill provides:

> Upon receipt of an application for the registration of a textile design, the Register of Copyrights shall cause the application to be examined and a search to be made and, if he finds the application to be in proper form and the textile design to be original and novel and not substantially to resemble in appearance a prior textile design, shall, within 7 days from the date of application, issue a certificate of registration under seal to the applicant.

What is novel or original? What satisfactory definition or measurement can be applied with reference to textiles?

As I stated before, not only did none of the retailers appear, and they are the greatest number involved, but there was nobody from the cloak and suit industry, none of the jobbers or wholesalers, none of the manufacturers of suits, brassieres, blouses, scarves, and so forth. And they are legion.

This hearing, to say the least, was lopsided. Only those who agreed in whole or in part with the bill testified.

Consider for a moment the long line of users of textile fabrics. First, we have the manufacturer of the yarn as in the case of rayon or nylon. Then we have the weaver of the fabrics, the weaver sells to the wholesalers or jobbers who in turn sell to the manufacturer of men's and women's cloaks and suits, shawls, scarves, and so forth. Then in turn there are the wholesalers and jobbers of these manufacturers. Finally there come the retailers, not to speak of the general public who is caught between the links of this chain. Within this long line are the factors, warehousemen and distributors. Anyone in this long chain of handlers could be made guilty of a violation of this act. There are no genuine safeguards for them. The implied warranty of copyright protection follows, like a nondetachable ghost, everyone concerned in the selling and handling of the product. Is each design to be checked by each of these, search to be made by each of these? It all adds up to an absurdity.

The committee is involving itself in recommendation of a bill that can kill in its attempt to cure. The industries involved therein are left to flounder in a sea of trouble, and the big manufacturers of textiles may find themselves all twisted up in their own cloth.

Imagine the plight of a retailer in a small town who has purchased a lot of gingham aprons. A representative of a competitor of the retailer's vendor or distributor arrives and tells him that if he sells the gingham aprons he is in violation of the law. The retailer, however, sells. Under section 9 of the act, he is subject to suit for infringement of copyright in the United States courts having jurisdiction of suits under the copyright laws. In many instances the United States district courts are 300 and 400 miles away. Despite the alleged safeguards in the act, this will be the effect of the operation of the act.

There will be coercion and intimidation by competitors. There will be plenty of litigation. There will be a field day for lawyers.

That Oil Shortage Again

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. HARRIS. Mr. Speaker, the shortage of fuel oil in certain areas in the East and Midwest has caused grave concern with the people in those areas. The increasing demand for fuel oil and other petroleum products far beyond any expectations has caused the question as to the availability of crude-oil reserves. Various committees and many Members of Congress, personally, as well as editorials, news articles, and magazines have been giving attention to this question. Our Committee on Interstate and Foreign Commerce, which has jurisdiction generally over petroleum, has been going into this problem and making every effort to help alleviate the immediate and critical shortages.

A preliminary report was issued which I commend to the attention of all Members. This report was dated January 26. In addition to presenting the problem recommendations were made, some of which have been carried out. Much has been said through the press and otherwise about the committee recommending an outright embargo on exports of petroleum products. This is a misrepresentation. The committee recommended the immediate cessation of the exploration and the deferment of making any foreign commitments involving the supply of petroleum and petroleum products until a complete review is made regarding imports and foreign reserves and the effect of our exports on our national economy and welfare. We said:

It appears that the situation is now so grave that exports should be stopped completely until it can be determined whether further exports are damaging to the economy of this country, and until such review is made, it appears most unwise for the country to make any foreign commitments involving supply of petroleum and petroleum products.

Such a review, Mr. Speaker, has been under way continuously and will continue. It is a problem we can meet. We must be diligent at all times toward maintaining a healthy industry. Our national welfare demands it. We must not, however, lose our sense of proportion by coming to a hasty conclusion that our domestic reserves are not adequate to meet our own needs. We must encourage and, above all, pursue, such policy that will permit the continued development of our domestic reserves. In that way, we will continue to increase as we have in the past our own reserves. In this connection, I include with my remarks an editorial on the subject entitled "That Oil Shortage Again," from the Arkansas Gazette in a recent issue:

THAT OIL SHORTAGE AGAIN

The old scarecrow of a national oil shortage, decked out in a somewhat new dress, flaps in the national economic winds. Congress has been asked by Secretary of the Interior Krug to appropriate $9,000,000 for research on extracting oil from coal and shale. Secretary of Agriculture Anderson, not to be outdone, wants funds to make synthetic oil from Iowa corncobs. The House Interstate Commerce Committee is in favor of prohibiting exports of petroleum and gasoline, and Senator BRIDGES, of New Hampshire, has introduced a bill to that effect.

New England and some other areas are suffering. But the shortage is local, as Secretary Krug recognized several months back when he asked the National Petroleum Council to suggest ways to increase availability of oil. He said, according to The Lamp, a Standard Oil Co. of New Jersey publication, that such localized shortages as may occur "will result not from deficiency of domestic and foreign resources, nor from exports, but principally from shortages of oil-country tubular steel goods and inadequate transportation capacity."

Nothing has happened since to alter that picture. There is a great national steel shortage, and the oil industry suffers from it just as the automobile industry does. A large percentage of the refineries are located in the market areas, and the fact that their production has declined does not reflect a lack of oil resources, but a lack of the rigging, pipe, and tank cars used to obtain and transport crude.

Certainly we need to continue the investigation of extraction and distillation methods for the production of synthetic oil. But we should weigh them against the facilities already at hand. The petroleum industry has impressive new exploration techniques, and there is an excellent chance that important new fields may be brought in at any time. Moreover, new methods applied to existing fields may enormously increase production. Some experts believe, for instance, that just one of the old or "settled" fields in Arkansas, under proper repressuring, might yield more additional oil in a single month than all the corncobs in Iowa over a period of years.

This localized oil shortage is bad, and the excitement of the New Englanders who are primarily affected is understandable. But it does not provide a logical basis for the sort of panic that seems to be leading some Congressmen to turn against the Marshall plan on the ground that our oil situation is so desperate we can't afford exports. An industry that met the demands of a mechanized global war isn't like to founder in the face of a rehabilitation program for western Europe.

To Bring Hope to Children Without Hope—A Report on Europe's Children as the United Nations Appeal Opens Its World-Wide Drive

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 30, 1948

Mr. SADOWSKI. Mr. Speaker, while many are talking about the Marshall plan, and are interested only in European recovery and relief on the basis of politics—and they know full well that not one dollar of this money will go to the people and the nations that suffered the most from the devastations of war—it is like a breath of fresh air to read this article written by Chester Bowles that appeared in the magazine section of the New York Times last Sunday, February 1, where a plea is made on a humane and Christian basis to help all of those children of Europe who are the innocent victims of this terrible war and have no conception of international politics, and sincerely look to the United States for food, clothing, and sustenance. It would take only a small portion of the Marshall plan funds to do a job that would meet with the approval of every American, and would win for us the everlasting gratitude and friendship of the future citizens of Europe, who are today these same little hungry, undernourished, frightened, and hopeless children that Mr. Bowles refers to.

Billions of dollars are being wasted upon armaments and preparation for war. Billions of dollars are being given to countries who were our enemies and to other countries who were not our allies and did not participate in the war. For Germany, it is proposed to give $2,000,000,000 in 1948, $1,000,000,000 from the War Department appropriations and $1,000,000,000 under the Marshall plan, but to the orphans and the destitute children in the war-ravaged countries not even a kind thought or word any more. The big Christian American hearts have not become chilled and calloused to the cries of orphaned, hungry, and destitute children of Europe. Of that I am sure. It is the political and big international business interests of America who have corrupted and messed up our foreign-relief program, so that the average American does not know what our policy is or where it will lead us. There are many established charitable and religious organizations who were willing, and could have undertaken a program of relief and assistance for Europe's children. Why do we not appropriate the money for this job? Why do we not pass the bill that I introduced, which would allow gift packages to be sent postage free to all European countries devastated by war? Here are two programs which would cost so little, and would be the best insurance for peace and friendship, but I suppose that the big boys could not make any money out of these two programs, and that is why

they will not give these two humane programs their support.

Chester Bowles, as Chairman of the International Advisory Committee for the United Nations Appeal for Children, has just completed a survey trip to Europe where he assisted in the formation of committees in various countries, to conduct drives for the relief of children. Before his departure for Europe he helped to establish the United States committee for the appeal, and this committee—the American Overseas Aid-United Nations Appeal for Children—is making a drive for funds this month. The article follows:

LONDON.—Like all Americans I have had some impression of the vast difficulties of postwar reconstruction in Europe; of what Europeans are doing to help themselves, and of what help they are getting from beyond their borders. Since my last trip to Europe a year ago, I have had to depend on newspaper stories, statistical reports, and the accounts given by returning travelers.

All these left me totally unprepared for many of the things I found. Words and figures cannot convey adequately the devastation in Warsaw; the sorrow of the Czech people for the murdered men of Lidice; the tragic spread of tuberculosis among the children of France and Hungary; the tight-lipped patience of the English.

Above everything else, however, I was impressed with the courage and intensity with which all these people are attacking their problems and the hard work being put forth by men, women, and children, many of them weakened by malnutrition.

All the countries which I visited suffered appalling human losses and physical destruction in the war. This differed in degree and kind between the countries, but no American has seen such things in his own country. Let us hope he never will. All of them were slowly fighting their way back to economic recovery, primarily by their own hard work, but with major assistance from their neighbors from overseas and most of all from UNRRA.

The crops were comparatively good, wherever there were men and machinery enough to plant, cultivate, and harvest them. Livestock destroyed by the Germans was slowly being replaced. Prisoners of war had come home and were making up for lost time in the restoration of industry and commerce.

In 1947 these countries were all hit together by a new disaster—what was, perhaps, the greatest drought Europe has ever suffered. The oldest records are those of France, going back to 1818. Since that time there has been no dry spell so destructive as that of 1947.

The drought brought new tragedies expressed in reduced nutrition and reduced energy for the workers; sharply increased infant mortality, and greater incidence of tuberculosis and other diseases among children.

The force of the blow differed from country to country but the pattern was the same. Everywhere the drop in grain production brought sharp cuts in the ration of bread—the fundamental food—and milk, the absolutely essential food for infants and growing children.

There was a tragic competition between bread and milk. To feed dairy cattle meant that the people as a whole would be further weakened and their recovery imperiled or delayed. Not to feed the dairy cattle meant that there would be even less milk—and there was already far too little.

It is not possible here to give statistical details for all countries, but France provides an example which is typical in most respects. The crop failure struck the French people with stunning force. Before the war France had raised an average of 300,000,000 bushels of grain per year. She had been accustomed to virtual self-sufficiency in food, as had Poland and Hungary, which produced for export. Last year the drought cut French production by nearly two-thirds—to only 130,000,000 bushels.

In 1946 average consumption of food in France had risen from wartime levels to 2,600 calaries daily—about two-thirds of the American diet but enough to give strength to the workers and hope to the country. One year later hope turned to desperation.

The grain shortage sharply reduced the supply of bread—an essential staple in every Frenchman's diet.

Barren pastures and lack of fodder led to a further slaughtering of a dairy herd already reduced by nearly one-third during the war. The remaining milch cows gave less milk, about 2 to 4 quarts daily compared with an average of 10 for cows in the United States. The milk was of lower quality with only 2 percent of butterfat, compared with 3.8 percent for American milk.

It is a particularly cruel irony that France which gave Louis Pasteur to the world is also critically short of equipment for pasteurizing and refrigerating to protect the purity of her milk. The effect on adults has been severe. The basic ration already had been cut to 2,300 calories, and it must be cut to 2,000 in the near future. On children the effect was worse and more painful to think about. At present in France 69 infants in every 1,000 die within a year of birth. This represents a reduction from 120 during the Nazi occupation, but it is double the rate in the United States. It is now increasing.

The French people have reacted with an almost universal will to work and sacrifice to save their children. In the last 2 months milk has not been available even to invalids in hospitals. All but a tiny trickle is going to children under the age of 4.

The tiny trickle is divided between children over the age of 4 and, through the dwindling black market, to wealthy foreign visitors who live in the finest hotels and go home to report that there is "plenty of food" in France.

Malnutrition came as a shock to France, for it has been a new and terrifying thing.

In Italy the murderous combination of war and drought struck hard at the people who already were very poor. The average Italian ration is an enfeebling 1,800 calories per day, but even this average is misleadingly high—for I have talked with Italian families who had eaten nothing during the previous 24 hours. The average also includes gluttony for the wealthy minority. For Italy has made less progress than France in suppressing black markets.

The great new thing that is in evidence in Italy is the determination of so many people—against the heartbreaking odds of poor soil, war-damaged industry and years of oppression—not only to recover but to break new ground for social advances. Except for details the story of need is the same in all countries. In Czechoslovakia industry is relatively booming, but her people are still forced to subsist on an average diet of less than 2,000 calories—the average American diet is 3,300. Fortunately, the Czechoslovak people, like the British, have an efficient rationing system through which meager supplies are efficiently and fairly distributed.

In Hungary—normally a food-exporting country—there is more grain. But there are critical shortages of fats, proteins, and vitamins—contributing to an infant mortality of 120 in every thousand births. Hungary, with some of the greatest physicians in the world, is powerless to cope with the high incidence of malaria and tuberculosis because of a tragic lack of medical supplies and hospital space.

It has been a mercifully mild winter in Europe. Four children in a single family have only clothing enough for one to wear at a time. It is common for fathers to make shoes for their children out of old fur, leather, or felt hats.

Poland, which suffered severely from drought, had lost 65 percent of her dairy herd and 70 percent of her farm horses during the war. It is estimated that she cannot become self-sufficient in milk for at least 8 years.

In 1944 Warsaw was the scene of one of the greatest mass tragedies in recorded history during and after an uprising of her people against the Nazis. More than 200,000 people in the city were killed, after which the Nazis went to work with dynamite to punish those who still survived. Block after block for miles were blasted until Warsaw was a prairie of rubble. The city was 92 percent destroyed.

Despite her tragedies and her weakness, for there are no bulldozers or steam shovels, and despite an average diet of from 1,700 to 2,000 calories, the people of Poland are rebuilding their nation almost with their bare hands. The 600,000 who still live in Warsaw of her prewar population of 1,400,000 are huddled in cavelike rooms amid the wreckage, but they are working with passionate intensity to make a new and better life for themselves and their children.

This yearning for a better life and determination to have it are universal. I have seen this in each country I have visited.

Yearning and even determination are not enough, however, for every one of these countries desperately needs help. They need to help each other and they are helping each other with a steadily growing trade. With even an average crop next year Hungarian wheat may add again to the bread supply of Czechoslovakia and to the spaghetti supply of Italy; Italian olive oil may alleviate some of the desperate fat shortage in Hungary and France.

But most of all they need help from richer and more powerful countries.

After the United Nations won the war the United Nations Relief and Rehabilitation Administration was established to repair some of the damage and heal some of the wounds. Every nation gave 1 percent of its national income to UNRRA, and $5,000,000,000 was raised—spent, most of it, I am convinced, with great care, economy, and wisdom. UNRRA was terminated, but the special needs of children and adolescents, of nursing and pregnant mothers, were still recognized by the United Nations, which established the International Children's Emergency Fund and the United Nations Appeal for Children.

A plan was projected whereby the Children's Fund would give aid to 20,000,000 children for a full year, with food, clothing, and medical care. To finance this program the governments of the United Nations were expected to contribute $400,000,000. In 2 or 3 years it was thought that the gravest phase of the emergency would be over, and that the war-ravaged countries would be well on their way toward self-sufficiency again.

But the governments provided only a bare dribble of funds. Something vital in human awareness had disappeared with UNRRA and less than one-tenth of the needed sum was collected after months of effort. A series of tragic choices had to be made. Only 4,000,000 children could be cared for out of the tens of millions who badly needed help. The 1-year program had to be cut to 6 months. Clothing and medicine had to be virtually eliminated from the program.

The 6-month lease on life for a relatively small number of needy children in 12 countries has already started. A small, hard-working staff of the Children's Fund is seeing to it that every pound of lard, horse meat, cod-liver oil, and every ounce of powdered milk—the major supply item—goes directly to children and infants. Supervised group

feedings guarantee that none of the supply can enter black market channels. The United Nations appeal for children seeks to extend that 6-month lease on life and to reach more children by asking individual men and women all over the world to fill in the gap left by their governments—to give 1 day in earnings or effort.

The way the people of Europe are working for reconstruction has been inspiring. Equally inspiring has been their reception of the United Nations appeal for children—even in countries which have themselves suffered terribly. For the people of Europe the appeal means more than food alone. It means peace and a chance for the peoples to cooperate directly in an international undertaking. In this I think they are in advance of their governments.

At present it appears that national committees of the United Nations appeal for children in at least 14 European countries will participate in the campaign for funds. I have met with several of these committees, and I have been enormously impressed both with their enthusiasm and their ingenuity. The Danes already have given great quantities of antitubercular serum to other countries, and more will probably be given through the appeal. This serves to highlight how much can be done with only a little help—for all the children in Europe can be protected for less than the cost of a few heavy bombers, for instance.

From the people of Norway have come cod-liver oil and offers of more. The Czechs, Hungarians, and Poles, with little to offer but their tireless labor, talk in terms of labor.

Words and figures are truly not adequate to convey some of the impressions which have been burned into my mind on this brief trip. All I can do is to pass on the facts about some of the things I can never forget.

In an industrial town near Paris, in a windowless 1-room shack, an 11-year-old girl was caring for three smaller children—and for her father, whose legs have been amputated, and who will have to wait for several more weeks for artificial legs. Her mother was at work at a $10-a-week job, trying to earn enough to keep the family alive—and together. The little shack was neat. The children were clean. Most surprising of all, the 11-year-old was singing.

There were many more 1-room shacks on the outskirts of Rome. In one of them a war widow lived with five children. Whenever there is hard rain the family and their neighbors have to leave their homes and go out on the hillside.

A few hundred yards away a big housing development being erected for the people at the bottom of the hill. I was told that the Costello family will not be able to move in because the mother's $3 monthly widow's pension will not give her enough to swing it. The cost is $1 per month. That is the current black-market price in Rome for a package of American cigarettes.

Near Budapest there are other shacks that I shall not soon forget. In one the father has five children, and tuberculosis. There is no hospital bed available for him, and there is not enough antitubercular serum for his children. His wife is striving to keep the family alive by growing a few vegetables and selling them.

In Warsaw there was a 10-by-14-foot corner of the cellar of a blasted house. In it lived what was left of the Marshy family, a boy of 7, his sister aged 10, and their grandmother. The father, mother, and a baby boy and a girl, who should be 15 now, were killed in the Warsaw uprising of 1944.

The grandmother found the children wandering in the streets and moved them into the cellar. To support them she earns a few cents an hour, removing rubble by hand. In addition, she receives $2 monthly from the Welfare Department. The children take turns going to school because there are not enough clothes for both.

They are among the fortunate few who get a little bread given by the government, spread with lard and washed down with milk contributed by the United Nations Children's Fund.

There are millions of children living like this in the countries which I have visited. But I shall remember not only the misery, hunger, and squalor. I shall remember the neatly tied ribbons in the little girls' hair in the Warsaw and Budapest orphanges, the pathetic decorations in the peasant huts in Italy and Czechoslovakia, the cheerful nursery group in the devastated Polish schools; the grateful appreciation of Hungarian and French doctors for new hospital equipment just received from the Swiss; and the calm, quiet, cheerful determination of teachers and social workers, nurses and physicians in every country as with meager resources they attack the problems of a new generation born in war.

The children of Europe and Asia are living in a world of misery created by our generation. It is our responsibility that they shall have an opportunity to build a new world infinitely better than the one they know today. The United Nations appeal for children is a challenge to every parent, every worker, farmer, and businessman who seeks to build a world of peace and understanding.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. Samuel B. Pettengill, former Representative from Indiana:

FACTS TO CONSIDER

Did the war reduce Europe's population? No, it has more people. In the past 10 years, according to the Population Reference Bureau, Europe has increased in population by 14,000,000.

What has this to do with the Marshall plan? A lot. A number of the 16 nations in the Marshall plan are giving bonuses for babies. We are called upon to feed them. Can we, and for how long?

In 1946, these 16 countries had 4,398,000 babies who survived to age one. Using wheat as a yardstick of food, it would take 920,000 acres of land to grow the minimum food for 1 year's lot of new Europeans. That equals the total crop land in New Jersey.

If in the next 4 years, the European crop of cannon fodder continues to increase at the same rate, it would take 18,200,000 acres to adequately feed these children from 1 to 4 years old. That is as much cropland as there is in California, our second largest State. This is for children alone. It does not count Europe's grown-ups and old people.

Meantime, our population has been increasing at about the same rate. Add the expected European children to our own children and you see trouble ahead. Wheat is, in fact, a minimum yardstick to measure calories. Small children can't eat wheat gruel all the time. They need milk, and cows make greater demands on acreage than wheat—both summer pasture and hay and grain in winter.

Dr. Hugh Bennett, chief of the United States Soil Conservation Service, told Congress we did not have enough good land left in the country for ourselves. That was 8 years ago. That was before the war, and before Marshall. Recently, Secretary of Agriculture Anderson has warned: "We continue to drain our soil fertility. * * * We are plowing land in the plains that is sure to be blown away in dust storms."

The Marshall plan will not send dollars abroad. It will send top-soil and our resources of phosphate, potash, iron, coal, petroleum, timber, etc. What about them? With reference to minerals, the Secretary of the Interior reported in 1945: "We have a meager supply * * * We are relatively weak now." Dr. Elmer Peterson of the Bureau of Mines says: "It follows that the faster we grow in industrial strength and military power * * * the faster we liquidate the basis of our power."

We are already living on our "capital" of natural resources. In 1943, our timber cut was 50 percent more than new growth. Lumber is short now. So is paper. We are in sight of the end of our good iron ore and other metals. Fuel oil rationing is also in sight.

In the light of these facts, President Truman's assertion that the Marshall plan will take only 5 percent of our total production is misleading. India, with her 388,000,000 hungry people—hungrier than Europeans—is already asking to come in under the Marshall plan. Why not? Then China, with her 470,000,000 hungry people, is next. Congress in fact, wants China to start sharing now.

If these countries threaten to go Communist unless we feed them, what do we do? Save Europe (if it can be saved) and let Stalin take over Asia?

We have 6,000,000 farms, and a farm population of 30,000,000. Are these 30,000,000 people to feed themselves and our 110,000,000 nonfarm Americans, and furnish a large part of the groceries to the 219,000,000 in the 16 Marshall plan European countries, plus 858,000,000 in India and China?

These are hard facts. They must be faced. If we let all these nations on our bandwagon, when do they get off? And where do we come out?

SAMUEL B. PETTENGILL.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by George Weller, Boston, Mass., foreign correspondent for the Chicago Daily News and Pulitzer Prize winner, before the Economic Club of Detroit, Detroit, Mich., January 5, 1948:

Mr. JOHN S. COLEMAN. * * * I have heard a top newspaper executive call our speaker of the evening, Mr. Weller, "One of the best, if not the best, foreign correspondent of our day." I am told that Mr. Weller has an objective viewpoint concerning the Marshall plan. I am hopeful that his talk will further clarify my thinking as to the possible success of what is called the Marshall plan in Europe, and the impact it will have on our living here.

Gentlemen, I am happy to introduce to you Mr. George Weller, foreign correspondent for the Chicago Daily News. Mr. Weller.

Mr. GEORGE WELLER. Thank you very much, Mr. Coleman.

It is customary for the visiting preacher to a new congregation to announce his text. My text, which may seem to you at first a little dry, is taken from the book of numbers. Let me read:

Albania, $40,000,000; Austria, $63,000,000; Australia, $54,000,000; Belgium, $494,000,000; Brazil, $70,000,000; Burma, $11,000,000; Canada, $138,000,000; Chile, $42,000,000; China, $1,482,000,000; Costa Rica, $1,500,000; Czechoslovakia, $31,000,000, plus about $400,000,000 UNRRA; $40,000,000 to Denmark; $1,000,000 to Ecuador; Egypt, $11,000,000; Ethiopia; $4,000,000; Finland, $92,000,000; France, $1,950,000,000; Great Britain, $4,400,000,000; Greece, 790,000,000; Hungary, $15,000,000; Ireland, $65,000; India $50,000,000; Italy, $538,000,000; Iran, $30,000,000; Korea, $62,000,000; Liberia, $20,000,000; Mexico, $87,000,000; Netherlands, $377,000,000; New Zealand, $5,000,000; Nicaragua, $2,000,000; Norway, $56,000,000; Peru, $3,000,000; the Philippines, $695,000,000; Poland, $90,000,000, plus another approximate $400,000,000 in UNRRA; the Soviet Union, $250,000,000; Turkey, $270,000,000; Yemen, $1,000,000; Yugoslavia, another approximate $400,000,000 in UNRRA.

I have been reading to you the postwar—not midwar, but postwar—aid that the United States has given to the world.

Today, stepping off from this background, we look at a new American plan to help the world. We want to know: what does the Marshall plan mean to Europe? and what does it mean to us? The motives, the aims, of the Marshall plan were stated after Mr. Marshall's overture at Harvard June 5, ably described to you by Mr. Coleman. Marshall's bid was taken up by the conference of ministers in Paris, where I was at that time, this summer. The objectives as taken up by those ministers with the exception of Mr. Molotoff were four:

Rerevive production in Europe.

To restore its financial stability.

To work for greater economic cooperation between the nations.

To correct the dollar deficit of these nations with regard to their imports from the United States.

Who can quarrel with these purposes? Certainly none. Who should examine them? Certainly whoever is asked to finance them or who offers to finance them.

Now, it is important before we examine a plan like this in detail that we try to find out what in general it means. The Marshall plan as a whole is, I am convinced, beyond the comprehension of even those people who try to work closest to it. But we have to content ourselves with its impression on the people whom it helps, and the people who pay for it. First, then, the people who pay for it—ourselves.

We are told that the Marshall plan has as its purpose to save Europe from hunger, from communism, and from chaos. These are all fright words.

The backers of the Marshall plan argue that hunger is a living and real danger in Europe today, along with communism, and that chaos actually threatens. No other solution is proposed than money. Money and goods.

There is no problem of power to those who propose the Marshall plan. There is no give-and-take of power politics. No. This experiment has to be carried out in a pure vacuum where economic laws alone prevail. So it appears to us, and so it is offered to us.

Now, to Europe, this plan seems a little less impeccable than it does to us. It is welcomed, of course, by the minority of governments who find themselves facing terrible dilemmas, who find themselves faced with the obligation of making reforms and adjustments, and who see here in this plan a sort of remittance, a sort of postponement of their necessity to wrestle directly with these problems.

There are others who cannot yet speak out their favor for the Marshall plan. I mean the government officials in the Communist satellite countries. It offers another out for them. If the United States can be induced to pour without security millions upon millions more of dollars into western Europe a profitable trade can be awakened, profitable for the eastern countries under the iron yoke and behind the iron curtain. Naturally these two minorities of officials, the Communist governments and the unreformed, semi-Socialist governments of the West, principally the governments of the East, silently welcome the Marshall plan.

But the majority of the European peoples are puzzled by the Marshall plan. They cannot understand why a country which has already given so generously to Europe should continue to wish to do so. The Europeans are in general critical and skeptical of mind. They want to know where the joker is in this generosity. They cannot believe that Americans can actually dispose of these sums seriously without asking recompense. And when they look at the list of the countries they are even more puzzled.

I am sure anyone who has been in Ireland, where I started out my tour this summer of Europe, would be puzzled indeed to know why Ireland was among the countries interested in a commercial gain through the Marshall plan; Ireland which remained neutral through the war; Ireland which provided me, as I took a bus across from Shannon to Dublin, with the biggest helping of roast beef and potatoes that I had anywhere, including the United States, for a very modest sum. Why does Ireland need any commercial boost? anyone would ask who has been in Ireland.

Why Scandinavia, whose industry is booming, and whose markets lack for nothing? Why Belgium, which has many items on its markets that we cannot, except at greater price, obtain here? Why is Switzerland to gain a trading lift, Switzerland where there is no housing problem such as we have, and where there is normal employment and a stable economy running along very smoothly, after a history, as far as the war is concerned, of being completely without injury?

Why, even somebody may ask, France, which as long ago as last May, 8 months ago, had already elevated itself to 93 percent of her former industrial capacity?

This is a genuine puzzle a d amazing, and the people have no answer for it, other than our open foreign explanation of rebuilding Europe at our expense. But there are those who are ready to give them more sinister explanations of self-interest.

The Communist Party in all these countries is ready to say that the purpose of America is imperialism. Well, now, "imperialism." What do we mean by that? Imperialism is perhaps the most abused word in all our confusion of semantics. Communists don't say what they mean by American imperialism. They don't say what the Americans want to get in return, because the Americans themselves don't say it. But it is easy for them to say that the Americans will eventually claim a price, because it is so irrational to any European to think that they will not.

Any European observer, looking today at the shift of weight of power in Europe so powerfully on the side of the Soviets and so much against us in the postwar changes, must believe that this is only the first step, the first overture, toward an eventual recovery of our loss in the balance of power which existed at the end of the war.

Can we expect gratitude? I dislike, because Americans are emotionally so susceptible on these points, to try to discuss and weigh so intangible a substance as gratitude. Gratitude can be found in some quarters in Europe. But I cannot say honestly that it is loudly, warmly, regularly, or spontaneously expressed.

We have had a thank-you note or two from some British town to a like-named town in the United States, where there was direct aid given from the foster town to the parent. We have some of that sort of personal gratitude. But altogether the Marshall plan is too far above the heads of all to feel any direct responsibility or any direct gratitude.

There is a rationalization of this indifference at hand. Europe has an idea that America is inexhaustible. America's difficulties, our declining land resources, are never discussed in the European press. They treat our aid as something natural, something due them, and something that comes from the less-harmed country to them, more by right than by generosity.

Now, if there were a Marshall plan for European recovery common to all the nations of the western world, this image would quite drastically change; if there were a broad front, a general front similar to the United Nations of accepted responsibility. But that is not the case.

A challenge of Mr. Marshall's remarks at Harvard has been picked up in its entirety and completely, and without any reference on the part of the European nations to a general sharing, when needed, by Mr. Marshall himself. That is why when Italy is portrayed to us in the darkest terms as needing immediate assistance of very large nature, nobody pays much attention to Italy's dealings with other countries.

If they did they would know that about 6 weeks ago Italy concluded an agreement to acquire beef and wheat from the Argentine to the tune of $175,000,000. Is this a gift, like America's of wheat and coal? No, it is not. Is is largess from the rich to the poor? No, it is not. The Argentine Government also dislikes communism. But are they giving away their hard-raised cattle and their wheat for it? No, they are not. Are they making this credit without interest to Italy? No, they are not. The credit charge or interest rate is 2½ to 3½ percent.

Europeans just don't understand these contradictions.

So we see that the Marshall plan is two different things to the giver and the receiver. It isn't what it appears to be to us to the Europeans who are to receive it.

Now let's pick the Marshall plan up by one tendril. Let's pick it up by the question of imperialism. What is America going to get out of this?

The Marxists are usually pretty realistic about these things. They are trained in the school where you don't give anything away for nothing. Let's say that it is actually true that we are doing this in order to stop communism. Well, this is indeed the basis upon which the Marshall plan is increasingly being sold to the American people.

Why stop communism? Because communism, as we perceive, as it breaks surface now in the postwar period, we see a gigantic network of power concentrated in the Kremlin. We see it pushing forth outward and upward from the ground in all directions. We see its acts, and they threaten us.

Now, how did we get to this position? Two great nations emerged from this war; one nation, the European one, had lost most of its industry and many of its people. It conserved, however, a birth rate, a breeding rate, far higher than its competitor on the other side of the ocean. Its vitality was intact. Its national pride, quite rightfully so, high. Its resources, most important, were intact.

The other nation on the other side of the water came out of the war with much less losses in manpower, but still with a far lower birth rate. It emerged with its surface industry unharmed in any way, but with its resources greatly sapped by an attempt to supply all the lacks of its allies.

Here are two powers more equal than we sometimes think of them. Which will win? We are not here interested in which these

nations God smiles upon, but which is likely to endure. We are asking ourselves which will win, not which one morally deserves to.

One of these nations fought on a single front; took heavy losses; traded space for time. Space and lives. The other jumped space across two great oceans and fought on two fronts.

The first nation was prodigal in valor and prodigal in casualties. The second nation was equally prodigal in valor and prodigal with its resources and securities.

Then victory came. And here again, by an odd reversal of techniques, the nation which in the beginning had traded space for time, which had retreated, when the victory came, and great part by itself, now raced on not only back to the lines where it had been before, but far beyond them. It discovered a new political weapon in the partisan forces. It used the partisans to establish new governments satellite to itself. It concentrated all its attention on building up it own strength at home.

And the other nation that had been so bold in action when it jumped the ocean with its armies, and had promised to put back democracy everywhere in the world? What did it do? This nation retreated. It drew back its forces across the oceans. It considered the war over, because the shooting war was over, and it said, "Let's play at peace."

One army remained tommy-gun at the ready, at its positions. Even today, 2 years later, this army occupies several more countries than the army that crossed the oceans. It occupies not only Austria and Germany. It maintains by right of treaty signed by all the other parties in the war, troops of communication—so-called in Hungary and Rumania. Its own advantage is very great, even through its own army, even exclusive of the powerful allies that it has created, and the satellite armies it controls and arms.

What of the other nation? The other nation, with a politically illiterate army, clamored to bring the boys home. It has left behind a mere weak, token force incapable—except at the single point of Trieste—of putting up any kind of military show or resistance.

The first nation had a social program, oh, yes. Its program was to seize and hold all enterprise, and hold it for itself, and to lodge all that could not be seized for itself in the hands of a friendly government, a puppet government, and to ask for as much more as possible afterward.

And what was the policy of the other nation, the nation from across the seas? To send of its own substance to support not only its own forces, not only the civilian populations, but even the armies of its allies, to prop up their political bargaining power. Did it increase its number of troops? It did not. What about the postwar policies? No more than had peace begun, immediately the nation from across the seas began immediately to read from the book of numbers.

But the other nation began to bargain. It did not bargain only with those whom it feared in western Europe. It bargained heartily with its own allies, and profited from them.

I have just read of the recent agreement between the Soviet Union and Czechoslovakia—Czechoslovakia, to whom we have given about $400,000,000 through UNRRA. Czechoslovakia has just received $23,000,000 of credit from Russia. A credit; not a gift. The credit will be paid for by barter in 1949 and 1950.

Notice the significant characteristics of this relationship. It is for a small sum. It is for a short term. And it is for real goods to come back in return for the credit. Contrast these terms with the loose American way of dealing: big amounts, long terms, small return.

Of these two rival nations one has a philosophy that calls upon all nations to join it. It invites them all, adaptable to their policies wherever they are. It has sown its seed in small, well integrated units, as I have seen in Indochina and Indonesia, and the Philippines.

The other nation says the thing to do is to turn the native peoples completely free, as was done in the case of the Philippines; to pay for their new freedom and to pay for their friendships; to disregard all strategy; to disregard all security.

As for those places in Asia where there is colonial war going on, the great power of Europe says the thing to do is support the masses, to encourage the struggling peoples. The other, the American Nation, supports by loans, and indirect or direct help, these colonial wars of France and Holland. While mentioning nothing of supporting these wars in its Marshall plan, it continues loaning more money to make them possible.

I think if you compare these two techniques you will have very little doubt, quite dispassionately speaking, as to which one of the two rivals is likely to be in the lead.

One of them—let's go just a bit further in this examination—boasts a conspiratorial party of internationally organized, devoted, idealistic fanatics. It has two wings in every country, aboveground and underground, prepared to go underground or to emerge, prepared to exploit the weaknesses of every situation.

We understand how this works when we see the first clamor on the part of the American troops to get home, which came in many cases from Communists in our own forces. Some later identified themselves, such as the Daily Worker correspondent who was on Stars and Stripes, who was the author of the Let's Go Home editorials in the Stars and Stripes in Japan.

But the nation which crossed the seas has no mass or conspirational organization whatever. It depends on an endless coal chute of money. When anything is needed anywhere it lifts the chute and lets down some more dollars.

The first nation has a systematic pattern of conquest. Its make-up is a partisan army, the rigging of elections, the essential partisans of the Soviet Army during the critical period seize all key posts in the cabinet, and finally the eradication of the opposition of all other parties systematically through trials. All this technique is clearly laid down in their own writer in Lenin, who says precisely how to do this. His instructions they follow faithfully and successfully.

And the other nation, to answer this, either withdraws their funds or ships in another great big bale of American dollars to answer it. Dollars, dollars. Anything can be cured with dollars.

How did we get to this vulnerable, humiliating position: We got to it through Teheran and Yalta. We got to it through conceding eastern Europe at Teheran to the division of two powers, only one of which was capable of exercising its strength there.

And the other great defeat was in the Far East. There we made critical concessions at Yalta. We gave the Chinese Communists a great base in Manchuria.

I don't like to sound tragic about this. But I think it is safe to say American blood will sometime flow for these terrible defeats.

Now we are in the process of waking up. We have slowly found out, a few of us actually realize that we lost the war. We did not win the war. We won it strategically, but we lost it politically. We lost it to that rival nation, first politically, and now strategically.

When today our Chief Executive compares, as he did in the case of Greece, the cost of a $400,000,000 loan to Greece and Turkey, to the cost of the entire war, he is comparing a tiny little front, only one of the fronts upon which we face defeat. The cost of the war will be not $400,000,000,000, but it will be nearer—when we have paid if off—$700,000,000,000.

Now, what do we want to do? We seem to want to buy back a buffer state in Europe. We want to buy back with dollars a western European buffer state. Now, this may sound rather crass to you, a rather crass analysis. There are humanitarian motives that we all feel. These exist. But they are so mixed up with this terrible military dilemma that they cannot be extracted, one element from another. So we have proponents of the Marshall plan jumping back and forth; from compassion to fear of communism and back to compassion again. It is confusing. Perhaps it is meant to be confusing.

If I might look backward I dare to say that these things, these humanitarian acts abroad, were better done when we handed them over to genuinely dedicated people like the Quakers who were selflessly devoted to humanity and were capable and efficient administrators of the humanitarian method of aid. Today it is especially desirable that we achieve this separation, first of all, between humanitarian sympathy and military reality.

Now, how did communism come into the countries with which we are mostly concerned?

We are worried about communism arising in western Europe, and we are worried because the wave of seizure has moved westward. Let's look very rapidly and briefly at this advance.

About 3 months ago I was in Bulgaria covering the Petkov trial, where a man who had been for all of his life a struggler for the rights of the peasants, a struggler for the small farmer, faced a rigged trial, and was eventually hanged. It was the last act of a straight Leninist drama.

But how was Bulgaria taken by the Communist Party? Bulgaria, which had played with the Nazis throughout the war; Bulgaria, on whom the Soviet Union declared war only after she was beaten and had made peace overtures to the rest of the Allies. It was done by the tardy creation of a Bulgarian partisan force of occupation by the Soviet Army. Then followed the placing of the partisan leaders in key Government positions, the gradual eradication of the other parties through terrorist measures, and suppression of the press, and so to the final drama of Petkov's death.

Look at Yugoslavia; the same thing obtains. Here is a more stellar record of resistance to the Germans, it is true, but nevertheless with the same pattern by a partisan corps; a leader trained in the Spanish Civil War becoming a leader of the country, with the Soviet Army to insure his predominance. In Albania, the same thing. Again a leader trained in Communist technique taking over the country.

Albania is an interesting example, because in reading to you from the book of numbers you remember I led off with $40,000,000 from us for Albania. Albania is one of the countries where America is today, in spite of the $40,000,000, unable even to maintain a diplomatic mission.

Go northward a little in Hungary. Again we have this phenomenon of the axis country taking over—the Soviet army on the scene; the adroit gradual pressure. Don't think that the Soviet commander goes around with a tommy gun and walks into the headquarters of the opposition parties and personally cleans it out. He does nothing of the kind. He simply terrorizes indirectly, by carefully managed methods, all opposition.

Northward to Czechoslovakia, where we see one of the last stages of transition of power to the Communists. We see a cabinet so completely dominated by the Communists that even the Catholic priest, who is the minister of communications, flipflops against the Marshall plan at Soviet command like all the

other members. Twenty-four hours ago they are unanimously pro the Marshall plan, and 24 hours later they are against it.

Poland. Again we have the pattern of the pressure government of Lublin; the delegates going to Moscow being arrested, and the gradual taking over, all the same steps.

Today you are told that communism arises itself out of hunger. You are told that it is a manifestation of the unrest of hungry people. Was there any hunger in those countries I named? No. The American people paid to assuage their hunger. Were there any riots? Were there mass organizations? No. Not in any of them. That idea is the sheerest rubbish and the sheerest play upon American fear.

Under the Marshall plan we are being blackmailed, blackmailed by the fear of communism.

Yes, we have lost the war in eastern Europe, as we lost it in Manchuria. But it was lost from the top, not by any mass movement, not by any idealistic economist's test under the bell glass. It was lost from the top by well-planned capably carried out resolutions. And we even paid for some of them.

Today we have a sort of a fear, an odd sort of fear, arising among us Americans. Some timid souls are fearful of opposing the Marshall plan because of being called pro-Communist.

Why do the Communists oppose the Marshall plan anyway? Well, they do it for tactical reasons, not for reasons of grand strategy, but for tactical reasons.

You see, the Marshall plan which is now proposed to us as an answer to communism, wasn't anti-Communist when Mr. Marshall proposed it at Harvard. Far from it. He proposed, if you remember, a general plan of aid to all European nations, specifically including—he was interrogated on it afterward—Russia. So that which is being sold to you now as anti-Communist plan was not such in the beginning. It became anti-Communist only after the Soviet Union, Mr. Molotov, in Paris refused to participate in it. Then it acquired its first anti-Communist line, and then the Communist International drove the southern Balkan states into line. It was after the Soviet Union compelled Poland and Czechoslovakia to do a flipflop that the Marshall plan became in our imagination anti-Communist.

But is it any weapon against communism? Is this afterthought worth so many billion dollars? Naturally, the Soviet Union has its own plan for a closed economy in eastern Europe and does not want the Marshall plan. But the Marshall plan is not a real threat in any sense to the Communists, and they are not worried about it. They are unable to find any arguments against it because actually it helps eastern Europe.

The only thing that they fear is the possibility that America might wake up and find out that she has been licked strategically in both Balkans and Far East and might do something about it.

The Marshall plan was probably invented to take the sting out of the Truman plan. The Truman doctrine looked too realistic. We tossed out the Marshall plan and turned it into a general over-all help, which was enlarged upon at Paris. Later, as you know, it was vastly expanded into this colossal amount: originally twenty-eight or twenty-nine million dollar plan, now seventeen-billion plan.

The real prize then has nothing to do with the economies of western Europe. The real prize that we are trying for is the economies of this solid block of satellite states that have been taken over by the Soviet Union. But promoting their trade with our gift-dollars, is not going to shake their governments very much, is it?

Now, it is an interesting experience for commercially minded men to go to countries like Poland, Yugoslavia, or Czechoslovakia and see there an economy functioning where the people know nothing about what is going on. Here is the way this trade-pact business works in those countries. A trade-pact is announced with, let us say, Bulgaria or Hungary. Well, two-thirds of the essential statistics are there, but not the other third that gives the meaning. We are going to sell $34,000,000 worth of hides and paper for $34,000,000 worth of clocks and hatchets, but nobody says how many we are going to get; nobody says what they cost; nobody says what or how it is going to be handled. The whole thing is a complete mystery. It is a mystery to those of us who are observers. We are supposed to tell what it means. But we cannot. Why? Because the essential figures are always omitted. You always either get the quantity and you don't get the value; or you get both; you don't get the price per item; or you don't get the time of the credit or you don't get the interest rate. Something is always left out. Talk about the corporations dropping a curtain in front of their economies. They've got nothing on the collectivist economists as I have seen them.

Russia is jumping this year her share in the Czech economy, from 4½ to 18 percent. And the Czechs, who are trying to play the game both ways, have pleaded for more American aid, if you please, in the face of having turned down the Marshall plan. Yet they are trying to get control of about 40 percent of their trade and hold it inside the economies of eastern Europe.

East and western Europe have made some 70 treaties of trade. They are not significant. So the question of autarchy remains.

Now, what are we going to do? Are we going to create a new autarchical system in western Europe? Is this the Marshall plan? The Russians say it is.

But, according to Mr. Harriman's interpretation, the Marshall plan is to help the countries of eastern Europe as well as the west. In other words, we are to help further with dollars the people whom the Russians already control.

Now, the Marshall plan has been likened to lend-lease. In lend-lease, you remember, we gave aid short of war to countries whose defeat we excluded, in the sense that we intended to continue to give it to them until they won, or we came in and they won through our coming in. But it is a false analogy to compare the Marshall plan with lend-lease, because under the Marshall plan we are helping both sides.

Now, there are lots of other places in the world where we are paying for both sides. Let's take, for example, at random, Palestine. The Zionists hope to collect here this year $258,000,000 to help the armed Jewish forces in Palestine, discountable from income tax as charity. The Arabs count for their particular aid on the steady flow of dollars through the sale of oil to the United States. So it is nothing new for the Americans to be paying both ways. In the case of the Arabs we are getting something back for it: oil. In the case of the Zionists, the Zionists of America are getting back in satisfaction helping people whom they sympathize with.

But have we reached a point where we want to promote the trade of Russia's satellites even more than we have already done?

The danger in plunging in this way, one of the dangers, is that which is so well illustrated by Greece today. We think of Greece as more under our control than any country in east or western Europe. Yet in Greece you will find a good example of the decadence of this dollar approach, this woefully unstrategic dollar approach.

We have today a Greek army of 150,000 men. They have been struggling for about a year with an army one-tenth their size—15,000 men. The rebels have possession of no city. Yet indirect support to the nationalists already has cost us through the nose. We are spending $300,000,000—about half of it, it is true, to aid the Greek economy—and already the Greeks want more.

Let's consider what is going to happen when we have once defeated this paltry little guerrilla army of less than a division.

I do not wish to present this case in an unsympathetic way to the Greek cause. I was with the Greek Army in northern Thrace only 3 months ago, and saw the difficulties they are there confronted with. Incidentally you may be interested to know that I had some partisan guerrilla pamphlets in my hand, which were explaining that the Americans were planning to give Thrace. Thrace is that northeast corner of Greece, which is one of the most fertile sections of Greece. The Americans were supposed to be planning to give Thrace to Turkey as a prize, and so the Thracians were called to fight on the side of the guerrillas.

Now, what is going to happen when you have to find places in the Greek economy for these 150,000 soldiers we have built up? Would it not have been better to have gone into Greece immediately, to have established strong American bases there, to have met this tremendous challenge of 90,000,000 Slav peoples outside Russia and under Slav, under Russian domination, to have met it directly ourselves, instead of to have to do as we have done? The Greeks can never counterbalance alone this great monolith hanging over them. Now, all these Greeks must spend their energies and our money chasing down 15,000 guerrillas. We distort the economy in a military sense while trying to build it up economically.

It seems to me that the long-range strategic responsibilities have been left too far aside in our plans. And the Marshall plan is part of this dreamy, merely economic approach.

Now, I have some diffidence about criticizing the public presentation of the Marshall plan. Why? Because I have uncovered in my study of how the European difficulty is being treated publicly some rather embarrassing information.

There is a well-known magazine of American medical science. About a year and a half ago a very important expert on nutrition, one of the leading dieticians of the country, was returning from Army service in Europe. Learning that he had prepared a report on hunger in Europe, the magazine asked for it for publication. The article came in. The magazine accepted it, and set the article up in type. The article said that there was no starvation in Europe anywhere, except briefly in Holland. It said that there was some undernourishment, but that there was no danger of epidemic disease or political unrest due to hunger.

This article if published at that time would have been picked up by the newspapers in general and would have caused a strong counter-reaction in the United States. It was not published. Why? Because upon learning of the article an important Government department wrote to the magazine and asked that it be suppressed. The article was suppressed, and is still suppressed.

Important figures get subordinated because they do not fit the general alarmist picture of hunger, chaos, and communism in western Europe.

I take these liberties because I am a newspaper man myself, and one of our greatest sports is self-criticism. The other day I saw, in Raymond Daniell's New York Times report from Berlin, that 62 percent of the German farmers have falsified their food accounts 62 percent. They have to turn in their quotas, and 62 percent were crooked. Might that be why we have to feed Germany?

Another story that I see much subordinated is the fact that the countries whom we propose to aid under the Marshall plan—these countries alone—have $13,000,000,000 in holdings in the United States.

In all the treatment of the Marshall plan I very rarely see it pointed out that there will be charges beginning July 1 of a billion dollars in aid to Europe outside the Marshall plan.

Why does the Government want to take this gamble? Well, I don't know. How can they call so coolly for such a gigantic experiment? It happens that I just came from New York. I spent 2 days in a hotel without any heat. The hotel had no oil. I have been living at Harvard University, studying and resting. I find around me there many young men who want to get married, want to raise future Americans, and are at the age when they should be establishing families, and cannot get a place to live. Suppose they marry. They can get one room or two rooms. They cannot raise a family. Don't they need a Marshall plan?

I look at our soil situation. I learn from the agronomists that our top soil is rapidly decreasing and it will pass the depletion point to feed this entire Nation.

I look at the words of a friend—Wallace Deuel—a news correspondent in Washington. He says that the Bureau of Mines says the United States has almost used up 21 out of 33 essential minerals. We have already used up 97 percent of our mercury; 68 percent of our lead and silver; 80 percent of chromium; 70 percent of tungsten, manganese, and bauxite; 65 percent of zinc. We will be all out of gold, the thing we are shoveling to Europe, in 14 years, but we will be all out of lead in 12; silver in 11; bauxite in 9; vanadium in 7; tungsten, antimony, and platinum in 4; asbestos and mercury in 3. We have 2 years' supply left of manganese.

It seems to me that under this situation the best thing for us to do is to do what should have been done long ago; that is, to drop this Marshall plan—which is European made anyhow—and begin all over again.

What does beginning all over again mean? Well, it means that on the aid side we will accept the principle already introduced by the leader of one of the Government missions that went to Europe, CHRISTIAN HERTER, who says that a 4-year plan is unnecessary, and that a 15-month plan is the maximum that should be undertaken.

I think that an early thing that we must take care of is the minimum hunger needs in Europe. But first there must be as well an American military plan.

And this revision must not be carried out as though it were an interesting economic experiment at the cost of the American people, even though Mr. Marshall calls it himself at best a calculated risk.

Our whole method has been upside down. Europe is being taken by military force and an applied political onslaught, not by hunger. If there is uncertainty or fear, it is our weakness that has created it, nor has our generosity checked it.

What are we gambling with in the Marshall plan? We are gambling with something more serious than the seventeen or the six billion dollars. What we are gambling with is the idealism of the American people. We know that they are being hard pressed at this moment even to feed themselves adequately. We know that prices are going up. We know that nobody is telling our people, or almost nobody, that the real struggle in Europe today is the struggling power of armies, of weapons, not of economies or moneys.

And if it should be that there be a depression, or a recession, as there is almost sure to be, when we reach the end of our present market, if this should happen and should coincide as it well may be with a new American wave of isolationism, you will find the last barriers going down in Europe, with no military means over there to halt them.

The thing we must do is to begin to plan a new plan, not the Marshall plan, a new plan, calling for permanent American bases overseas, with enough counterweight in power to match the counterweight of the eastern nations, where we have lost the political war to the Soviet Union. Using military reality as a background we can then begin to aid on a self-liquidating basis those countries who are ready to accept our aid. Then having pushed their great military fear out of the equation we can begin to see clearly.
